Fair Trade Laws

Fair trade practice laws have been enacted by 12 states since January, and bills proposing such laws are pending in 15 other states, a summary of fair-trade acts made public by the American Retail Federation shows. Fifteen states had such laws at the close of last year.

Only Connecticut and Vermont have defeated fair trade practice proposals in current legislative sessions.

Fair trade bills have been passed and signed by the governors in the following states:

Arkansas (H. 98), Georgia (S. 72), Indiana (S. 23), Kansas (S. 96), Kentucky (H. 13), Montana (H. 70), Nevada (H. 130), New Mexico (H. 23), South Dakota (S. 8), Tennessee (H. 320), West Virginia (H. 204), Wyoming (S. 15).

Bills have been passed by one or both houses of the legislature in the states of—

Colorado (H. 513), Idaho (H. 315), North Carolina (H. 435), North Dakota (H. 209), Oklahoma (S. 45), South Carolina (H. 409).

Nine other states have fair trade bills pending. They are: Delaware (S. 61), Maine (H. 115, S. 265), Massachusetts (H. 397, H. 548, H. 549, H. 975, H. 1106, S. 122, S. 296), Michigan (H. 32), Minnesota (H. 277), S. 65), Missouri (H. 118, H. 119), Nebraska (Bill 131), New Hampshire (H. 62), Texas (H. 58, S. 24, S. 163).

No fair trade bills have been introduced in the legislatures of Alabama or Utah.

Amendments to or substitutes for existing fair trade laws are pending in these states:

Maryland (H. 41), New Jersey (S. 131), New York (H. 414, S. 82), Ohio (S. 263), Washington (S. 70).

National Biscuit Company Wins Shredded Wheat Decision

PHILADELPHIA: U. S. Circuit Court of Appeals for the Third Circuit reversed a former decision in the case of National Biscuit Company vs. Kellogg Company involving the use of the trade name "Shredded Wheat". The court declared that the Kellogg Company employed "unfair competition and untruthful statements to deceive the public and secure the trade which in equity and good conscience belonged to the plaintiff."

Following is an excerpt from Judge J. Warren Davis' opinion:

"The defendant (Kellogg Company) appropriated not only the name of the plaintiff's product (Shredded Wheat), but also its form and shape which has characterized the biscuit for more than forty years . . .

"In order to secure the property of the plaintiff in the name and form of its product, the defendant placed upon its cartons the words, 'The original has this signature: W. K. Kellog.' That is, defendant not only adopted the name and form of plaintiff's product, but also claimed that its product was the *original* and by implication that the plaintiff's was an *imitation*. There could have been but one object for doing this, and that was by unfair competition and untruthful statements, to deceive the public and secure the trade which in equity and good conscience belonged to the plaintiff.

". . . a decree will be entered vacating our former decree and reversing the decree of the District Court with directions to the court to enter a decree enjoining the defendant (Kellogg Co.) from the use of the name 'Shredded Wheat' as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trademark; and with further directions to order an accounting for damages and profits."

Court Upholds National Biscuit Shredded Wheat

The Federal Circuit Court of Appeals at Philadelphia on April 12 upheld the National Biscuit Co. in its suit to prevent the Kellogg Co. from using the name, "Shredded Wheat" on any of its products.

The court reversed a previous opinion upholding the U. S. District Court for Delaware. It directed the Kellogg company to refrain from advertising or offering its products for sale in the form and shape used by the biscuit company.

Judge J. Warren Davis in granting the injunction said, that the Kellogg company had appropriated not only the name Shredded Wheat, "but also its form and shape which has characterized the biscuit for more than 40 years. In order to secure the property of the plaintiff (National) and the name and form of its product, the defendant (Kellogg) placed upon its cartons the words 'The original has this signature: W. K. Kellogg.' That is, the defendant . . . claimed that his product was the original and by intimation that the plaintiff's was an imitation."

A MISNOMER: Recently when the U. S. Circuit Court in Philadelphia held that the Kellogg Company was in infringement of the trade mark, "Shredded Wheat," owned by the National Biscuit Co., it had the following to say about the name: "These threads of wheat come out or extrude from the rollers just as steel rails do when steel is passed between rollers. But it has never been suggested in making steel rails or copper wire that steel or wire was 'shredded.' Neither can it be said that wheat is 'shredded', in the plaintiff's process. It is mashed and mangled. The name at most is merely suggestive."

ADVERTISER SHORTS

In Court

After the original patents on Shredded Wheat expired in 1912, National Biscuit Co. (NBC) knew it couldn't object when other companies manufactured a similar product. But it could and it did when Kellogg Co. brought out Whole Wheat Biscuits, subtitled them "shredded wheat," added insult to injury by plastering the carton with: "The original has this signature: W. K. Kellogg."

Two years ago NBC fretted when the U. S. Circuit Court of Appeals in Philadelphia found Kellogg within its rights.

It felt better last fortnight when the same court reversed itself in words that admen found significant: "When a person after the expiration of a patent has spent such enormous sums of money . . . to create a valuable property right . . . equity today will not permit another to apply the name . . . of the merchandise to his product. . . . There could have been but one object for doing this, and that was by unfair competition and untruthful statements to deceive the public."

SHREDDED WHEAT OWNERSHIP SET

The U. S. Circuit Court of Appeals yesterday held that the National Biscuit Company is entitled to the sole use of the "Shredded Wheat" trade-mark.

In its decision the court reversed its former ruling handed down in January, 1936, when it held that the Kellogg Company was entitled to use the trade-mark because the National Company's patent on it had expired. The latest ruling, however, points out that Kellogg adopted the mark after National spent nearly

Kellogg Loses To Shredded Wheat

In a reversal of a previous decision gained in a long legal fight, a United States Court has awarded a verdict to the National Biscuit Company, against Kellogg Company, awarding rights in the name "Shredded Wheat" to National Biscuit, present owners of the Shredded Wheat Biscuit Company, which originated this product many years ago.

Kellogg Company was enjoined against use of the trade name, "Shredded Wheat," in advertising or sale in the form of the similar product of National Biscuit Company. The injunction was issued by the U. S. Circuit Court of Appeals at Philadelphia in reversing a previous decision in favor of Kellogg.

The decision says the Kellogg Company employed "unfair competition and untruthful statements to deceive the public and secure the trade which in equity and good conscience belonged to the plaintiff." Particularly cited was use of the words on the cartoons, "The original has this signature, W. K. Kellogg."

The court held this statement implied the National Biscuit product was an imitation.

"Shredded Wheat" Name and Form Cause of Lawsuit

The U. S. Circuit Court of Appeals, third circuit, last month found in favor of the plaintiff, the National Biscuit Company, in its suit against the Kellogg Company over the use of the name "Shredded Wheat" and the form and shape of the product.

The Kellogg Company has been enjoined from further use of the name, and from manufacture and sale of the product, and has been required to render an accounting to the National Biscuit Company, according to Clem Hildebrand, manager of the central agency for National Biscuit Company.

Shredded Wheat has been manufactured at Niagara Falls since 1900, Mr. Hildebrand stated, and the trade-name has become a household word.

4. The instructions contained in said letters Exhibit A and Exhibit B reach the entire selling organization of National Biscuit Company through the respective managers of its selling agencies, and to the best of my knowledge and belief have been communicated to every employee of National Biscuit Company engaged in selling its product. It is also my information and belief, based upon reports from the various agencies of the company and upon conversations with managers, that the instructions contained in said letters have been and will continue to be fully complied with.

WILLIAM W. ROSSITER.

Circular to all Agencies.

N. Y., 5/13/37.

To MANAGERS:

Some of the circulars addressed by the District Sales Managers and Managers to their organizations indicate a slight misunderstanding as to the present status of the litigation against the Kellogg Company concerning Shredded Wheat. You recently received copies of the opinion of the Circuit Court of Appeals for the Third Circuit, together with news releases. That opinion directs the issuance of an injunction but the injunction has not yet been issued by the District Court. While it is entirely proper for a successful litigant to advise his organization, and his customers also, of a court decision in his favor, care should be taken not to anticipate the completion of the case by our Legal Department.

In this connection, your communications to the trade should be confined to a statement of the fact of the decision of the Court of Appeals. You should decline to offer any suggestions as to what your customers should do with respect to the Kellogg's stocks on hand or with respect to continuing purchases and sales. Above all things, no threats of any kind should be indulged in.

The Kellogg Company is seeking a rehearing of the case and if that is denied they may appeal the case to the Supreme Court of the United States. In such event it may be several months before the case is reduced to final judgment. When that takes place you will be duly advised.

SALES DEPARTMENT,

W W Rossiter

MANAGER.

EXHIBIT "B."

Circular to all Agencies.

N. Y., 5/26/37.

To MANAGERS:

Supplementing our circular letter of May 13, 1937, please make no use whatever of the recent decision or opinion of the United States Circuit Court of Appeals for the Third Circuit in the action against the Kellogg Company concerning "Shredded Wheat".

The Kellogg Company has recently complained to the Court that an improper use has been made of the decision and opinion. So far as our investigation has revealed, this complaint is not justified. The National Biscuit Company does not wish, however, to have any of its agents or employees do anything which may possibly be construed as an improper use of the decision or opinion.

If anyone is asked about the decision or opinion or its effect, the reply should be as set forth in the last two paragraphs of the circular of May 13, 1937, reading as follows:

"In this connection, your communications to the trade should be confined to a statement of the fact of the decision of the Court of Appeals. You should decline to offer any suggestions as to what your customers should do with respect to the Kellogg's stocks on hand or with respect to continuing purchases and sales. Above all things, no threats of any kind should be indulged in.

"The Kellogg Company is seeking a rehearing of the case and if that is denied they may appeal the case to the Supreme Court of the United States. In such event it may be several months before the case is reduced to final judgment. When that takes place you will be duly advised."

AFFIDAVIT OF LEWIS CHARLES BLEIL.

IN THE UNITED STATES CIRCUIT COURT OF APPEALS,
FOR THE THIRD CIRCUIT.

No. 5801. October Term, 1936.

National Biscuit Company,
Plaintiff-Appellant,
against
Kellogg Company,
Defendant-Appellee.

STATE OF NEW YORK,
COUNTY OF NEW YORK, } ss.:

LEWIS CHARLES BLEIL, being duly sworn, deposes and says:

1. I am a route salesman employed by National Biscuit Company and I reside at Saratoga Springs, New York, and am working out of the Schenectady agency of National Biscuit Company under Mr. P. J. Beilman, manager. I have been with National Biscuit Company for twenty-one years and have been in this territory about sixteen years.

2. Among the customers which it is my duty to visit is Mr. R. J. Parry, assistant superintendent of Grand Union Tea Company, with headquarters at Glens Falls, New York, and having jurisdiction over the Grand Union Tea Company's stores in the northern district, including Glens Falls, Hudson Falls, Saratoga Springs, Plattsburg—approximately ten stores. Shortly after the decision in this case filed April 12, 1937, I had occasion to call on Mr. Parry, at which time I showed him the news release describing and quoting from the opinion of the Court. He expressed his satisfaction at not being required in the future to handle two kinds of Shredded Wheat.

3. Upon a second visit, Mr. Parry told me that a representative of the Kellogg Company had called upon him and told him it was not true that National Biscuit Company had won its case and that the Kellogg Company would continue to supply him with Shredded Wheat in any quantity he wished.

4. I have read a purported copy of a letter from J. J. Casey contained on page 3 of the affidavit of C. F. Baumgart, verified June 19, 1937, and I am the personal representative of the National Biscuit Company referred to in that letter, and the conversations narrated above are the only conversations I had with Mr. Parry concerning Shredded Wheat or the decision in this case.

5. I have read the sales department circulars dated respectively May 13th and May 26th, 1937, and have fully complied with the instructions therein contained in every respect. I have never used the decision for the purpose of furthering the sales of Shredded Wheat other than to state the facts as I have above narrated. Indeed, I have been too busy selling other products of National Biscuit Company to spend any time in attempting to make an unfair or improper use of the decision.

No. 5801. October Term, 1936.

National Biscuit Company,
Plaintiff-Appellant,

against

Kellogg Company,
Defendant-Appellee.

STATE OF NEW YORK,
COUNTY OF NEW YORK, } *ss.:*

WALTER S. LARSON, being duly sworn, deposes and says:

1. I am sales manager of the National Biscuit Company agency in Williamsport, Pennsylvania, and have held that position since January, 1931, and have been with the company since 1918. I have read the letter from Williamsport quoted on page 4 of the affidavit of Crichton Clarke, verified June 28th, 1937, in which the statement is made that National Biscuit Company salesmen are giving the impression to merchants in my territory that they will be subject to prosecution for handling Kellogg's Whole Wheat Biscuit. I can say positively that this statement is wholly untrue. I have six salesmen under me, all of whom I know well and all of whom have been carefully instructed to make no derogatory statements concerning the Kellogg Company or the decision in this litigation, and the instructions contained in the sales department

circulars of May 13th and May 26th, 1937, respectively, have been strictly adhered to by me and by all salesmen under my jurisdiction.

WALTER S. LARSON.

AFFIDAVIT OF WILBUR A. MOSER.

IN THE UNITED STATES CIRCUIT COURT OF APPEALS,
FOR THE THIRD CIRCUIT.

No. 5801. October Term, 1936.

National Biscuit Company,
Plaintiff-Appellant,

against

Kellogg Company,
Defendant-Appellee.

STATE OF NEW YORK,
COUNTY OF NEW YORK, } *ss.:*

WILBUR A. MOSER, being duly sworn, deposes and says:

1. I reside in Uniontown, Pennsylvania, and am sales manager of the National Biscuit Company agency located in that city. I have been in that position since January 1st, 1927, and have been with the company in the sales department since April, 1915. I have read page 6 of the affidavit of C. F. Baumgart, verified June 19th, 1937, in which is quoted a letter from O. K. Berry, district sales manager of Kellogg Sales Company, addressed to Mr. Crichton Clarke, in which the statement is made that "the man in charge of National Biscuit Company's sales in the Uniontown area addressed the United Quality Food Stores' representatives, which consists of thirty or thirty-five retailers, and stated that Kellogg was no longer permitted to

make and sell Kellogg's Shredded Whole Wheat Biscuit.

2. The statement quoted is wholly untrue. There are two groups of retail stores in Uniontown, one called United Quality Stores and the other called Quality Food Stores. The former consists of thirty or thirty-five stores, the latter of about fourteen stores. The United Quality Stores hold meetings every Tuesday evening and I have attended every meeting for at least three years. I have never addressed the meeting and I have never made the statement that Kellogg is no longer permitted to make and sell Shredded Whole Wheat Biscuit, nor any statement substantially to that effect, nor any statement about the litigation between National Biscuit Company and Kellogg Company other than in private conversation to tell customers of the fact of the decision of April 12th, 1937. No other representative or official of the National Biscuit Company has ever addressed a meeting of United Quality Stores at any time within the past three years, and, to the best of my knowledge and belief, no such statement by any representative of National Biscuit Company has been made either publicly or privately in my territory.

3. The Morning Herald and the Evening Genius, both daily newspapers of Uniontown, printed on April 20th, 1937, a statement of the fact of the decision of the Court with extracts from the opinion so that members of the trade reading the daily papers were advised of the fact.

4. I have received and read the sales department circulars dated respectively May 13th and May 26th, 1937, and have communicated the contents of the same to the salesmen under my jurisdiction. No statement

in any way derogatory or damaging to the Kellogg Company has been made in my territory to the best of my knowledge and information.

WILBUR A. MOSER.

FOR THE THIRD CIRCUIT.

No. 5801. October Term, 1936.

National Biscuit Company,
Plaintiff-Appellant,

against

Kellogg Company,
Defendant-Appellee.

STATE OF NEW YORK,
COUNTY OF NEW YORK, } *ss.:*

SYDNEY P. ALBERT, being duly sworn, deposes and says:

1. I reside in Brockton, Massachusetts, and I am sales manager of the National Biscuit Company agency located in that city. I have been in that position since October 1st, 1936, and have been with the company continuously in the sales department since 1919.

2. I have read that portion of the affidavit of C. F. Baumgart, verified June 19th, 1937, relating to a report from Peter B. James, of Brockton, in which it is stated that we had requested the large outlets in Brockton to remove Kellogg's Shredded Wheat Biscuit from the shelves, claiming the same illegal. I am the person who regularly contacts the larger retail outlets in my territory in and about Brockton which handle Shredded Wheat Biscuit and also handle the Kellogg products. The statements just referred to found on page 10 of the said affidavit are wholly untrue. The most that I have said to any customer of

National Biscuit Company concerning the decision of April 12th, 1937, is to inform them of the fact thereof.

3. I have received and read the sales department circulars dated respectively May 13th and May 23d, 1937, and have communicated the contents thereof to all of the salesmen under my jurisdiction, of which there are nine. I state positively that the instructions in those circulars have been strictly complied with by me and to the best of my knowledge and belief by each and every one of the salesmen under my jurisdiction.

SYDNEY P. ALBERT.

2. On May 13, 1937, upon the instructions of counsel for National Biscuit Company, I prepared and caused to be mailed to the manager of each selling agency of National Biscuit Company, of which there are approximately 260 throughout the United States, a circular letter of which a true copy is hereto annexed and marked Exhibit A.

3. On May 26, 1937, upon similar instructions from counsel for National Biscuit Company, I prepared and caused to be mailed to the managers of all sales agencies a letter of instructions a true copy of which is annexed hereto and marked Exhibit B.

AFFIDAVIT OF BENJAMIN L. MINGES.

IN THE UNITED STATES CIRCUIT COURT OF APPEALS,
FOR THE THIRD CIRCUIT.

No. 5801. October Term, 1936.

National Biscuit Company,
Plaintiff-Appellant,
against
Kellogg Company,
Defendant-Appellee.

STATE OF NEW YORK,
COUNTY OF NEW YORK, } *ss.:*

BENJAMIN L. MINGES, being duly sworn, deposes and says:

1. I am sales manager in charge of the sales agency of National Biscuit Company in Wilmington, Delaware. I have been with National Biscuit Company Sales Department since 1921 and have been manager at Wilmington since February, 1934. I have read the purported letter set forth on page 4 of the affidavit of Crichton Clarke, verified June 28, 1937, in which it is stated that National Biscuit Company salesmen made certain statements at the Haldas Store, Fifth and King Streets, Wilmington. I am the person who visits the Haldas Store and I recall being in the store at the time the Kellogg Company's salesman was selling a bill of goods to the buyer of that store. I heard him mention Shredded Wheat and asked him if Kellogg

sold Shredded Wheat. He said: "Yes, lots of it." I said: "I thought there was only one Shredded Wheat." I said that I had seen in the paper that the Kellogg Company had lost the suit of the National Biscuit Company against them. He said: "No, that is not right. We are going to continue to sell Shredded Wheat right along."

2. Later, as I was informed by the buyer, the Kellogg salesman inquired who I was, indicating that he did not know at the time I was the National Biscuit Company salesman. I did not make the statement attributed to me in the said affidavit; I did not say that the Supreme Court had reversed the decision of the Court in Philadelphia; I did not say that the Kellogg Company would have to take Shredded Wheat off the market, and I did not say they would have to pay a million dollars in damages, nor did I make any statement in substance like those quoted in the said affidavit.

3. Upon a second interview with the buyer of the Haldas Store, I showed him a small clipping from a Philadelphia paper announcing that the Circuit Court of Appeals had reversed itself and found in favor of the National Biscuit Company. I made no further comment upon the decision either to the Haldas Store buyer or to any other customer of National Biscuit Company or of the Kellogg Company.

4. I have received and read the sales department circulars dated May 13 and May 26, 1927, respectively and have communicated the contents of the same to all of the salesmen under my jurisdiction, of whom there are six. From my knowledge of the activities of these salesmen I verily believe that the instructions contained in the said circulars have been strictly complied with, and that no derogatory statements of any kind concerning the Kellogg Company as to the effect of the

said decision have been made by me or any of my salesmen.

THIRD JUDICIAL CIRCUIT.

I, WM. P. ROWLAND, clerk of the United States Circuit Court of Appeals for the Third Circuit, DO HEREBY CERTIFY the foregoing to be a true and faithful copy of the original transcript of record (Volumes I, II and III) and proceedings in this court (Volume IIIa) in the case of National Biscuit Company, Plaintiff-Appellant, v. Kellogg Company, Defendant-Appellee, No. 5801, on file, and now remaining among the records of the said court, in my office.

IN TESTIMONY WHEREOF, I have hereunto subscribed my name and affixed the seal of the said court, at Philadelphia, this
(Seal) eleventh day of August, in the year of our Lord one thousand nine hundred and thirty-seven and of the Independence of the United States the one hundred and sixty-second.

WM. P. ROWLAND,
Clerk of the U. S. Circuit Court of Appeals, Third Circuit.

[fol. 2244] IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT, OCTOBER TERM, 1935

No. 5801

NATIONAL BISCUIT COMPANY, Plaintiff-Appellant,

vs.

KELLOGG COMPANY, Defendant-Appellee

PETITION TO WITHHOLD INJUNCTION MANDATE

To the Honorable the Judges of the Circuit Court of Appeals:

Your petitioner, Kellogg Company, respectfully represents:

1. On April 12, 1937 this Court on a rehearing of its former decision, directed an interlocutory decree in the following language:

"* * * a decree will be entered vacating our former decree and reversing the decree of the District Court with directions to the court to enter a decree enjoining the defendant from the use of the name 'Shredded Wheat' as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trademark; and with further directions to order an accounting for damages and profits."

[fol. 2245] 2. Thereafter your petitioner duly moved this Court for rehearing of its said decision. The said rehearing was denied.

3. Thereafter your petitioner made application to the United States Supreme Court for the issuance of a writ of certiorari to review such interlocutory decision and the said Supreme Court declined to entertain the said writ and likewise denied a petition for rehearing and application to withhold its order denying the writ of certiorari.

4. Your petitioner believes that the Supreme Court of the United States declined to entertain the said writ upon the grounds as specified in the case of The Hamilton-Brown Shoe Company v. Wolf Brothers & Company, 240 U. S. 251, 258, namely, that the said decree being of an interlocu-

tory nature only, should not at this time be reviewed, but that such review, if any, should be withheld until the said decree became final upon the final accounting thereby ordered.

5. The issuance of an order herein and the enforcement of a mandate of injunction pending the accounting to be had between the parties, would be an extreme hardship to the petitioner. For this loss, pending final decree and possible review by the United States Supreme Court, no adequate compensation to your petitioner is possible.

6. The controversy involved in this litigation commenced in January, 1922, and petitioner has so far never been enjoined in the manufacture and sale of this product. A delay of the enforcement of such injunction pending the limited time requested can result in no harm to respondents. Peti- [fol. 2246] tioner is an old established concern, having been engaged in business through itself and predecessors for over thirty years, is amply financially responsible, and maintains plants, agencies, and distributing centers throughout the Nation and in Europe, and is fully able to answer for any damages that might result to respondents by reason of such stay. Counsel is now preparing for and will proceed diligently in the making and stating of such account in the form as directed by the decree.

7. There is now pending before the Privy Council at London an appeal from a decision of the Supreme Court of Ontario, Canadian Shredded Wheat Company, Ltd. v. Kellogg Company of Canada, Ltd., 1936 Ont. Rep. 613, which has been set for a hearing, as your petitioner is informed, by the said Privy Council for the 25th day of November, 1937, and which is an appeal by respondents herein from a judgment of the said Supreme Court of Ontario denying to the said respondents an injunction in the form directed by this Court in this case upon a practically identical state of facts. The Privy Council, as a court of last resort, is, therefore, now about to hear and determine the identical issue of law which under its rules of practice the Supreme Court of the United States declined to hear at an interlocutory state of the proceedings.

8. In view of the instructions of the United States Supreme Court as outlined in John Simmons Company v.

Grier Brothers Company, 258 U. S. 82, the said stay is likewise requested until such time as the said Privy Council shall have passed upon the respondents' appeal which is now before it, for the reason that if that decision be affirmed, counsel intend to apply for a rehearing or review herein in [fol. 2247] the manner as indicated by the Supreme Court in such decision.

Wherefore, your petitioner prays that this Court in the exercise of its discretion and in accordance with the provisions of the Act of February 13, 1925, Chap. 229, Sec. 8 (d), 43 Stat. 936, withhold its injunction mandate pending the decision of the Privy Council and pending the accounting and the entry of final decree herein, or authorize an application to the District Court to stay the operation of the injunction.

And your petitioner will ever pray.

Kellogg Company, by Crichton Clarke, of Counsel.

[fol. 2248] State of Pennsylvania,
County of Philadelphia, ss:

Crichton Clarke, being duly sworn according to law, deposes and says that he makes this affidavit on behalf of petitioner, Kellogg Company, and is duly authorized to do so, that the facts stated in said petition are true to the best of his knowledge, information and belief and that said petition is presented to this Court in good faith and not for the purpose of delay.

Crichton Clarke.

Sworn to and subscribed before me this 10th day of November, A. D. 1937. John F. Solomon, Notary Public. My commission expires March 9, 1939. (Seal.)

[fol. 2249] [Endorsed:] In the United States Circuit Court of Appeals for the Third Circuit. October Term, 1935. No. 5801. National Biscuit Company, Plaintiff-Appellant, vs. Kellogg Company, Defendant-Appellee. Petition to Withhold Injunction Mandate. Received & Filed Nov. 10, 1937. William P. Rowland, Clerk. Crichton Clarke, Attorney for Petitioner, 36 W. 44th Street, New York City.

[fol. 2250] UNITED STATES OF AMERICA, ss:

The President of the United States of America to the Honorable the Judges of the District Court of the United States for the District of Delaware, Greeting:

Whereas, lately in the District Court of the United States for the District of Delaware, before you or some of you, in a cause between National Biscuit Company, plaintiff below (appellant) and Kellogg Company, defendant below (appellee)—No. 980 in Equity—a decree was entered in said District Court on January 23, 1935 which decree is of record in the office of the clerk of said District Court, to which reference is hereby made, and the same is hereby expressly made a part hereof.

[fol. 2251] And whereas, in the present term of October, in the year of our Lord one thousand nine hundred and Thirty-six, the said cause came on to be heard before the said United States Circuit Court of Appeals on the said transcript of record and was argued by counsel:

On Consideration Whereof, it is now here ordered, adjudged and decreed by this court that the decree of the said District Court in this cause be, and the same is hereby reversed, with costs, with direction to the said District Court to enter a decree enjoining the defendant from the use of the name "Shredded Wheat" as its trade name and from advertising or offering for sale its products in the form and shape of plaintiff's biscuit in violation of its trademark: with further directions to the said District Court to order an accounting for damages and profits. And the said Plaintiff-Appellant, National Biscuit Company, recover against the said Defendant-Appellee, Kellogg Company in the sum of Ninety-Eight and 60/100 Dollars ($98.60) for its costs herein expended and have execution therefor.

Philadelphia, April 12, 1937.

You, therefore, are hereby commanded that such execution and further proceeding be had in said cause, as according to right and justice, and the laws of the United States, ought to be had, the said appeal notwithstanding.

Witness the Honorable Charles Evans Hughes, Chief Justice of the Supreme Court of the United States, at Phila-

delphia, the 7th day of December, in the year of our Lord one thousand nine hundred and thirty-seven.

Costs of Plaintiff-Appellant National Biscuit Company

Clerk,	$78.60

PETITION OF PLAINTIFF-APPELLANT TO RECALL MANDATE AND TO CLARIFY SAME—Filed March 4, 1938

Thomas G. Haight, Drury W. Cooper, Charles A. Vilas, Counsel for Plaintiff-Appellant.

[fol. 2253] UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

No. 5801

NATIONAL BISCUIT COMPANY, Plaintiff-Appellant,

vs.

KELLOGG COMPANY, Defendant-Appellee

Petition

Petition of plaintiff-appellant, National Biscuit Company, for an order of this Court recalling its mandate is-

sued in the above entitled cause on December 8, 1937, and for clarification of said mandate.

Petitioner respectfully represents:

1. On April 12th, 1937, this Court filed its written opinion directing reversal of the judgment of the District Court of Delaware in the above entitled action and the issuance of an injunction. On December 8th, 1937, the mandate of this Court, in pursuance of its opinion, was duly issued and transmitted to the District Court whereby the District Court was directed to

"enter a decree enjoining the defendant from the use of the name 'Shredded Wheat' as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark,"

[fol. 2254] and also to order an accounting for damages and profits.

2. On January 5th, 1938, in pursuance of said mandate, the District Court duly entered its decree, a true copy whereof is hereto attached and marked Exhibit A; and on January 7th, 1938, there was issued out of said Court a writ of injunction, a true copy whereof is hereto attached and marked Exhibit B, which said writ of injunction was duly served upon the defendant on January 8th, 1938.

3. Counsel for the defendant, Kellogg Company, during the arguments as to the form of the said decree and on other occasions has contended in the District Court and still contends that the effect of the said mandate and writ of injunction is to forbid the defendant from selling its product only when the trade name "Shredded Wheat" is applied to a biscuit in the form and shape of plaintiff's biscuit and is accompanied by a representation of a dish with biscuit in it. Defendant further contends that it is not enjoined from making its biscuit in the form and shape of plaintiff's biscuit nor from calling it "Shredded Wheat" unless at the same time it uses upon its cartons plaintiff's trade mark consisting of a dish with two biscuit in it. Defendant has expressed the intention in written and verified petitions filed with the District Court of continuing to manufacture and sell its biscuit in the form and shape of plaintiff's biscuit notwithstanding the decision and mandate of

this Court and the injunction issued pursuant thereto, and, [fol. 2255] as plaintiff is informed and believes, the defendant is now advertising and offering for sale its said biscuit made in the form and shape of plaintiff's biscuit in cartons closely resembling those used by it at the time of and after the bringing of this action.

That is to say, defendant so construes the mandate of this Court as to permit it to sell the same biscuit as it was selling before this Court's decision, and to call it "Shredded Wheat," provided only it does not mark the containing cartons with a dish with biscuit in it.

4. Plaintiff is further informed and believes that the District Judge for the District of Delaware is in doubt as to whether the construction placed by the defendant upon the mandate of this Court and the injunction issued pursuant thereto be not the correct construction as is evidenced by the following quotation from an oral argument which took place before the said District Judge on February 1st, 1938:

"The Court: Do you go this far, Mr. Vilas, that the dedendant Kellogg is enjoined from making the pillow shaped biscuit?

"Mr. Vilas (plaintiff's counsel): There is no doubt about it. I do not know why they should use the language they do, if they did not mean what they said.

"The Court: There may be an honest difference right there."

5. The plaintiff is advised by its counsel and believes that it was the intention of this court clearly expressed in the said opinion of April 12th, 1937, that the defendant should be enjoined from doing each of the three things mentioned in that portion of the opinion quoted in para- [fol. 2256] graph 3 hereof, namely, that it was to be enjoined from using the words "Shredded Wheat" as its trade name, and also from advertising or offering for sale its biscuit in the form and shape of plaintiff's biscuit, and also from making use of the plaintiff's registered trade mark consisting of a dish with two biscuit in it, and plaintiff is further advised by its counsel and believes that unless the said mandate of this Court be promptly clarified the defendant intends to and will continue to manufacture, advertise and offer for sale its biscuit in the form and shape

of the plaintiff's biscuit to the great damage of the plaintiff.

6. The matter is of further importance because an accounting of profits and damages has been referred to a Master, but has not proceeded beyond the issuance of an order upon defendant to state its account of profits and damages; and the scope of the accounting will be obscure until the direction of this Court is made clear.

Wherefore, plaintiff prays that this Court forthwith enter its order recalling the said mandate for the purpose of clarification; and that it thereupon proceed to amend and clarify its said mandate in such manner and form as to set at rest any doubt which either of the parties or the District Judge may have concerning the meaning and intent of this Court's decision; and for such other and further relief in the premises as to the Court may seem just and proper.

Respectfully submitted, National Biscuit Company,
Plaintiff, by (Sgd.) Charles A. Vilas, Its Solicitor.

Dated March 4, 1938.

[fol. 2257] State of New York,
County of New York, ss:

Charles A. Vilas, being duly sworn, deposes and says that he is one of the counsel for National Biscuit Company, plaintiff above named, and has been in charge of the above entitled case from its inception in 1932 and is familiar with all the proceedings had herein; that he has read the foregoing petition, knows the contents thereof and that the same is true except as to those matters therein stated to be alleged upon information and belief and as to those matters he believes it to be true; that the reason this verification is made by deponent and not by the petitioner is that the petitioner is a corporation of the State of New Jersey, and deponent is counsel therefor. This petition is interposed in good faith and not for the purpose of delay and the deponent believes that the said petitioner has good ground in law for presenting the same.

(Sgd.) Charles A. Vilas.

Sworn to before me this 4th day of March, 1938. Frederick C. Walter, Notary Public, Queens County. Queens Co. Clk's No. 1753 Reg. No. 1656. N. Y. Co. Clk's No. 214 Reg. No. 8W125. Commission expires March 30, 1938. (Seal.)

No. 980. In Equity.

NATIONAL BISCUIT COMPANY, Plaintiff,

v.

KELLOGG COMPANY, Defendant

And now, to wit, this—5th—day of January, A. D. 1938, the mandate of the United States Circuit Court of Appeals for the Third Circuit on the appeal of the plaintiff heretofore taken in the above entitled cause having been transmitted to the clerk of this court and filed herein on the eighth day of December, A. D. 1937 and the same having been brought to the attention of the court, in compliance therewith, it is now, on motion of Hugh M. Morris, Esq., solicitor for plaintiff,

Ordered, adjudged and decreed by the court as follows:

(1) That the decree of this court entered herein on the twenty-third day of January, A. D. 1935 dismissing the bill of complaint be and the same is hereby vacated and set aside and the bill of complaint reinstated.

(2) That a perpetual injunction issue out of and under the seal of this court directed to said defendant, Kellogg Company, its officers, agents, servants, employees and at-
[fol. 2259] torneys and those in active concert or participating with them, its successors and assigns, restraining and enjoining it and them, and each of them, from the use

of the name "SHREDDED WHEAT" as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark.

(3) That the plaintiff do recover from the defendant the gains, profits and advantages which the said defendant has derived, received, earned or made or which it shall derive, receive, earn or make by reason of the use by defendant of the name "SHREDDED WHEAT" as its trade name and, advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark, as well as any and all damages which the said plaintiff has sustained by reason of such use or either of them.

(4) That this cause be and the same is hereby referred to—Charles F. Richards, Esq., as special master to take, state and report to this court, with all convenient speed, an account of said profits and damages, and that upon said accounting the testimony heretofore taken by either party in this cause may be used by either party and considered by the master.

(5) That plaintiff have judgment against defendant for the costs awarded to it by the Circuit Court of Appeals for the Third Circuit in the sum of Ninety-eight Dollars and [fol. 2260] Sixty Cents ($98.60) together with its costs in this court up to and including the entry of this decree, including costs incurred by the plaintiff for printing the transcript of record on appeal, said costs to be taxed by the clerk.

(6) That this court reserves for further consideration upon the coming in of the master's report all questions pertaining to costs hereinafter accruing and damages or profits.

(Sgd) John P. Nields, J.

No. 980. In Equity

NATIONAL BISCUIT COMPANY, Plaintiff,

v.

KELLOGG COMPANY, Defendant

UNITED STATES OF AMERICA
District of Delaware, ss:

The President of the United States of America to Kellogg Company, a Corporation of the State of Delaware, Greeting:

Whereas, in the above entitled cause, lately pending in the District Court of the United States for the District of Delaware, it was, on the fifth day of January, A. D. 1938, ordered, adjudged and decreed by the Court that a perpetual injunction issue out of and under the seal of said court directed to said defendant, Kellogg Company, its officers, agents, servants, employees and attorneys and those in active concert [fol. 2262] or participating with them, its successors and assigns, restraining and enjoining it and them, and each of them, from the use of the name "SHREDDED WHEAT" as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark;

Now, therefore, know ye, that you, the said Kellogg Company, your officers, agents, servants, employees and attorneys and those in active concert or participating with you, your successors and assigns, and each of you, are hereby strictly restrained and enjoined under the pains and penalties that may fall upon you in case of disobedience from the use of the name "SHREDDED WHEAT" as your trade name

and from advertising or offering for sale your product in the form and shape of plaintiff's biscuit in violation of its trade mark.

Witness the Honorable John P. Nields, Judge of said court, at Wilmington, in said district, this seventh day of January, A. D. 1938, and the Independence of the United States of America the one hundred and sixty-second.

No.—

NATIONAL BISCUIT COMPANY, Plaintiff-Appellant,

v.

KELLOGG COMPANY, Defendant-Appellee

Defendant's Motion and Petition for Rehearing

May it Please the Court:

Plaintiff has petitioned this Court to recall its mandate herein and to send down a new mandate, in substance, enjoining defendant (a) from selling its small sized pillow shaped shredded wheat biscuit at all, (b) from calling any shape of biscuit by the "tradename" "shredded wheat" and (c) from displaying on its package a picture of a plate containing shredded wheat biscuit, or from doing any of these three acts.

The case came on for argument before Judges Buffington and Davis on March 11, 1938, Judge Thompson being absent, and the Court granted the defendant permission to present an alternative form of order and any motions or petitions desired to be presented on behalf of defendant.

(a) The jurisdiction of the Court to Entertain Plaintiff's petition.

The term of Court at which the order of this Court, dated April 12, 1937, was entered having long since expired and the mandate of this Court having gone down in December, 1937, and pursuant thereto a decree having been entered by the District Court in January, 1938, it is sub-
[fol. 2271] mitted that there is grave doubt as to the jurisdiction of this Court to entertain plaintiff's petition.

Bronson v. Schulten, 104 U. S. 410, 415;

Hart v. Wiltsee, 25 Fed. (2nd) 863, (C. C. A. 1) 1928;

Reynolds v. Manhattan Trust Company, 109 Fed. 97 (C. C. A. 8) (1901);

Foster Bros. Mfg. Co. v. National Labor Relations Board, 90 Fed. 2nd 948, (C. C. A. 4) (1937);

Arcoil Mfg. Co. v. American Ins. Co., 87 Fed. 2
206, 207 (C. C. A. 3rd) (1936);
E. G. Stande Mfg. Co. v. Labombardie, 247 Fe
879, 880 (C. C. A. 1) (1918);
Hawkins v. C. C. C. & St. L. Ry. Co., 99 Fed. 32
323 (C. C. A. 7) (1900);
Casey v. Sterling Cider Co., 15 Fed. 2nd 5
(C. C. A. 1) (1926).

In fact, the exercise by this Court of such jurisdictio
would be an exercise of original not appellate jurisdiction
The Court, in ruling upon appellant's petition, would no
be reviewing any order, judgment or decree of the Distric
Court. It would be changing the decree entered by the
District Court, pursuant to the mandate of this Court,
but not in conformity with any statute concerning appeals
or review or conferring upon it jurisdiction so to do. There
is no appeal pending in this Court from the decree of the
District Court entered pursuant to the mandate. In fact,
the Court is asked to enter an order in a case no longer
pending here where its mandate has gone down to the lower
court and has been literally executed by that court, and
to exercise jurisdiction upon an original petition filed in
this Court without a record of the proceedings had in the
court below since the filing of the mandate there.

We were first informed on March 18th, 1938 that an ex
parte order was obtained on March 5, 1938 extending the
October 1937 term of the Court in this case until the dis-
position of the plaintiff's petition. A copy of this order
is attached as Appendix B. We first procured a copy of
this order on March 19, 1938. We have not had sufficient
time to examine into the validity of this order, but that
question probably is not important. For, while in form
plaintiff seeks merely a clarification of the mandate
[fol. 2272] inasmuch as the mandate follows precisely the
opinion delivered at the March 1937 term, in substance
what plaintiff seeks is a modification of the opinion and the
order of this Court made at the March 1937 term long
since expired. In fact, we submit that plaintiff's petition
cannot be granted without a modification of the opinion
and the order of reversal and remandment, otherwise the
mandate will vary from the opinion and judgment. Under
the authorities cited above, plaintiff's petition should not
be granted.

(b) Defendant Petitions for a Rehearing

If, however, the Court decides to entertain plaintiff's petition and to determine it, the defendant requests a rehearing of this cause. In this connection, it is submitted there is the same jurisdiction in this Court to entertain a petition for rehearing now as there is to entertain and decide plaintiff's pending petition to recall the old mandate and send down a new mandate to the District Court.

Counsel are impelled further to urge a rehearing, by reason of the persuasive and highly authoritative opinion recently rendered by the Privy Council of Great Britain, Lords Atkin, Thankerton, Russell of Killowen, Wright and Maugham, in which that learned Court in passing upon the identical issues involved in this litigation and between subsidiaries of the same parties, holds that the words "Shredded Wheat" have not acquired a secondary meaning, and that the sale of defendant's biscuits under the designation "Kellogg's Shredded Whole Wheat Biscuit," either in or separate and apart from their cartons, does not constitute unfair competition with plaintiff or "passing off."

We request the Court to give attention particularly to the final paragraph of the opinion of the Privy Council, reading as follows:

"One further observation their Lordships desire to make. Litigation has taken place in the United States of America in which a company called National Biscuit Company sought to restrain a company called Kellogg Company from using the words 'Shredded Wheat'. The action was dismissed by decree of the U. S. District Court for the District of Delaware; and on appeal to the U. S. Circuit Court [fol. 2273] of Appeals for the Third Circuit, the decree was affirmed. Subsequently on reargument before the same Judges, that decision was reversed, and a decree was entered 'enjoining the defendant from the use of the name "Shredded Wheat" as its trade name, and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark. Their Lordships can only (but with the greatest respect for that Court) express the view that if the facts of that case were similar in all respects to the facts of the present case, they prefer the first judgment of the Circuit Court of Appeals to its later decision."

The issues in both cases are of law rather than fact and the facts of both cases are the same. In fact, in the American trademark registrations, plaintiff's predecessor actually disclaimed any exclusive rights in the name and form or shape of the pillow-shaped shredded wheat biscuit, as will presently appear. For the purposes of this case, the Canadian and American law should be the same, and defendant should have the same right to operate in the United States that it has in Canada under the Privy Council judgment.

As the Privy Council opinion by Lord Russell is a better petition for rehearing and a better brief for defendant than counsel could hope to write, we have attached the same hereto as Appendix A and have incorporated the same herein and we earnestly invite the attention of the Court thereto.

In any event, if the Court determines it has jurisdiction, it should either grant rehearing, or deny plaintiff's petition leaving the present mandate undisturbed.

I

The present mandate permits the defendant to make and sell the pillow shaped biscuit. If the Court decides to issue a new mandate, it also should provide that the defendant has the right to make and sell the pillow shaped biscuit.

If the defendant is to be enjoined from manufacturing and selling a small-sized pillow shaped shredded wheat bis- [fol. 2274] cuit, irrespective of the name applied thereto or the character of the carton containing the same, and irrespective of whether it ultimately goes to home or restaurant trade (an unprecedented form of injunction), such an injunction must be based solely on the principles of unfair competition on the theory that defendant was passing-off its biscuit as the biscuit of the plaintiff. Such an injunction would not be based upon any principles of trade name or trade mark.

Defendant contends that it should not be enjoined, and the mandate did not direct that it be enjoined, from manufacturing and selling a pillow shaped shredded wheat biscuit in the form, shape and size now being manufactured by it, for the following reasons:

1. As a matter of substantive law, defendant has a right to manufacture and sell a pillow shaped shredded wheat biscuit in the form, shape and size now being manufactured and sold by it because such a biscuit was formerly manufactured under the Perky patents which have expired, and the testimony in this case showed that such form is functional, and the District Court so found.

Privy Council Judgment, Appendix A;
Singer v. June, 163 U. S. 169;
Shredded Wheat Company v. Humphrey Cornell Company, 250 Fed. 960 (C. C. A. 2, 1918).

In the Humphrey Cornell case, relating to the right to sell shredded wheat biscuit in the pillow shaped form, the Court stated in part:

"It is in cases where the connotation of origin arises, not from verbal description, but only from the appearance of the article, that the trouble arises in application, because the appearance must in some way be changed, or the article must be wrapped or marked. Thus has arisen the principle often applied in this court that minor, or 'non-functional,' changes in appearance may be required, so long as the substantial elements are left in the public domain * * * Under [fol. 2275] the guise of protecting against unfair competition, we must be jealous not to create perpetual monopolies.

"We do not see any possible change in the appearance of the biscuit itself which would be of enough service to the plaintiff to justify its imposition upon the defendant. Concededly, variation could be enforced only in its form, color, or size. As to form, the plaintiff appears to us finally concluded by its own design patent. Whether or not the evidence might have allowed us to prescribe some variation in the form, had that form been only the result of the plaintiff's original adoption, we do not say. Fox v. Hathaway, 199 Mass. 99, 85 N. E. 417, 24 L. R. A. (N. S.) 900, suggests that we might have found a way out. But the plaintiff's formal dedication of the design is conclusive reason against any injunction based upon the exclusive right to that form, however necessary the plaintiff may find it for its protection. As to color, also, we feel ourselves limited, because, while the shade of brown depends upon the baking, the plaintiff's own biscuits vary within appreciable limits, and to require the defendant to adopt a shade different

enough for commercial distinction would be to force them to bake their biscuits so that they would be repellant to most tastes. It would, so far as we can see, in effect, either terminate or hopelessly cripple any competition between the two parties.

"With size it is perhaps different, for we are not satisfied that the added cost of turning out a smaller biscuit would be substantial, per pound of shredded wheat."

The defendant complied with the Humphrey-Cornell decision by packing all biscuit for both home and restaurant trade in distinctive cartons. Defendant went even further than that decision required it to go, by making a biscuit differing in size from plaintiff's original biscuit. The testimony shows that defendant's biscuit is small than plaintiff's original biscuit. Plaintiff's original biscuit is ¾" x 2½", and defendant's 2⅝" x 2¼". Plaintiff manufactured its biscuit only in the 3¾" x 2½" size until five years after defendant's product was placed upon the market. Thereafter plaintiff manufactured a portion of its biscuit for restaurant trade of substantially the same size as defendant's, thus cancelling [fol. 2276] the difference in size between plaintiff's and defendant's biscuit. R. I, p. 204 (from the findings of the Trial Court). Of course, plaintiff cannot complain of similarity in size, when it is the imitator in that respect, and its imitation cancelled the size difference originally existing.

The unreversed findings of fact below hold clearly that the form of the biscuit as produced by the patent-expired machines is functional and is the mechanically necessary product of the patent-expired machines. The District Court held and other cases have also established as a fact (Shredded Wheat v. Humphrey-Corneli, 250 Fed. 960) that the rectangular shape of the product with shreds forming a truss-like arch between the sides is the only practical shape in which the biscuit can be made and the findings of the District Court in this respect were not reversed by this Court. The opinion in the Humphrey-Cornell case is the basis of a statement of the law by Nims on Unfair Competition and Trade Marks (3rd Edition), P. 936, as follows:

"The patents under which the Shredded Wheat Co., manufactured its biscuits had expired. While it was pos-

sible for it to compel competitors to market their biscuits in cartons which would differentiate them from its own biscuits, it was found impossible to change the appearance of the biscuits themselves so as to make them distinguishable. Defendant was ordered to mark by a wrapping, tag, or brand or by symbol impressed in the substance all of their biscuits which would reach the ultimate consumer outside the cartons. The injunction provided for relief for defendants at the end of six months, if, after a trial they showed they could not comply with this provision and continue in competition with plaintiff."

The necessary proof was supplied in this case, and plaintiff in effect conceded the fact by contending that defendant should make some other shape of biscuit because there was no other way than that which defendant had already used (difference in size), to distinguish the biscuit in issue.

Any other form of biscuit lacks the quality of strength, lightness and crispness which characterizes the regular [fol. 2277] product of the patent-expired machinery. The proof establishing this was so clear that the court below indicated its belief that if the same proof had been adduced in the Humphrey-Cornell case, the defendant there would not have been required even to mark its biscuit.*

---

*R. V. I, p. 221, from the opinion of the District Court:

"By making its biscuit substantially smaller than plaintiff's, and using individual cartons, defendant has met the requirements of the decree of the Circuit Court of Appeals for the Second Circuit in the Ross case (i. e. Shredded Wheat Co. v. Humphrey-Cornell). In this case the proof fully confirms the testimony of Andrew Ross that the biscuit itself cannot be branded or marked. With each biscuit distinctively marked by carton and by size, there can be no excuse for confusion or deception. Had the proof in this case as to marking been before the Court of Appeals in the Ross case the opinion of Judge Ward would doubtless have been the opinion of the Court."

R. V. I, p. 201, the Trial Court quoting from Judge Ward in Humphrey-Cornell:

"Moreover, I think that the form and size of the biscuit as always made by the complainant are functional, and that

The testimony in support of these conclusions is at R. II, pages 1119, 1131, and 1144.

It thus appears clearly that no other form or shape of the biscuit is practicable. The defendant having established the distinctive appearance of its biscuit by reducing its size has met the requirements of the Humphrey-Cornell case. This leaves the defendant with the indisputable and conceded right (plaintiff's brief on appeal p. 34, post, p. 21) to make and sell the biscuit.

But if there should be any doubt as to whether dissimilarity in size and in packaging sufficiently differentiates defendant's product from the plaintiff's, then it is submitted that the Court instead of enjoining defendant from selling the small pillow shaped form of biscuit, should specify such further precautions, if any, as would prevent alleged unfair competition in supplying hotel and restaurant trade, without harming the defendant in its indispu-[fol. 2278] table right to compete with plaintiff for such trade, and conditioned on plaintiff ceasing to supply the restaurant trade with a small sized biscuit copied after defendant's.

Even if the form of the biscuit should be determined to be non-functional, nevertheless defendant's use of the form should not be absolutely enjoined. In Coca-Cola Co. v. Gay-Ola Co., 200 Fed. 720 (C. C. A. 6th), it was determined that the color of an imitation product resembling Coca-Cola was not functional (200 Fed. 724) and was adopted for the purpose "of making the two articles look just alike" (200 Fed. 724). Yet the Court held that as to the bottling part of the output defendant could provide reasonably efficient means of notice and probably prevent deception by stamping and labeling the bottles with the name of the product (200 Fed. 725). Upon subsequent appeal (211 Fed. 942, 944) the product was allowed to be marketed in bottles prominently marked with the name of the product.

---

imitation of these features is no evidence of unfair competition. The form evidently tends to strengthen a product made out of such fragile material and the size is apparently the best fitted for use as a breakfast food on a saucer. I think the bill should be dismissed." Shredded Wheat Co. v. Humphrey-Cornell Co., 250 Fed. 960, 967.

In Coca-Cola Co. v. Koke Co., 254 U. S. 143 (another of the Coca-Cola cases), the Court held that "the product including the coloring matter is free to all who can make it if no extrinsic deceiving element is present". Note that this language was used regarding coloring matter which was not an essential ingredient of the compound.

Plaintiff's proposed form of mandate would absolutely enjoin the sale of defendant's small-sized pillow shaped biscuit even when sold to the ultimate consumer in a carton under the name of "Kellogg's Whole Wheat Biscuit" with the Kellogg name prominently displayed on the carton as the manufacturer. Such an injunction is not necessary to prevent unfair competition. It is necessary in order to give plaintiff a monopoly of the business. In the use of the pillow shape there is "no extrinsic deceiving element" under the Coca-Cola Co. v. Koke Co., 254 U. S. 143, 147; defendant therefore has the right to sell that shape of biscuit, particularly where sales are made in cartons labelled [fol. 2279] "Kellogg's Whole Wheat Biscuits" with the Kellogg name as manufacturer.

It was conceded by plaintiff at the March 11th, 1938 hearing that the carton now being used by defendant (a copy of which is submitted as Exhibit C) is non-deceptive and does not offend against plaintiff's rights. It appears, therefore, that biscuits sold for home consumption (which comprise approximately 97½% of the total biscuits sold) reach the ultimate consumer inside of non-deceptive cartons.

All of defendant's biscuit manufactured for consumption in public eating places are also packed in defendant's distinctive cartons containing two biscuits each, and in only about 2½% of the eating places are biscuits served in plates apart from the cartons.

With reference to defendant's right to sell this form of biscuit, we quote from the opinion of the Privy Council in Canadian Shredded Wheat Company, Limited, vs. The Kellogg Company of Canada Limited, decided February 4, 1938, 1938 All England Law Reports 618, and Appendix A:

"The plaintiff company however, claims as against Kelloggs a passing-off injunction based upon the allegation that Kellogg's biscuits are of such shape and size that hotel-keepers and restaurant-keepers could, if so minded, supply them in response to the request of a customer who, in asking

for shredded wheat, desired to be supplied with biscuits of the plaintiff company's manufacture. Their Lordships see no reason for granting any such relief, upon the evidence given in the present case. They are not satisfied that a person asking for shredded wheat will not have his request truly satisfied if the product shredded wheat, as manufactured by Kelloggs or any other manufacturer, is supplied. Nor are they satisfied that a customer who really desires a biscuit of the plaintiff company's manufacture will necessarily be deceived by being offered a biscuit of the same shape *but perceptibly smaller*. Such likelihood of deception requires to be proved, and it is noticeable that no witness was shown a Kellogg's biscuit and asked whether he would have taken that to be a biscuit of the plaintiff's company's manufacture. The plaintiff company has not, in [fol. 2280] their Lordships' opinion, made out a case in these proceedings which would justify the granting of a passing-off injunction based solely on the form of the biscuit." (Emphasis ours).

We also invite the Court's attention to the testimony embodied in the findings of the Trial Court, as follows:

"Howard Duane, a witness on behalf of *plaintiff* testified as follows:

(Quoting from the opinion of the Court)

"X Q. You saw right away that the biscuit handed to you in its carton was not the biscuit you had been getting?

A. Immediately.

X Q. Did you eat it?

A. Yes.

X Q. Did you notice anything about the size when you took it out of the carton?

A. Yes, the biscuit was shorter than the shredded wheat biscuit.

X Q. You did not think that was any biscuit made by the National Biscuit Company, or the Shredded Wheat Company?

A. No, I did not. I knew it was not." (Italics ours.)

All other witnesses who were asked similar questions testified to the same effect, as the District Court found.

As before explained, the exact form and shape of the biscuit is the precise product of the machine. The only way

in which distinction between the products could be made was by making the biscuit smaller. This was done by defendant and for further reference thereto, defendant now submits to the Court herewith the actual biscuits made by the plaintiff and defendant, from which the size distinction will be clear. This element of the proof was likewise embodied in the findings of the lower court, in which the Court said:

"Plaintiff also has an individual carton carrying two biscuits indistinguishable in size from defendant's small biscuit, and first put upon the market five years after *defendant* originated and popularized the same size biscuit. It should be noted that defendant distinguished its biscuit [fol. 2281] from plaintiff's by making a different size, yet *plaintiff* wiped out the size distinction by duplicating defendant's small biscuit." (Italics ours.)

2. The mandate of this Court is alleged by plaintiff to be ambiguous, but we assert that such mandate, when read in connection with the opinion of the Court, does not prohibit the defendant from selling a pillow shaped biscuit of the form and shape of plaintiff's biscuit provided such manufacture and sale is not accomplished by means of the use of the term "Shredded Wheat" and by means of the use of plaintiff's alleged trade mark consisting of two biscuits in a bowl partially submerged in milk. Plaintiff, in effect, concedes this by petitioning for a new and different mandate. In no place does the Court's opinion state that the pillow shaped form of biscuit cannot be sold by the defendant.

On the contrary, the whole opinion seems to revolve around the use of "Shredded Wheat" as a trade name and the registered bowl trade-mark of the plaintiff rather than the form of the biscuit. On page 2 of its opinion, the Court says:

"Therefore, upon the expiration of the patent the defendant was free to adopt the name of 'Shredded Wheat' to to designate its product with some adequate explanation that the product was made by it and not by the plaintiff."

In this connection the Court not only does not prohibit the manufacture of a biscuit in the form and shape of the plaintiff's but, on the contrary, by saying that the defend-

ant was free to adopt the name of "Shredded Wheat" it clearly indicates that the defendant was free to sell the product to which the Court recognized that the defendant had the right to apply that name.

On page 3 of the opinion, the Connecticut litigation is discussed. In that suit the plaintiff objected to the de- [fol. 2282] fendant's use of "Shredded Wheat". The suit was dismissed by the plaintiff without any stipulation that the defendant would cease to manufacture a biscuit in the same form and shape as that made by the plaintiff. Such a dismissal by the plaintiff constituted acquiescence, thereby recognizing that the defendant had the right to sell the pillow shaped biscuit, and as before stated this right was specifically conceded by the plaintiff on the first argument of the appeal. (Appellant's brief on Appeal, p. 34, post, 21.)

On page 4 of the opinion, the Court refers to the name and trade mark "as identifying plaintiff's biscuit," but not to the form of the biscuit as doing so.

The language used by this Court on pages 5 and 6 of its opinion on rehearing is as follows:

"For instance, the defendant called its product 'Kellogg's Whole Wheat Biscuit'. This is exactly what it is. It is a biscuit made from whole wheat by Kellogg."

This language indicates that the defendant is free to market a pillow-shaped biscuit under the name of "Kellogg's Whole Wheat Biscuit", and shows that the defendant's rights concerning the name of the biscuit are the only ones open to doubt. If the defendant can call its product "Kellogg's Whole Wheat Biscuit" it certainly must be assumed to have the right to sell the product to which it has the right to give the name. It is clear that marketing that same product under the term "whole wheat biscuit" was not prohibited by the Court.

The conclusion may definitely be drawn from the opinion that it is the name and not the form of the biscuit that appear to concern the Court. On page 6 of its opinion, the Court says:

"The case now stands in equity just as it would have stood if there had been no patent before 1912 and the plaintiff's competitors had sat by and allowed it from that time

on to build up at great expense a valuable good-will *in the name.*" (Emphasis ours.)

[fol. 2283] This sentence definitely shows that the Kellogg Company has the right to sell a biscuit in the pillow shape and form because there is no patent to prevent such action. In the last sentence of the paragraph, the Court's opinion states that the adoption by any one of the name and form of the article which a competitor has been selling, tends to show a fraudulent attempt to gain the good-will enjoyed by such competitor. It is to be noted that the form is prohibited only when it is connected with an infringing name.

The use of "name and form" conjunctively in the next paragraph leads to the same conclusion. The Court's opinion states that the expiration of the patent allows the public to use the name which has been given to the patented article provided that this right be used within a reasonable time. It argues that the right to use that name is lost after the expiration of a reasonable time but it does not refer to a loss of the right to sell the patent expired article. This language does not suggest that the defendant is prohibited from selling the pillow shaped biscuit independently of some other action which the court disapproves.

On pages 7 and 8 of this Court's opinion, referring to the Dyanshine case, it is stated:

"We held that the defendant was guilty of unfair competition and enjoined it 'from using the words 'dye and shine' in any way, form, arrangement, or manner of spelling as the name, or as resembling a name of its product, leaving it free, of course, to use these words merely and exclusively in describing the qualities and characteristics of the product.' *This the defendant in the case at bar is free to do, but may not, as it has been doing, use the words 'Shredded Wheat' as the trade name of its product.*"

The Court's language clearly concedes to the defendant the right to use the words "shredded wheat" descriptively so long as they are not used as a trade name. This language also concedes that the defendant has a right to manufacture and sell "its product"; namely, a pillow-shaped biscuit.

[fol. 2284] In the long full paragraph on page 10 of the Court's opinion, the Court mentions that the expiration of the design patent did not confer on the defendant any rights

in the trade name or trademark of the plaintiff, but in no place does the Court prohibit the manufacture of the product of the defendant and its sale, if done without designating the product as shredded wheat and using plaintiff's alleged trade mark.

In the next paragraph of the opinion and also in the opinion on pages 5 and 11, "name and form," used conjunctively, appear. The conjunctive use of those words in those paragraphs again indicates that form alone was not intended to be prohibited.

A close reading of the Court's opinion as a whole indicates that it was not intended to prohibit the sale of the pillow shaped biscuit unless connected with the other features which the Court intended to prohibit.

The opinion of this Court which recognizes in so many places defendant's right to sell the pillow shaped biscuit should not after petition for certiorari has been submitted to the Supreme Court and after the expiration of the term at which the judgment of this Court was entered, be so radically changed as now to prohibit the exercise by the defendant of the right so recognized.

In view of the decision in the Humphrey-Cornell case and of the Privy Council in the Canadian Shredded Wheat case, it is submitted that if there be any doubt as to the meaning of the mandate in this case it should be resolved against the plaintiff, and that the defendant's right to sell a pillow shaped form of biscuit of a different size than that of plaintiff's biscuit should be upheld.

II

The Effect of the Denial of Certiorari by the Supreme Court

Judge Davis, at the hearing, asked a question as to the effect on the case of the denial of certiorari by the Supreme Court.

[fol. 2285] A decree for injunction and accounting is interlocutory merely. A denial of certiorari for the review of an order of the Circuit Court of Appeals ordering such injunction and accounting does not preclude the Supreme Court after final decree upon the merits, including the accounting, and its affirmance by the Circuit Court of Appeals, to review, upon certiorari, the entire case, including

the former order of the Circuit Court of Appeals directing the injunction and accounting.

Hamilton Brown Shoe Co. v. Wolf Bros., 240 U. S. 251;
John Simmons Co. v. Grier, 258 U. S. 82.

Defendant believes that the Supreme Court may well have decided not to review this decision by certiorari at an interlocutory stage of the proceeding, but to withhold such review until completion of the accounting directed, in order that if such review were ordered, it might embrace any novel questions raised upon the accounting itself.

It may be likewise that the Supreme Court interpreted the opinion and judgment as not prohibiting the sale of the pillow shaped form of biscuit.

III

Defendant's Petition for Rehearing

Defendant hereby petitions for rehearing upon the grounds set forth below.

Since the second decision of this Court, the Judicial Committee of the Privy Council, in the case of The Canadian Shredded Wheat Company, Limited, v. The Kellogg Company of Canada Limited And Another, decided February 4, 1938 (Privy Council Appeals No. 40 of 1937) involving the same issues, facts and law and subsidiaries of the same parties as are here involved, affirmed the judgments of the [fol. 2286] Supreme Court on Ontario (1936 Ont. Rep. 281) and the Court of Appeals of Ontario (1936 Ont. Rep. 613) dismissing the Canadian suit which corresponds with and was copending with this suit. (See Appendix A.) The judgment of the Privy Council was rendered on February 4, 1938, after this Court had made its second decision herein and the Privy Council reached the same conclusion which this Court reached in its first judgment. The Privy Council expressly states its preference for the first decision of this Court over its second one.

Comity and the judicial amenities alone would indicate that this Court should rehear the cause in view of the judgment of the Privy Council.

Bourjois Sales Corporation v. Abraham Dorfman, 273 N. Y. 167.

In this Dorfman case, the judgment of the Supreme Court of the United States was not any more binding upon the New York Court of Appeals than is the Privy Council judgment here, but the New York Court bowed to the Federal Supreme Court, and in this case the Privy Council judgment is submitted as a weighty, a worthy, an important, a highly persuasive ground for rehearing.

Including the Privy Council, twenty-three judges have passed on the issue whether the formerly patented design of the biscuit is in the public domain, and twenty-one judges have passed on the issue whether, the words "shredded wheat" are in the public domain or whether they are perpetual monopolies owned by plaintiff.* Three of these judges subsequently reversed themselves.

[fol. 2287] The decisions of twenty-one judges to the effect that the words "Shredded Wheat" are in the public domain are as follows:

Natural Food Co. v. Williams, 30 App. D. C. 348 (three Judges, besides the Examiner of Interferences and the Commissioner of Patents in the same case);

Kellogg Co. v. National Biscuit Co. (the Sherman Act case), 71 Fed. (2d) 662 (C. C. A. 2) (three Judges on appeal).

The present case. (Trial judge, and three Circuit judges on the first decision on appeal who subsequently reversed themselves.)

---

* In the matter of trademark No. 500,671, registered under name of Shredded Wheat Company Limited, Justice Bennett in the High Court of Justice, Chancery Division, decided on December 21, 1937, prior to the decision of the Privy Council in the Canadian Shredded Wheat Company, Limited, case, that the words "Shredded Wheat" had acquired a "secondary meaning and were properly registered as a trademark under the English trademark statute. That case is now pending on appeal in the English Court of Appeal where reversal is confidently anticipated in view of the later decision of the Privy Council ruling the words "Shredded Wheat" to be descriptive and not distinctive or possessed of a secondary meaning.

Canadian Shredded Wheat Co., Ltd. v. Kellogg Co. of Canada, Ltd. (1936, Ont. Reps. 281) and Same v. Same, 1936, Ont. Reps. 613 (the Canadian case) (One trial Judge and five Judges of the Court of Appeal of Ontario);

The Canadian Shredded Wheat Co., Ltd. v. Kellogg Company of Canada, Ltd., Privy Council Appeals, No. 40 of 1937 (Five Judges).

The decisions of twenty-three judges to the effect that the pillow shape or design is in the public domain are as follows:

Four judges in this case, three of whom subsequently reversed themselves; three in the Sherman Act case (Judge Caffey's decision in the District Court did not directly touch the issue), four Judges in the case of Shredded Wheat Co. v. Humphrey-Cornell, 250 Fed. 960 (C. C. A. 2), six Judges in the Canadian case, five Law Lords in the Privy Council, and Judge Kohlsaat, post, p. 19, all held that plaintiff did not have a monopoly of the form or shape of the biscuit.

We realize that in matters of intellectual conviction or law, questions may not be concluded by sheer weight of [fol. 2288] numbers, but certainly the grounds for further consideration are impressive.

Let us briefly consider these and other decisions which now have been followed by the Privy Council.

Plaintiff's predecessor was the owner of some forty-one patents on method and machines for shredding cooked but unleavened wheat and forming the same into rectangular biscuits of the well-known type and shape. The product was described as shredded wheat throughout the patents. One patent covered the exact shape or design of the biscuit itself; others covered machines whose sole function was to shred the wheat and form it into the identical shape of biscuit here in issue. The patents expired about 1912 and since that time, the product, machinery, design and description and patent-expired name have been in the public domain under long established law.

Singer v. June, 163 U. S. 169.

Dupont v. Waxed Products, 85 Fed. (2) 75 (C. C. A. 3) (Cert. denied, 57 Sup. Ct. 194).

Ameisite v. Interstate, 72 Fed. (2) 946, (C. C. A. 3).

Prior to defendant's entry into the field, the design, form and shape of the biscuit had been dedicated to the public as follows:

(a) In 1908, Judge Kohlsaat held that the Perky design patent No. 24,688, covering the design of biscuit here in issue, was invalid because of more than two years public use of the design before the patent application was filed. Here was a double dedication, first, by two years public use and, second, by invalidation of the design patent. Plaintiff's predecessor did not appeal from Judge Kohlsaat's judgment.

Natural Food Co. v. Henry P. Bulkley, et al., N. Dist. of Illinois, Eastern Div. No. 28,530.

(b) Plaintiff disclaimed the design or representation of the biscuit as a trademark in its trademark registrations Nos. 85,186 (V. 4, p. 197) and 216,593 (V. 4, p. 205).

(c) In 1918, the Circuit Court of Appeals for the Second Circuit held that the right of a competitor of plaintiff's to make the identical size, shape and appearance of biscuit was "indubitable."

[fol. 2289] Shredded Wheat Co. v. Humphrey Cornell, 250 Fed. 960.

(d) The expiration of the patents on the machines for making the identical shape of biscuit here in issue and on the method for making the product itself ended the patent monopoly.

Singer v. June, supra.

The public ownership of the words "shredded wheat" was just as strongly established as the public ownership of the design, prior to defendant's entry into the field, for the following reasons:

(a) The expiration of the patents in which the words were used descriptively placed such words in the public domain.

Singer v. June, supra.

(b) A few months after the enactment of the Trademark Act of February 19, 1905, which permitted registration of descriptive terms used exclusively for ten years next preceding the passage of the Act, plaintiff's predecessor sought to register the words "Shredded Whole Wheat" as its

trademark, but the Court of Appeals of the District of Columbia affirmed the decision of the Patent Office and held that the words were descriptive of the patented product; were not used as a trademark and, in fact, were incapable of exclusive appropriation. This case also held that the concurrent use of the words by Williams prevented the exclusive appropriation of such words as a trademark.

Natural Food Company v. Williams, 30 App. D. C. 348.

(c) In 1912, plaintiff registered the picture of its factory as its trademark "for shredded wheat in Class 46, foods and ingredients of foods", No. 89,071 (V. 4, p. 199). Plaintiff's present claim is that its trademark for shredded wheat is shredded wheat. Its registration No. 89,071 states that "No claim is made herein to the words 'The Home of Shredded Wheat'." which appear above the factory picture. Here is [fol. 2290] a double disclaimer of the words "Shredded Wheat," first by using them to describe the product itself and second by disclaiming the words as part of the phrase "The Home of Shredded Wheat."

Such a disclaimer is irrevocable.

Beckwith v. Commissioner of Patents, 252 U. S. 538; Holzapfels v. Rahtjens, 183 U. S. 1.

(d) The words "shredded wheat were used throughout the patents, advertisements and trademark registrations to describe and name the product and process.

(e) Even plaintiff conceded defendant's right to manufacture the patent-expired biscuit in the pillow form in its main brief on appeal in this Court, by asking, at p. 34:

"2. That the defendant be enjoined from manufacturing or selling or offering for sale Whole Wheat Biscuit in substantially the form and shape of plaintiff's biscuit *unless each biscuit be banded or marked in such a distinctive manner as to state clearly that it is a product of the defendant and not of the plaintiff.*" (Italics ours.)

Defendant thus was well protected by sound and established law and prior adjudications when it began to make this publicly owned product and design under this publicly owned name and to market it in fair and distinctive cartons.

Briefly stated, the second decision of the Court of Appeals,

particularly if it is to be amended as requested by plaintiff, would accomplish the following unusual and, we submit, erroneous results:

It would disregard the ruling of the Privy Council and of the Circuit Court of Appeals of the Second Circuit that the right of a competitor of plaintiff's to make the patent-expired pillow-shaped shredded wheat biscuit here in issue is indubitable (Shredded Wheat Co. v. Humphrey-Cornell, 250 Fed. 960); disregard the ruling that plaintiff's effort to monopolize the manufacture and sale of shredded wheat is [fol. 2291] unlawful under the Sherman Anti-Trust Act (Kellogg Company v. National Biscuit Company, 71 Fed. (2d) 662); disregard the ruling of the Court of Appeals of the District of Columbia, that shredded wheat is incapable of exclusive appropriation as a trademark (Natural Food Company v. Williams, 30 App. D. C. 348); disregard the rulings of the Supreme Court of Ontario and the Court of Appeal of Ontario that by virtue of patent expirations defendant is free to make shredded wheat and call it Kellogg's Shredded Wheat in Canada; disregard the ruling of the Privy Council on the same law and facts and its expressed preference for the first judgment of this Court over its second; disregard the ruling of the Supreme Court of the United States holding that after patents expire anyone is free to make the patent expired product and call it by the name universally applied to it during the life of the patents and in the patents themselves (Singer v. June, 163 U. S. 169); disregard the ruling of the same Court holding that perpetual monopolies may not be set up under the guise of trademarks (Delaware & Hudson Canal Co. v. Clark, 13 Wall. 311; Standard Paint v. Trinidad, 220 U. S. 446); disregard the ruling of the same Court (Mr. Justice Sutherland) holding that relief in fair trade cases cannot exceed the wrongs of the defendant and that even if the defendant practiced deception, it could not thereby be deprived of its right to combine chocolate and quinine (Warner v. Ely Lilly & Company, 265 U. S. 526); and disregard the ruling of the same Court that so-called trademarks, once disclaimed in statutory registrations, cannot thereafter be reclaimed (Beckwith v. Commissioner of Patents, 252 U. S. 538, Holzapfels v. Rahtjens, 183 U. S. 1; Saxlehner v. Wagner, 216 U. S. 375).

Finally it would disregard the Constitution and the Sherman Anti-Trust Act. The latter prohibits all monopolies

except those based on patents and copyrights and the former permits only patent and copyright monopolies and those only for a limited time and authorizes only Congress and not the Courts to grant or extend them.

Surely such wholesale disregard of long standing and well established precedents and of important principles of law in the fields of patents, trademarks, fair trade and monopoly, and in the light of a dissent so powerful as that of [fol. 2292] the Privy Council, should not be lightly undertaken and a rehearing is respectfully requested. Certainly, to broaden the mandate in the very face of the Privy Council judgment to the exact contrary and after the order for a mandate had been the subject of certiorari proceedings in the Supreme Court, would be an action so unusual as at least to be preceded by the amenity of a rehearing.

Conclusion.

Until plaintiff asked this Court to broaden the mandate so as to enjoin defendant from selling a pillow shaped biscuit at all or under any name or in any kind of a carton, the furthest any judge had gone in attempting to restrain use of the pillow shape or form by any one except plaintiff was the injunction of Judge Thomas in the District Court in the Humphrey-Cornell case. Judge Thomas restrained use of the form unless each biscuit was marked or tagged individually, irrespective of whether it was in a carton and irrespective of whether the defendant could mark each biscuit at all or whether it could remain in business if it tagged a food product with a glued on label or band—which in any event a restaurant waiter could tear off just as easily as the customer could.

But the Court of Appeals of the Second Circuit, on appeal from that ruling, held that as to biscuits reaching the consumer in cartons (either large or small) no other marking than the carton was required. It held that as to restaurant biscuit (at that time displayed in large glass globes containing biscuits without cartons) the defendant should attempt to mark or band the biscuit and if it could not do so without competitive handicap or hardship, it was given leave to apply back to the Court. The Court held that no restriction could be put on defendant, the com-

mercial effect of which would be to destroy defendant's "indubitable" right to compete.

Judge Nields held that defendant's product was incapable of being passed off as plaintiff's and that no passing off had been proved. He also held that it had been proved that no marking was possible other than what defendant worked [fol. 2293] out; namely by making a small biscuit and putting it in a distinctive carton for the restaurant trade. This Court did not reverse that finding of fact which bars the broad injunction that plaintiff now seeks.

The Privy Council after five days of argument, carefully considered both decisions of this Court and expressed its preference for the first decision and dissented in toto from the second opinion. The general principles of judicial comity suggest that the careful consideration given to both decisions of this Court by the Privy Council should be reciprocated before this Court should either enter a new mandate or adhere to the old one.

We respectfully submit that there could hardly be a stronger authority for a rehearing than the Privy Council judgment on the same principles of law, the same issues and subject matter and between subsidiaries of the same parties.

Respectfully, W. H. Crichton Clarke, Edward S. Rogers, Robert T. McCracken, E. Ennalls Berl, of Counsel for Defendant.

Certificate.

I, W. H. Crichton Clarke, certify that I am one of the counsel for Kellogg Company, the defendant in the above entitled cause, and that in my opinion the annexed Petition and Motion are well founded in law and fact and that the same are not interposed for the purpose of delay.

Crichton Clarke.

[fol. 2294] IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT, OCTOBER TERM, 1935

No. 5801

NATIONAL BISCUIT COMPANY, Plaintiff-Appellant,

v.

KELLOGG COMPANY, Defendant-Appellee

Appeal from the District Court of the United States for the District of Delaware

OPINION SUR PLAINTIFF-APPELLANT'S PETITION TO RECALL AND CLARIFY MANDATE, AND DEFENDANT-APPELLEE'S PETITION FOR REHEARING—Filed May 5, 1938

Before Buffington, Davis and Thompson, Circuit Judges

DAVIS, Circuit J.:

On April 12, 1937, during the March Term of this court, a decree was entered, pursuant to an opinion filed the same day, reversing with costs a decree of the United States District Court for the District of Delaware, which dismissed the appellant's bill of complaint, and containing a direction [fol. 2295] to the District Court to enter a decree "enjoining the defendant (appellee) from the use of the name 'Shredded Wheat' as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade-mark; with further directions to the said District Court to order an accounting for damages and profits". Subsequently a petition for rehearing was filed by appellee and denied in due course. A petition for certiorari was then presented to the Supreme Court of the United States and denied in October, 1937, during the October Term of this court. This was followed by a petition to the Supreme Court for a rehearing and by petitions to this court and the Supreme Court that injunctive relief be withheld pending a further application for certiorari, which appellee stated that it intended to make after a final decree following an accounting had been entered in the District Court and presumably finally passed upon by this court. All of these petitions were

denied during the October Term, 1937, of this court. On December 7, 1937, this court issued its mandate in the exact language, except as to costs, of the order of April 12, 1937 above quoted. Appellant then applied to the District Court to enter a final decree. This was done, but the District Court, in the parts of the decree which dealt with the injunction and the recovery of damages and profits, except for the usual provisions in such decrees enjoining officers, agents, etc., followed the exact language of the mandate. Appellee contended before the District Court and this court that the opinion, order and mandate of this court meant that appellee could sell and offer for sale its biscuit in the usual pillow-shape form, provided it did not place on the cartons or in advertising matter what has been referred to in this case as the plaintiff's "two-biscuit-in-a-dish" trade mark, and apparently contended that it [fol. 2296] could likewise use the words "Shredded Wheat" unless in connection with that trade mark. Because the District Court was apparently in doubt as to exactly what the mandate intended to enjoin, and because the defendant had expressed a determination to advertise and sell biscuits in the pillow-shape form, appellant, before the expiration of the October, 1937, term, at which the mandate was issued, applied to this court to recall its mandate and clarify it.

We thought that, when our opinion was read as a whole, we had made it perfectly clear that what we intended to enjoin was the use of the name "Shredded Wheat" as a trade name and the advertising and selling of biscuits in the pillow-shape form, irrespective of whether the two-biscuit-in-a-dish trade mark were employed in connection with either the use of the name or the sale or advertising of the biscuit in the pillow-shape form. This was the construction which the appellee placed on the opinion and order of April 12, 1937, in its petition for rehearing to this court and appellant says that it placed the same construction upon them in its various petitions to the Supreme Court. It so admitted before this court at the hearing to recall the mandate. Appellee in those petitions doubtless placed upon the mandate what it believed to be its proper construction and its changed view adopted after the mandate of this court had issued was apparently due to the exigencies of its position rather than to any real belief that the opinion of this court left any doubt as to what was meant. The

language at the end of the opinion and in the order and mandate is poorly phrased. We intended to enjoin the use of the words "Shredded Wheat" as a trade name, the advertising and sale of biscuits in the pillow-shape form, and the use of the two-biscuit-in-a-dish trade mark, separately or together.

[fol. 2297] At the hearing to recall and clarify the mandate, counsel for appellant submitted an order which it requested the court to make. Counsel for appellee was asked if he wished to submit an alternative form of order. He said that he did and was given 10 days in which to do so. Instead of presenting such an order, he has filed a printed petition of 23 pages, in which he has asked for a rehearing of the whole case and questions the jurisdiction of this court to entertain appellant's petition.

As appellant's petition seeks only a clarification of the mandate, and as it was presented before the expiration of the term at which the mandate was issued, we have no doubt of our right to entertain it and grant the relief sought. Bronson v. Schulten, 104 U. S. 410; Marion County Court, W. Va. v. Ridge, et al., 13 Fed. (ed) 969. It is equally clear that this court is without jurisdiction to entertain appellee's petition for rehearing. It was not presented, nor was permission given to present it, within the term when the order of April 12, 1937 was made, nor within the term when the Supreme Court denied the petition for certiorari and the petition for rehearing nor within the term when the mandate was issued. Arcoil Mfg. Co. v. American Eq. Assur. Co., 87 Fed. (2d) 206 (C. C. A. 3); Foster v. N. L. R. B. 90 Fed. (2d) 948 (C. C. A. 4); Bronson v. Schulten, supra; Marion County Court, W. Va. v. Ridge, et al., supra. The petition for rehearing therefore must be denied for lack of jurisdiction.

But even if we had jurisdiction to consider it, we see no reason why it should be granted. Nothing new is presented except that in February, 1938, the British Privy Council in Canadian Shredded Wheat Co. Ltd. v. Kellogg Company of Canada, Ltd. reached, it is claimed, a different conclusion from that of this court. Even if the record in [fol. 2298] the two cases were the same, the latter decision does not persuade us that the conclusion at which we arrived was wrong. We are advised that the British High Court of Justice on a full record reached a different con-

clusion from that of the British Privy Council as to the registerability of "Shredded Wheat" as a trade name under the English statute.

The only remaining question is whether, in view of the fact that the order of April 12, 1937 did not specifically provide for an injunction against the violation of the two-biscuit-in-a-dish trade mark (although it was intended to do so) we have any jurisdiction to amend the mandate so as to include specifically such a provision. As there may be some doubt on this question, we will not amend the mandate so as to provide a specific injunction against the use of the two-biscuit-in-a-dish trade mark. Its use on a carton or in advertising matter, when the defendant is not permitted to use the word "Shredded Wheat" as a trade name or to advertise or sell biscuits in the pillow-shape form, would manifestly be so improper and so likely to mislead that we will assume that the appellee will not use it.

An order will be made recalling for clarification the mandate, as requested in appellant's petition and motion.

A true Copy. Teste:

——— ———, Clerk of the United States Circuit Court of Appeals for the Third Circuit.

No. 5801

NATIONAL BISCUIT COMPANY, Plaintiff-Appellant,

vs.

KELLOGG COMPANY, Defendant-Appellee

Appeal from the District Court of the United States for the District of Delaware

ORDER RECALLING AND CLARIFYING MANDATE—Filed May 5, 1938

This cause coming on to be heard on the petition and motion of plaintiff-appellant National Biscuit Company, filed on March 4, 1938, for an order of this Court recalling its Mandate issued in the above entitled cause on December

8, 1937, in order that the same might be clarified, and having been argued by counsel:

On consideration whereof, it is now here ordered, adjudged and decreed by this court as follows:

(1) That its said Mandate be and the same is hereby recalled for the purpose of clarification; and

(2) That the said Mandate be clarified so as to direct the United States District Court for the District of Delaware to enter a decree, in the usual form, enjoining the defendant Kellogg Company (1) from the use of the name "SHREDDED WHEAT" as its trade name, (2) from advertising or offering for sale its product in the form and shape of plaintiff's biscuit, and (3) from doing either; and adjudging and decreeing, in the usual form, that plaintiff recover from said defendant profits and damages by reason of defendant's use of the said trade name and the use of the said pillow-shape form of biscuit, or either of them.

Philadelphia, May 5th, 1938.

J. Warren Davis, Circuit Judge.

vs.

KELLOGG CO., Defendant-Appellee

SUR PETITION FOR REHEARING

And now, to wit, May 5, 1938, after due consideration, the petition of defendant-appellee for rehearing in the above-entitled case is hereby denied.

Philadelphia, —— —, ——.

J. Warren Davis, Circuit Judge.

Endorsements: Order Denying Petition for Rehearing of Defendant-Appellee. Received & Filed May 5, 1938. Wm. P. Rowland, Clerk.

[fol. 2301] IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT, OCTOBER TERM, 1935

No. 5801

NATIONAL BISCUIT COMPANY, Plaintiff-Appellant,

vs.

KELLOGG COMPANY, Defendant-Appellee

Appeal from the District Court of the United States for the District of Delaware

PETITION FOR REHEARING—Filed May 13, 1938

The Court has made and filed three decisions herein and three orders or judgments based threon. The first decision and judgment affirmed the District Court, the second reversed the District Court and directed the entry of a judgment which has been heretofore understood as a three part judgment covering the words "SHREDDED WHEAT" the pillow form of biscuit and the so-called plate trade-mark.

The third judgment recalls the mandate and directs the entry of a new District Court decree enjoining only the use of the words "SHREDDED WHEAT" and the pillow form of biscuit and specifically omitting any injunction as to the so-called plate trade-mark.

The defendant-appellee respectfully hereby petitions the Court for a rehearing and reversal of the second and third [fol. 2302] decisions of the Court and of the judgments or orders entered or to be entered thereon.

As to the second decision and judgment of the Court defendant-appellee respectfully renews and re-submits its first and its second petitions for rehearing herein, hereby specifically incorporating them herein with the same force and effect as though copied at length herein.

The mandate to the District Court based on the second decision and judgment has now been recalled and is now in this Court and defendant-appellee therefore hereby resubmits its said first and second petitions for rehearing, earnestly submitting that the Court has jurisdiction to consider and grant the same.

As to the third decision and judgment of this Court based thereon, defendant-appellee assigns as a ground for rehearing:

1. The objections to jurisdiction averred in its second petition for rehearing.

2. The objection that the third decision and judgment of the Court is not a mere clarification of its second decision and judgment, but is a new and materially different judgment directing a two part injunction instead of the previous three part injunction and changing the injunction as to the pillow form of biscuit in substantial and material respects.

3. That the second decision and judgment characterized in the third decision as "poorly phrased" is not such a definite and distinct order as is necessary to serve as a lawful judgment of the Court.

4. That the Court has as much jurisdiction to grant a rehearing at this time as it has to change the second judg-
[fol. 2303] ment in the material and substantial respects directed by the third order.

W. H. Crichton Clarke, Attorney for Defendant-appellee. E. E. Berle, Robert T. McCracken, Of Counsel.

I further certify that the foregoing petition is well founded in law and is not interposed for the purpose of delay.

W. H. Crichton Clarke, Attorney for Defendant-Appellee.

[fol. 2304] UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

No. 5801

NATIONAL BISCUIT COMPANY, Plaintiff-Appellant,

against

KELLOGG COMPANY, Defendant-Appellee

SIR:

Please Take Notice that on the 13th day of May, 1938, at the opening of Court, at 11 o'clock in the forenoon of said day, or as soon thereafter as counsel can be heard, the de-

fendant-appellee will move this Court for an order staying the issuance of its mandate herein to be issued pursuant to the order of this Court made and dated the 5th day of May, 1938.

The grounds of said application are set forth in the annexed affidavit of Crichton Clarke, Esq., sworn to the 11th day of May, 1938, and the said defendant-appellee will likewise apply for such other, further or different relief as to the Court may seem just and proper.

Yours, etc., Crichton Clarke, Attorney for Defendant-Appellee, Office and P. O. Address: No. 36 West 44th Street, Borough of Manhattan, City of New York.

To Charles A. Vilas, Attorney for Plaintiff-Appellant, 36 West 44th Street, Borough of Manhattan, City of New York.

[fol. 2305] UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

No. 5801

NATIONAL BISCUIT COMPANY, Plaintiff-Appellant,

against

KELLOGG COMPANY, Defendant-Appellee

STATE OF NEW YORK,
County of New York, ss:

Crichton Clarke being duly sworn deposes and says:

I am an attorney and counselor at law and of counsel for the defendant-appellee in the above entitled action.

This affidavit is made in support of the annexed notice of motion for an order staying the issuance of the mandate herein to be issued pursuant to the order of this Court, dated May 5, 1938, and is made in response to the plaintiff-appellant's motion for immediate issuance of said mandate without the customary thirty days stay.

The original mandate of this Court was issued and transmitted to the District Court on the 8th day of December, 1937, and during the October Term of this Court.

On the 5th day of March, 1938, plaintiff-appellant moved this Court for an order recalling the said mandate which came on for argument on the 11th day of March, 1938, and was granted by this Court pursuant to its order dated May 5, 1938, in and by which order this Court directed the issuance of a mandate in certain other and different lan-
[fol. 2306] guage from that embodied in the mandate of December 8, 1938.

Pursuant to the directions of said order of May 5, 1938, the original mandate of December 8, 1937, having been duly recalled has now been returned by the District Court to this Court for its consideration, and no new mandate has issued out of this Court pursuant to its order of May 5, 1938.

It is the intention of the defendant-appellee to petition the Supreme Court for leave to present an application for a rehearing of its petition for certiorari on the merits of the controversy, which, as I am advised, should be presented on or before the 23rd day of May, 1938.

Such petition for rehearing is now in the process of prepa-ration, and as counsel for the defendant-appellee, I have relied upon the usual practice of this Court to grant an automatic stay of thirty days before the issuance of the mandate. The application of plaintiff-appellant for the immediate issu-ance of the mandate is not supported by any affidavits set-ting forth the grounds for such unusual relief. It would appear justifiable to assume that the plaintiff-appellant de-sires to forestall the proposed application to the Supreme Court to rehear or to deprive defendant-appellee of its right to apply to the United States Supreme Court for a writ of certiorari.

As counsel for the defendant-appellee, I desire to set before the Supreme Court the clear and indisputable con-flict between the decision of this Court of April 12, 1937, and the decision of the Judicial Committee of the House of Lords of Great Britain, and to point out the clear iden-
[fol. 2307] tity of the issues involved between this case and the case before the Privy Council.

I desire further to point out to the Supreme Court that the opinion of Mr. Justice Bennett of the High Court of Justice of Great Britain which is said to be in conformity

with the opinion of this Court relates solely to the application of the trademark statutes of Great Britain and involved no element of unfair competition, and that, further, the judgment of the High Court of Justice was rendered prior to the sweeping decision of the Privy Council, and that the decision of the Privy Council is such that there is grave doubt that the judgment of the High Court of Justice is sustainable upon appeal.

As further reason for granting the application for a stay herein, I wish to present to the Court a copy of a letter written by me on the 6th day of May, 1938, to Mr. William P. Rowland, as Clerk of this Court, which is as follows:

"May 6, 1938.

Mr. W. P. Rowland, Clerk of the United States Circuit Court of Appeals, for the Third Circuit, Philadelphia, Pa.

Re National Biscuit Co. v. Kellogg Co., No. 5801.

DEAR MR. ROWLAND:

I have your letters of May 5th and 6th and enclose herewith my check for $5.60 to cover the cost of the opinion and order of May 5th.

I assume that the usual practice of your Court in withholding the new mandate for thirty days will be followed, as this will give the appellee an opportunity to make a new application to the Supreme Court for a writ of certiorari, [fol. 2308] and it is our intention to do this. If my assumption that the new mandate will be witheld the same as any other mandate is not correct, please let me know in order that we may take such other steps as may be necessary in attempting to preserve defendant's subject matter of this litigation, pending the intended application for certiorari.

This cause has now been involved in the appellate court for several years and there could seem to be no reason why the defendant should not have an opportunity to apply to the Supreme Court without having its business, valued at more than a million dollars, destroyed in the interim.

Very truly yours, Crichton Clarke."

On the same day, associate counsel for the defendant-appellee, Ward & Gray, wrote to Mr. Rowland as follows:

"May 6, 1938.

William P. Rowland, Esq., Clerk, U. S. Circuit Court of Appeals, 304 Custom House, Second and Chestnut Sts., Philadelphia, Pa.

DEAR SIR:

I acknowledge receipt of your letter of May 5th, inclosing copies of opinion in National Biscuit Company vs. Kellogg Company, No. 5801, and in accordance therewith I am inclosing our check for $5.00.

I assume that the mechanics which will be involved in carrying into effect the opinion of the Circuit Court of Appeals filed yesterday will be through the entry of an order providing for the recall of the mandate from the District Court, and after its actual recall, the issuance of a further order providing for a new or clarified mandate.

It is conceivable that the appellee may be advised to [fol.2309] apply for a certiorari upon the issuance of the order providing for the new mandate, and in that event we will desire an opportunity to apply to the Circuit Court of Appeals for a stay as to the new mandate, pending the disposition of the petition for certiorari.

If I am correct in my understanding of the procedure and the appellee should desire to make an application for certiorari and a stay, I should appreciate it if you would advise me when the order for the mandate is entered and before the actual issuance of the mandate, so that we may have an opportunity to follow our course in this regard.

Very truly yours, Ward & Gray."

The reason for the two letters above referred to was that counsel might be assured that the usual practice of this Court would be followed and that the usual thirty day stay on the new mandate would be automatically applied, to provide time for a rehearing or for an application to the Supreme Court for a writ of certiorari.

On May 9, 1938, in furtherance of the intention of the defendant-appellee to apply for a writ of certiorari, I wrote a letter to Mr. Rowland as follows:

"May 9, 1938.

"Mr. William P. Rowland, Clerk of the United States Circuit Court of Appeals for the Third Circuit, Philadelphia, Pa.

Re National Biscuit Co. v. Kellogg Co., No. 5801

DEAR MR. ROWLAND:

[fol. 2310] With further reference to the above matter, defendant-appellee has decided to present an application for certiorari to the United States Supreme Court to review the last order of this Court, declining to entertain the petition for rehearing and recalling and modifying the mandate.

Will you please, therefore, cause to be printed and certified the requisite number of copies of the proceedings in the Circuit Court subsequent to those heretofore printed for use in the Supreme Court as Volume IIIA of the record. There need be printed only the petition of appellant to recall and clarify the mandate, dated March 5th, and our petition for rehearing filed March 21st and briefs in connection with these matters and also the judgment and order of the Circuit Court of May 5th.

Very truly yours, Crichton Clarke."

My intention in writing this letter was in order to conform to the practice of this Court, which as I understand it, is to stay the issuance of the mandate for thirty days, and then if notified that application for a writ of certiorari is pending futher to stay the mandate until such application is made and determined.

On behalf of the defendant-appellee, I now ask that the usual practice be followed and that the defendant appellee be granted the usual stay of thirty days within which to present to the Supreme Court an application for rehearing.

As above stated, the mandate has now been recalled and is before this Court, and the cause is wholly pending in this Court. The motive of plaintiff-appellant in moving that the usual practice be set aside and that the new mandate issue immediately can be only for the purpose of de-

priving defendant-appellee of its right to the usual relief [fol. 2311] and to a review of these proceedings by certiorari.

This cause has been pending for six years and there is no conceivable reason why a delay of thirty days in order to permit review of the last determination of this Court should act in any way to prejudice the plaintiff.

On behalf of the defendant-appellee, therefore, I respectfully request this Court that it stay the issuance of its new mandate herein for a period of thirty days, from the 5th day of May, 1938, for the purpose of allowing the defendant-appellee to petition the Supreme Court for a reargument of its application for a writ of certiorari.

Crichton Clarke.

Sworn to before me this 11th day of May, 1938. Nayer W. Goldberg, Notary Public. Kings. Co. No. 670, Reg. No. 00419. Comm. Expires March 30, 1940.

[fol. 2312] [Endorsed:] United States Circuit Court of Appeals for the Third Circuit. National Biscuit Company, Plaintiff-Appellant, against Kellogg Company, Defendant-Appellee. Notice of Appellees Motion for Stay of Mandate and Affidavit. Crichton Clarke, Attorney for Defendant-Appellee, 36 West 44th Street, Borough of Manhattan, New York City.

Endorsements: Order Denying Defendant-Appellee's Petition for Rehearing. Received & Filed May 16, 1938. Wm. P. Rowland, Clerk.

[fol. 2315] UNITED STATES OF AMERICA, ss:

The President of the United States of America to the Honorable the Judges of the District Court of the United States for the District of Delaware, Greeting:

Whereas, lately in the District Court of the United States for the District of Delaware, before you or some of you, in a cause between National Biscuit Company, plaintiff below (appellant) and Kellogg Company, defendant below (appellee)—No. 980 in Equity—a decree was entered in the said District Court on January 23, 1935, which decree is of record in the office of the Clerk of the said District Court, to which reference is hereby made, and the same is hereby expressly made a part hereof.

as by the inspection of the transcript of the record of the said District Court, which was brought into the United States Circuit Court of Appeals for the Third Circuit by virtue of an appeal by plaintiff, agreeably to the Act of Congress, in such case made and provided, more fully and at large appears.

[fol. 2316] And whereas, in the term of October, in the year of our Lord one thousand nine hundred and thirty-six, the said cause came on to be heard before the said United States Circuit Court of Appeals on the said transcript of record and was argued by counsel:

And Whereas, On Consideration Whereof, it was, on April 12th, 1937, ordered, adjudged and decreed by the said United States Circuit Court of Appeals that the decree of the said District Court in this cause be, and the same was thereby reversed, with costs, and with direction that said District Court should enter a decree as hereinafter provided;

And Whereas, the mandate of this Court to the District Court of the United States for the District of Delaware was withheld pending consideration of a petition for rehearing and the disposition of a petition for writ of certiorari and a petition for rehearing on said petition for certiorari and certain other petitions of defendant;

And Whereas, on December 7th, 1937, upon the denials of the said various petitions, the mandate of this Court issued to the said District Court;

And Whereas, in the Term of October 1937 a motion and petition were presented by the said plaintiff to recall the said mandate for clarification, which said motion and petition were granted and an order entered recalling said mandate and directing that the same be clarified in certain respects;

On Consideration Whereof, it is now here ordered, adjudged and decreed by this Court that the said mandate of this Court issued on December 7th, 1937, be and the same is hereby recalled for the purpose of clarification and, in lieu of the directions therein contained, the following shall be and are the directions to the said District Court, viz.: that the said decree of the said District Court in this cause be, and the same is hereby reversed, with costs, and the said District Court is directed to enter a decree, in the

usual form, enjoining the defendant Kellogg Company (1) from the use of the name "SHREDDED WHEAT" as its trade name, (2) from advertising or offering for sale its product in the form and shape of plaintiff's biscuit, and (3) from doing either; and adjudging and decreeing, in the usual form, that plaintiff recover from said defendant profits and damages by reason of defendant's use of the said trade name and the use of the said pillow shape form of biscuit, or either of them; and that the said plaintiff, National Biscuit Company, recover against the said defendant, Kellogg Company, in the sum of One Hundred Eight and 60/100 Dollars ($108.60) for its costs herein expended and have execution therefor.

Philadelphia, May 5, 1938.

You, therefore, are hereby commanded that such execution and further proceeding be had in said cause, as according to right and justice, and the laws of the United States, ought to be had, the said appeal notwithstanding.

Witness, the Honorable Charles Evans Hughes, Chief Justice of the Supreme Court of the United States, at Philadelphia, the 16th day of May, in the year of our Lord one thousand nine hundred and thirty-eight.

Costs of Plaintiff-Appellant, National Biscuit Co.

Clerk	$88.60

[Endorsed:] Original File No. 5801. U. S. Circuit Court of Appeals, Third Circuit. No. 11, Oct. Term, 1936. National Biscuit Company, Plaintiff-Appellant, vs. Kellogg Company, Defendant-Appellee. Copy of Amended Mandate.

[fol. 2317] UNITED STATES OF AMERICA,
Eastern District of Pennsylvania,
Third Judicial Circuit, set:

I, William P. Rowland, Clerk of the United States Circuit Court of Appeals for the Third Circuit, do hereby

certify the foregoing to be a true and faithful copy of the original additional proceedings in this Court since the certification of August 12, 1937, in the case of National Biscuit Co., Plaintiff-Appellant, vs. Kellogg Co., Defendant-Appellee, No. 5801, on file, and now remaining among the records of the said Court, in my office.

In Testimony Whereof, I have hereunto subscribed my name and affixed the seal of the said Court, at Philadelphia, this 17th day of May, in the year of our Lord one thousand nine hundred and thirty-eight and of the Independence of the United States the one hundred and sixty-second.

Wm. P. Rowland, Clerk of the U. S. Circuit Court of Appeals, Third Circuit. (Seal United States Circuit Court of Appeals, Third Circuit.)

[fol. 2318] IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF DELAWARE

No. 980. In Equity

NATIONAL BISCUIT COMPANY, Plaintiff,

v.

KELLOGG COMPANY, Defendant

And now, to wit, this—5th—day of January, A. D. 1938, the mandate of the United States Circuit Court of Appeals for the Third Circuit on the appeal of the plaintiff heretofore taken in the above entitled cause having been transmitted to the clerk of this court and filed herein on the eighth day of December, A. D. 1937 and the same having been brought to the attention of the court, in compliance therewith, it is now, on motion of Hugh M. Morris, Esq., solicitor for plaintiff,

Ordered, Adjudged and Decreed by the court as follows:

(1) That the decree of this court entered herein on the twenty-third day of January, A. D. 1935 dismissing the bill of complaint be and the same is hereby vacated and set aside and the bill of complaint reinstated.

(2) That a perpetual injunction issue out of and under the seal of this court directed to said defendant, Kellogg Company, its officers, agents, servants, employees and at-

torneys and those in active concert or participating with them, its successors and assigns, restraining and enjoining it and them, and each of them, from the use of the name "SHREDDED WHEAT" as its trade name and from advertising [fol. 2319] or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark.

(3) That the plaintiff do recover from the defendant the gains, profits and advantages which the said defendant has derived, received, earned or made or which it shall derive, receive, earn or make by reason of the use by defendant of the name "SHREDDED WHEAT" as its trade name and, advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark, as well as any and all damages which the said plaintiff has sustained by reason of such use or either of them.

(4) That this cause be and the same is hereby referred to Charles F. Richards, Esq., as special master to take, state and report to this court, with all convenient speed, an account of said profits and damages, and that upon said accounting the testimony heretofore taken by either party in this cause may be used by either party and considered by the master.

(5) That plaintiff have judgment against defendant for the costs awarded to it by the Circuit Court of Appeals for the Third Circuit in the sum of Ninety-eight Dollars and Sixty Cents ($98.60) together with its costs in this court up to and including the entry of this decree, including costs incurred by the plaintiff for printing the transcript of record on appeal, said costs to be taxed by the clerk.

[fol. 2320] (6) That this court reserves for further consideration upon the coming in of the master's report all questions pertaining to costs hereinafter accruing and damages or profits.

(Sgd.) John P. Nields, J.

A true copy. Attest: H. C. Mahaffy, Jr., Clerk. (Seal.)

[fol. 2321] [Endorsed:] U. S. District Court, District of Delaware. No. 980. In Equity. National Biscuit Company, Plaintiff, v. Kellogg Company, Defendant. Interrogatory Decree. Filed January 5, 1938. (Sgd.) H. C. Mahaffy, Jr., Clerk.

[fol. 2322] IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF DELAWARE

No. 980. In Equity

NATIONAL BISCUIT COMPANY, Plaintiff,

v.

KELLOGG COMPANY, Defendant

And now, to wit, this 19th day of January, A. D., 1938, upon reading and considering the motion of the defendant by E. Ennalls Berl, Esq., its solicitor, to amend the decree entered herein on the fifth day of January, A. D. 1938, by the deletion therefrom of the words "or either of them" at the end of paragraph (3) of said decree, it is

Ordered by the Court that said decree of January 5, A. D. 1938, be and hereby is amended by striking out paragraph (3) thereof and inserting in lieu thereof the following paragraph:

(3) That the plaintiff do recover from the defendant the gains, profits and advantages which the said defendant has derived, received, earned or made or which it shall derive, receive, earn or make by reason of the use by defendant of the name "SHREDDED WHEAT" as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark; and that the plaintiff also recover from the defendant any and all damages which it may have sustained by reason of the use by defendant of the name "SHREDDED WHEAT" as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark.

[fol. 2323] This order does not interpret or construe the mandate of the appellate court but seeks merely to have paragraph (3) and all other parts of the decree conform to that mandate.

(Sgd.) John P. Nields, J.

A True Copy. Attest: H. C. Mahaffy, Jr., Clerk. (Seal.)

[fol. 2324] [Endorsed:] U. S. District Court, District of Delaware. No. 980. In Equity. National Biscuit Company, Plaintiff, v. Kellogg Company, Defendant. Order

Amending Order of January 5, 1938. Filed January 19, 1938. (Sgd.) H. C. Mahaffy, Jr., Clerk.

[fol. 2325] IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF DELAWARE

No. 980. In Equity

NATIONAL BISCUIT COMPANY, Plaintiff,

v.

KELLOGG COMPANY, Defendant

UNITED STATES OF AMERICA,
District of Delaware, ss:

The President of the United States of America to Kellogg Company, a Corporation of the State of Delaware, Greeting:

Whereas, in the above entitled cause, lately pending in the District Court of the United States for the District of Delaware, it was, on the fifth day of January, A. D. 1938, Ordered, Adjudged and Decreed by the Court that a perpetual injunction issue out of and under the seal of said court directed to said defendant, Kellogg Company, its officers, agents, servants, employees and attorneys and those in active concert or participating with them, its successors and assigns, restraining and enjoining it and them, and each of them, from the use of the name "SHREDDED WHEAT" as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark;

Now, Therefore, Know Ye, that you, the said Kellogg Company, your officers, agents, servants, employees and attorneys and those in active concert or participating with [fol. 2326] you, your successors and assigns, and each of you, are hereby strictly restrained and enjoined under the pains and penalties that may fall upon you in case of disobedience, from the use of the name "SHREDDED WHEAT" as your trade name and from advertising or offering for sale your product in the form and shape of plaintiff's biscuit in violation of its trade mark.

Witness the Honorable John P. Nields, Judge of said court, at Wilmington, in said district, this seventh day of

January, A. D. 1938, and the Independence of the United States of America the one hundred and sixty-second.

(Sgd.) H. C. Mahaffy, Jr., Clerk U. S. District Court, District of Delaware. (Seal.)

[fol. 2327] UNITED STATES OF AMERICA,
District of Delaware, ss:

I, Henry C. Mahaffy, Jr., Clerk of the District Court of the United States for the District of Delaware, do hereby certify that I have carefully compared the foregoing writing with the original Injunction issued in the case of National Biscuit Company, Plaintiff v. Kellogg Company, Defendant, No. 980 In Equity with Marshall's return of service thereon, and find the same to be a true and correct copy of said original injunction and Marshall's return so full and complete as the same now remains on file in my office.

In Witness Whereof, I have hereunto set my hand and affixed the seal of said court, at Wilmington, in said district, this sixteenth day of May, A. D. 1938.

H. C. Mahaffy, Jr., Clerk. (Seal of the District Court in Delaware.)

[fol. 2328] [Endorsed:] U. S. District Court, District of Delaware. No. 980. In Equity. National Biscuit Company, Plaintiff, v. Kellogg Company, Defendant. Injunction. Filed January 19, 1938. (Sgd.) H. C. Mahaffy, Jr., Clerk.

DISTRICT OF DELAWARE, ss:.

I hereby certify and return that at Wilmington, in said District, on the 8th day of January, A. D. 1938, I served the within Injunction on the within named Kellogg Company, defendant, by delivering a true copy of the same to Alfred Jervis, Secretary of The Corporation Trust Company, said The Corporation Trust Company being resident agent for said defendant company in the State of Delaware, the president of said defendant company then and there residing without the State of Delaware.

So Answers.

Austin D. Smith, United States Marshal, by (Sgd.) Gove S. Lynch, Gove S. Lynch, Deputy.

SHREDDED WHEAT

TRADE MARK REG. U.S. PAT. OFF.

Made of the whole wheat—nothing added, nothing taken away. Contains, in a digestible form, all the elements for building muscle, bone and brain. Ready-cooked ready-to-eat.

ALL THE BRAN IN THE WHEAT

SHREDDED WHEAT is an all-day food, equally nourishing for breakfast, for lunch, for dinner. Delicious with berries, sliced bananas, or other fruits.

To make a hot dish, heat the Biscuit in oven to restore crispness, then pour hot milk over them, adding a little cream. Salt or sweeten to suit the taste.

HEAT THE BISCUIT IN OVEN TO RESTORE CRISPNESS

Certified FOR FOOD VALUE

Kellogg's WHOLE WHEAT Biscuit contains practically all the food value of entire wheat, including the natural bran. Two biscuits and a bowl of milk will supply about half the average person's daily requirements of both calcium and phosphorus and one-fourth the iron necessary, as well as many other minerals.

This certified analysis made by the Medical Arts Laboratory of Philadelphia, indicates the splendid food value of Kellogg's Shredded WHOLE WHEAT Biscuit.

Carbohydrates	77.31%	Minerals	2.10%
Protein	12.97%	Fibre	1.45%
Fat	1.90%	Moisture	3.12%

MINERALS

Calcium	3.30%	Sodium	1.23%

Kellogg's WHOLE WHEAT BISCUIT

Are made of delicately flavored whole-wheat shreds. These shredded biscuits are a new convenient size. Two just fit the cereal bowl.

Kellogg's Whole Wheat Biscuit are delicious served with hot or cold milk or cream; and a special treat with berries, peaches, prunes, bananas or other fresh or preserved fruits. Add sugar or salt to suit taste—or sweeten with honey.

These nourishing, easy-to-digest biscuits are excellent for lunch as well as breakfast. Ideal for children's suppers or for a late bed-time snack.

Summary of Advertising and Promotional Work Used During Period—1895 to July 31st, 1927.

Magazine and Newspaper advertising started in the year of 1897 in a small way. However, each year the amount of Newspaper and Magazine advertising was gradually increased until as early as 1907 it was necessary to make separate appropriations for Magazines and Newspapers.

Using a 5 year period from 1922-1927 the number of Newspapers and Magazines used were as follows:—

1922	171 Regular Papers (No Magazines)	
1923	235 Regular Papers (No Magazines)	
1924	244 Regular Papers	
	40 Regular Papers (Rotogravure sections—	4 Magazines (National)
1925	291 Regular Papers	1 Magazine
1926	255 Regular Papers	
	381 Western Union List	4 Magazines
1927	325 Regular Papers	
	740 Western Union List	7 Magazines
TOTAL	2682 Newspapers.....	16 Magazines

Special Newspaper Contests—1 National Recipe Contest

1 National Teacher's and Pupil's Essay Contest.

PLAINTIFF'S EXHIBIT NO. 85.

To Arthur W. Page
American Embassy,

London, April 7, 1918.

Dear Arthur:

I daresay you remember this epic:

Old Morgan's wife made butter and cheese;
Old Morgan drank the whey.
There came a wind from West to East
And blew Old Morgan away.

I'm Old Morgan and your mother got ashamed of my wheyness and made the doctor prescribe cream for me. There's never been such a luxury, and anybody who supposes that I am now going to get fat and have my cream stopped simply doesn't know me. So, you see why I'm intent on shredded wheat biscuits. That's about the best form of real wheat that will keep. And there's no getting real wheat-stuff pure and simple, in any other form.

There's no use in talking about starving people—except perhaps in India and China. White men can live on anything. The English could fight a century on cabbage and Brussels sprouts. I've given up hope of starving the Germans. A gut of dogmeat or horse flesh and a potato will keep them in fighting trim forever. I've read daily for two years of impending starvation across the Rhine; but I never even now hear of any dead ones from hunger. Cold steel or lead is the only fatal dose for them.

Therefore I know that shredded wheat will carry me through.

You'll see, I hope, from the clippings that I enclose that I'm not done for yet anyhow. Two speeches a day is no small stunt; and I did it again yesterday—hand running; and I went out to dinner afterward.

It was a notable occasion—this celebration of the anniversary of our coming into the war.[1]

Nobody here knows definitely just what to fear from the big battle; but everybody fears more or less. It's a critical time—very. I am told that that long-range gunning of Paris is the worst form of frightfulness yet tried. The shells do not kill a great many people. But their falling every fifteen minutes gets on people's nerves and they can't sleep. I hear they are leaving Paris in great numbers. Since the big battle began and the Germans have needed all their planes and more in France, they've let London alone. But nobody knows when they will begin again.

Nobody knows any future thing about the war, and everybody faces a fear.

Secretary Baker stayed with me the two days and three nights he was here. He made a good impression but he received a better one. He now knows something about the war. I had at dinner to meet him:

Lloyd George, Prime Minister.
Balfour, Foreign Secretary.
The Chief of Staff.
Lord Derby, War Secretary.
General Biddle, U. S. A., in command at London.
Admiral Sims, U. S. N.

The talk was to the point—good and earnest. Baker went straight back to France and our whole cooperation began. With the first group of four we had conferences besides for two days. His coming was an admirable move.

Yours affectionately,
W. H. P.

[1] This meeting, on April 6, 1918, was held at the Mansion House. Page and Mr. Balfour were the chief speakers.

From the "Life and Letters of Walter H. Page" by Hendrick, Volume II, page 369.

STORE MANAGERS:

HERE ARE

5 Reasons Why Consumers Prefer KELLOGG'S

1. Doublé toasted! Kellogg's Whole Wheat Biscuit are toasted brown on both sides! They are much crisper and more appetizing.
2. More convenient size. Two biscuits just fit the cereal bowl.
3. Economical. 15 biscuits to the package instead of the usual dozen.
4. Rich in food value. Every package certified by the Medical Arts Laboratory of Philadelphia.
5. Kellogg flavor and quality. Delicious taste baked in by a special Kellogg process.

Feature these points to our customers. Cash in on the fine qualities of this product. Display Kellogg's Whole Wheat Biscuit on the counter and in the window. Build Floor Displays. Get back of Kellogg's and push them aggressively. Have your clerks do likewise.

UNITED STATES DISTRICT COURT
DISTRICT OF CONNECTICUT

THE SHREDDED WHEAT COMPANY,
Complainant,
—against—
THE HUMPHREY CORNELL COMPANY and FREDERICK H. TOWNE,
Defendants.

IN EQUITY
No. 1436.

The order entered herein on June 12, 1918 on mandate of the United States Circuit Court of Appeals for the Second Judicial Circuit is hereby re-settled to read as follows:

UNITED STATES DISTRICT COURT
DISTRICT OF CONNECTICUT

THE SHREDDED WHEAT COMPANY,
Complainant,
—against—
THE HUMPHREY CORNELL COMPANY and FREDERICK H. TOWNE,
Defendants.

IN EQUITY
No. 1436.

Order on Mandate

A final decree having been entered in the above entitled cause in favor of complainant on the 25th day of May, 1917, and an appeal from said decree having been duly allowed and prosecuted in the United States Circuit Court of Appeals for the Second Judicial Circuit, from which a mandate has been duly issued to this Court ordering that the said decree be modified and that

as thus modified the decree be affirmed without costs, and said mandate having been duly entered in this Court:

AND IT APPEARING from the opinion of the said Court of Appeals that the defendants' cartons are so different from the complainant's that no confusion is possible in the sale of defendants' biscuits in the cartons; and that only commercial experience can finally determine the possibility of marking, wrapping or tagging the individual biscuits, which may be sold outside of the cartons, without operating to give the complainant such advantage in the market as would substantially handicap the defendants in business of selling biscuits outside of the cartons;

NOW, THEREFORE, UPON CONSIDERATION THEREOF, and in obedience to said mandate and in cognizance with the opinion of the said Court of Appeals herein,

IT IS ORDERED that the said decree heretofore entered in this cause be and the same is hereby modified to read as follows:

"I. That complainant or its predecessors have for upwards of twenty-three years past been engaged in the manufacture and sale of a wholewheat biscuit of a particular form, shape, size and color; and during all said period, until the acts of these defendants, have been the sole manufacturers of a wholewheat biscuit of such form, shape, size, color and character.

II. That the said biscuit as manufactured and sold by complainant in such form, shape, size and color, has become widely and universally known as the product of complainant, and known to the public under the name of 'Shredded Wheat' or 'Shredded Wheat Biscuit', which said words were originally applied to said product by complainant.

III. That the said form, shape, size and color of said biscuit have come, through long and exclusive use and advertisement, to have the meaning and significance only of the product and biscuit of the complainant.

IV. That the defendants' cartons are so different from the complainant's that no confusion is possible in the sale of defendants' biscuits in the cartons.

V. That the defendants' biscuits are of the same form, shape, size and color as the said biscuit manufactured and sold by the complainant, and, therefore, all said defendants' biscuits that shall reach the last purchaser outside of their cartons must either bear a letter, cross or other plain symbol, impressed in their substance, or have fastened upon them a wrapping, tag or band, stating that they are made by the Ross Food Company.

VI. That an injunction issue out of and under the seal of this Court restraining and enjoining defendants, The Humphrey Cornell Company and Frederick H. Towne, their privies, agents, servants, employees, attorneys and representatives, from the sale of all wholewheat biscuits reaching the last purchaser outside of their cartons, to wit, wholewheat biscuits of the same form, shape, size, color and appearance as the biscuit manufactured by the complainant, or in imitation thereof, unless the said biscuits reaching the last purchaser either bear a letter, cross or other plain symbol impressed in their substance, or have fastened upon them a wrapping, tag, or band stating that they are made by the Ross Food Company or other manufacturer.

VII. That the Ross Food Company, the manufacturer of said biscuit, has assumed the expense of defending this action; and that the said corporation, and Andrew Ross, president thereof, and Ralph Valentine, superintendent thereof, were present and participated in the trial of the issues herein, in behalf of defendants, and are privies to the judgment of this Court;

VIII. That the evidence shows that the sales of the defendants The Humphrey Cornell Company and Frederick H. Towne are so small in amount as not to justify the expense of a reference to a master for an accounting.

IX. That the complainant is entitled to recover against the defendants the costs and disbursements of this action, taxed by the clerk of this Court in the sum of $623.90 and execution issue therefor.

AND IT IS FURTHER ORDERED that the injunction heretofore granted in the above entitled cause be and the same hereby is modified so that the said injunction shall read:

"NOW, THEREFORE, we do strictly and perpetually enjoin you, the said Humphrey Cornell Company, and the said Frederick H. Towne, your privies, agents, servants, employees, attorneys and representatives, under the pains and penalties which may fall upon you and each of you, that you forthwith and forever desist and refrain from selling all wholewheat biscuits reaching the last purchaser outside of the cartons, to wit, wholewheat biscuits of the same form, shape, size, color and appearance as the biscuit manufactured by the plaintiff, or in imitation thereof, unless each of the said biscuits reaching the last purchaser, either bears a letter, cross or other plain symbol impressed in their substance, or have fastened upon them a wrapping, tag or band stating that they are made by the Ross Food Company, or other manufacturer;"

AND IT IS FURTHER ORDERED, that the said injunction, as modified hereby continue in force until the further order of the Court:

AND IT IS FURTHER ORDERED, that the defendants at the end of six months from the date hereof may apply to this court to be relieved of the requirement and

injunction herein to mark, wrap, tag or band the said biscuits reaching the last purchaser outside of the cartons, upon showing that after a bona fide trial of all possible expedients, the manufacturer of defendants' biscuits cannot comply with the said requirement and injunction except at an expense which would make impossible any continued competition in the business of selling biscuits outside the cartons with any assurance of reasonable profit.

PLAINTIFF'S EXHIBIT NO. 252.

UNITED STATES PATENT OFFICE.

THE SHREDDED WHEAT COMPANY, OF NIAGARA FALLS, NEW YORK.

TRADE-MARK FOR CEREAL BISCUIT.

85,186. Registered Jan. 30, 1912.

Application filed May 8, 1911. Serial No. 56,292.

STATEMENT.

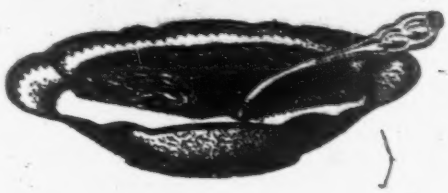
To all whom it may concern:

Be it known that THE SHREDDED WHEAT COMPANY, a corporation duly organized under the laws of the State of New York, and located in the city of Niagara Falls, county of Niagara, in said State, and doing business at the corner of Buffalo avenue and Fourth street, in the city of Niagara Falls, in said State, has adopted for its use the trade-mark shown in the accompanying drawing, no claim being made to the representation of a shedded-wheat biscuit, for cereal biscuit, in Class No. 46, Foods and ingredients of foods.

The trade-mark has been continuously used in the business of said corporation since September 15, 1909.

The trade-mark is applied or affixed to the packages containing the goods by printing the same on said packages or by placing thereon a printed label on which the trade-mark is shown.

THE SHREDDED WHEAT COMPANY,
By A. J. PORTER,
President.



DECLARATION.

State of New York Niagara county ss:

ALEXANDER J. PORTER, being duly sworn, deposes and says that he is the president of the corporation, the applicant named in the foregoing statement; that he believes the foregoing statement is true; that he believes said corporation is the owner of the trade-mark sought to be registered; that no other person, firm, corporation or association, to the best of his knowledge and belief, has the right to use said trade-mark, either in the identical form or in any such near resemblance thereto as might be calculated to deceive; that said trade-mark is used by said corporation in commerce among the several States of the United States; that the drawing presented truly represents the trade-mark sought to be registered; and that the specimens show the trade-mark as actually used upon the goods.

ALEXANDER J. PORTER.

Subscribed and sworn to before me, a notary public, this first day of November in the year 1910.

[L. S.] JAS. TRAVERSE,
Notary Public.

Copies of this trade-mark may be obtained for five cents each, by addressing the "Commissioner of Patents, Washington, D. C."

Registered Aug. 17, 1926. **Trade-Mark 216,593**

UNITED STATES PATENT OFFICE.

THE SHREDDED WHEAT COMPANY, OF NIAGARA FALLS, NEW YORK.

ACT OF FEBRUARY 20, 1905.

Application filed February 18, 1926. Serial No. 227,680.

STATEMENT.

To the Commissioner of Patents:

The Shredded Wheat Company, a corporation duly organized under the laws of the State of New York, and located and doing business at Niagara Falls, New York, has adopted and used the trade-mark shown in the accompanying drawing, for BISCUITS, CRACKERS, AND CEREAL FOODS COOKED OR PREPARED FOR CONSUMPTION, in Class 46, Foods and ingredients of foods, and presents herewith five specimens showing the trade-mark as actually used by applicant upon the goods and requests that the same be registered in the United States Patent Office in accordance with the act of February 20, 1905, as amended. The trade-mark has been continuously used and applied to said goods in applicant's business since September 15, 1909. The trade-mark is applied or affixed to the packages containing the goods by printing the same on said packages or by placing thereon a printed label on which the trade-mark is shown. Applicant is the owner of trade-mark registration No. 85,186, granted January 30, 1912.

Applicant disclaims any exclusive right to the representation of two biscuits apart from the mark shown on the drawing.

The undersigned hereby appoints William H. Davis, Arba B. Marvin, Dean S. Edmonds, Frank E. Barrows, W. Brown Morton, Merton W. Sage, and Willis H. Taylor, Jr., (constituting the firm of Pennie, Davis, Marvin & Edmonds, 165 Broadway, New York city, registration No. 10,839), and each of them, its attorneys, to prosecute this application for registration, with full powers of substitution and revocation, to make alterations and amendments therein, to receive the certificate of registration, and to transact all business in the Patent Office connected therewith.

TRUMAN A. DEWEESE
Vice-President in Charge of Publicity

The News Editor,
"State Journal,"
Springfield, Ill.

Dear Friend:

I am sure you will agree that the enclosed item, referring to our suit against the Kellogg Company, has enough news interest to justify its publication in your paper. The item will no doubt come to you through the regular news channels, but as it vitally concerns the interests of this Company that has been a consistent advertiser in the newspapers for thirty years I am sure you will appreciate our efforts to give you the exact facts.

I know you will not want to show any prejudice in the matter, and yet I am sure you will want to be fair to this Company. For this reason I have confined the news article to the claims made in the complaint which was filed in the United States District Court. The matter of editorial comment is left entirely to your good judgment.

We would like to have it printed just as it is written, but of course you are at liberty to make any condensations that will better adapt it to your columns and your policies. We are sure we can depend on you not to print it before the date on which it is to be released. Needless to tell you any courtesies you may

show us in this matter will be greatly appreciated by our Company as well as by the writer.

Very truly yours,

T. A. DeWeese
Vice-President in Charge of Publicity.

TAD-M.

DEFENDANT'S EXHIBIT NO. 10.

Please do not Publish before August 22nd.

THE SHREDDED WHEAT COMPANY SUES KELLOGG

The Company Asks the Court to Restrain Kellogg from Manufacturing an Imitation of Its Product and from Appropriating its Trade Name and Good-Will.

A lawsuit involving issues of far-reaching importance to manufacturers of food products was started when The Shredded Wheat Company filed a complaint against the Kellogg Company of Battle Creek, Michigan, and certain grocers, alleging unfair competition and unlawful appropriation of its trade name and its good-will. The suit was filed in the United States District Court at New Haven, Connecticut, on Monday, August 22nd.

The occasion for the complaint is the attempt of the Kellogg Company and some grocery jobbers and retailers to market a biscuit which is an imitation of the product of The Shredded Wheat Company under the name "Shredded Whole Wheat Biscuit." The filing of this complaint by The Shredded Wheat Company is notice of its intention to enforce its rights and claims for damages against any manufacturer, wholesaler or retailer manufacturing or distributing any product that is an imitation of its product.

The complaint covers in detail the growth and development of the business of The Shredded Wheat Company, the various methods employed to educate the public regarding the food value of the product and the money expended in creating consumer demand and building good-will all over the world. It places the value of this good-will and trade name at millions of dollars and asks for an injunction against the Kellogg Company.

The complaint alleges that for 34 years The Shredded Wheat Company has given its biscuit a distinctive form, size and shape, and by extensive advertising has so fixed this form, size and shape in the public mind that even when the biscuits are displayed separate and apart from the carton they are recognized by consumers as a product only of The Shredded Wheat Company. They have employed the words "Shredded Whole Wheat Biscuit" and "Shredded Wheat" not as descriptive of the process of manufacture, but as fanciful and distinctive designations identifying their particular product and indicating the source of manufacture.

The complaint avers that The Shredded Wheat Company has expended over $24,000,000, in all kinds of educational work until these terms or words have grown to be trade names of their product with only one meaning in the public mind in the United States and foreign countries, and that these names have not been used in respect to any other article of food for human consumption.

Among the educational methods mentioned in the complaint are advertisements in newspapers and magazines; booklets, leaflets, lectures, store cards, and the distribution of millions of samples from house to house. It is also stated that an average of 100,000 persons have passed through the home plant in Niagara Falls every year for twenty years, to the end

that consumers now invariably associate the names "Shredded Wheat Biscuit" and "Shredded Wheat" with the one product made by The Shredded Wheat Company.

While much of the complaint stresses the unfairness of this sort of competition and the damage done to The Shredded Wheat Company through the appropriation of their trade name and good-will, a large portion of the complaint is devoted to calling the attention of the Court to the deception and fraud that will be practiced upon consumers who purchase the Kellogg Biscuit under the impression that they are getting the original Shredded Wheat Biscuit made by The Shredded Wheat Company, the only product associated with the words "Shredded Wheat."

Attention is also called to the fact that the consumer seldom sees the carton or container, hence he is easily led to believe that The Shredded Wheat Company is manufacturing a biscuit reduced in size and containing less wheat. The complaint alleges in fact that in many instances the Kellogg biscuit has been passed off as the Shredded Wheat Company's product.

The complaint recites the fact that in 1915 The Shredded Wheat Company brought a suit in equity against the Ross Food Company and certain grocers to restrain them from manufacturing and marketing an imitation Shredded Wheat. An injunction was issued restraining the defendants from making Shredded Wheat Biscuit, and this injunction afterwards was affirmed with some modification by the Court of Appeals.

It is further alleged in the complaint that the Kellogg package contains nine ounces of food as against the twelve ounces in the Shredded Wheat Company's package and is sold at less price as an additional means of deceiving the consumer who asks for Shredded

Wheat and is given less weight under the impression that he is getting the real Shredded Wheat made by The Shredded Wheat Company. It is further claimed that if Kellogg is not restrained he will proceed to flood the market with imitation biscuit, relying upon the market for Shredded Wheat Biscuit created through years of advertising.

The complaint asks that Kellogg be restrained from infringing upon the rights of The Shredded Wheat Company, from manufacturing an imitation of their product, and from putting on their carton improper and misleading terms, thereby confusing the product of the Kellogg Company with the real Shredded Wheat Biscuit. The Shredded Wheat Company asks for damages to be assessed and an injunction issued.

DEFENDANT'S EXHIBIT NO. 95.

NATIONAL BISCUIT COMPANY

"UNEEDA BAKERS"

Eighty-Five Ninth Avenue, New York

December 1, 1930.

TO JOBBERS:

Effective January 1, 1931, National Biscuit Company will inaugurate direct sale and distribution of SHREDDED WHEAT to retail merchants and other distributors through its agencies located throughout the United States.

The following prices will apply:

SHREDDED WHEAT, 36's (9 bundles of 4 cartons)	$4.05 per case
SHREDDED WHEAT (bundles of 4 cartons)	.45¢ " bundle
INDIVIDUAL SHREDDED WHEAT (72 cartons)	1.60 " case
TRISCUIT (bundles of 6 cartons)	.50¢ " bundle

Inasmuch as SHREDDED WHEAT will be considered as an added line to our present merchandise sold through agencies, it will be subject to our usual terms and discounts, as follows:

Less than $100 per month,	10%
$100 to $999.99 per month,	15%
More than $1,000 per month,	17½%

Jobbers of SHREDDED WHEAT will be allowed an additional 2½%, based on quantities noted above, with maximum of 17½% trade discount. Cash discount of 1% will be allowed if paid within 10 days from date of invoice. It is requested that, in the sale of SHREDDED WHEAT, Jobbers do not allow in excess of our published discounts.

National Biscuit Company desires to retain, and will co-operate to encourage the sale of SHREDDED WHEAT through jobbers who are in a position to handle same profitably. Any inquiry in regard to this revised policy will have our prompt attention. If jobbers now handling SHREDDED WHEAT desire to discontinue the item entirely, they will be relieved of their stock, at cost price, as early as practicable after January 1, 1931.

If, during the month of December, present jobbers permit their supply of SHREDDED WHEAT to become exhausted and they do not desire to restock, National Biscuit Company reserves the right to fulfill customers' requirements by delivery through its agencies.

Very truly yours,

NATIONAL BISCUIT COMPANY,
SALES DEPARTMENT,
F. K. Montgomery, Vice President.

Ceres Greets You With Words of Good Cheer.

Ceres, the Goddess of Agriculture, says there is wealth of muscle and blood and brain, and the material for the reconstruction of your physical form and the enjoyment of perfect health to be found ONLY in pure, unadulterated, plain, nutritious food, and this Nature has lavishly provided.

If you would have bright eyes, rosy cheeks, good form, elasticity in step, avoid adulterated and mixed up messes. Improper food, and, therefore, improper nourishment, has caused the death of more than one-half the entire population of the world under the age of five years, and the other half to suffer the torments of the damned. Drunkards, lunatics, felons and other unfortunates fill the asylums, poor houses, hospitals and penitentiaries of the land because of improper food. The races are sick.

Absolutely pure food is manufactured only by THE CEREAL FOOD CO., 1632 Arapahoe street.

Shredded Whole Wheat Bread and Shredded Cereal Coffee fill every requirement of the human system. Come to the CEREAL RESTAURANT AND SALESROOM and try, and take home with you some of these perfect foods.

DEFENDANT'S EXHIBIT NO. 121.

UNITED STATES CIRCUIT COURT OF APPEALS
FOR THE SECOND CIRCUIT.

THE SHREDDED WHEAT COMPANY,
Complainant-Appellee,

—against—

THE HUMPHREY CORNELL COMPANY and FREDERICK H. TOWNE,
Defendants-Appellants.

Before:

WARD and HOUGH, Circuit Judges

and

LEARNED HAND, District Judge.

Appeal by the defendants from a decree of the District Court for Connecticut enjoining them from selling any shredded wheat biscuit without distinctly marking upon each biscuit that it was made by the defendant and was not the product of the plaintiff and from using any cartons having a picture of such biscuit without similar marking. The jurisdiction of the District Court depended upon diverse citizenship.

The plaintiff is a large corporation situated in Niagara Falls, New York, and engaged in the manufacture of the familiar article of food, known as "Shredded Wheat Biscuit", under a series of patents of which the original and basic is for a product and process. This patent was granted to one, Perky, the original promoter of the enterprise, in October, 1895, Number 548,086, and disclosed a process of boiling the original whole wheat berry, partially drying it, and

then forcing it between compression rollers, one or both of which had peripheral grooves which mashed the several parts of the berry into a heterogeneous soft paste. This paste was then forced out through combs or scrapers so as to emerge in thin filaments or shreds. The patent states that the wheat in this form is ready for food, though it may be baked in various ways.

In the actual manufacture of the biscuit, the pulpous shreds or filaments which proceed from the combs, as described in the product patent, are carried off upon a web or endless belt and are built up by a succession of layers until a strand of the desired thickness is secured. This strand is cut at given intervals by knives, thus making the longer edges of the biscuit, which through the pressure of the knives are matted and pressed together. The biscuits are then cooked in an oven which raises the top except at the longer edges which have been matted together, separating the shreds and making more obvious the interstitial texture of the whole. The baking also browns the top, and hardens the biscuit by drying; the color depends upon the manipulation of the heat and somewhat varies with the operator.

In September of the same year Perky took out a design patent for fourteen years upon a biscuit, shown in accompanying drawings and rectangular in plan view, the longer axis being about twice the shorter. The end view or section on the shorter axis was ovoid, the bottom or base of the biscuit being flatter than the top. The design also displayed the rough or filamented texture of the biscuit. It described as the leading feature of the design "a fibrous interstitial appearance, showing superimposed layers or irregular interlacing threads or filaments" in such wise that the threads are visible from the surface through the outer

layers. This design resulted necessarily from the actual process of manufacture above described.

The plaintiff's predecessor, the Cereal Machine Company, of Colorado, began the manufacture of this product in 1895, and in six years, 1901, it had already attained a wide sale, and has increased enormously until at the present time the sales amount to hundreds of millions of biscuits each year distributed in all states of the Union, in Europe, and elsewhere. Accompanying the increase of its business has been an outlay for advertising of many millions of dollars and in all sorts of forms, among which one of the most common has been pictures of the biscuit, either in black and white or in color.

The plaintiff packs the biscuit in cardboard cartons twelve to the box, and sells to the retailer or jobber in cases of thirty-six cartons for Three dollars and sixty cents each. The cartons have the words "Shredded Wheat Biscuit" upon them and the name of the plaintiff as manufacturer. In cases where the retailer sells to the consumer for family use the cartons go along with the biscuits, but a large part of the plaintiff's business consists in sales to hotels, restaurants, lunch-rooms and boarding houses, and the biscuits in such cases necessarily reach the ultimate consumer upon plates or saucers without any identifying mark. As a method of advertising, moreover, the biscuits are displayed in restaurants and lunch-rooms in large glass globes, without any mark or sign of their source.

The plaintiff, to show the unfair competition upon which the bill was based, was obliged to prove that the mere appearance of the biscuits when out of the cartons was so associated with the plaintiff that it had acquired a "secondary" meaning. To do this it called many witnesses, who swore either that they knew the biscuit as the plaintiff's or that they knew it as

coming from a single source to which they had become accustomed. These witnesses were jobbers, retailers and consumers. The testimony was uncontradicted, and the defendants do not dispute that the biscuit is so associated with the plaintiff or at least with some single source in the public mind.

The defendant company is only a jobber selling the biscuits of the real party in interest, the Ross Food Company, a corporation organized in 1914, by Ross, Valentine and Towne, formerly employees of the plaintiff for many years. The design patent having expired in 1909, and the product patent in 1912, these gentlemen conceived the project of manufacturing a biscuit identical in substance and appearance with the plaintiff's, and this they began to do in August, 1915. Their efforts had not as yet achieved much success when in October of that year, three years after the product patent had expired, this bill was filed.

The Ross Food Company markets its biscuits in cartons of ten each, of which it sells thirty-six to a case for two dollars and eighty cents. The carton is so totally dissimilar to that of the plaintiff that nothing need be said of it except that it contains a picture of two of the wheat biscuits, accurate not only as to its own contents, but necessarily identical with the plaintiff's biscuit. This picture has been used by retailers in the sale of the goods as an assurance that the contents of the carton was shredded wheat biscuit and the general appearance of the carton in one instance anyway was not sufficient to prevent confusion. The plaintiff also produced several witnesses who said either that they had innocently served the Ross Food Company's biscuit as shredded wheat or that they had received them as such.

The question litigated upon the trial was whether, assuming that the general appearance of the plaintiff's biscuit had acquired a "secondary" meaning, that

justified any relief in view of the design patent, and the defendant's undoubted right to make and sell the biscuits as it chose. Proof was taken as to the feasibility of wrapping each biscuit or tagging it with a distinctive mark, and as to the commercial possibility of making the biscuit in another form or of impressing some mark upon its top in the process of baking. So far as necessary this proof is considered in the opinion.

CHARLES K. OFFIELD and WILLIAM C. BREED
for the plaintiff
JAMES H. GRIFFIN and JOHN R. NOLAN
for the defendant.

LEARNED HAND, D. J.: Originally the plaintiff was able to sell its biscuits because the public came to like them; they liked their taste, they liked their appearance, they were converted by their supposititious dietetic value. The art of advertising spuriously reinforced a genuine demand by the power of reiterated suggestion. So far, however, the public was buying because it wanted, or had been made to think it wanted, the biscuit which the plaintiff produced and so far there was no ground for any kind of protection. We have recently considered this question in Crescent Tool Co. v. Kilborn & Bishop Co., decided Nov. 13, 1917, and there we held that the right to appeal to the public even in the minutest details of the plaintiff's design was open to all so long as the details had acquired no "secondary" meaning. The evidence shows without contradiction, however, that the long monopoly of the plaintiff has created, as indeed it was bound to create, a state of mind more complex than this, for when one has for a long time bought from a single source some article that one likes, either through conscious reflection or through mere conservative habit,

one is apt to impute to its source a part of its putati value. The plaintiff has at least shown that the pub has become accustomed to regard its familiar wh biscuit as emanating if not from it by name, at l from a single, though anonymous maker, and the se ond is as good for these purposes as the first, Saalfi Co. vs. G. & C. Merriam Co., 238 Fed. R. 1, 8. Tho the public may, therefore, buy the biscuit becaus has come to like it, the plaintiff still has a stake that other motive for buying, i. e., that it comes fr the accustomed maker. It is true that it has at tim been said that where the association of the make name with the article has arisen during the monopol of a patent, it is of slight value, Kellogg Toasted Co Flake Co. vs. Quaker Oats Co., 235 Fed. R. 657, 6 But while the public cannot of course exercise an preference between makers during the monopoly, th may come, and as we have said, it is almost inevitabl that they should come, to associate some of the sup posed merit of a successful article not only with th advantages due to the patented characteristics, bu with the supposed uniformity and reliability of it manufacture. If the public has come so to associat the machine with a single maker, he is, we think, e titled to some protection, as much when the associa tion be through mere appearances as when it b wrapped up in a name as in Singer Manufacturing Co. vs. June Mfg. Co., 163 U. S. 169. It is not neces sary that there should be a period after the expiration of the monopoly during which the field was open and the secondary meaning was acquired or preserved among actual or possible competitors, though the con trary is indeed suggested in G. & C. Merriam v. Saal field, 198 Fed. R. 369, 374.

We think, therefore, that prima facie the plaintiff stands with a genuine grievance, an "injuria" of ex

ctly the same kind as the owner of a trade-mark or a ell-established "make-up". The difficulty in the case t bar, as it generally does in such cases, lies in giving ny remedy which shall not take away the defendant's ndubitable rights. The original "secondary meaning" ases like Reddaway vs. Banham, (1896), App. C. 199, ll turned upon some meaning acquired by words of ommon speech, to which it cost the defendant little or othing to add some affix, so that his complaint that he as being deprived of rights in the public domain was hin, yet in strict principle he was correct, because rima facie he might use the common speech in any ontext. The courts were necessarily in fact compromising between two conflicting rights, of which one ad no substantial value.

It is in cases where the connotation of origin arises ot from verbal description, but only from the appearance of the article, that the trouble arises in application, because the appearance must in some way be changed, or the article must be wrapped or marked. Thus has arisen the principle often applies in this court that minor, or "non-functional", changes in appearance may be required, so long as the substantial elements are left in the public domain, Enterprise Mfg. Co. vs. Landers, 131 Fed. R. 240, Yale & Towne Mfg. Co. v. Alder, 154 Fed. R. 37. In the same class stand cases like Fox vs. Hathaway, 199 Mass. 99, and Fox vs. Glynn, 199 Mass. 344, Coca Cola Co. vs. Gay-Ola Co., 200 Fed. R. 720, Walker vs. Grubman, 222 Fed. R. 478. Indeed, this principle has been pressed very far in this court, Rushmore vs. Manhattan Screw & Stamping Co., 163 Fed. R. 999, Lovell, McConnell Mfg. Co. v. American Ever Ready Co., 195 Fed. R. 931, Rushmore vs. Badger Brass Mfg. 198 Fed. R. 379. The first Rushmore case was recognized at the time as trenching hard upon the other limit in application, which is that where the "second-

ary meaning'' is bound up in elements of the appear-
ance which cannot be changed without cutting off th
defendant's substantial right to make and sell that kin
of goods in question, the plaintiff must suffer the resul
ing confusion. These are the converse of the "no
functional'' cases, Daniel vs. Electric Hose & Rubb
Co., 231 Fed. R. 827, Marvel Co. vs. Pearl, 133 Fed. R
160, Diamond Expansion Bolt Co. vs. U. S. Expansi
Bolt Co., 177 App. Div. 554, Fairbanks vs. Jacobus, 1
Blatchf. 337, Heide vs. Wallace, 135 Fed. R. 346, Globe
Wernicke Co. vs. Fred Macey Co., 119 Fed. R. 69
Flagg Mfg. Co. v. Holway, 178 Mass. 83. Under the
guise of protecting against unfair competition we must
be jealous not to create perpetual monopolies.

We do not see any possible change in the appear-
ance of the biscuit itself which would be of enough
service to the plaintiff to justify its imposition upon
the defendant. Concededly, variation could be enforced
only in its form, color or size. As to form, the plain-
tiff appears to us finally concluded by its own design
patent. Whether or not the evidence might have
allowed us to prescribe some variation in the form had
that form been only the result of the plaintiff's original
adoption, we do not say; Fox vs. Hathaway, supra, sug-
gests that we might have found a way out. But the
plaintiff's formal dedication of the design is conclu-
sive reason against any injunction based upon the ex-
clusive right to that form, however necessary the plain-
tiff may find it for its protection. As to color also we
feel ourselves limited, because, while the shade of brown
depends upon the baking, the plaintiff's own biscuits
vary within appreciable limits and to require the de-
fendant to adopt a shade different enough for commer-
cial distinction would be to force them to bake their
biscuits so that they would be repellant to most tastes.
It would, in so far as we can see, in effect, either ter-

inate or hopelessly cripple any competition between e two parties.

With size it is perhaps different, for we are not tisfied that the added cost of turning out a smaller iscuit would be substantial, per pound of shredded heat. That might indeed have to await experiment, it appeared that a mere change in size would give y effective relief to the plaintiff. There is no reason suppose that it would, and there is every reason to elieve that it would greatly embarrass the defendants. o increase the size of the biscuit would make it impos- ible to put two in the ordinary saucer; to decrease it o that three could be sold for the present price of two ould obviously increase the cost of that part of the anufacture, after the wheat is shredded, by one-half gain, or nearly. We think that such a requirement fanciful as relief and too onerous upon the defendant.

There remains, therefore, as the only practicable elief, some mark impressed upon the surface of the iscuit in the baking, or some proper wrapping or tag, ith an adequate legend. In the imposition of such a equirement, we should observe the same limitation as ourts have by general agreement observed in the "non- nctional" cases. That is, we should be equally jeal- us to assure the defendant's right freely to compete the market with the first comer. The question is lways commercial; we ought not to impose any bur- ens which either by changing the appearance of the rticle itself, or by imposing expense upon its produc- ion, will operate to give the plaintiff such advantage the market as will substantially handicap his com- etitors. On the other hand Judge Hough believes hat once the right is assured to the defendant of mak- g the article in all its substantial elements, that is all e can demand. If the similarity between the goods ust remain such as to create confusion, it is irrelevant

that the cost of wrapping, marking or tagging them may impose too great a burden upon the defendant to allow his continuing in the market. His manufacture, as it exists, is a fraud and all elements of deception must be removed before it can be permitted to continue.

In the case at bar it remains ambiguous upon this record just what are the commercial possibilities of marking, wrapping or tagging the defendant's individual biscuits. The evidence is meagre as to impressing a mark upon the top of the biscuits during the baking; all we can find is that of Valentine. At one place he says that it would be practicable to impress a cross upon the biscuit while soft that would endure and the cost would be slight; later he says that when the biscuit rose in the baking the mark would disappear or the biscuit would be "deformed". We think that the "deformity" is just what the plaintiff is entitled to require, not a deformity, it is true, which would affect the design dedicated by the design patent, but enough to mark distinctively the biscuit itself. After a careful scrutiny of this record as it stands we see no reason to suppose that such a requirement is not possible.

The evidence as to wrapping or tagging each biscuit is if possible still more meagre. Ross swears that the paper alone for wrapping would cost twenty-five cents per case, raising the cost from two dollars and eighty cents to three dollars and five cents. How far the cost of labor and breakage would increase this, he does not know. A paper tag or band if put on before baking would be destroyed, and if put on afterwards must be pasted. What the cost of pasting would be, does not appear, nor whether a paste could be obtained which would be unobjectionable upon an article of food. It would certainly appear as though each of these would be a reasonable possibility.

The record appears neutral in respect of these matters, and in the view I take personally all depends upon

whose is the burden to show that there is or is not a commercially practicable means to discriminate. I think that since the plaintiff has shown that the appearance of its biscuit has acquired a "secondary" meaning and that it is physically possible to attach or impress upon the defendant's biscuit a distinguishing mark, the defendant has the burden of showing that such a mark will impose upon him a commercial handicap which will practically take from him his free right to compete. I therefore agree with Judge Hough that the defendant should be compelled to put some distinguishing mark upon each biscuit sold to any final purchaser out of the carton. This mark need not be what the District Court required, that is, a statement that the biscuit was made by the defendant, and not by the plaintiff, but something sufficiently obvious to distinguish the two, as a cross, a line, or a letter, if the mark be impressed, or a suitable legend, if paper be fastened to the biscuit.

Such a requirement does not, however, apply to those biscuits which reach the final purchaser in cartons, that is, to those which are not sold to hotels, restaurants, lunch-rooms and boarding houses. The defendant's cartons are so different from the plaintiff's that no confusion is possible. ~~Yet as the point has been so much pressed that the picture of the biscuits on the cartons has been the means of confusion or of deception, we agree that out of abundant caution the defendant should add below that picture in large type the legend, "Made by the Ross Food Company."~~

I think that as respects the marking, wrapping or tagging of individual biscuits the case is such that only commercial experience can finally tell what are the possibilities. I would therefore add to the requirements imposed above a probationary period within which the defendant must try in good faith to accommodate itself to this necessity. This portion of its trade is less than ten per cent. and it cannot prove a for-

midable obstacle for six months to require it to comp
provided that at the end of that time it have leave
demonstrate that compliance is equivalent to destru
tion of its right of free competition. The burden
be upon it to show that it has exhausted all the pos
bilities of effective distinction between the biscuits,
that each involves an expense which will not permit
to maintain that part of its trade without a handi
that forbids any assurance of a reasonable profit
a continued competition in that line. While Jud
Hough does not think that such a probationary peri
is necessary, since the result would be irrelevant,
agrees to a disposal of the case upon those terms.

The decree will, therefore, be modified as follow
first, by relieving the defendants of any injunction
the sale of such biscuits as shall reach the last pu
chaser in cartons, ~~except that at the base of the pict~~
H. G. W. ~~of biscuits on the carton shall appear the legen~~
~~"Made by Ross Food Co."~~ Second, all biscuits reach
ing the last purchaser outside of their cartons mu
either bear a letter, cross or other plain symbol, im
pressed in their substance, or have fastened upon them
a wrapping, tag or band, stating that they are made by
the Ross Food Company. Third, the defendant at the
end of six months may apply to the District Court to be
relieved of the second requirement upon showing that
after a bona fide trial of all possible expedients it can
not comply with the second provision except at an
expense which would make impossible any continued
competition in the business of selling biscuits outside
the cartons with any assurance of reasonable profit.

As so modified the decree is affirmed without costs.

DEFENDANT'S EXHIBIT NO. 122.

UNITED STATES CIRCUIT COURT OF APPEALS,
FOR THE SECOND CIRCUIT.

No. 145, October Term 1917.

THE SHREDDED WHEAT COMPANY,
Complainant-Appellee,
against
THE HUMPHREY CORNELL COMPANY and FREDERICK H. TOWNE,
Defendants-Appellants.

Appeal from the District Court of the United States for the District of Connecticut.

PETITION OF DEFENDANTS-APPELLANTS FOR RE-HEARING.

To the Honorable the Judges of the United States Circuit Court of Appeals for the Second Circuit:

Your petitioners, The Humphrey Cornell Company and Frederick H. Towne, defendants-appellants, in the above-entitled cause, respectfully show:

(1) That as appears from the majority opinion (per Judges Hough and Hand) filed February 20, 1918, the fact was apparently overlooked by the Court that defendants' cartons bear thereon, in large distinct type, below each picture of the biscuit, the legend:

Manufactured by
THE ROSS FOOD CO., INC.,
Batavia, N. Y., U. S. A.; and

(2) That, therefore, there was inadvertently included in the order of modification of the decree of the District Court, respecting the sale of defendants' biscuits in cartons, the requirement:

. . . that at the base of the picture of biscuits on the carton shall appear the legend: "Made by Ross Food Co."

The express language of the Court is:

"The decree will, therefore, be modified as follows: first, by relieving the defendants of any injunction in the sale of such biscuits as shall reach the last purchaser in cartons, except that at the base of the picture of biscuits on the carton shall appear the legend: 'Made by Ross Food Co.'"

. . .

The portion of the opinion forming the basis of the foregoing requirement as to the addition of the legend "Made by the Ross Food Co." is found at page 12 of the typewritten opinion, and reads:

"The defendant's cartons are so different from the plaintiff's that no confusion is possible. Yet as the point has been so much pressed that the picture of the biscuits on the cartons has been the means of confusion or of deception, we agree that out of abundant caution the defendant should add below that picture in large type the legend, 'Made by the Ross Food Company.'"

The effect of leaving in the opinion and order of the Court, the requirement that the defendants' cartons shall bear the legend "Made by the Ross Food Co.," is to convey the erroneous impression that defendants' cartons did not heretofore have upon them words designating the biscuits illustrated thereon and contained therein as a product manufactured by The Ross Food Co.; and it leaves the meaning of the Mandate in doubt before the District Court, and may thus occasion difficulty in the settlement of the decree in that Court, with attendant delay and expense. Moreover should the District Court insist upon defendants altering the language on their cartons, i. e., changing

"Manufactured" to Made, the defendants will be greatly embarrassed thereby, in that there are many thousands of the cartons on hand.

WHEREFORE your petitioners pray that a rehearing of this cause may be granted on the matters hereinbefore referred to at such time as the Court may appoint, that the Court may then consider and determine the propriety of modifying the said opinion and the directions therein relative to the marking of defendants' cartons, and that such other and further relief may be had as to this Court may seem just and meet and the circumstances of the case may require.

DEFENDANT'S EXHIBIT NO. 126.

UNITED STATES OF AMERICA, SS:

The President of the United States of America,

To the Honorable the Judges of the District Court of the United States for the District of Connecticut.

GREETING:

WHEREAS, lately in the District Court of the United States for the District of Connecticut, before you, or some of you, in a cause between Shredded Wheat Company and Humphrey Cornell Company and another, a decree was entered in the office of the clerk of said court on the 25th day of May, 1917, in the words and figures following, to-wit:—

"This cause having duly come on to be heard upon the issues raised by the pleadings herein and Charles K. Offield, Esq., William C. Breed, Esq., and Frederick I. Allen, Esq., having been heard in behalf of complainant; and John R. Nolan, Esq., James H. Griffin, Esq., David Tice, Esq., and Arthur Keefe, Esq., having been heard in behalf of defendants and due consideration having been had, it is now upon motion of George D. Seymour, solicitor for complainant,

Ordered, adjudged and decreed

I. That complainant or its predecessors have for upwards of twenty three years past been engaged in the manufacture and sale of a whole wheat biscuit of a particular form shape size and color; and during all said period until the acts of these defendants have been the sole manufacturer of a whole wheat biscuit of such form shape size color and character,

II. That the said biscuit as manufactured and sold by complainant in such form shape size and color has become widely and universally known as the product of complainant and known to the public under the name of Shredded Wheat or Shredded Wheat Biscuit, which said words were originally applied to said product by complainant.

III. That the said form shape size color of said biscuit have come through long and exclusive use and advertisement to have the meaning and significance only of the product and biscuit of the complainant and are not functional or essential to the manufacture of a whole wheat biscuit.

IV. That the defendants have infringed upon and violated the rights of complainant in selling a whole wheat biscuit manufactured by The Ross Food Company simulating, copying and imitating the form shape size and color of the complainant's biscuit, and have unfairly traded therein by the marketing and sale of the said biscuit to the injury of the complainant and the deception of the public.

V. That the defendants have futher infringed upon and violated the rights of the complainant by placing upon their cartons a pictorial representation of complainant's biscuit to the injury of complainant and the deception of the public.

VI. That the Ross Food Company the manufacturer of said biscuit has assumed the expense of defending this action; and that the said corporation and Andrew Ross president thereof, and Ralph Valentine Superintendent thereof were present and participated in the trial of the issues herein in behalf of defendants and are privies to the judgment of this court.

VII. That an injunction issue in accordance with the opinion of this court filed herein, and under the seal of this court restraining and enjoining the defendants The Humphrey Cornell Company and Frederick H. Towne, their privies agents

servants employees attorneys and representatives from manufacturing selling or marketing a whole wheat biscuit of the same form shape size color and appearance as that of complainant's biscuit or in imitation thereof unless there is clearly and unmistakably marked on each biscuit words stating that such biscuit is made by the defendants or other manufacturer and is not the product of the Shredded Wheat Company, the complainant herein; and that defendants their privies, agents, servants, employees, attorneys and representatives are further enjoined and restrained from selling or marketing or using cartons or containers for a wheat biscuit bearing thereon a pictorial representation of the shredded wheat biscuit manufactured by the complainant or in imitation thereof, unless there is clearly and unmistakeably on each representation of such biscuit words stating that said biscuit is made by the defendants or other manufacturer and is not the product of the Shredded Wheat Company, the complainant herein.

VIII. That the evidence shows that the sales of the defendants The Humphrey Cornell Company and Frederick H. Towne are so small in amount as not to justify the expense of a reference to a master for an accounting, and this decree is therefore made final.

IX. That the complainant is entitled to recover against the defendants the costs and disbursements of this action the same to be taxed by the clerk of this court and execution issue therefor.

Dated New Haven, Connecticut, May 25, 1917.

EDWIN S. THOMAS, U. S. J."

as by the inspection of the transcript of the record of the said Court, which was brought into the United States Circuit Court of Appeals for the Second Circuit, by virtue of an appeal agreeably to the act of Congress in such case made and provided, fully and at large appears.

And, Whereas, in the present term of October, in the year of our Lord one thousand nine hundred and seventeen the said cause came on to be heard before the said United States Circuit Court of Appeals for the Second Circuit, on the said transcript of record and was argued by counsel:

On consideration whereof, IT IS HEREBY

ORDERED, ADJUDGED AND DECREED, That the decree of said District Court be and it hereby is modified in accordance with the opinion of this court and as so modified is affirmed without costs.

You therefore, are hereby commanded that such further proceedings be had in said cause, in accordance with the decision of this court, as according to right and justice, and the laws of the United States, ought to be had, the said appeal notwithstanding.

WITNESS the Honorable EDWARD D. WHITE, Chief Justice of the United States, the 4th day of March, in the year of our Lord one thousand nine hundred and eighteen.

WILLIAM PARKIN

(Seal) Clerk of the United States Circuit Court of Appeals for the Second Circuit.

Clerk

NATIONAL BISCUIT COMPANY
"Uneeda Bakers"

Denver, Colo.,
June 2nd, 1932.

TO ALL JOBBERS:

We have put out a smaller size Shredded Wheat biscuit in Individual Cartons, for restaurant use, and these are listed at $1.35 per case of 72, your regular discount applies.

We will continue to carry our regular size biscuit in Individual Cartons at $1.60 per case of 72.

Our reason for this change has been the fact that there has been a smaller biscuit put out by one of our competitors and some of the restaurant trade have been confused with the thought that our price was out of line.

In ordering out this merchandise please designate "Small Size" for the new carton and "Large Size" for the standard carton. We know, there are a great many restaurants who do not care to change because the consumer in general is used to the larger size biscuits but we want your salesmen to be in line with competition on price, and if this new package is used only when needed it will serve its purpose.

We will see that our salesman shows you samples.

Yours very truly,

NATIONAL BISCUIT COMPANY.

PETITION.

To the Commissioner of Patents:

The Shredded Wheat Company, a corporation duly organized under the laws of the State of New York, and located and doing business at Niagara Falls, New York, has adopted and used the trade-mark shown in the accompanying drawing for biscuit or crackers, in Class 46, Foods and ingredients of foods, and presents herewith five specimens showing the trade-mark as actually used by applicant upon the goods, and requests that the same be registered in the United States Patent Office in accordance with the act of March 19, 1920. The trade-mark has been continuously used and applied to said goods in applicant's business since January 1st, 1894. The trade-mark is applied or affixed to the goods, or to the packages containing the same, by placing thereon a printed label on which the trade-mark is shown, or by printing the trade-mark directly on the package. The mark has been in bona fide use for not less than one year in interstate commerce by the applicant. E.W.Anderson (George Manne Anderson) of Washington, D.C., are appointed attorneys for the prosecution of this application.

STATEMENT.

To the Commissioner of Patents:

The Shredded Wheat Company, a corporation duly organized under the laws of the State of New York, and located and doing business at Niagara Falls, New York, has adopted and used the trade-mark shown in the accompanying drawing, for BISCUIT OR CRACKERS, in Class 46, Foods and ingredients of foods, and presents herewith five specimens showing the trade-mark as actually used by applicant upon the goods, and requests that the same be registered in the United States Patent Office in accordance with the act of March 19, 1920. The trade-mark has been continuously used and applied to said goods in applicant's business since January 1st, 1894. The trade-mark is applied or affixed to the goods, or to the packages containing the same, by placing thereon a printed label on which the trade-mark is shown, or by printing the trade-mark directly on the package. The mark has been in bona fide use for not less than one year in interstate commerce by the applicant. E. W. Anderson & Son (George Manne Anderson) of Washington, D. C., are appointed attorneys for the prosecution of this application.

THE SHREDDED WHEAT COMPANY,
By F. L. MONIN,
Secretary.

IN THE UNITED STATES PATENT OFFICE

Application of THE SHREDDED WHEAT COMPANY
Serial No. 227,479
Filed February 18, 1926
For Trade Mark SHREDDED WHEAT.

New York, N.Y., April 20, 1926.

Honorable Commissioner of Patents,
Washington, D. C.

S i r:

We beg to submit the following in reply to the comment in the Examiner's letter dated March 18, 1926.

We respectfully request that the objection to the characterization of the goods on which the mark is used be withdrawn. This characterization was adopted after careful consideration of a somewhat unusual situation and seems to us to be needed to insure adequate protection of applicant's Trade Mark rights. The article on which the mark is used is the well known shredded wheat biscuit, known everywhere and commonly referred to as a biscuit. This product is in some respects like a cracker, and in fact this applicant makes a product of the same general nature as the shredded wheat biscuit, but much thinner and more compact and in those respects much more like a cracker. However, in the actual conduct of the applicant's business its shredded wheat biscuit competes with prepared cereal foods, such as are commonly referred to as breakfast foods. It does not compete to any substantial extent with products of the kind commonly sold as biscuits and crackers. In other words, though the product is called a biscuit it competes to an inconsiderable extent with

227479-4

the products of bakers as that term is commonly used, and to almost the whole extent with prepared cereal or breakfast foods.

This seems to us to require that the Certificate of Registration name biscuits as the goods on which the mark is used because applicant's goods are commonly referred to as biscuits, and also crackers because applicant's product is similar to crackers and may readily be made up in a form even more closely similar to crackers, and also cereal foods because applicant's product, even though otherwise referred to, is in fact a prepared cereal food and competes with such food in the trade.

These considerations seem to us to fully justify the use of the characterization of applicant's goods as it appears in the statement, and we ask, therefore, that the objections presented in the first two paragraphs in the Examiner's letter be withdrawn.

The matters referred to in the foregoing were discussed at some length with the Examiner in charge of Trade Marks, and we wish to express our appreciation of the courtesy extended to us at that interview.

Respectfully submitted,

Attorneys for Applicant.

TRADE-MARK FOR BISCUIT OR CRACKERS.

No. 52,880. Statement and Declaration. Registered May 22, 1906.

Application filed June 8, 1905. Serial No. 7,888.

STATEMENT.

To all whom it may concern:

Be it known that THE NATURAL FOOD COMPANY, a corporation duly organized under the laws of the State of New York, and located in the city of Niagara Falls, in the county of Niagara, in said State, and doing business at the corner of Buffalo avenue and Fourth street, in said city of Niagara Falls, has adopted for its use a trade-mark, of which the following is a description.

The trade-mark consists of the conventional representation of the mythological character "Ceres," represented as holding a lighted torch in one hand and a sheaf of wheat in the other.

This trade-mark has been continuously used in the business of said corporation since January 1, 1894.

The class of merchandise to which the trade-mark is appropriated is bakers' ware or bread, and the particular description of goods comprised in said class upon which said trade-mark is used is biscuit or crackers.

The trade-mark is usually displayed on the packages containing the goods by printing the same on the package.

[L. S.] THE NATURAL FOOD COMPANY,
By BIRNEY L. HERRICK,
Secretary.

DECLARATION.

State of New York, county of Niagara, ss:

BIRNEY L. HERRICK, being duly sworn, deposes and says that he is secretary of the corporation, THE NATURAL FOOD COMPANY, the applicant named in the foregoing statement; that he believes the foregoing statement is true; that he believes said corporation is the owner of the trade-mark sought to be registered; that no other person or firm, corporation or association, to the best of his knowledge and belief, has the right to use said trade-mark, either in the identical form, or in any such near resemblance thereto as might be calculated to deceive; that the said trade-mark is used by the said corporation in commerce among the several States of the United States and particularly between the State of New York, and the State of Illinois, and between the United States and foreign nations, and particularly with Great Britain, and that the description, drawing, and facsimiles presented truly represent the trade-mark sought to be registered.

BIRNEY L. HERRICK.

DEFENDANT'S EXHIBIT NO. 242.

[NOTE: This patent only reproduced. Balance of patents in this exhibit found in Volume V.]

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO.

BREAD AND METHOD OF PREPARING SAME.

SPECIFICATION forming part of Letters Patent No. 548,086, dated October 15, 1895.

Application filed March 16, 1894. Serial No. 503,777. (No specimens.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Denver, in the county of Arapahoe and State of Colorado, have invented a certain new and useful Article of Food or Bread and the Preparation of the Same; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

An object of the invention is the production of an article of food or bread, consisting of externally-rough porous threads or filaments of wheat or similar grain, having the outer nutrition bran and gluten of the entire berry visibly mingled with the interior starchy portion thereof and adapted by their composition of entire grain-berries and their rough and porous thread-like or shred-like form to constitute, without other shortening or aeration, bread of especially light and wholesome character.

A further object of the invention consists in the novel art or method of preparing the grain or berry and reducing it to form without taking from the grain any of the beneficial qualities provided by nature and presenting the same in convenient form for service as a superior article of food without the aid of experts or skilled labor now required to produce palatable bread.

The usual methods practiced in the manufacture of flour and the resultant bread therefrom are such as to detract from the natural and healthful properties possessed by the grain in its original state. The addition of shortening, yeast, baking-powder, alum, or other foreign ingredients to render the bread light is also detrimental, and the entire method consumes a large amount of time and labor.

According to the improved method which I am now about to describe, the wheat is taken in the whole or berry form, and after being cleaned and thoroughly washed is boiled until cooked, without destroying the whole or individual form of the berry. The time of boiling is usually about one hour. This operation, in addition to cooking the grains, removes from them the outer siliceous coating and adherent extraneous matter. It also destroys all insect life and removes the traces thereof. Before removal from the boiler the grain is seasoned with salt. The wheat, still in berry form, is, nevertheless, just after the boiling quite soft and its interior or starchy portion especially is watery. It can be easily mashed between the finger and thumb and is not in condition for proper compression until its inner and outer portions are brought more upon an equality in point of consistence. To this end the grain, being removed from the boiler, is allowed to dry for some hours—from twelve to twenty hours being usually sufficient—until the interior of the berry has, from the loss of some of its water, become more consistent. The grain should be constantly stirred or agitated during this part of the process to hasten the drying-out action and to prevent incipient fermentation. I prefer, therefore, to dry out the grain in rotating wire-cloth barrels or cage-tumblers. The berries should now have sufficient interior consistence to enable their outer and interior portions to be effectively incorporated with each other, such incorporation being accomplished by passing the grain between compression-rollers, one or both of which is provided with a series of fine circumferential grooves whereby the berries are mashed and their outer bran-coats, gluten layers, and starchy interior portion thoroughly incorporated together and forced into the grooves of the roller or rollers, whence the resultant food is discharged, by means of a comb or scraper, in the form of long fine filaments or threads of porous character and having a rough exterior admirably adapted to cause them to adhere together when being massed to form loaves or biscuit. The sinuous form and rough or jagged exterior shape of the filaments is designed also to provide small interstices throughout the mass, whereby the bread is thoroughly aerated and made very light.

The food as discharged from the rolls is ready for use without further cooking, or it can be shaped for baking in various ways. The food presented is pure wheat and all the parts of the berry are given to the consumer in attractive form. No chemical change is set up therein by the use of ferments or other

foreign ingredients, and the percentage of water in the food is much less than in ordinary bread.

The article so produced is a food or bread composed of superposed or massed layers or deposits of dry, externally rough, porous, sinuous threads or filaments of cooked whole wheat containing intermixed the bran, starch, and gluten of the entire berry, and which is absolutely free from leavening or raising material or their products.

The fine thread-like character of the component filaments of the bread and their disposition therein renders it tender, so that shortening is not required. All the nutritious and beneficial qualities of the berry are preserved in this admirable article of food, while its form gives it tenderness and lightness without the admixture of foreign ingredients.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. A food or bread composed of superposed or massed layers or deposits of dry, externally rough, porous, sinuous threads or filaments of cooked whole wheat containing intermixed the bran, starch, and gluten of the entire berry, and which is absolutely free from leavening or raising material, or their products.

2. The process of reducing cereals for food, consisting, first, in cooking the grain with salt, after it has been thoroughly cleaned, without destroying the whole berry form, second, partially drying the grain with constant agitation until its interior and exterior portions are of substantially the same consistency, and finally, compressing the grain to intimately commingle the outer or bran coats, gluten layers, and starchy, interior portions in the form of porous, rough filaments or threads, substantially as described.

In testimony whereof I affix my signature in the presence of two witnesses.

HENRY D. PERKY.

Witnesses:
J. M. STANLEY,
HARRY C. JAMES.

Correction in Letters Patent No. 548,086.

It is hereby certified that in Letters Patent No. 548,086, granted October 15, 1895, upon the application of Henry D. Perky, of Denver, Colorado, for an improvement in "Bread and Methods of Preparing Same," an error appears in the printed specification requiring correction, viz: In line 47, page 1, the word "corked" should read *cooked;* and that the said Letters Patent should be read with this correction therein that the same may conform to the record of the case in the Patent Office.

Signed, countersigned, and sealed this 29th day of October, A. D. 1895.

[SEAL.]

JNO. M. REYNOLDS,
Assistant Secretary of the Interior.

Countersigned:
S. T. FISHER,
Acting Commissioner of Patents.

CLERK'S CERTIFICATE.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY AND WILLIAM H. FORD, OF WATERTOWN, NEW YORK, ASSIGNORS, BY DIRECT AND MESNE ASSIGNMENTS, TO THE CEREAL MACHINE COMPANY, OF COLORADO.

MACHINE FOR THE PREPARATION OF CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 502,378, dated August 1, 1893.

Application filed October 29, 1892. Serial No. 450,305. (No model.)

To all whom it may concern:

Be it known that we, HENRY D. PERKY and WILLIAM H. FORD, citizens of the United States, residing at Watertown, in the county of Jefferson, State of New York, have invented certain new and useful Improvements in Machines for the Preparation of Cereals for Food, of which machine the following description, in connection with the accompanying drawings, is a specification, like letters on the drawings representing like parts.

The object of our invention is the economic reduction of cereals in the grain state to desirable forms of food without detracting from their natural nutritious qualities and virtue and for the better preparation of the same for more convenient and general use. These objects are attained by the mechanism illustrated in the accompanying drawings, in which—

Figure 1 is a plan view; Fig. 2 an elevation. Figs. 3 and 4 are details of a scraper.

A is a frame supporting the moving parts.

B and B′ are two rolls one or both of which are to be grooved circumferentially. Only one marked B is so shown in the drawings. The said rolls are geared together by gears C. C. and may be driven by any convenient power. Roll B is shown with rigid journal bearings while B′ is shown with adjustable bearings so that the desired proximity or contact may be maintained between the faces of the two rolls.

D is a scraper having teeth so formed as to fit in the grooves in roll B and between the teeth the said scraper is to fit the cylindrical faces of the divisions separating said grooves. This scraper D is fixed upon a spindle E and is held in contact with roll B by the weight F upon an arm attached to the spindle E. The said scraper may be held in contact with said roll by other convenient means.

G is a conveyer belt.

H is a spindle having loose collars J. J. This spindle plays in vertical slots K. K. of the brackets L. L.

The operation of this machine is as follows: The grain being properly prepared by boiling, steaming, steeping or soaking and the outer shell being removed when desired, is fed in any convenient manner between the rolls B and B′ at O by which it is compressed into the grooves on roll B from which the product in the form of threads, lace or ribbons or sheets, &c., (the form of which depending on the contact or proximity of rolls B and B′) is removed by scraper D where it is received by the belt G and carried forward to the spindle H around which the product is wound by the frictional action of the belt against the product; the spindle rising in the slots as the size of the roll increases. If desired the product may be conveyed without winding upon the spindle to any convenient receptacle.

What we claim, and desire to secure by Letters Patent, is—

1. In a machine for the preparation of cereals for food, the combination with a pair of compressing rolls, one of which is provided with circumferential grooves, of a comb-like scraper the teeth of which are arranged to fit said grooves, the spaces between said teeth being arranged to fit the cylindrical faces of the divisions separating said grooves, substantially as specified.

2. In a machine for the preparation of cereals for food, the combination of a pair of circumferentially grooved rolls, the comb-like scraper therefor, the conveyer belt, and the spindle H hung in slotted bearings, over said belt, substantially as specified.

3. In a machine for the preparation of cereals for food, the combination with a pair of compressing rolls, one of which is formed with circumferential grooves, the comb-like scraper therefor, and the weight for holding said scraper in contact with said roll, of the conveyer belt, traveling underneath said grooved roll, and the spindle H journaled in bearing slots over said belt and designed to have frictional contact therewith, substantially as specified.

In testimony whereof we have signed our names to this specification in presence of two subscribing witnesses.

HENRY D. PERKY.
WILLIAM H. FORD.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO, ASSIGNOR TO THE CEREAL MACHINE COMPANY, OF COLORADO.

MACHINE FOR THE MANUFACTURE OF FOOD PRODUCTS FROM CEREALS.

SPECIFICATION forming part of Letters Patent No. 520,496, dated May 29, 1894.

Application filed July 7, 1893. Serial No. 479,849. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Denver, in the county of Arapahoe and State of Colorado, have invented certain new and useful Improvements in Machines for the Manufacture of Food Products from Cereals; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 is a side elevation of the machine. Fig. 2 is a side elevation of the other side of the machine. Fig. 3 is a front elevation of the machine, with the pedestal broken away. Fig. 4 is a vertical section on the line *x*—*x*, Fig. 3. Fig. 5 is a detail, partly in section, showing the feed roll and its bearings. Figs. 6, 7 and 8 are detail views of modified forms of parts of the invention, and Fig. 9 is a detail view of the comb or scraper. Fig. 10 is a longitudinal vertical section through the rolls O and J.

This invention has relation to certain new and useful improvements in machines for the manufacture of food products from cereals, and it consists in the novel construction and combination of parts, all as hereinafter described and pointed out in the appended claims.

The object of the invention is to provide a practical and efficient machine for the treatment of cereals whereby they may be economically converted into a wholesome food product in desirable and convenient form, as more fully described in my pending application, Serial No. 475,540, filed May 25, 1893.

Referring to the accompanying drawings illustrating the invention, the letters A, A′ designate a pair of parallel rolls or cylinders having their shafts B journaled in suitable bearings in a frame C, side by side in close relation to each other, and acting by compression. One or both of said rolls have their surfaces provided with a series of fine circumferential grooves *a*, separated from each other by plain circumferential spaces *b*. In the drawings I have shown only one of the rolls A as having such grooves, the other having a plain cylindrical surface. The shaft of the roll A′ is provided with movable bearings *b*′, acted upon by screws *c*, for purposes of adjustment to regulate the compression of the rolls one against the other.

D D are intermeshing gear wheels on the shafts B B, and driven by a pinion D′ on a shaft D^2, journaled below the shafts B B, and driven by a pulley D^3, or by other suitable gear. The shaft D^2 is journaled a little to one side of a central line of the shafts B, D, and meshes with one of the gear wheels D.

D^4 is a clutch for throwing the pinion D′ into and out of driving engagement with its shaft.

E designates a hopper supported over the rolls A, A′, and E′ is a feed cylinder journaled in the throat or discharge of said hopper. This feed cylinder is formed with longitudinal corrugations *e*, and is made removable from its bearings for purposes of cleaning when necessary. To permit such removal one end of the cylinder has a bearing on a screw point E^2, while at the other end is a shaft E^3 having a squared portion *e*′ which removably engages a correspondingly shaped socket in the end of the cylinder. Said shaft E^3 has a bearing at e^3 in a bracket E^4, and carries a grooved pulley E^5 by means of which it, together with the cylinder is rotated. On said shaft is a collar e^3 between which, and the bearing e^2, around the shaft, is a spring E^6 which normally holds said shaft against endwise movement out of engagement with the cylinder. The shaft may however be withdrawn when it is desired to remove the cylinder, which by this arrangement may be readily accomplished. The pulley E^5 may be driven by a belt from a pulley F on one of the shafts B, as shown, or by friction or other gear connection with such shaft. The corrugations *e* in the feed cylinder E′ assist the feed in that they carry the grain from the hopper and cause it to be deposited centrally between the rolls A, A′.

F′ is a slide situated in the throat of the hopper E, and arranged to control the feed.

G is a table situated below and in front of the roll A′, and supported by a bracket G′.

carried by the rest or support H of the machine. This table is pivotally swung between the arms of said bracket, being reversible, and is normally held in its horizontal position by means of a thumb screw *h*, or pin engaging the table through the arm of the bracket. Depending from the under side of said table when the latter is in the position shown in Fig. 1, is a bracket I in which is journaled a roll J, which is usually provided with a covering *j* of canvas, or other suitable material. On the shaft K of said roll is a pulley L, which when the table is in its reversed position, as shown in Fig. 2 is in position to be driven by a belt or other connection with a pulley M on one of the shafts B. Extending from the arms *i* of the bracket I are slotted or forked arms N, N, the slots of which are designed to form bearings for a removable spindle or former roll O.

P designates a comb or scraper supported on the frame in front, and so situated that its teeth are adapted to engage the fine grooves *a* of the roll A while the intervening spaces between the teeth travel upon the plain spaces *b* between said grooves. The bolts which secure the comb to the frame extend through slots *p* in the comb frame, thereby permitting the comb to be adjusted toward or away from roll A, by means of adjusting screws *o*.

The operation of the machine as thus far described is as follows:—The grain being first boiled, steamed, soaked, or steeped, and the outer hull or shell being first removed, when desired, it is fed into the hopper E and is delivered by the rolls A, A', which are geared to rotate toward each other. By the compression of these rolls the grains or cereals are reduced and forced into the grooves *a* of the roll A, from which the resulting product is removed by the comb P in the form of films, strings, or shreds, of light, tender, and porous character, as more fully described in my application before referred to. In the position of the table as shown in Fig. 1, these films, strings, or shreds, are deposited thereon, or into a suitable receptacle supported thereon for the purpose. When, however, it is desired to turn out the finished product in rolls, cups, or other similar forms, the table is reversed and swung into the position shown in Fig. 2 and the roll J is connected with its driving pulley or gear. The shreds, strings, or films, fall upon this roll from the comb, the rotation of the said roll also causing, by friction, the rotation of the spindle or former roll O, which catches such shreds, strings or films and winds them thereon into a cylindrical mass. In order to facilitate the removal of this mass from the former roll or spindle, the latter is preferably made slightly tapering or conical, the roll J being of similar form.

In some cases it may be desired to divide the mass transversely of its length into two parts, and this may be accomplished by means of a cutter R carried by an arm R' pivoted to the front portion of the frame, and adapted to be turned down into cutting contact with the mass as it forms on the roll or spindle O. The same effect may be accomplished by forming the roll J with a central, circumferential cutter projection J', as shown in Fig. 6, or by omitting a few of the grooves *a* at the central portion of the roll A, as in Fig. 7, so that the product is naturally delivered in two parts.

When both rolls A and A' are provided with the grooves each roll is designed to have a comb and delivery and forming devices, the arrangement being a duplication of that shown.

In some instances in addition to the circumferential grooves *a*, I may provide the rolls with grooves at right angles to the grooves *a*, or obliquely thereto, as shown in Fig. 8. This aids the feed and adds to the capacity of the rolls.

Having thus described my invention, what I believe to be new, and desire to secure by Letters Patent, is—

1. In a machine for treating cereals, the combination with the hopper and the compression rolls, of the removable rotary feed cylinder in the throat of said hopper, and above said rolls, a screw forming a bearing for one end of said cylinder, the shaft detachably engaging an angular socket in the opposite end portion of the cylinder, the bearing for said shaft, the spring, and means for driving said shaft and thereby said cylinder, substantially as specified.

2. In a machine for treating cereals, the combination with the compression rolls, and the comb or scraper, of the reversible table, the bracket secured thereto, the roll journaled in said bracket, the former roll or spindle also carried by said bracket, and means for rotating said roll, substantially as specified.

3. In a machine for treating cereals, the combination of the compression rolls, the comb or scraper, the reversible table, the bracket carried thereby and having the forked or slotted arms, the receiving roll journaled in said bracket, the former roll or spindle removably journaled in said forked or slotted arms, and designed to be rotated by frictional contact with said receiving roll, and means for rotating said feeding roll, substantially as specified.

4. In a machine for treating cereals, the combination of the compression rolls, the comb, the receiving roll, the former roll or spindle, and means for dividing the product taken by said former roll into two parts, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

HENRY D. PERKY, OF DENVER, COLORADO, ASSIGNOR TO THE CEREAL MACHINE COMPANY, OF SAME PLACE.

ROLL-MACHINE FOR REDUCING CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 532,480, dated January 15, 1895.

Application filed March 31, 1894. Serial No. 505,950. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Denver, in the county of Arapahoe and State of Colorado, have invented certain new and useful Improvements in Roll-Machines for Reducing Cereals for Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 of the drawings is a side view, partly in section, of a machine embodying the invention. Fig. 2 is a front elevation, of the machine, with parts in section; the hopper being removed. Fig. 3 is a plan view of the machine with the hopper removed. Fig. 4 is a bottom plan view of the endless rack, its support, and the pinion; and Fig. 5 is a detail, sectional view of part of the frame, showing the engagement of the rack and pinion.

The object of this invention is to provide a reducing machine for grain and other articles of food, whereby the material, being reduced continuously by the machine to the form of long threads or shreds, falls upon a long reciprocating receiver, which disposes said threads or shreds lengthwise of the receiver in layers to any desired thickness.

In the accompanying drawings the letter A designates the frame of a reducing machine, supporting a hopper B, and a pair of reducing rolls C and D, whereof the roll C is formed with circumferential grooves, into which the material fed into the hooper is compressed, and from which it is discharged in thread or shred-like form by means of the comb or scraper E, having its toothed edge complementary in contour to the sectional form of the grooved roll. These shreds or threads, especially those formed by passing cooked wheat grains between the rolls, are very tender and delicate, and cannot be independently manipulated or disposed after discharge by the comb. The form, therefore, in which they are laid or disposed by the machine upon such discharge is of great importance.

Under the rolls and comb of the machine is provided a through-way or passage F, for a reciprocating receiver, which consists usually of a reciprocating holder or plate G, a detachable receiving board or trough R, and suitable reciprocating mechanism.

In order to provide a compact machine of this character with a long throw of the receiver, various mechanisms may be employed, such as a vibrating lever, or reversing cams with pulley and reversing cord, or the device indicated in the drawings which is preferred, being compact, reliable, and capable of arrangement within the framing. In this movement, the letter K, represents an endless internal-tooth rack, cast or otherwise attached to the under side of the plate G, such rack being of elongated form, with parallel sides and semicircular ends. Between the sides midway is also attached to the under side of said plate a guide rib L, the ends of which are separated from the semicircular toothed ends of the rack sufficiently to allow for the passage of the pinion P, from one side of the rack to the other. This pinion is secured to the upper end of the vertical shaft I, the lower end of which may be turned by means of bevel gearing, or otherwise. It is provided with a central stud *v*, engaging the rib L.

Below the pinion the shaft engages the transverse slotted bearing J, whereby sufficient lateral vibratory movement is allowed to the shaft I, when its pinion engages the semicircular ends of the rack in passing from one side thereof to the other. As the pinion rotates in engagement with one side of the rack the plate or holder or carriage G, is moved longitudinally in the passage F, until the semicircular end of said rack comes into engagement with said pinion, causing the latter to transfer its engagement from one side of the rack to the other, and thereby reversing the endwise motion of said plate or carriage.

A detachable or removable receiver, board or trough R, is usually provided, to be placed on the plate G, to receive the shreds or threads as they fall from the reducing rolls. The reciprocating movement disposes these continuous shreds longitudinally on the receiver, and in layers, these layers increasing in number, in accordance with the number of reciprocations of said receiver, until the desired thick-

ness is produced. The receiver board with its contents can then be removed from the plate or carrier, and another substituted. The contents of the trough can be subdivided into biscuits or loaves for baking.

The carrier or plate G moves upon elongated guide arms V, extending from the frame, which is usually constructed in hollow pedestal form inclosing and concealing the reciprocating gear mechanism of the receiver.

The receiver is designed to be geared up to run at about the same speed as the reducing rolls, or a little more slowly when it is desired to effect a wavy or sinuous disposition of the shreds or threads along the receiver.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. In a food-reducing machine, the combination with the rolls and discharging comb, of a reciprocating receiver, adapted to dispose the shreds or threads, as they fall from the reducing rolls, in longitudinal manner and in layers, substantially as specified.

2. In a food-reducing machine, the combination with the frame, the reducing rolls, the discharging comb, and the passage in said frame below said rolls and comb, of the reciprocating plate or carrier, and the removable receiver board or trough substantially as specified.

3. In a food-reducing machine, the combination with reducing mechanism, of a receiver plate its endless bottom rack and guide, the vertical vibratory shaft its pinion, and the driving gear, substantially as specified.

4. In a food-reducing machine, the combination with reducing rolls of a reciprocating receiver moving in a way or passage of the frame, below said reducing rolls, and having its reciprocating mechanism inclosed in said frame, substantially as specified.

In testimony whereof I affix my signature in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO, ASSIGNOR TO THE CEREAL MACHINE COMPANY, OF SAME PLACE.

PERFORATED-ROLL MACHINE FOR REDUCING CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 532,481, dated January 15, 1895.

Application filed March 31, 1894. Serial No. 505,951. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, residing at Denver, in the county of Arapahoe and State of Colorado, have invented new and useful Improvements in Perforated-Roll Machines for Reducing Cereals for Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, forming a part of this specification, and to the letters of reference marked thereon.

Figure 1 of the drawings is an end view, partly in section, of a machine embodying the invention. Fig. 2 is a plan view of the same with the hopper removed. Figs. 3 and 4, are detail views showing the discharging scoop in slightly modified form.

The invention has relation to rolling machines for reducing grain to thread like or shred like form, while thoroughly incorporating together the interior and exterior particles of the berry.

In the accompanying drawings, the letter A designates the frame or support, having bearings for the journals of the reducing rolls B, and C, which are designed to work in neat contact with each other.

The roll B is formed preferably of steel, and has a cylindrical surface. Its journal shaft *b*, is strong and is seated in a long bearing in order to brace the roll to its work. The body of this roll is solid, but it may have a circular end flange *d*, this being an extension of the marginal portion of said roll at its free end to engage a small roller *e*, of a tie brace D, which is also provided with a second small roller *e'*, to engage the circular end flange *f*, of the other roll, C.

The roll C is of cylindrical form and hollow, and its cylindrical wall is provided with perforations throughout its extent. This hollow roll is open at one end, and at its other end is formed with a strong back portion to which is connected its journal shaft *c*, which is of comparatively large diameter, and is seated in a long bracing bearing.

The rolls are turned by means of gearing, as indicated at V.

E represents a hopper seated on the frame and designed to feed the grain, previously prepared by boiling and drying, to the rolls B, and C, which compress the berries, mashing them, and intimately incorporating the particles composing the outer portions of the berries with the starchy interior part thereof. The action of the rolls forces the grain during this process into and through the perforations of the roll C, the material being protruded within the perforated wall in the form of threads or shreds, growing in length at each revolution of the roll until removed from the cylinder by the operation of a suitable scoop or discharging device G.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. In a machine for reducing grain for food, the combination with a hollow roll having a perforated cylindrical wall, of a cylindrical compressing and crushing roll working in metallic contact therewith, a feeding hopper, and rotating mechanism for said rolls, substantially as specified.

2. In a machine for reducing grain, for food, the combination with a hollow perforated roll, of a cylindrical compressing roll working in contact therewith, the operating gear therefor, and a rolling tie-brace, substantially as specified.

3. In a machine for reducing grain for food, the combination with the hollow perforated roll and the compressing roll working in contact therewith, of the operating gear, the feed hopper, and a discharging device, substantially as specified.

In testimony whereof I affix my signature in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO, ASSIGNOR TO THE CEREAL MACHINE COMPANY, OF SAME PLACE.

ROLL-MACHINE FOR REDUCING CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 532,697, dated January 15, 1895.

Application filed March 31, 1894. Serial No. 505,948. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Denver, in the county of Arapahoe and State of Colorado, have invented certain new and useful Improvements in Roll-Machines for Reducing Cereals for Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 of the drawings is an end view, partly in section, of a machine embodying my invention. Fig. 2 is a front view of the same, also partly in section, with the hoppers removed. Fig. 3 is a plan view of the machine with the hoppers removed; and Fig. 4 is a detail view of one of the groove-rolls and comb.

The object of this invention is to provide a reciprocating or slide machine for the reduction of food, and especially for the reduction of grain to shredded or thread-like form, without detracting from the nutritious qualities and virtues thereof.

The machine consists mainly of the frame or pedestal H, the slide plate D, its gearing, the circumferentially grooved rolls or cylinders A, their gears, the hoppers E, and the discharging combs P. The pedestal or frame is provided at its upper end with standards C, for the grooved rolls, and below, with strong bearings for the crank shaft S, and for the guide rod R of the slotted cross head W.

This machine is usually made in double form, having two grooved rolls between which the slide plate reciprocates each roll being provided with its independent hopper E which rests upon the roll and is provided with an opening or way *e*, between its rear wall and the cylinder surface for the passage of the contents of the hopper, which is fed down between said roll or cylinder and the slide plate.

The grooved rolls are provided with gears G, and the slide-plate has a lateral rack connected therewith, which extends upward between and engages the roll-gears G.

The rolls A are provided with fine grooves extending circumferentially around them, said grooves being preferably of V-form; and the combs P, having teeth of similar contour to enter the grooves and discharge therefrom the threads or shreds of the food product.

The slide plate D is connected to the slotted cross-head W, which is given a vertically reciprocating motion by the revolution of the cranks K, crank pin J, and the sliding box N. Motion is given to the cranks and crank pin by the shaft S, and its pulley T, which is belted to any convenient power shaft.

The grain or other material to be shredded, having been suitably prepared by boiling and drying to proper consistence, is placed in the hoppers and fed through the ways *e*, *e*, between the faces of the rolls and the reciprocating plate, whose rack *r*, engaging the gears of the rolls causes them to revolve first in one direction, and then in the opposite direction. On the downward movement of the rack, the material to be shredded is drawn between the inward turning rolls and the plate and forced into the grooves of said rolls from which it is discharged by the combs P, which are attached to the standards C, and extend transversely of the rolls in front engaging the same.

Suitable pans or receivers may be placed upon the flat top *m* of the pedestal to receive the shredded or filamentous discharge.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. The combination with a grooved reducing roll and its discharging comb of the reciprocating plate engaging said roll, and mechanism for operating the same substantially as specified.

2. The combination with a grooved reducing roll, its gear and discharging comb, of the reciprocating plate and rack, and mechanism for operating the same, substantially as specified.

3. The combination with a pair of grooved reducing rolls, their gear, and discharging combs, of the reciprocating plates between said rolls and its rack engaging the gear of said rolls, substantially as specified.

4. The combination with a pair of grooved reducing rolls, their hoppers, gear, and discharging combs, of the reciprocating plate between said rolls, its rack engaging the gear of said rolls, the slotted cross-head slide-bar and crank shaft, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO, ASSIGNOR TO THE CEREAL MACHINE COMPANY, OF SAME PLACE.

GROOVE-ROLL MACHINE FOR REDUCING CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 532,698, dated January 15, 1895.

Application filed March 31, 1894. Serial No. 505,949. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, residing at Denver, in the county of Arapahoe and State of Colorado, have invented a certain new and useful Improvement in Groove-Roll Machines for Reducing Cereals for Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1, of the drawings is an end view of a machine embodying my invention, part of the supporting frame being broken away. Fig. 2 is a vertical section of the same. Fig. 3 is a detail view of a portion of the frame, showing the comb cleaner. Fig. 4 is a plan view of the comb-cleaner and a portion of the frame; and Fig. 5 is a detail view of one of the groove-rolls and comb.

The invention relates to groove roll machines for reducing grain or other articles of food to shredded or thread-like form, and consists mainly in the novel construction, and combination with the grooved roll and its discharging comb, of a cleaner for said comb, as hereinafter set forth. In these machines, although the grooved roll and the discharging comb, are of fine construction, the teeth and lands of the comb fitting neatly the grooves and surface intervals of the roll, it is found that particles of the food material will, to some extent, pass the discharging comb and accumulate on its upper marginal surface near the roll; and the object of this invention is to provide means for clearing away, and saving this accumulation.

In the accompanying drawings, the letter A designates a portion of the frame of the machine, carrying a pair of reducing rolls, whereof the front roll B is formed with a series of fine circumferential grooves, the back roll C having a simple cylindrical surface. The material fed between these rolls is compressed into the fine grooves of the roll B, and is discharged from these grooves in shred or thread-like form by the comb D, the teeth of which fit neatly into said grooves. This comb is secured to bearings of the frame, as indicated at E.

F represents a small shaft, located below the reducing rolls, and having a pinion G, engaging the gear-wheel H of the grooved reducing roll. At each end this shaft is provided with a cam I, having a circular contour broken by the notch J.

K indicates the comb cleaner, which is usually a plate of steel extending along the top of the comb, but having an oblique position with reference to the top plane of the comb, its lower or working edge *a*, when said cleaner is moved inward being just clear of the top of said comb and free of the surface of the grooved roll. This cleaner is designed to have an intermittent quick movement in the direction of this roll, and to give it such motion, the lateral slides *b*, are employed, these being attached to the ends of the cleaner plate, and working in side bearings *c*, of the frame in a reciprocating manner, intermittently, their motion being governed by the notch cams I. Springs *d*, serve to hold the ends of the slides *b*, in engagement with said cams. At each revolution of the cams I, the cleaner is moved, as the slides enter and leave the notches J, suddenly toward the roll surface, and away therefrom a short distance, this distance being maintained by the engagement of the circular portion *e*, of the cams with the ends of said slides, until the rotation of the cams brings their notches again to bear on the slides. This intermittent reciprocating cleaner, at each revolution of the cams, quickly pushes whatever particles of material may have accumulated on the inner edge of the comb toward and into the grooves of the reducing roll, so that they are taken up thereby and carried around in said grooves to be mixed with the new material fed from the hopper and utilized.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. The combination with the reducing rolls and the discharging comb, of a comb cleaner, substantially as specified.

2. The combination with the reducing rolls

and the discharging comb, of an intermittently reciprocating comb cleaner, substantially as specified.

3. The combination with the grooved reducing rolls and the discharging comb engaging one of said rolls, of the intermittently reciprocating cleaner plate extending along the top of the comb and having oblique position with reference to its top plane, its lateral slides and springs, and the circular cams, moving in contact with said slides substantially as specified.

In testimony whereof I affix my signature in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO, ASSIGNOR TO THE CEREAL MACHINE COMPANY, OF SAME PLACE.

ROLL-MACHINE FOR REDUCING CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 533,551, dated February 5, 1895.

Application filed April 28, 1894. Serial No. 509,104. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Denver, in the county of Arapahoe and State of Colorado, have invented certain new and useful Improvements in Roll-Machines for Reducing Cereals for Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 of the drawings is a back view of the machine. Fig. 2 is a side view. Fig. 3 is a sectional view. Fig. 4 is a top view with the hopper removed.

This invention has for its object to provide a machine for the reduction of cereals and other articles of food, wherein a single grooved roll is employed in conjunction with a stationary or non-reciprocating adjustable back plate.

In the accompanying drawings, the letter A designates a frame having bearings B, for the reducing roll C, which is designed to rotate upon a horizontal axis, and is circumferentially grooved as indicated. The frame is also provided with bearings D for the pivots E of the back plate F, which is designed to engage the face of the roll C in order to cooperate therewith in reducing the grain which is fed from the hopper G between said roll and the upper extension of flange H, of said plate, and causing the mashed product to enter the grooves of said roll. The back plate is adjustable, its position being governed by the screws I, which extend through lateral bearings of said back plate into the frame. The adjustment required is very slight, whether it be designed to hold the back-plate in contact with the surface of the roll in order to reduce the material to shred-like or filamentous form, or to allow a slight interval between the roll surface and the back-plate in order to reduce the material to the form of a ribbon or film having a corrugated surface.

In some cases, it is designed to provide the flange of the back plate with a corrugated feed roll as indicated at J; or the flange may be made to have an oscillating feed motion.

K represents the discharging comb, which is supported upon bearings L of the frame, and extends transversely of the cylinder or roll in front. The contour of its edge is complementary to that of the roll surface which it engages to clear the material from the grooves thereof, discharging the same in thread like or shred form.

In preparing grain for this machine, it should be boiled until sufficiently cooked without destroying the whole form of the grains, and then dried sufficiently to restore somewhat the interior consistence thereof, and equalize the amount of moisture in the several parts of the berry.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. In a reducing machine for grain and other articles of food, the combination with a circumferentially grooved roll, and its discharging comb, of a stationary back-plate engaging said roll, substantially as specified.

2. In a reducing machine for grain and other articles of food, the combination with a circumferentially grooved roll and its discharging comb, of an adjustable pivoted back plate and the adjusting screws, substantially as specified.

3. A reducing machine for grain and other articles of food having the circumferentially grooved feed roll, the back-plate provided with an upper extension or feed flange, the hopper, and the discharging comb, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

SPECIFICATION forming part of Letters Patent No. 533,552, dated February 5, 1895.

Application filed April 28, 1894. Serial No. 509,406. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Denver, in the county of Arapahoe and State of Colorado, have invented certain new and useful Improvements in Roll-Machines for Reducing Cereals for Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 of the drawings is a front elevation of a machine embodying my invention. Fig. 2 is a side view of same. Fig. 3 is a sectional view on the line *x*—*x* Fig. 2. Fig. 4 is a detail view of the reciprocating frame, and Fig. 5 is a detail view of one of the grooved rolls and scraper or comb.

The object of this invention is to provide an upright reciprocating or wall machine for the reduction of food, and especially for the reduction of grain to shredded or thread-like form without detracting from the nutritive qualities and virtues thereof.

The machine consists of a frame A of elongated form, having a back plate B, and in connection therewith a reciprocating shredder slide C, having a grooved roll and hopper and devices for operating the same.

The frame A with its elongated back plate is designed to be secured to a wall or upright in vertical position by means of suitable bolts or fastenings indicated at D. At the upper end of the frame are provided the pulleys E each carrying a rope F, one end of which is attached to the slide C, while to its other end is connected the weight G. This weight is sufficiently heavy to balance the slide and to assist the working movement of the latter in the upward direction.

The slide C, is provided with a frame consisting of side plates H, connected by transverse bolts indicated at *a*, which form bearings for the anti-friction rollers *b*, which engage the rear surface of the back plate B. The side plates extend forward at the sides of the back plate, projecting sufficiently to provide bearings for the journals K of the eccentric levers L, said journals forming bearings for the shaft of the grooved roll or cylinder R, as indicated at *c*. These bearings are eccentrically placed in the lever journals K, so that when said levers are turned downward by depressing the operating levers Z, which are connected thereto by links *d*, the grooved roll or cylinder R is moved away from the back-plate B.

The cylinder R is formed with circumferential grooves preferably of V-form, as indicated in the drawings. Upon it is supported the hopper N, the rear wall of which is made short at its lower end between the side walls to provide a feed way for the contents of the hopper allowing it to pass down along the rear upper surface of the grooved cylinder between the same and the back-plate B.

When the cylinder slide is drawn upward by means of its levers Z, or a treadle connected thereto, the eccentric levers L bring the cylinder R into engagement with the back-plate, so that by its rotation thereon, the grain or other contents of the hopper is reduced to shredded or thread-like form. In the reverse or downward movement of the slide the feeding ceases, and the cylinder is moved away from the back-plate by the action of the eccentric levers. The amount of upward movement of the levers Z, is adjusted and controlled by means of the set screws *e*, on the side plates H, said side plates also carrying stop lugs *f*, which limit the downward movement of the main operating levers Z.

P indicates a removable pan or receiver which is connected to the side plates of the slide by means of its lateral arms *p*, which engage lugs *q*, of said slide or carrier.

V indicates the discharging comb the operating edge *v* of which is shaped to conform to the contour of the cylinder surface across which it extends in front, its small teeth entering the grooves of the cylinder and causing the threads of material brought around in said grooves to fall upon the receiver in shredded or thread-like form.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. The combination of the circumferentially grooved cylinder and a sliding carrier

therefor, of the vertical back-plate behind said cylinder, the discharging comb engaging said cylinder, the hopper arranged to discharge between said cylinder and back plate, and devices for operating said carrier and cylinder, substantially as specified.

2. The combination with the vertical back plate, of the reciprocating, adjustable grooved cylinder arranged to move in contact with said back plate, the carrier slide, in which said cylinder is journaled, a discharging comb engaging said cylinder, levers for actuating said slide, and stops for controlling the movements of said levers, substantially as specified.

3. The combination with the carrier walls and the grooved cylinder of the eccentric levers bearing in said walls, and the cylinder shaft having eccentric bearings in the journals of said levers, substantially as specified.

4. The combination with the back-plate, and the carrier, of the balance device, the grooved cylinder, the eccentric levers, their eccentric bearings for the cylinder shaft, the operating levers and connections, and the lever stops, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO, ASSIGNOR TO THE CEREAL MACHINE COMPANY, OF SAME PLACE.

ROLL-MACHINE FOR REDUCING CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 533,553, dated February 5, 1895.

Application filed April 28, 1894. Serial No. 509,406. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Denver, in the county of Arapahoe and State of Colorado, have invented certain new and useful Improvements in Roll-Machines for Reducing Cereals for Food; and I do declare the following to be a full, clear and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 of the drawings is a front elevation of my invention. Fig. 2 is a partial vertical section thereof. Fig. 3 is a horizontal section on line *x*—*x*, Fig. 2. Fig. 4 shows details of the shell. Fig. 5 is an elevation of roll with a shell removed therefrom.

The invention is designed to facilitate the formation of the films or threads of material, as discharged from a grain reducing machine, into hollow cylindrical or cup shape.

In the accompanying drawings the letter A designates the frame of a grain reducing machine, having a circumferentially grooved shredding roller B, and a compressing roll C engaging the same, designed to reduce the grain previously softened by boiling and drying to proper consistency, to threadlike or shredded form, the threads or shreds being discharged therefrom by the comb or scraper D having edge teeth conformed to and engaging the grooves of the roll B.

E represents a slide box for one of the rolls, engaging a slide-way F of the frame on each side, whereby said roll is allowed to be separated slightly from its fellow in order to form a ribbon or film of the material, having a ribbed or corrugated surface. The adjustment is controlled by the set screws G.

Below the rolls and above the frame support, is provided in said frame, a passage or through way H, for the reception of a traveling receiver, such receiver being usually removable from the frame.

In the drawings the form of receiver represented is a traveling band or belt I, moving around pulleys J, J, which bear in the ends of an elongated frame L, which is held in the passage H of the frame by means of the set screws *m*, which pass through side bearings of the frame. These screws also facilitate the adjustment of the receiver to true position.

At one end of the frame a slide bearing *n*, is provided for the band pulley said bearing having a tension screw and nut as at *a*.

The traveler frame carries the vertical slot-bearings N, arranged opposite to each other on the sides of said frame, and being designed to receive the journals of the receiving rollers R.

The threads or films of material discharged from the reducing rolls upon the traveling band are carried thereby in extended form to the nearest receiving roller R, which takes up the same and winds it in circular form, and in layers until the desired thickness of wall is reached. Then this roller with its contents being removed, the material on the band is taken up by the next roller in series and formed thereon to be removed in turn. It will be observed that the feed from the machine on the band to the rollers is continuous, and the formation of the food rings or "cups" expeditious, no time being lost in stopping the machine to remove or replace a roller, a matter of great importance in the production of these articles of food in large numbers and at a low price.

In order to further facilitate the production and preparation of these rings or "cups," each roller is provided with the detachable metallic shells S, which are slipped on said roller from its ends toward its middle portion, the adjacent ends of said shells being separated from each other a little, to provide a way for the cutter P, by means of which the material wound upon the shells is divided, allotting to each shell its proper portion. The shells are usually formed with a divided wall to allow them to be compressed in discharging the rings or cups of food; and this construction also gives them a spring-like hold upon the roller. The shell is also usually provided with a base flange *b* at one end.

Each shell S is not alone a former or shaper of the food material, but also it constitutes a pan or cooking utensil, as it is designed to be

placed upon its flanged end, in upright position, with its contents, for cooking, in a suitable oven. The perfect form of the rings or "cups" is thereby preserved, and the danger of their injury before cooking reduced to a minimum. When these shells are employed in suitable numbers, two or three winding rollers R, will be found sufficient for the machine.

The dividing knife or cutter P, preferably a disk, is carried on an arm V, pivoted or otherwise connected to the frame. The cutter is adjustable in order that it may be readily applied to any roller of the series, for this purpose the arm V is provided with a slot or slideway v, and a connecting pin or clamp-screw z.

Z is a board underneath that portion of the traveling band which is under the rollers R. The purpose of this board is to support the traveling band where it passes under the receiving rollers and hold it in contact with said rollers.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. In a food-reducing machine, the combination with the reducing rolls and discharging comb; of the adjustable and removable receiver frame, its traveling band, pulleys and tension device, substantially as specified.

2. In a food-reducing machine, the combination with the reducing rolls and discharging comb; of the receiver frame, its pulleys and traveling band, the vertical slot-bearings of said receiver frame, the removable receiver rollers, and a dividing cutter, arranged to be brought into successive engagement with said receiving rollers, substantially as specified.

3. In a food reducing machine, the combination with the reducing rolls, and discharging comb; of the receiver frame, its pulleys and traveling band, the vertical slot-bearings of said receiver frame, the removable receiver rollers, and metallic receiver shells adapted to engage said rollers and removable therefrom, substantially as specified.

4. A divided removable metallic receiver shell provided with a base-flange and adapted to fit on the receiver roller of a traveling receiver, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO, ASSIGNOR TO THE CEREAL MACHINE COMPANY, OF SAME PLACE.

ROLL-MACHINE FOR PREPARATION OF CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 533,554, dated February 5, 1895.

Application filed April 28, 1894. Serial No. 509,407. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, residing at Denver, in the county of Arapahoe and State of Colorado, have invented new and useful Improvements in Roll-Machines for the Preparation of Cereals for Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings and to the letters of reference marked thereon.

Figure 1 of the drawings represents a side view of the machine. Fig. 2 is a front view. Fig. 3 is a detail showing perforated rolls. Fig. 4 is a detached view of one of the grooved rolls and its discharging comb.

The object of this invention is to provide a machine for the economic reduction of cereals in the grain form to a desirable article of food, without detracting from their natural nutritious qualities, and for the better preparation of the same for general use.

In the accompanying drawings, the letter A designates the frame of the machine.

B, B represent two reducing rolls having engaging gear wheels C, C, and operating mechanism therefor. Between the cylindrical surfaces of the reducing rolls extends a compressing ring or annular traveling band plate D, of comparatively large diameter, said ring having a roller bearing at E.

F, F represent the bearings for the reducing rolls, which may be braced in position by means of tie-bolts G, whereby also, the rolls may be adjusted to proper contact with the traveling ring plate.

H H indicate the hoppers in which the grain, suitably prepared by boiling and drying to proper condition for the action of the rolls, is placed, and whereby the grains in whole form are fed between the reducing rolls and the intermediate ring plate. As the rolls are rotated, the ring plate revolves and compresses and mashes the grain into the fine circumferential grooves of the rolls, which carry the material until discharged in the shape of continuous fine threads or shreds by scrapers K. In this action the outer bran layers, the glutin layer and the interior starchy portions of the grain are intimately commingled, and an article of food is presented having all the nutritive qualities and virtues of the various parts of the grain berry, in convenient form for immediate consumption, or for shaping and preparation in various ways for baking.

The circumferential grooves of the reducing rolls are fine, or small in cross-section, and preferably of V-form, and the discharging combs or scrapers have fine teeth of similar contour adapted to enter said grooves, and discharge the threads or shreds of food as they are brought around by the rotation of the rolls. The grooved rolls are especially adapted for the reduction of small grain such as wheat and barley.

In reducing Indian corn, I design sometimes to employ in place of the grooved rolls, hollow rolls having their cylindrical walls provided with a number of perforations, through which, by the action of the traveling ring plate the material is forced in the shape of small threads, which can be discharged from the hollow rolls by means of inclined scoops or other suitable device.

Having described my invention, what I claim as new, and desire to secure by Letters Patent, is—

1. In a reducing machine, the combination with the reducing rolls and their hoppers of the intermediate traveling ring plate, and its bearing roller, substantially as specified.

2. In a reducing machine, the combination with circumferentially grooved reducing rolls, their hoppers, and discharging combs or scrapers, of the traveling ring-plate extending between the reducing rolls, substantially as specified.

In testimony whereof I affix my signature in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO, ASSIGNOR TO THE CEREAL MACHINE COMPANY, OF SAME PLACE.

MACHINE FOR REDUCTION AND PREPARATION OF CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 533,565, dated February 5, 1895.

Application filed May 4, 1894. Serial No. 510,075. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, residing at Denver, in the county of Arapahoe and State of Colorado, have invented new and useful Improvements in Machines for the Reduction and Preparation of Cereals for Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, forming a part of this specification, and to the letters of reference marked thereon.

Figure 1 of the drawings is a side elevation of the machine with part of the line shaft and gear broken away and one of the shredders in section. Fig. 2 is a plan view of the machine. Fig. 3 shows a fragment of slotted belt J. Fig. 4 shows a fragment of the continuous cutter. Fig. 5 is a plan view of grooved roll and comb. Fig. 6 shows a fragment of the slotted belt G.

The invention relates to the economic reduction of cereals in the grain state, to a desirable form of food, and it has for its object to provide means for the production of such form of food, rapidly, and in large quantities, commensurate with the ordinary use of such an article as bread.

In carrying out this invention, I provide in bearings upon a suitable frame F, a series of reducers or shredders A, which are arranged in succession.

Each reducer or shredding device, consists preferably of a pair of rolls B, B, whereof one is grooved. The grooves of the roll extend circumferentially around it, and are of small or fine character, and usually V-shaped in sectional form, the bottom of the groove having however some breadth. A groove having a width of one fiftieth of an inch, and a depth of one fiftieth of an inch serves an excellent purpose, especially in the reduction of wheat. The grooves are arranged in series around the cylindrical surface of the roll, and the intervals of the cylindrical surface between the grooves may be about one thirtieth of an inch.

The back roll of the pair or set is smooth and its cylindrical surface is in exact and neat contact with that of the grooved roll. The rolls are geared together to run in contact as indicated at C, and all the sets of the series are rotated at a uniform rate of speed. For this purpose a line shaft D may be provided with suitable gearing engaging the roll gear. Each set of reducing rolls is provided with a discharging scraper or comb E, which is secured to the frame. This scraper or comb has teeth which are complementary in their contour to the grooves of the roll, and engage said grooves to discharge the contents thereof, as brought around in said grooves. Over each set of rolls is a hopper H, into which the grain, having been boiled and sufficiently dried for the proper action of the reducing rolls, is placed.

When the machine is in operation, each set of rolls discharges the grain in the form of continuous threads or shreds of fine or small cross-section. In order to take up these different discharges of the reducers, a continuous receiver belt or carrier G is provided having suitable pulleys or rollers K, at its ends, and proper guides of the framing to keep its upper or receiving portion level. This belt, being run at a suitable rate of speed takes the discharged threads or shreds of the reducers along with it, disposing the layers successively upon each other to a thickness suitable for baking, this thickness being governed by the number of reducers employed. In order to form and subdivide the material thus built upon the belt and carried along thereby into sections for biscuit or loaves, a continuous cutter L is provided. This cutter is preferably one which moves at the same rate of speed as the belt, and may be a wheel having radially projecting blades N, which extend transversely. The distance between the blades determines the breadth of the biscuit-sections. A continuous band J, extends at the height of the proposed biscuit above the carrier belt, and parallel therewith. This band J is run at the same rate of speed as the belt G, and is provided with transverse slots I, which are engaged by the blades of the cutter as the latter revolves, said blades projecting through said slots into the material on the belt G, and subdividing the same into sections. This band J serves

as a clearer for the cutter blades, keeping them free from adherence of the shredded or threaded product.

The cutter should be run by means of a sprocket chain from the belt pulley of the carrier or from some shaft in gear therewith, at the same rate of speed as the carrier belt. By means of this cutter the biscuits or loaves can be nearly cut through or separated so as to leave a thin or web-like attachment between them at their lower portions, such attachment causing them to hold together sufficiently for leading in delivering them to an oven-belt on which they may be baked.

If it is desired to separate the biscuits or loaves entirely the pressure wheel P, which runs under the belt G immediately below the cutter wheel may be provided in order to form an under cutter with short blades V, adapted to protrude in turn through transverse slots Z, which may be formed in the belt G for this purpose.

The threads or shreds of material are very delicate and tender, and, owing to their nature and their roughened or somewhat jagged exterior, adhere to each other readily so as to give considerable stability to the biscuit formation, but in order to prevent them from adhering to the cutter blades or cutter, the clearing belt or band J is provided as hereinbefore described.

S, S designate a pair of cutter disks situated back of the last comb E. The purpose of these disks is to trim the lateral edges of the layers of product on the belt G before it passes to the cutter L.

Any suitable form of gearing may be employed for giving the cutter L and clearer J the proper movements, a suitable arrangement for the purpose being indicated at the right of Figs. 1 and 2.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. The combination of a series of sets of reducing rolls, their discharging combs, a continuous receiver belt underneath said rolls, a rotary cutter journaled over said belt beyond the last set of said rolls, and gear for rotating said cutter at the same rate of speed as said belt, substantially as specified.

2. The combination of a series of sets of reducing rolls, their discharging combs, a continuous receiver belt underneath said rolls, a rotary cutter journaled over said belt beyond the last set of said rolls, a slotted endless clearer belt for said cutter, and gear for rotating said cutter and clearer belt at the same rate of speed as the receiving belt, substantially as specified.

3. The combination with the reducing rolls, and a continuous receiver belt, of a moving cutter, and an endless, traveling, slotted clearer belt operating in connection with said cutter, substantially as specified.

4. The combination with reducing rolls and a continuous receiver band, of an endless moving cutter having a series of blades and a slotted endless clearer belt, substantially as specified.

5. The combination with reducing rolls, and a slotted continuous receiver band, of an endless moving cutter, a slotted clearer belt, and a moving under cutter, having its blades working through the slots of the receiver band, substantially as specified.

In testimony whereof I affix my signature in the presence of two witnesses.

PULSATING WATER-SEPARATOR FOR REMOVING ROCK, GRIT, OR FOREIGN MATTER FROM GRAIN.

SPECIFICATION forming part of Letters Patent No. 533,891, dated February 5, 1895.

Application filed May 4, 1894. Serial No. 510,066. (No model.)

To all whom it may concern:

Be it known that I, JAMES H. MONTGOMERY, a citizen of the United States, residing at Denver, in the county of Arapahoe and State of Colorado, have invented a certain new and useful Pulsating Water-Separator for Removing Rock, Grit, or Foreign Matter from Grain; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, forming part of this specification, and to the letters of reference marked thereon.

Figure 1, of the drawings represents a vertical longitudinal section on the line *y*—*y*, Fig. 2. Fig. 2 represents a cross-section on line *x*—*x*, Fig. 1.

The object of this invention is to provide means for separating from grain, and especially from wheat, by water pulsations, such particles of rock, chaff, and other foreign matter, as may be left intermingled therewith, after the grain has been acted upon by thrashing or cleaning machines of ordinary character. It is designed to thoroughly separate all grit from the grain so that it may be fed to reducing machines of exact and fine construction without danger of injuring the same.

In the accompanying drawings the letter A, designates a water-tight box or tank, and B, an inclined screen or sieve extending longitudinally in the upper portion of said tank, and suspended or supported therein, so that it is just submerged below the surface of the water with which the tank is designed to be nearly filled. The screen has a small mesh to retain the grains of wheat while allowing the smaller particles of grit to pass through into the lower portion of the tank. The tail C of the screen is sufficiently raised above the wire cloth bottom to dam up the grain to the depth of an inch or more, said grain being designed as the screen fills, to flow over the tail board into the chute in the end of the tank, whence it is discharged through a valve spout D.

An up and down reciprocating motion is given to the screen by means of small rotating cams *a*, on a shaft *b*, said cams being connected to the screen by suitable arms, *c*. This reciprocation produces upon the wheat grains in the screen a pulsating action causing them to rise, loosen from each other and fall back at each pulsation. The particles of rock and grit being specifically heavier than the grains of wheat, are by these pulsating motions, gradually washed down through the grain to the bottom of the screen, which allows the finer grit to pass through its mesh but retains the larger particles. These larger pieces of rock and grit accumulate at the lower end of the screen being gradually shaken into a receptacle or pocket *d*, preferably at the side from which they may be taken, when there is a sufficient quantity. In order to cause a lateral movement of these larger particles of grit a slight lateral inclination may be given to the bottom of the screen.

The grain is fed into the hopper E, whence it passes by the hopper spout *g*, to the screen. While good thrashed grain will sink in water, some of the berries may require a little soaking, and in order to prevent these from floating along the surface of the water past the screen with the chaff, a canvas or other drag G is provided across the head portion of the screen to exert a submerging action on the berries, holding them until they are soaked sufficiently to sink. This drag extends transversely of the tank, its ends being connected to the sides thereof.

In order to let the water and sediment out of the tank, a discharge spout I is provided at its bottom portion.

The level of water is preserved by the surface spout J. If running water is employed, being supplied to the tank by a pipe K, the chaff and light stuff will float along the surface of the water, and be discharged through the spout J. A screen Z, just below the water surface, extends to the discharge end of the tank to prevent chaff covered grain from soaking and falling into the chute with the good grain.

I am aware that there are several ways of producing a pulsating effect of the water on the grain therein, and I do not therefore desire to be confined to the mechanism hereinbefore described for this purpose.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. In a separator for taking out grit and

foreign matter from grain, the combination of a tank, a pulsating screen therein, a hopper arranged to discharge onto said screen, an inclined discharge chute, and a chaff screen over said chute, substantially as specified.

2. In a pulsating water separator for taking out grit and foreign matter from grain, the combination of a tank, a screen therein, and a soaking drag over said screen, substantially as specified.

3. In a pulsating water separator for grain the combination of a vertically reciprocating screen submerged in a tank, an inclined discharge chute in the tank extending from the tail of the screen and a soaking drag across the head portion of said screen, substantially as specified.

4. In a pulsating water separator for grain, a tank, a vertically reciprocating grit screen therein, a discharging chute or receptacle, a chaff screen thereover, and a soaking drag over the grit screen, substantially as specified.

In testimony whereof I affix my signature in the presence of two witnesses.

JAMES H. MONTGOMERY.

Witnesses:

JOHN S. PERRY,

J. M. STANLEY.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF DENVER, COLORADO.

BREAD AND METHOD OF PREPARING SAME.

SPECIFICATION forming part of Letters Patent No. 548,088, dated October 15, 1895.

Application filed March 15, 1894. Serial No. 503,777. (No specimens.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Denver, in the county of Arapahoe and State of Colorado, have invented a certain new and useful Article of Food or Bread and the Preparation of the Same; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

An object of the invention is the production of an article of food or bread, consisting of externally-rough porous threads or filaments of wheat or similar grain, having the outer nutrition bran and gluten of the entire berry visibly mingled with the interior starchy portion thereof and adapted by their composition of entire grain-berries and their rough and porous thread-like or shred-like form to constitute, without other shortening or aeration, bread of especially light and wholesome character.

A further object of the invention consists in the novel art or method of preparing the grain or berry and reducing it to form without taking from the grain any of the beneficial qualities provided by nature and presenting the same in convenient form for service as a superior article of food without the aid of experts or skilled labor now required to produce palatable bread.

The usual methods practiced in the manufacture of flour and the resultant bread therefrom are such as to detract from the natural and healthful properties possessed by the grain in its original state. The addition of shortening, yeast, baking-powder, alum, or other foreign ingredients to render the bread light is also detrimental, and the entire method consumes a large amount of time and labor.

According to the improved method which I am now about to describe, the wheat is taken in the whole or berry form, and after being cleaned and thoroughly washed is boiled until corked, without destroying the whole or individual form of the berry. The time of boiling is usually abont one hour. This operation, in addition to cooking the grains, removes from them the outer silicious coating and adherent extraneous matter. It also destroys all insect life and removes the traces thereof. Before removal from the boiler the grain is seasoned with salt. The wheat, still in berry form, is, nevertheless, just after the boiling quite soft and its interior or starchy portion especially is watery. It can be easily mashed between the finger and thumb and is not in condition for proper compression until its inner and outer portions are brought more upon an equality in point of consistence. To this end the grain, being removed from the boiler, is allowed to dry for some hours—from twelve to twenty hours being usually sufficient—until the interior of the berry has, from the loss of some of its water, become more consistent. The grain should be constantly stirred or agitated during this part of the process to hasten the drying-out action and to prevent incipient fermentation. I prefer, therefore, to dry out the grain in rotating wire-cloth barrels or cage-tumblers. The berries should now have sufficient interior consistence to enable their outer and interior portions to be effectively incorporated with each other, such incorporation being accomplished by passing the grain between compression-rollers, one or both of which is provided with a series of fine circumferential grooves whereby the berries are mashed and their outer bran-coats, gluten layers, and starchy interior portion thoroughly incorporated together and forced into the grooves of the roller or rollers, whence the resultant food is discharged, by means of a comb or scraper, in the form of long fine filaments or threads of porous character and having a rough exterior admirably adapted to cause them to adhere together when being massed to form loaves or biscuit. The sinuous form and rough or jagged exterior shape of the filaments is designed also to provide small interstices throughout the mass, whereby the bread is thoroughly aerated and made very light.

The food as discharged from the rolls is ready for use without further cooking, or it can be shaped for baking in various ways. The food presented is pure wheat and all the parts of the berry are given to the consumer in attractive form. No chemical change is set up therein by the use of ferments or other

foreign ingredients, and the percentage of water in the food is much less than in ordinary bread.

The article as produced is a food or bread composed of superposed or massed layers or deposits of dry, externally rough, porous, sinuous threads or filaments of cooked whole wheat containing intermixed the bran, starch, and gluten of the entire berry, and which is absolutely free from leavening or raising material or their products.

The fine thread-like character of the component filaments of the bread and their disposition therein renders it tender, so that shortening is not required. All the nutrition and beneficial qualities of the berry are preserved in this admirable article of food, while its form gives it tenderness and lightness without the admixture of foreign ingredients.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. A food or bread composed of superposed or massed layers or deposits of dry, externally rough, porous, sinuous threads or fi ments of cooked whole wheat containing i termixed the bran, starch, and gluten of t entire berry, and which is absolutely fr from leavening or raising material, or the products.

2. The process of reducing cereals for fo consisting, first, in cooking the grain wi salt, after it has been thoroughly cleans without destroying the whole berry form, se ond, partially drying the grain with constan agitation until its interior and exterior po tions are of substantially the same consis ency, and finally, compressing the grain t intimately commingle the outer or bran coat gluten layers, and starchy, interior portio in the form of porous, rough filaments threads, substantially as described.

In testimony whereof I affix my signatu in the presence of two witnesses.

HENRY D. PERKY.

Correction in Letters Patent No. 548,086.

It is hereby certified that in Letters Patent No. 548,086, granted October 15, 1895, upon the application of Henry D. Perky, of Denver, Colorado, for an improvement in "Bread and Methods of Preparing Same," an error appears in the printed specification requiring correction, viz: In line 47, page 1, the word "corked" should read *cooked;* and that the said Letters Patent should be read with this correction therein that the same may conform to the record of the case in the Patent Office.

Signed, countersigned, and sealed this 29th day of October, A. D. 1895.

[SEAL.]

JNO. M. REYNOLDS,
Assistant Secretary of the Interior.

Countersigned:
S. T. FISHER,
Acting Commissioner of Patents.

UNITED STATES PATENT OFFICE.

HENRY D. PERRY, OF BOSTON, MASSACHUSETTS.

DESIGN FOR A BISCUIT.

SPECIFICATION forming part of Design No. 24,033, dated September 17, 1895.

Application filed August 2, 1895. Serial No. 558,026. Term of patent 14 years.

To all whom it may concern:

Be it known that I, HENRY D. PERRY, a citizen of the United States, and a resident of Boston, in the county of Suffolk and State of Massachusetts, have invented a certain new and useful Design for Biscuits; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, which form a part of this specification.

Figure 1 of the drawings is a perspective view of the invention, and Fig. 2 is an end view of same.

This invention has relation to a certain new and original design for biscuits; and it consists in the novel form and configuration thereof, as hereinafter described, and shown in the accompanying drawings.

The leading feature of the design consists in a biscuit, which presents a fibrous interstitial appearance, showing superimposed layers or irregular interlacing threads or filaments, which are wound or disposed in such loose relation to each other that the threads or filaments of the inner layers are visible from the surface to a greater or less degree through the interstices of the outer layers.

The general form of the biscuit shown in the drawings, when viewed in plan, is that of a parallelogram, and when viewed in end elevation or cross-section is a flattened oval with slight creases along the longitudinal edges, its distinguishing characteristic being mainly, as above stated, its fibrous interstitial appearance.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

The design for a biscuit, substantially as herein shown and described.

In testimony whereof I affix my signature in presence of two witnesses.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS.

MACHINE FOR REDUCING AND PREPARING CEREALS FOR FOOD.

SPECIFICATION forming part of Letters Patent No. 571,284, dated November 10, 1896.

Application filed February 7, 1896. Serial No. 578,394. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Machines for the Reduction and Preparation of Cereals for Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 of the drawings is a representation of a central vertical section through the machine. Fig. 2 is an end view of the cutter-head and supporting-frame receiving-belt in section. Fig. 3 is a central vertical section through the cutter-head with roller C broken to show cam at back. Fig. 4 is a sectional view of the section-cutter. Fig. 5 is an end view of the trough-feeder. Fig. 6 is a perspective view showing the troughs and the action of the section-cutter, the knife of the same being in dotted lines. Fig. 7 is a sectional view of one of the hoppers of the reducing-machines detached, the plane of section being at right angles to that of the section shown in Fig. 2. Fig. 8 is a detail view, partly in section, of the sectional hopper-walls h' detached. Fig. 9 is a side view of the same.

The object of this invention is to provide a competent and efficient machine for the reduction of grain in large quantities to thread-like or shredded form wherein the exterior and interior portions of the grain-berry are properly commingled, and suitable rapid disposition of the reduced product in layers sectionally divided and arranged for convenience in the manufacture of biscuits or forms of bread is effected.

In carrying out this invention I provide upon a suitable frame F a series of reducers or shredding-heads A, which are arranged in line with each other, as indicated in the drawings, Fig. 1. Each reducing-head is provided with a pair of reducing-rolls C and D, preferably, whereof one roll, C, is grooved. The grooves of the roll extend circumferentially and are of small or fine character and usually V-shaped in cross-section. The number of grooves may be about twenty to the inch. A groove being a width of one-fiftieth of an inch by about the same depth and a bottom surface of about one-sixth of the depth will serve an excellent purpose. The back roll D of the pair or set is smooth and its cylindrical surface is designed to be in exact and neat contact with that of the grooved roll. The rolls are geared together to run in contact, as indicated at E. The bearings for one of the rolls, preferably the back roll, are adjustable, as indicated at d. The rolls are provided with annular rabbets at their ends, as indicated at c, to form bearings for the inside faces of the concaves h of the lateral walls h' of the hopper H, which is removable. The grooved roll is provided with a circular notched cam C' at each end. Corresponding notches in the two cams should, as is obvious, be exactly opposite each other.

G indicates the driving-shaft, carrying a clutch-pinion $G^{\times}$, adapted to engage the gear-wheel $G^{\times}$ of the front roll. The shifting-lever engages the clutch and enables the operator to disengage the driving mechanism from the rolls of the head in an instant, causing said rolls to cease working. Each drive-shaft is provided with a pulley G', which is belted to a line-shaft G'', whereby all the rollers of the reducing-heads are run at the same speed.

Each reducing-head is provided with a comb or scraper a, which is provided with teeth to engage the grooves of the roller C. A spring-actuated cleaner b, located in inclined position above the comb, is carried by the lever-arms e, which are provided with adjustable lugs e' to engage the notched cams of the grooved roller. This cleaner thereby has an intermittent motion toward the surface of the grooved roller and serves to push back to this roller such accumulations of the product material as may occur upon the comb or scraper a.

It may sometimes happen that the rabbeted bearings upon the end portions of the two rolls may not be exactly in alinement with each other. It is therefore advisable to provide the hopper with means whereby it can be adjusted to suit such a condition. To this end the lower portion of the hopper is made in two

sections h', which are separate from the main frame H', each section having a sliding engagement with said frame, as indicated at h^2. The concaves h are formed on these sections, as shown in Figs. 7 and 9. By this construction it will be apparent that each section h' can be adjusted to suit its bearings on its subjacent roll independently of the other section.

Inclined cut-off slides f are seated in ways of the hopper-walls and are provided with rack-and-pinion devices f'' in order to adjust the feed of the grain to the rolls or to cut it off. The inclination of the slides enables the operator to cut the flow off close to the rolls. The hopper is supported upon adjustable set-screws, as at Z.

Underneath the series of reducing-heads the frame F is provided with a series of idle-rollers for the feed branch of the endless receiver-belt B and below this with a return-way. The traveling belt B is provided with lateral studs or guides b^2. B' indicates the driving and take-up pulleys for this belt.

At one end of the machine is provided a trough-feeding ledge or table J, having an adjustable guide or flange g (see Fig. 5) to insure feeding the troughs or sectional receivers I (see Fig. 6) in line with the receiver-belt B. This table is provided with a short feeding-belt K, which is designed to be driven at a speed somewhat faster than that of the main belt B, in order to insure closing the troughs or sectional receivers in abutted end-to-end position on the main belt. These sectional receivers have lateral flanges or walls and are open at their ends, which are shod with metal, as indicated at I^2, to avoid undue wear. At one end each trough is provided with catch lugs or projections I' for the automatic operation of the cutter m. This cutter (see Fig. 4) is secured upon the frame beyond the last reducing-head. Its frame is provided with bearings for the parallel-motion hanger l, to which is secured the knife-frame N, carrying the knife m, which is connected to said frame by a retracting-spring N'. This frame or carriage is provided with lugs at its lower corners, as indicated at n, which are designed to be engaged by the catch projections I' of the sectional receivers I. A lever K^2 is pivoted to the hanger and engages a bearing of the knife by one of its arms. Its other arm, usually provided with an antifriction-roller, engages a cam-arm N^2, which is pivoted to the fixed frame of the cutter and is counterbalanced, as at N^3, to give it an upward motion to engage the trip-arm p. The hanger l is returned to normal position by means of the weighted arm W.

The grain, having been boiled, salted, and dried to proper consistency, as explained in Letters Patent No. 548,086, dated October 15, 1895, is fed into the hoppers of the reducing-machines and is reduced by their grooved rollers to shred or thread like form, each head depositing a layer of the shred-like pro upon the traveling sectional receiver these layers are deposited in succes thickness of the product upon the rece gradually increased to the extent desir accordance with the number of redu heads composing the machine or such portion of them as may be in gear. In to form biscuit of fair size, I design to some thirty-odd heads in the gang. As trough or section of the receiver engage manger of the cutter the knife-frame is forward and the knife is automatically eciprocated vertically in such a manner transversely divide the product into sec at the junction of the trough with the ceding one. The cam-arm of the cutter ing the trip-arm becomes disengaged, trough passes forward, and the hanger turns to original position. The cam-arm and is set in engagement with the trip, w for the next receiver section or trough. low the receiver-belt is the trough return R, which runs upon a roller-way and is vided with driving and adjusting pulleys dicated at R'.) An upwardly-inclined ch G''' is provided under the trough-feeding ble J and serves to raise the troughs a matically to suitable position to be taken an attendant and fed onto the belt K.

Having thus described my invention, w I claim as new, and desire to secure by Let Patent, is—

1. The combination of a series of reduc or shredding heads, the endless carrier-b arranged to travel below the said heads series of open-ended receivers designed to carried on said belt, a cutting device loca over the rear portion of said belt and adap to be operated by the engagement there of the receivers as they pass thereunder, means whereby said receivers may be ea returned to feeding position, substantially specified.

2. The combination of the series of reduc or shredding heads arranged in line, a roller-way below said heads, the endless b arranged to run over said way, the feed-t at the front end of said belt, its feed-bel line with the first-named belt and desig to be driven at a slightly greater speed, sectional receivers, the automatic cutter, the return belt and chute, substantially specified.

3. The combination with the series of ducing-heads, the endless belt thereun and the sectional receivers having the t lugs or projections, of the section-cutter, h ing the parallel-motion hanger, the kn frame secured to said hanger, and hav trip-lugs for engagement with the lugs of receivers, the knife, its retracting-spring the cam-and-lever devices for forcing t knife to its work, substantially as specifi

4. The combination with the receivers h ing trip or catch lugs, of the parallel-mot

...hanger the knife-frame secured to said hanger ...ed to be engaged by the said trip of ...ch lugs, means whereby said engagement ...the movement of the hanger caused thereby ...the knife to descend to its work, ... for retracting the knife after the ... been made and for returning the ... to normal position, substantially as ...

... section-cutter having the parallel-... counterbalanced hanger, the cutter-... secured thereto and having a trip-lug ... projection, the cutter, the retracting-spring ..., the counterbalanced cam-lever, the ... which secures said cam-lever in operative position, and the lever having one arm ... a bearing of the knife and its outer ... engaging the said cam-lever, substantially as specified.

6. In a grain shredding or reducing machine, the combination with a pair of reducing-rolls, one of which is circumferentially grooved, and the comb or scraper for removing the product from the grooved roll, of the pivoted scraper arranged to play back and forth upon the upper surface of said scraper, a pair of oscillating, spring-actuated, pivoted levers to which said scraper is attached, ...ed cams upon the shaft of one of the reducing-rolls, and adjustable lugs carried by said levers and engaging the respective cams, substantially as specified.

7. A grain shredding or reducing machine having a pair of rolls or cylinders journaled to rotate in neat contact with each other, one of said rolls or cylinders being circumferentially grooved, the hopper having the sectional, adjustable lateral walls provided with bearings on the ends of said rolls, the cut-off slides seated in ways of the hopper-walls, the driving mechanism for said rolls or cylinders, and clutch-gear whereby said rolls or cylinders may be disconnected from the driving mechanism, substantially as specified.

8. In a grain reducing or shredding machine, the combination with the reducing-rolls having the rabbeted end portions, of the vertically-adjustable hopper having a bearing upon said rabbeted end portions, the bearing-sections of the hopper being separate from the main frame of the hopper and capable of an independent endwise adjustment with relation to the said rolls, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS.

ROLL REDUCING-MACHINE FOR PREPARING FOOD.

SPECIFICATION forming part of Letters Patent No. 598,745, dated February 8, 1898.

Application filed August 3, 1897. Serial No. 646,969. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Roll Reducing-Machines for the Preparation of Food; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 of the drawings is a transverse vertical section through a machine embodying my invention. Fig. 2 is a longitudinal section through the roll C and its bearing. Fig. 3 is a transverse section through a portion of said roll, and Fig. 4 is a plan view of the two rolls removed.

In the present invention I have designed to provide a machine for commingling the exterior coats and gluten layer of the grain-berry with its interior portion or starch, reducing the same to definite form for use as food; and to this end I have devised the following mechanism:

The material upon which it is designed to operate is grain, and especially wheat, which has been duly cleaned and cooked and partially dried in order to bring its exterior and interior portions to an equalized consistency, and yet maintain it in the entire or berry form.

In the accompanying drawings the letter A designates the framework of a machine having bearings for back roll B and the front roll C. These rolls are turned exactly true, and one of them should be provided with box-bearings D for purposes of adjustment, as the rolls are designed to be run in contact with each other. One of the rolls, B, may have a plain cylindrical surface. The other roll, C, is provided with longitudinal grooves *d* of V-form in cross-section, a succession of such straight or longitudinal grooves extending parallel to each other around the roll. The grooves are separated by lands *c* of the cylindrical surface.

F represents the hopper of the machine, into which the material, being the prepared grain above referred to or shreds of the same produced by machines of proper character, is fed. The rolls being rotated by means of suitable gearing (indicated at L) cause the material to be pressed into the grooves of the roll C, from which it is discharged in the form of strips of definite length in accordance with the width of the roll in the following manner: Fitting neatly in the bottom of each groove is a steel wire or strip of corresponding cross-section, (indicated at *z*,) the ends of which are secured to movable holders *k*. At each side of the grooved roll is attached to the framing a cam-guide *l*, having an eccentric curvature *l'* sufficient to cause the wire to be protruded from its seat in the bottom of the groove when these curvatures are engaged by the movable holders *k*. The cam-guides are located below the contact-line of the rolls sufficiently to provide for the discharge of the shreds or strips after their formation. The discharging-strips are drawn back to their seats in the grooves by spring action or otherwise. The cams may have slight steps, as indicated at *s*, in order to cause a slight quick movement of the wire *z* to facilitate its discharging action.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

1. The combination with a pair of reducing-rolls journaled to run in neat surface contact with each other, one of said rolls having therein, a series of longitudinal grooves, of a wire or strip movably seated in the bottom of each of said grooves, movable holders to which these wires or strips are attached, and cam-guides engaged by said holders to successively protrude said wires or strips ffom their seats, together with means for again withdrawing the same, substantially as specified.

2. The combination with a pair of reducing-rolls journaled to run in neat contact with each other, one of the said rolls having therein a series of parallel, longitudinal surface grooves of V form in cross-section, and a feed-hopper arranged to discharge between said rolls, of a wire or strip movably seated in the bottom of each of said grooves, and means whereby the same is momentarily pro-

truded during each rotation of the roll together with means for returning the same to its seat after each protrusion, substantially as specified.

3. The combination of a pair of reducing-rolls, one of which has therein a series of parallel longitudinal grooves, the wires or strips one of which is movably seated in each of the said grooves, the movable holders to which said wires or strips are attached at their end portions, the springs connected to said holders, and the stepped cam-guides engaged by the said holders, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS.

MACHINE FOR REDUCING CEREAL FOOD PRODUCTS TO FORM FOR USE.

SPECIFICATION forming part of Letters Patent No. 614,338, dated November 15, 1898.

Application filed May 21, 1896. Serial No. 592,493. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Machines for Reducing Cereal Food Products to Form for Use; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 is a central longitudinal section through the devices constituting the invention, being partly diagrammatic. Fig. 2 is a sectional view showing the evaporating-chamber in connection with the oven by a continuous belt. Fig. 3 is a detail view of the cutter or indenter. Fig. 4 is a sectional view illustrating the projections upon the roller *b*. Fig. 5 is a plan view of the rolls *a* and *b* and the scraper. Fig. 6 is a perspective view of the wafer.

The object of this invention is to provide means whereby grain, and especially wheat in its entire or berry form, having been properly cleaned and cooked, is reduced to the form of a band or ribbon in which the interior and exterior portions of the grain or berry are intimately commingled, such band or ribbon being separated or indented transversely to provide sections of suitable size and shape for baking into crackers or wafers. It is also designed to provide means whereby such bands or ribbons of the grain product may be overlaid or plicated and transversely separated or indented in such a manner as to provide sections of suitable size for baking, each section consisting of several thicknesses or layers duly connected at the edges of the section. It is also designed to provide means for baking these sections continuously as they are formed, and, finally, it is designed to provide means for ornamenting the sections superficially by raised or indented configurations in order to give them an attractive appearance.

In the accompanying drawings I have indicated at A, B, and C several sets or gangs of shredding devices, substantially of the character described in detail in Letters Patent No. 502,378, dated August 1, 1893, into the hopper of which the grain in its entire or berry form is fed after it has been properly cleaned and properly cooked, preferably in the manner substantially as set forth in Letters Patent No. 548,086, dated October 15, 1895. The number of shredding-heads in each set or gang is determined by the thickness of the ribbon or band desired and by the rapidity of production contemplated. These roll-shredders discharge the material in the form of threads or shreds, in which the exterior coats and the gluten layers of the grain are intimately commingled with the interior starch. The threads or shreds are transferred by means of a hopper guide or carrier to the hopper of the band-rollers E E' E^2, there being one band-roller to each set or gang of reducing-rollers.

The band-roller consists of a pair of rolls *a* and *b* and a discharger or cleaner C', being similar to the shredding or reducing head in its main features of construction, the rolls, however, not being in contact, as the reducing-rolls are, but being separated from each other a distance corresponding to the thickness of the band desired. The front roll *a* may have a plain cylindrical surface or it may be circumferentially grooved. The back roll *b* may be plain or it may have shallow grooves or indentations or slight projections of ornamental design, such projections or indentations having beveled walls or rounded angles to provide for the ready detachment of the band as it passes from the rolls to the carrier F.

In the arrangement shown in Fig. 1 the three reducing-machines (designated by B) are arranged to discharge upon an endless carrier D, which transfers the product to the hopper of the first band-roller E. The second set of reducing-machines (marked A) discharge into a hopper B', whose lateral walls may, as shown, consist of endless traveling bands *b'*. This hopper discharges the material to an intermediate band-roller E'. The third set of reducing-machines (marked C) discharge onto an endless carrier D', which delivers the product to the third band-roller E^2.

One band-roller, with its set or gang of re-

ducing-heads, will provide a single band upon the carrier F, where by means of a cutter or indenter G it may be separated or indented in a sectional manner to form crackers or wafers. The carrier F is preferably a traveling band of steel adapted to transport the separated or indented band through the oven K, which is preferably heated by gas, as indicated at F', which designates gas-burners. F' designates an upper baking-band, heated by similar burners. In passage through this oven the wafers are baked, and they are discharged at the end of the carrier in crisp condition. This carrier may also extend beyond the oven into an evaporating-chamber, as indicated at F, or it may discharge its contents upon a carrier which moves more slowly through such evaporating-chamber. Said chamber is preferably provided with an exhaust-fan F².

The cutter or indenter G may be of rotating character, as indicated, its blades being rectilinear or curved or of wave-like or other shape in accordance with the design of the cracker or wafer desired to be produced. The cutter is geared to run at the same rate of speed as the carrier.

When it is desired to form a wafer of two or more layers or thicknesses, two or more band-rollers, with their respective sets or gangs of reducing-heads, are employed, the arrangement being in succession, or so that the band produced by the second band-roller will overlie that produced by the first band-roller and will be overlaid by that produced by the third band-roller. In order to insure the connection of edges of the section of a band of several layers, it is designed to provide the cutter or indenter with pressing-shoulders, as indicated at m. In this manner it is designed to provide wafers of several layers or folds each of which is entire or of plicated character when finished in baking. While the means described are designed for the production of these crackers or wafers in large quantities suitable for commercial supply, manipulation of the material is avoided, so that consumers are protected, in an important manner, from a sanitary point of view.

In making a wafer of two or more layers or thicknesses two or more band-rollers may be employed in series, the first band-roller having its grooved roll and scraper or comb in the rear of the plain roll and the last band-roller having its grooved roll and scraper in front of its plain roll, as indicated in Fig. 1. The ribbon of material falling from the first roller upon the receiving-carrier will have an under surface of finely ribbed or corrugated configuration, the size of the ribs or corrugations depending upon that of the grooves of the roll, which may be as small or as fine as those of a grooved reducing-roll. This ribbon of material will form the under layer. The upper layer of material, which is formed by the last band-roller, will have its upper surface of similar ribbed or corrugated character. Intermediate band-rollers may be employed to provide intermediate layers where the wafer is to consist of more than two layers. In any case, however, when the mechanism is arranged, as indicated, with the first and the last band-rollers in reversed position the upper and under surfaces of the wafer will present an ornamental surface of fine ribs or corrugations, and when the bands of material are rolled thin by means of finely-grooved rolls referred to such rolls will have a comminuting or shredding effect such as will reduce the cooked wheat when fed directly into the hopper of the band-rollers, so that the prior action of reducing-rolls is not always required.

The reducing-heads used in combination with the band-rollers are designed to provide for a more intimate and thorough commingling of the exterior layers with the interior portion of the grain or berry, and they serve an important purpose in that regard.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

The combination with one or more band-rolling machines, and an endless traveling carrier upon which said machine or machines discharge their product, of a rotary indenter or cutter above said band, and having a series of blades provided with pressing-shoulders, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS.

APPARATUS FOR MAKING FOLDED WAFERS.

SPECIFICATION forming part of Letters Patent No. 618,288, dated January 24, 1899.

Application filed August 17, 1897. Serial No. 648,538. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Apparatus for Making Folded Wafers; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 of the drawings is a vertical longitudinal section of apparatus embodying my invention. Figs. 2 and 3 are detail views of the gearing in side and end elevation, respectively; and Figs. 4 and 5 are detail views showing the rollers G G'.

The object of this invention is to provide apparatus for making folded wafers from grain, and especially from wheat in the entire or berry form.

The grain or wheat is first cleaned and cooked, preferably as described in Letters Patent No. 548,086, dated October 15, 1895. It is then partially dried in order to render the interior and exterior portions of the berry of more even or similar consistency, in which condition it is ready to be fed to the reducing or shredding rolls which are designed to effect an intimate commingling of the interior phosphatic and nitrogenized layers with the interior carbonaceous or starch portion. The shreds or threads of the material discharged from the reducing-rolls are massed and rolled into ribbons or bands which are rolled in layer form to provide wafers of several plies or thicknesses.

In order to avoid handling the material, mechanism is provided as follows:

The letters A, B, and C represent reducing-machines substantially of the character described in Letters Patent No. 502,378, dated August 1, 1893, in which finely-grooved rolls are employed to reduce the grain which is fed into the hopper D to shredded form, the shreds or threads being discharged by means of the combs or cleaners *e*, also described in said Letters Patent. The threads or shreds are transferred by means of an endless carrier or conveyer hopper F to the band-forming rolls G G', which are not run in contact like the reducing-rolls, but are adjusted apart from each other in accordance with the thickness of the band to be produced. One of the rolls G is usually grooved circumferentially, while the other, G', is plain or provided with shallow elevations or depressions of ornamental configuration. A scraper or discharger H is provided in connection with the band-roll G in order to clear the band therefrom after its formation.

K indicates the cutter or longitudinal separating-rib, which may be provided on one of the band-rolls, while the other is grooved or depressed lengthwise, as at Z, to engage the cutter as the rolls rotate. The groove Z should be of an even depth with the fine circumferential grooves of the roll in order that the action of the scraper or discharger H shall not be interfered with.

The ribbon or band of material is designed to be separated into even lengths by this cutting mechanism, and as these lengths are discharged by the scraper they fall upon a traveling band or endless carrier M, which may be of steel, in order that the wafers formed thereon may be passed through an oven and quickly baked. The oven is indicated at Z'.

The driving pulley or drum J of the carrier-band is designed to have an intermittent rotary reciprocating motion in order to give the endless band a longitudinal reciprocating movement of suitable character to effect the folding. At each end of its shaft is provided a gear-wheel N or N', which engage, respectively, idlers P *p p*, which are in turn engaged, respectively, by segment gear-wheels R and S on the ends of the drive-shaft *t*. The toothed segments of the wheel S should have a little more than twice the span of those of the wheel R and should alternate therewith in order that the driving-pulley J may be turned forward more than twice as far as it is turned backward, the reversal being effected by means of idlers.

In the arrangement shown in the drawings I have shown the idler P interposed between the gear-wheel N' and the drive gear-wheel R, while between the gear-wheels N and S are two small idlers, whose combined diameter is equal to the diameter of the idler P. It will

be obvious that by means of these idlers the gear-wheels R and S will drive the pulley or drum J alternately in opposite directions. Other suitable gear may, however, be employed. By this means as the ribbon of the material falls upon the endless carrier it moves with it forward a short distance, then backward the same distance, and then forward, so that a three-ply wafer is formed with scroll ends. The carrier continuing to move forward receives the first portion of the next length of the ribbon of material, and by its reversals forms another wafer in rear of the first, and in such manner the operation of forming the wafers may be carried on continuously, and as the baking may also be effected upon the carrier on which the wafers are folded in a continuous manner it is evident that these wafers can be finished in shape before they have time to settle.

The carrier-band may be heated in the oven Z' by means of gas-jets z' or other suitable means. Z^3 indicates a top baker, which may consist of a second endless band carried and driven by the drums Z^2 and heated by gas-jets Z^4 or other suitable means.

The distance between the baking-surfaces of the two bands should be about equal to the thickness of the wafers.

Z^5 designates a discharging-chute at the distant end of the oven, through which the wafers are automatically discharged as the carrying-band passes around its carrying roll or drum.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

1. The combination with one or more reducing-machines, and with a carrier or traveling receiver upon which they discharge, of the band-forming rolls which receive the product from said carrier or receiver, a traveling carrier which receives the product from the said rolls, and gear whereby the said carrier has a reciprocatory forward movement, substantially as specified.

2. The combination with the band-forming rolls, of the traveling carrier working underneath said rolls, and gear whereby said carrier is actuated to a reciprocatory forward movement, substantially as specified.

3. The combination with the band-forming rolls of the endless traveling carrier-belt working underneath said rolls, its carrying and driving pulleys, and gear for imparting to said driving-pulleys an intermittent rotary reciprocatory motion, substantially as specified.

4. In a machine of the character described, the combination with the band-forming rolls, one of which has a peripheral longitudinal rib, and the other a longitudinal groove or depression, of the endless traveling carrier-belt working underneath said rolls, and gear whereby said carrier-belt may be actuated to a reciprocatory forward movement, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS.

APPARATUS FOR MANUFACTURING CEREALS INTO FORMS OF FOOD OR BREAD.

SPECIFICATION forming part of Letters Patent No. 667,892, dated February 12, 1901.

Application filed February 27, 1899. Serial No. 707,085. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in an Apparatus for the Manufacture of Cereals into Forms of Food or Bread; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

In the accompanying drawings, Figure 1 is a vertical longitudinal section through a building, showing the plant as in operation. Fig. 2 is a vertical transverse section of same. Fig. 3 is a plan view of boilers, cleaners, travelers, &c., on the top floor of a building. Fig. 4 is a sectional view of the section-cutter. Fig. 5 is a side elevation of the gang-cutter table, gang-cutters, and operating mechanism therefor. Fig. 6 is a section on the line *a a*, Fig. 5. Fig. 7 is a section on the line *x x*, Fig. 8. Fig. 8 is a section on the line *y y*, Fig. 7, the cutter upon one side being raised. Fig. 9 is an end elevation of trough-feeding table. Fig. 10 is an end elevation of the panning-table. Fig. 11 is a perspective view of a portion of the belt and sectional receivers thereon, the section-cutter knife being shown in lowered position in dotted lines. Fig. 12 is a detail sectional view of one of the drying-trays. Fig. 13 is a sectional detail view of one of the compartment-receivers.

In Letters Patent No. 548,086, dated October 15, 1895, I have described the process of preparing wheat or similar grain and reducing it to a convenient filamentous or thread-like form for use without taking from the grain any of the beneficial portions which are possessed by the grain in its original state. The present invention has reference to such preparation of the grain in large quantities and its manufacture commercially into food or bread of uniform first quality and at such low rate of manufacture that it will be within the reach of all.

The plant or apparatus is preferably established in a building having several stories for the more convenient operation of the machines and structures involved in carrying out the process. Upon an upper floor are located the cleaning-machines and boilers, and a drying-flue extends from this floor to a lower floor, where the grain is discharged upon trays for further drying. Upon an intermediate floor are located the reducing-machines in gang form.

In the accompanying drawings the letter A designates a cleaning-machine, which is preferably a pulsatory water-cleaner of the general character set forth in Letters Patent No. 533,821, dated February 5, 1895. Any required number of these machines may be employed, according to the capacity of the plant. The grain of commerce is fed to these machines and when discharged therefrom is clean, being without grit or extraneous matter. An overhead track B of continuous form extends from the cleaners to the boilers C and to the mouth *d* of the drying-flue D. Travelers E, having suspended hooks or catches *e*, are arranged upon the overhead track and serve for the transportation of the wire-cloth cylinders or cages F. The grain discharged from the cleaner is deposited in the cage, which is then closed and fastened and is conveyed by means of the track B to the boiler. Above the series of boilers extends an overhead track B', (see Fig. 3,) having a traveling lift E', Fig. 2, provided with hooks or catches *e'*, said hooks being separated by a distance equal to that between the hooks *e* of the traveler E, this distance being determined by the length of the cage whose shaft *f* the hooks are designed to engage at *f'*. The lift is operated until the weight of the cage and its contents bears upon it, being raised sufficiently for the disengagement of the hooks *e* of the traveler E. The lift is now operated to deposit the cage in the boiler in such manner that its journals rest in the bearing *c* (see Figs. 7 and 8) of the boiler provided therefor. In order to save weight and to avoid grime and smoke, the boilers are heated by steam, the pipes being indicated at *c''*, Fig. 7. The cage is rotated in the boiler by means of suitable gearing, sprocket-wheels and chains being preferred, as indicated at F', in connection with a line-shaft F''. The boilers are provided with steam-

heating chambers C' and with covers C''. When the grain is sufficiently cooked and after it has been salted, the cage is lifted out of the boiler and transferred to the traveler E, whereby it is conveyed to the mouth *d* of the drying-flue D, into which the grain is discharged from the cage. Passing downward through this flue it is diverted from side to side by means of rotary or inclined ledges *d* in order to facilitate the action upon the grain of the suction-blast through the flue produced by means of a fan at D'. The grain is discharged from the flue into a compartment-receiver *a*, (see Fig. 13,) whereof each compartment is designed to hold a sufficient quantity to charge one of the drying-trays G, into which the grain is discharged by opening the movable bottom *g* of the compartment. The drying-tray, Fig. 12, is provided with a wire-cloth bottom, which is usually overlaid with cotton sheeting. The grain is then spread evenly in the tray, which is conveyed by means of a carrier G'' between the lines of racks G''', upon one of which the tray, with its charge of grain, is placed for further drying, or the trays may be loaded into an elevator and placed in racks on the floor above the reducing-machines. In the drawings, however, I have shown grain-elevators *g'*, which discharge into the hoppers *b* of the reducing-machines, each hopper having preferably several branches *b'*, in order that it may feed several heads of the machine.

The reducing-machine H is of gang form, its roller-heads K being arranged in series. These roller-heads are of the general character indicated in Letters Patent No. 532,698, dated January 15, 1895, and in Letters Patent No. 533,555, dated February 5, 1895. The grain fed into the hoppers of the roller-heads is reduced by their grooved rollers to shred or thread like form, each head depositing a layer of the shred-like threads upon the traveling receiver J. As these layers are deposited in succession, the thickness of the product upon the receiver is gradually increased to the extent desired, in accordance with the number of roller-heads constituting the machine or such proportion of them as may be in gear. In order to form biscuit of fair size, I desire to use some thirty-odd heads in the gang.

Below the series of reducing-heads extends the traveling sectional receiver J, (see Fig. 11,) which is carried by the endless belt *h*, running upon a bed of rollers and over suitable end pulleys, one of which is geared to drive the belt. At one end of the gang-machine is the trough-feeding table H', (see Figs. 1 and 9,) having an endless traveling belt *h'*, which moves at a speed a little faster than that of the main receiver-belt *h*. At the other end of the machine is the gang-cutter table K', Figs. 1, 5, and 6, which is usually provided with two gang-cutters, (see Fig. 6,) one on each side, and between said cutters with a roller-bed K^2 to receive the troughs as they come loaded with the product from the gang reducing-machine. The trough-feed belt is geared to be exactly in line with the main receiver-belt and on the same level therewith, as also is the roller-bed K^2 of the cutter-table. Beyond the cutter-table and in line therewith is the panning-table I, Figs. 1 and 10, having slideways *i*, the surfaces of which are level with that of the risers K^3 of the gang-cutters.

Below the receiver-belt *h* is the traveling trough-returning belt h^3, which is designed to extend from a pulley under the panning-table I to a pulley under the trough-feeding table H'. This belt h^3 is supported on suitable rollers, and above it, at its ends, are provided the oppositely-inclined chutes I' and I''. The main receiver-belt *h* and trough-return belt h^3 are usually provided with guide-studs along their edges to keep the troughs in line.

The sectional receiver comprises a number of open-ended troughs J, the bottoms of which are transversely slotted, as indicated in Letters Patent No. 532,286, dated January 8, 1895. The slots are made at equal distance from each other, this distance being that of the width of the biscuit desired. The ends of the troughs are shod with iron to prevent undue wear and to preserve exactness in their length. At the front end of each trough the iron shoe or end piece is provided with a catch lug or projection *j*.

At the delivery end of the gang reducing-machine is located the automatic section-cutter L, actuated by the moving troughs J to divide the reduced product between the troughs and which is provided with a parallel-motion knife-frame *l*, suspended to swinging arms *l'*, and with a lateral projection to engage the catch-lug *j* of the trough J. The spring-retracted knife is moved downward by means of the cam L', which engages the knife-lever as the knife moves forward. An automatic trip is provided at L^2 to release the cam-lever and allow it to fall to prevent the action of the retracting-spring and the return of the knife.

The troughs J returned to the trough-feeder are pushed upward from the return-belt h^3 along the inclined chute I', from which they are fed to the belt *h'*, which carries them to the main receiver-belt *h*, automatically closing each trough against the trough which precedes it, and thereby securing close joints between the sections or troughs on the main receiver-belt. In their passage below the reducing-heads the troughs are loaded with the filamentous layers of the grain product. As each trough is discharged from the gang reducing-machine, its load is separated from that of the next trough or section by means of the automatic cutter L. The loaded troughs discharged upon the gang-cutter table K' are slid laterally in position upon the risers K^3 of the lower gang or set *k* of knives. (See Figs. 5 and 6.) The risers K^3, secured to a frame K^4, are then lowered by means of a lever mechanism K^5, letting the trough down

upon the lower set k' of knives. The upper set or gang k of knives is designed to have vertical motion, its frame being provided with end guides. This gang of knives is brought downward by means of lever mechanism K^3 to divide the load of the product in the trough into biscuit forms. This gang of knives being raised by means of a spring K^6 or weight, or both, the risers are elevated to raise the trough to a level with the slideways of the panning-table, to which the trough, with its load, is quickly transferred by endwise movement. The panning-table is provided with a pan-shelf i', preferably above the level of the slideways or ledges i, to receive the pans m, into which the biscuit are transferred from the troughs by the panners. The empty troughs from the panning-table are transferred by means of the inclined chute I^2 to the trough-return belt, whereby they are returned to the feeding-table. The pans of biscuit are loaded upon carriers, whereby they are transferred to the oven-room X, Fig. 2, and they are then placed upon revolving shelves X' in the oven, wherein they remain until sufficiently browned. When taken from the oven, the interior of the biscuit is still quite soft and moist, and in order to fit them for commercial use they are placed upon racks of carriers and passed through a hot-air chamber Z.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

1. In apparatus for the purpose described, the combination of the grain-cages, the alined grain-cleaners, the alined boilers adapted for the reception of said cages, the drying-chute, a track leading from said cleaners to said boilers, and to said chute, means for transferring said cages from said cleaners to said boilers and from said boilers to said chute upon said track, and means for transferring said cages from said track into said boilers, and from said boilers back again to said track, substantially as specified.

2. In apparatus for the purpose described, the combination of the grain-cages, the alined grain-cleaners, the alined boilers adapted for the reception of said cages, a track leading from said cleaners to said boilers, means for transferring said cages from said cleaners to said boilers upon said track, means for transferring said cages from said track, into said boilers, and from said boilers back again to said track, and means for rotating said cages in said boilers, substantially as specified.

3. In apparatus for the purpose described, the combination of the grain-cages, the alined grain-cleaners, the alined boilers adapted for the reception of said cages, the drying-chute, a track leading from said cleaners to said boilers and to said chute, means for transferring said cages from said cleaners to said boilers, and from said boilers to said chute upon said track, means for transferring said cages from said track into said boilers and from said boilers back again to said track, a traveling receiver under said chute, having a movable bottom, drying-trays, and a carriage for said trays arranged beneath said receiver, substantially as specified.

4. In apparatus for the purpose described, the combination of the drying-chute, a traveling compartment-receiver beneath said chute, movable bottoms for said compartments, drying-trays, and a carriage for said trays arranged beneath said receiver, substantially as specified.

5. In apparatus for the purpose described, the combination of the grain-drying chute, a traveling receiver under said chute, and having a movable bottom, drying-trays, a carriage for said trays arranged under said receiver, an elevator for the grain, and reducing-machines fed by said elevator, substantially as specified.

6. In apparatus for the purpose described, the combination of a grain-elevator, grain-reducing machines, a hopper into which the grain is discharged from said elevator, and a plurality of spouts leading from said hopper and feeding said reducing-machines, substantially as specified.

7. In apparatus for the purpose described, the grain-reducing machines, means for discharging the reduced product from said machines, a traveling belt beneath said machines, receiving-troughs carried by said belt, the trough-feeding belt, and means for moving said trough-feeding belt a little faster than said first-named belt, substantially as specified.

8. In apparatus for the purpose described, the grain-reducing machines, means for discharging the reduced product from said machines, a traveling belt beneath said machines, receiving-troughs carried by said belt, and a section-cutter operated by said troughs to divide the reduced product contained thereby between the troughs, substantially as specified.

9. In apparatus for the purpose described, the grain-reducing machines, means for discharging the reduced product from said machines, a traveling belt beneath said machines, receiving-troughs carried by said belt, a section-cutter operated by said troughs to divide the reduced product contained thereby between said troughs, and means for returning said cutter to raised position, substantially as specified.

10. In apparatus for the purpose described, the grain-reducing machines, means for discharging the reduced product from said machines, a traveling belt beneath said machines, receiving-troughs carried by said belt, a section-cutter operated to divide the reduced product contained by said troughs between said troughs, and a gang-cutter operated to divide the reduced product contained by each said trough into blocks, substantially as specified.

11. In apparatus for the purpose described,

the grain-reducing machines, means for discharging the reduced product from said machines, a traveling belt beneath said machines, receiving-troughs carried by said belt, and having transverse slits therein, a section-cutter operated to divide the reduced product contained by said troughs between said troughs, and a gang-cutter having knives operating in the transverse slits of said troughs to divide the reduced product of each trough into blocks, substantially as specified.

12. In apparatus for the purpose described, the grain-reducing machines, means for discharging the reduced product from said machines, a traveling belt beneath said machines, receiving-troughs carried by said belt, and having transverse slits therein, a section-cutter operated by said troughs to divide the product contained thereby between the troughs, and a gang-cutter having knives operating in the transverse slits of said troughs to divide the reduced product of each trough into blocks, substantially as specified.

13. In apparatus for the purpose described, the grain-reducing machines, means for discharging the reduced product from said machines, a traveling belt beneath said machines, receiving-troughs carried by said belt, means for dividing the reduced product contained by said troughs between the troughs, means for dividing the reduced product of each trough into blocks, and a panning-table in line with said reducing-machines, substantially as specified.

14. In apparatus for the purpose described, the grain-reducing machines, means for discharging the reduced product from said machines, a traveling belt beneath said machines, receiving-troughs carried by said belt, a trough-feeding belt arranged to move a little faster than said first-named belt, means for dividing the reduced product contained by said troughs between the troughs, and means for dividing the reduced product of each trough into blocks, substantially as specified.

15. In apparatus for the purpose described, the grain-reducing machines, means for discharging the reduced product from said machines, a traveling belt beneath said machines, receiving-troughs carried by said belt, a trough-feeding table having a belt arranged to move a little faster than said first-named belt, means for dividing the reduced product contained by said troughs between the troughs, means for dividing the reduced product of each trough into blocks, a panning-table in line with said reducing-machines, a trough-return belt extending underneath said panning-table forwardly under said reducing-machines and trough-feeding table, a chute leading downwardly from said panning-table to said return-belt, and a chute leading upwardly from said return-belt, to said trough-feeding belt, substantially as specified.

16. The combination with the gang reducing-machines, the sectional, transversely-slotted receivers, and the carrying mechanism for said receivers, of the gang-cutter table having a central roller-way to receive said receivers, and lateral gang-cutters having upper and lower knives, vertically-movable risers adapted to support said receivers thereon, together with suitable mechanisms for actuating the upper knives, and the said risers, substantially as specified.

17. The cutting-table having a central roller-way, and lateral gang cutting mechanisms upon each side thereof, said gang cutting mechanism having vertically-movable risers adapted to support the material being cut, means for actuating the said risers, an upper, vertically-movable gang of knives, and a lower stationary gang, together with suitable mechanism for actuating the upper knives, substantially as specified.

18. The combination with the gang reducing-machines having the roller-heads, the endless feed-belt which travels beneath the said heads, the feed-table at the front of the gang-machine, its feed-belt adapted to be rotated at a slightly-greater rate of speed than the feed-belt of the gang-machines, the sectional, slotted receivers, the section-cutter, the gang-cutters, the panning-table, the endless return-belt, extending from the feed-table to the panning-table, and the inclined chutes, leading from each of said tables to the said return-belt, substantially as specified.

19. The combination with the gang reducing-machines, the endless feed-belt, and the sectional receivers adapted to be carried by the said belt, of the automatic section-cutter, and the gang-cutters, substantially as specified.

20. The combination with the gang reducing-machines, the endless feed-belt, and the sectional receivers adapted to be carried by said belt, and having transversely-slotted bottoms, of the two gang-cutters, having upper and lower sets of knives with actuating mechanisms therefor, and a roller-way between said cutters, and adapted to receive said receivers, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

HENRY D. PERKY.

Witnesses:
J. G. POMERENE,

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS.

MACHINE FOR REDUCING FOOD MATERIAL TO FORM AND DISTRIBUTING SAME.

SPECIFICATION forming part of Letters Patent No. 678,127, dated July 9, 1901.

Application filed November 20, 1900. Serial No. 37,163. (No model.)

all whom it may concern:

Be it known that I, HENRY D. PERKY, a citi- of the United States, residing at Worces-, in the county of Worcester and State of assachusetts, have invented certain new and ful Improvements in Machines for Reduc- Food Material to Form and Distributing Same; and I do hereby declare the follow- to be a full, clear, and exact description the invention, such as will enable others illed in the art to which it appertains to e and use the same.

In the accompanying drawings, Figure 1 is ide elevation of the abutting end portions the cutting and panning mechanisms. Fig. is a side elevation of the cutting mechanism, reducing mechanism being indicated. g. 3 is a side elevation of the panning mech- sm in conjunction with the belt-trough B. g. 4 is a plan view of the same. Fig. 5 ows the bridge-slide K in section in con- nection with the belt-trough.

This invention has relation to machines for ducing food material in large quantities fed ntinuously in regularly-subdivided form d placing the same upon receivers for bak- g or drying or such other subsequent pro- dure as may be required.

The invention consists, mainly, in means for ntinuously subdividing and depositing the od material in parallel rows upon receivers.

In the accompanying drawings the letter designates that portion of a mechanism hereby the material—such, for instance, as heat—is reduced to shred or thread-like rm and deposited upon a sectional travel- g trough or receiver continuously and in fficient quantity for the thickness of the bis- it or subdivisions which are to be formed.

B indicates the sectional belt-trough of this ducing-machine, which passes through and rms a part of the subdividing machinery , which, being provided with upper and wer traveling knife-belts moving at the me rate of speed as the belt-trough, serves subdivide the continuously-moving ribbon material into biscuit-sections. The sub- ivided material upon the belt-trough, pass- g beyond the cutting mechanism, is taken om the belt-trough by an inclined bridge- lide, which discharges the biscuit-sections order upon the depositing-belt D, whereby, in connection with the moving receiving mechanism E, carrying the receivers or pans, the biscuit-sections are placed regularly and in order thereon. I have illustrated in this connection grooved-roll reducing-machines adapted to discharge the wheat or other material in thread-like form, as indicated in Letters Patent No. 533,555, dated February 5, 1895; but it is apparent that other machines adapted to deposit the food material in ribbon form upon the sectional traveling belt-trough B may be employed. This belt-trough consists of sections *b*, each of which is of proper size to hold one biscuit, and these sections form links of the belt, being connected by lateral lugs and pivots in such manner as to leave the interval between the sections clear for the passage of the knives of the cutting mechanism.

B′ indicates one of the end pulleys of the belt-trough, and *b′* represents the lateral ways of the frame, upon which the lugs of the belt-sections move, these lugs being usually provided with small rollers.

The lower traveling cutter or knife belt C′ consists of sections *c′*, each of which carries a blade *e′*, said sections having each a rise *d′*, adapted to fit a recess *b″* between belt-sections *b*, as the belts come together in such manner that the blade *e′* is passed upward through the narrow interval or slot between the trough-sections, the two belts moving along continuously at the same speed. F and F′ indicate the pulleys of this belt. The upper traveling cutter or knife belt C″, also moving at the same speed, consists of sections *c″*, linked together by means of lugs carrying rollers, as at *d″*, and is usually recessed in its lower face or otherwise shaped to give form to the biscuit or to compress the material where the cut is to be made. The blade *e″* of this section is movable up and down, being carried in a slideway *f‴* formed upon the back of the section and having a friction-spring, and small lateral rollers *g″* are provided upon lugs of the blade-frame, adapted to engage a camway G″ of the main frame, which serves to depress the blades of the sections sufficiently to make them cooperate with the blades of the lower knife-belt in cutting the ribbon of material transversely into sections. H and H′ indicate the pulleys of this

knife-belt, and G represents gearing whereby the knife-belts are caused to travel at the same rate of speed as the belt-trough. A'' indicates guideways of the rollers *d''*.

Resting upon the belt-trough B at its end where it commences to pass downward around the end pulley B' is a bridge-slide K of about the width of the interval between the side flanges of the trough-section. This bridge-slide is connected to a frame K', which is usually pivoted to the main frame. The bridge-slide is arranged in ways of the frame K', which is provided with a spring designed to hold the slide in projected position, but with a yielding pressure. The face of the bridge-slide is usually formed with a concave curvature longitudinally, and the slide is arranged in a downwardly-inclined position to pass the biscuit-sections to the depositing-belt D, which is arranged at a lower level than that of the belt-trough and is geared to run at the same rate of speed continuously, so that the biscuit-sections are taken from the belt-trough as fast as they are formed and delivered thereby. While the receiving end portion of this belt D moves along continuously and steadily in position with the biscuit-sections, which are received thereon from the bridge-slide, the depositing end portion of the belt shortens and lengthens alternately, by the one movement depositing the biscuit-sections upon the receiver or pan and by the other movement carrying forward the line or feed of biscuit-sections to be deposited in a second row upon the receiver or pan parallel to the first row, the lateral adjustment and longitudinal retraction of the receiver or pan taking place while the depositing-belt is lengthening itself.

The reciprocating receiver frame or carriage N for the pans is geared to move at the same rate of speed as the depositing-belt and the belt-trough.

D' indicates the end pulley of the belt D, which is journaled in fixed bearings of the main frame, which is provided with slideways *l* for a carriage L, which carries at its delivering end the small end pulley *d'* of the belt, said belt in its return below passing around a pulley *d''* in bearings of the carriage L and around another pulley D'', which is seated in bearings of an adjustable holding-piece T, which is connected to the main frame by means of an adjusting-screw *t*. The belt D therefore has an upper end branch upon which biscuit-sections are carried and by which they are deposited and a lower branch which acts as a take-up when the upper branch is shortened as the carriage moves backward.

M indicates a reversing-shaft having rack-and-gear engagement with the slide frames or carriages L and N, whereby said carriages are reciprocated in opposite directions, but at the same rate of speed. The carriage N, having the lower rack *n*, carries the pulleys of the sprocket-chains S, upon which the receivers or pans are placed in position to receive the biscuit-sections from the depositing-belt. These sprocket-chains run transversely and serve to convey the proper intermittent movement to the receivers in the lateral direction, said movement being effected by means of a cam R intermittently engaging the pawls *r* of the shaft *s*.

At the end of the carriage L is pivoted a depositing lip or slide V, which takes the biscuit-sections from the end of the depositing-belt D and passes them down its incline to the receiver or pan. By means of reversing-gear (indicated at *v*) this depositing-lip is raised at the end of the movement of discharge and held in the raised position until the extended belt D is in position to place another row of biscuit-sections on the pan, when said lip is lowered promptly to inclined position. The degree of inclination is readily adjustable while the machine is in motion by means of the sleeve-screw *v'*, the operation of which changes the position of the worm *v''*.

The reversing devices are operated automatically by the carriage L through its cam-lugs *l* and *l'*, which alternately engage the switch-lever *l''*. By means of the slides *u* and *u'*, which carry said cam-lugs, and the adjusting-screw mechanism (indicated at *w* and at *w'*) the position of either or both of the cam-lugs can be changed. In this manner means are provided for lengthening or shortening the stroke of the carriages L and N at either or both ends of the movement.

The material carried by the belt-trough between the knife-belts is subdivided thereby, the blades of the lower knife-belt passing upward through the intervals between the trough-sections, which are held in position by their guideways, and the blades of the upper knife-belt being depressed by means of the camways, which engage the rollers of the blade-frames. The upward push of the lower blade and the downward action of the compressing edge of the upper knife-section render the action of the upper knife clean and effectual and at the same time obviate any tendency of the material to adhere in the slot between the trough-sections. The biscuit-sections thus formed are taken from the belt-trough by the bridge-slide, which may have a short reciprocating motion, and passed to the depositing-belt, which, with the aid of its depositing-lip, places them upon the receiver or pan, which by an intermittent lateral movement effects an arrangement of the biscuit-sections in parallel rows. As one receiver or pan is filled another is placed upon the carriage to be filled in turn. Usually the carriage N is made wide enough to hold two or more pans side by side in order to give the attendant sufficient time to remove a filled pan and place an empty one upon the sprocket-belts while an intermediate pan is being filled.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. The combination with reducing mechan-
, and panning mechanism, of upper and
traveling knife-belts, a belt-trough shap-
the material from the reducing mechan-
in elongated or ribbon form, and carry-
the same between the knife-belts whereby
subdivided, and a bridge-slide or transfer
ice whereby the subdivisions or sections
the material are taken from the trough-belt,
placed upon the belt of the panning mech-
m, substantially as specified.

2. The combination with upper and lower
veling knife-belts, and with panning mech-
ism running at the same rate of speed as
knife-belts, of a sectional belt-trough, adapted to carry the material deposited thereon in elongated or ribbon-like form, and passing between the knife-belts at the same rate of speed, and a bridge-slide or transfer device whereby the subdivisions or sections of the material are taken from the trough-belt and placed upon the belt of the panning mechanism, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS.

PNEUMATIC PANNING OR DISTRIBUTING MACHINE.

SPECIFICATION forming part of Letters Patent No. 678,625, dated July 16, 1901.

Application filed September 29, 1900. Serial No. 31,554. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Worcester, in the county of Worcester and State of Massachusetts, have made certain new and useful Improvements in Pneumatic Panning or Distributing Machines; and I declare the following to be a full, clear, and exact description of the same, such as will enable others skilled in the art to which it appertains to make and use the invention, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

In the accompanying drawings, Figure 1 is a side elevation of my invention, partly broken away. Fig. 2 is a plan view of the main portion of the machine, the feeding or carrier chain and divider-chains being omitted. Fig. 3 is a section on the line x x, Fig. 2. Fig. 4 is a section on the line y y, Fig. 1, showing a small opening y from the suction-chain to the atmosphere. Fig. 5 is a view similar to Fig. 4, showing two pneumatic chambers H and H'. Fig. 6 is a plan view of the valve-plate. Figs. 7, 8, 9, 10, and 11 are detail views of one of the upper divider or section links e.

The invention relates to the preparation of articles of food, and particularly to the formation and distribution of crackers, biscuits, &c., in regular order, as in panning the same for baking, the object being not only to facilitate the preparation of food in large quantities, but also to promote its sanitary character by avoiding all handling.

The invention consists in providing a pneumatic transfer in combination with a carrier, in the novel construction and combinations of parts constituting a pneumatic transfer or distributer, in the novel construction and combinations of parts constituting a continuously-acting cutting and panning machine wherein the transfer is made by a pneumatic device, and finally in the novel construction and combinations of devices for the purposes set forth, all as hereinafter more particularly described.

In the accompanying drawings, the letter A designates framework of substantial character and preferably of iron.

B represents an endless feeding belt or carrier, consisting of short sectional plates or troughs b, on which the ribbon of food material is conveyed, being usually fed thereto by a series of reducing-machines (indicated at C C C) or in any other desirable manner.

When reducing-machines such as are indicated in the drawings are employed, it is designed that the ribbon or continuous layer of material shall be formed by shredding the grain, as described in patents which I have heretofore obtained. In such a combination, therefore, it is intended that the grain shall not be touched by hand from the time it is grown in the field until after it is cooked and ready for use as food.

The short sectional plates or troughs b of the endless carrier B are provided with rollers b' b' in order that they shall travel freely on the ways or tracks p, provided in the framing. Between the sectional plates or troughs b b is a narrow interval of separation b^3 for the passage of devices which serve to divide the ribbon of food material into sections.

D represents the lower endless divider or cutter chain, which consists of a belt of links d, having rollers d', which serve to facilitate their movement on the ways or tracks q of the framing, these ways or tracks having a slight arch or rise at q', whereby an upward movement of the cutter-links d is gradually effected in order to cause the separator-blades d^2 of said links to pass upward through the intervals of separation b^3 of the feeding belt or carrier B. Each link d is provided with a blade d^2, which is transversely arranged in the link-body and secured thereto either rigidly or adjustably, as may be found desirable.

The links of the lower divider belt or chain D are arranged to break joints with the trough-links b in order that the blades of the former shall have proper position to pass upward through the interval between the trough-links.

Compared with the length of the feeding-carrier B the lower divider-chain is short, being designed only to assist in effecting the separation of the material on the carrier B into sections.

E represents the endless chain of suction-links e e, which are provided with rollers e' e' to facilitate their movement on the tracks or ways r of the framing. In the construction shown in the drawings this endless chain E

is arranged above the carrier B and is geared to move at the same rate of speed therewith, as is also the lower divider-chain D. Each link *e* of the chain E carries a divider-blade e^2, which may be rigidly secured to its frame or may be made adjustable or even removable, as in some cases it may be desirable to include the length of several links in a section of the food material on the carrier. The suction-link *e* consists of a rectangular tubular or open frame, its upper portion having an opening *f* communicating with a passage *f'* through the link, the lower portion of said passage being also open, but covered or guarded by a wire-cloth or perforated bearing *a*, the design being to allow air to pass upward or downward through the link freely, as may be required in the operation of the machine. The upper surface of the link *e* is designed to move along in approximate contact with a valve-seat *g*, as indicated in the framing, said valve-seat being provided for use in connection with a transverse reciprocating valve-plate G.

The endless suction-chain E extends beyond the endless carrier B and the endless divider-chain D sufficiently to include the pneumatic chamber or chambers H H'. Usually a single pneumatic chamber H will be sufficient, this being a suction or exhaust chamber, kept in exhausted condition by means of a suitable exhaust-fan, the passage to which is indicated at *k*; but if the food-sections are of such character that they adhere too closely to the wire-cloth bearings *a* of the suction-links it may be necessary to employ the pressure-chamber H', which is provided with a connection to a blower-fan. An opening for the admission of atmospheric air when the suction is cut off will, however, usually prove sufficient to release the biscuit or cracker section from the wire-cloth bearing *a*, which should be treated with paraffin.

The valve-plates G are arranged in series in ways or seats g^3 of the frame, these being located in the lower portion or bottom of the pneumatic chamber. The number of valve-plates may be equal to one or two more than the number of biscuits or food-sections designed to form a row on the pan or receiver. Each valve-plate is designed to operate in conjunction with a link of the suction-chain above described, as such link comes into position or nearly into position below it. The series of valve-plates corresponds with the series of openings *m* of the pneumatic chamber, and such series is of suitable length to correspond with the length of the pan or receiver, such as indicated at N', Fig. 1, so that when these openings or suction-passages are closed by means of the valve-plates the food-sections will be deposited on the pan in a row. Besides the openings *m* openings are provided in the bottom of the first portion of the pneumatic chamber. The latter openings are not provided with valve-plates, as they are designed to be in continuous action, serving to convey the food-sections or biscuits from the carrier B to the valved portion of the pneumatic chamber, where the depositing operation is effected.

The valve-plates G are provided with air-passages or openings *g'* and with stop or cut-off portions g^4.

Below that portion of the pneumatic chamber which is provided with valves is located the pan-carrier table N, which consists of an adjustable frame provided with bearings for the shafts of the sprocket-wheels *s*, which carry the transverse sprocket-chains S or endless carriers on which the pans or trays are laid. These sprocket-chains are intermittently operated by means of a pawl F and a ratchet-wheel T, of which one of the teeth (indicated at *t'*) is longer circumferentially than the other teeth *t*, in order to provide sufficient movement of the pans where they lie adjacent to each other to pass from the last row of biscuit-sections of a filled pan to the place of deposit on the succeeding pan where the first row of biscuit-sections is to be dropped. The ratchet-wheel T is operated through the pawl F and pivoted connection W by the crank or eccentric J, which is carried on the end of a shaft I, which also carries a series of circular cams V V, each of which corresponds to one of the valve-plates. The cams V are each formed with a circumferential depression *v*, the depression of each succeeding cam being a little longer than that of the preceding cam and so arranged that while the rear inclines v' are in line with each other and designed to operate together the forward inclines v^2 are spirally arranged, so that they will act in succession. A series of arms Z are pivoted to the framing or to the wall of the pneumatic chamber, said arms corresponding in number to the valve-plates and being provided with projections *z*, whereby they engage the circular cams hereinbefore referred to. The free ends of the arms Z are designed to engage projections or arms of the valve-plates G and serve to give motion to said plates when the cams are rotating. Reverse motion is given to the valve-plates by means of springs L, arranged on the stems of the valve-plates, said springs engaging arms a' of the framing through perforations in which the stems pass. The valve-plates are adjustable, the stems being threaded and provided with nuts for the purpose.

The shaft I, carrying the cams, is operated from the shaft of the end sprocket-wheel E^3 of the endless chain E by means of bevel-gearing, (indicated at I'.)

Under the arrangement indicated while the valves are opened successively to avoid waste of the exhaust they are closed simultaneously, so that a row of biscuits or food-sections is dropped from the links of the pneumatic belt E to the receiver of the pan on the carrier-table.

The connecting arm or rod W', which extends from the eccentric J to the pawl F, is usually pivoted at *w* to provide for lateral play, which is advisable in order to allow adjustment of the pan-carrier frame to accommodate said frame to the drop movement of the valves. This adjustment may be effected by the hand-screw M, having a pivotal seat in the framing.

Q indicates a rotary brush, which is designed to act upon the trough-links of the carrier-belt to keep them clean.

The operation may be described as follows: The trough-carrier links conveying the ribbon of food material as it is formed thereon by deposit from the reducing-machinss move along the tracks of the framing and pass between the lower divider-chain and the suction-belt. The links of these belts being provided with knives or blades, which operate, preferably, by a pressing or abutting movement, serve to subdivide the band or ribbon of food material into sections. After this subdivision the lower chain of cutter-links leaves the work and the chain of trough-links having conveyed the food-sections under the pneumatic chamber also leaves the work. The biscuits or food-sections being now taken up by the exhaust and being carried in contact with the wire-cloth bearings *a* along under the pneumatic chamber reach the valved portion, which is normally closed by the mechanism. As each link of the chain E comes under the series of valves a valve is opened, continuing the suction until a sufficient number of biscuits has been carried along the valved portion from a row, when the valves are closed simultaneously and all the biscuits of said row are dropped or deposited on the pan or receiver below. This pan or receiver remains stationary long enough to receive the row of biscuits and is then moved transversely by the action of the ratchet-and-pawl mechanism or other suitable manner the proper distance to attain a position to receive the next row of biscuits, and the action of the valves being repeated a second row of biscuits is deposited alongside the first row.

In the construction illustrated four rows of biscuits are apportioned to each pan, and the fourth ratchet-tooth is made sufficiently longer than the others to allow in the movement of the pan-carrier chains for the interval between the pans.

It will be observed that the drop motion of the valves, wherein they simultaneously close off the exhaust, is intermittent, taking place in the intervals of the intermittent motion of the pan-carrier. In other words, when the pan-carrier is still the simultaneous cut-off or drop motion of the valves takes place quickly enough to allow time for the drop of the biscuits to the pan before the latter is again shifted. To effect this movement of the valves and the movement of the pan-carriers, the cam-shaft is usually connected to the shaft of the end pulley of the chain E by means of bevel-gearing. In some cases, however, the receiver may have continuous movement.

The machine may be run by means of power applied to a shaft F and gearing F', operating the shafts of the sprocket-wheels B' of the feeding-chain D' of the lower cutter-chain and E' of the pneumatic chain.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. A pneumatic panning or distributive depositing-machine, consisting of an endless belt having open sections provided with perforated or wire-cloth bearings, and adapted to operate in connection with a transversely-moving receiver, and an exhaust-chamber having valved openings, substantially as specified.

2. In a pneumatic panning or distributive depositing-machine, an endless belt having open sections provided with perforated or wire-cloth bearings, substantially as specified.

3. An endless chain or belt having open sections provided with divider-blades, and perforated or wire-cloth bearings, substantially as specified.

4. In a pneumatic panning or distributive depositing-machine, the combination with an exhaust-chamber, and its valved openings, of an endless belt of open links, and perforated or wire-cloth bearings attached to the bottoms of said links, substantially as specified.

5. In a pneumatic panning or distributive depositing-machine, the combination with an endless feeding-carrier, and chain cutters or dividers operating in conjunction therewith, of an exhaust-chamber having valved openings, an endless belt of suction-links, and devices for operating the parts, substantially as specified.

6. The combination with an exhaust-chamber, its openings and valves, an open-link suction-belt, an endless feeding-belt and transverse endless pan-carriers, of devices for giving reciprocating motion to said valves, and intermittent motion to said pan-carriers, substantially as specified.

7. The combination with a pneumatic chamber, its openings and valves, the open-link suction-belt, and the transverse receiver, of the endless feeding-belt, the series of valve-operating cams and devices, the cam-shaft and eccentric and the ratchet-and-pawl devices in connection with said eccentric, for giving intermittent motion to said receiver, substantially as specified.

8. The combination with a pneumatic exhaust-chamber, and an endless feeding belt or carrier, of a suction-belt operating in connection with said exhaust-chamber, valve devices for cutting off the exhaust, a transverse

receiver and mechanism for giving intermittent motion to said receiver, and alternate intermittent cut-off motion to said valve devices, substantially as specified.

9. The combination with a pneumatic exhaust, its valves, and a continuous feed-belt of an endless suction-belt operating in connection with said exhaust, valves and feed, and a transversely-moving receiver, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS.

CONTINUOUS CUTTING-MACHINE.

SPECIFICATION forming part of Letters Patent No. 681,656, dated August 27, 1901.

Application filed December 9, 1899. Renewed February 9, 1901. Serial No. 46,722. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, residing at Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Continuous Cutting-Machines; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

In the accompanying drawings, Figure 1 is a side elevation of the invention. Fig. 2 is a partial longitudinal section showing the guideways; and Fig. 3 is an enlarged section on the line *x x*, Fig. 1.

This invention has relation to machines for cutting shredded wheat and other food preparations into regular and uniform sections; and it consists in the novel construction and combinations of devices hereinafter set forth, and more particularly pointed out in the appended claims.

In the accompanying drawings, illustrating the invention, the letter A designates the frame of the machine, having parallel sides and elongated form. The frame is formed with tracks or ways, as *b*, *c*, and *d*, upon which the side lugs of the endless-chain belts E, F, and G, respectively, travel, said belts being carried by their end sprocket-wheels H, I, and J. The middle belt F is made of iron, and consists of short sectional troughs having lateral flanges *k* and side lugs *l*. The links or short troughs are pivoted together by means of pins passing through the side lugs, and these lugs usually carry small rollers *m*, whereby their passage along the track *c* is facilitated and whereby engagement with the rims of the sprocket-wheels is effected. The body of each trough-section is formed on its under side with a broad transverse rib, the sides of which are beveled in such manner that each two successive links provide between them a transverse recess, (indicated at *n*.) The belt F so formed constitutes an endless sectional trough having between the sections narrow intervals for the passage of the blades of the cutter-belts. The lower cutter-belt G consists of an endless chain of knife sections or links each consisting of a body portion *p*, having its sides beveled and being properly portioned to engage the recess *n* of the trough-belt F. The knife-sections are provided with the transverse blades *q* and with lateral lugs *r*, usually bearing the rollers *r'* and being pivoted together to connect the sections in chain form. When the machine is in operation, the blades *q* pass upward in succession between the sections of the trough belt. These blades pass upward into the trough sufficiently to lift the material somewhat and to coact with the blades of the upper cutter-belt. The upper cutter-belt E also consists of section-links provided with lateral lugs pivoted together and usually having the lateral rollers *s*. The under side or face of the body portion of the link may be plane, but is preferably fashioned in mold form having a beveled edge rib *e*, (see Fig. 2,) adapted to gather the material somewhat and give it shape as it presses thereon in its downward movement. At the adjacent edges of the sections these ribs or lips also serve to compress the material against the rising blades of the lower cutter, in this manner facilitating the action of the blades of the upper cutter in their descent. At the back of each section of the upper cutter is provided a frame portion or flange *t*, forming a way for the blade-frame *u*, which carries the blade *v*, which has its movement along the plane of the edge face of the section downward to pass the rising blade of the lower cutter in a shearing manner. In order to effect this, camways *w* are provided on the main frame at each side above the trackways *b*, said trackways in this part having over-flanges *b'*, adapted to prevent the body portions of the knife-sections from leaving the trackways. The camways *w*, which dip downward, as indicated, and have a subsequent rise, are designed to engage the rollers *z*, which are connected to lateral lugs of the blade-frame *u*. As the knife-sections pass along their trackway toward the end of the machine the rollers of the blade-frame enter the camways *w* and are operated thereby to depress the blade-frame and blade to make the cut and then to raise the blade-frame and blade, withdrawing the latter from the material through the aid of the edge rib or lip of the section-body. The blade and blade-frame are held in raised position by means of the

friction-springs y, which bear against the slot-bolts connecting the parts. That portion of the machine in front of the camway is made sufficiently long to provide for pressing the biscuit in form. The three endless belts E, F, and G travel at the same rate of speed and are accurately formed and geared in order that the action of the cutter-blades shall be neat and close. The position of the lower cutter-blades is accurately defined by means of the engagements of the lower cutter-bodies with the interval recesses of the belt-trough, and provision is made for micrometric adjustment of the upper cutter by means of slanting set-screws of its sprocket-wheels passing through the hubs thereof and engaging abutments of the shaft on which they are keyed.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. The combination, with a traveling sectional carrier-belt composed of trough-links, of a lower chain cutter-belt having link-blades adapted to pass upward between the trough-links, an upper chain cutter-belt, the plane-tracks and cam-tracks of the frame, whereby the movements of the belts are controlled, and the sprockets and gear devices, whereby the belts are connected to move at the same rate of speed, substantially as specified.

2. The combination with the link troughs, and their connected frames and rollers, of a lower chain cutter-belt having fixed blades and devices for engagement with the interval recesses of the trough-links, substantially as specified.

3. The combination with link troughs, and their connected frames, of the lower chain of link cutters, and an upper chain of links having reciprocating blades, and mechanism for operating, substantially as specified.

4. The combination with camways in the frame, and the connected section-troughs, of an upper chain of connected links, their adjustable blades and sliding frames, having lateral lugs to engage the camways, substantially as specified.

5. The sectional cutter-link, consisting of the body portion and its connecting lugs and rollers, its mold-form face, its trackway, movable blade-frame, adjustable blade and friction-springs, substantially as specified.

6. In a continuous cutting-machine, the combination with chain of section-troughs, of a lower chain of knife-links, engaging said chain of section-troughs, and an upper chain of links carrying movable cutters and means for reciprocating said cutters, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

LOUIS S. BURBANK, OF WORCESTER, MASSACHUSETTS, ASSIGNOR, BY MESNE ASSIGNMENTS, TO THE NATURAL FOOD COMPANY, OF NIAGARA FALLS, NEW YORK.

APPARATUS FOR FACILITATING PACKING.

SPECIFICATION forming part of Letters Patent No. 683,100, dated September 24, 1901.

Application filed December 21, 1899. Serial No. 741,073. (No model.)

To all whom it may concern:

Be it known that I, LOUIS S. BURBANK, a citizen of the United States, residing at Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Apparatus to Facilitate Packing; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

In the accompanying drawings, Figure 1 is a side elevation of my apparatus. Fig. 2 is a vertical longitudinal section of same. Fig. 3 is a section on the line *x x*, Fig. 2. Fig. 4 is a section on the line *y y*, Fig. 2; and Fig. 5 is a detail view illustrating the engagement of the cross-bars D with the slideways.

The invention has relation to means for facilitating packing small articles, such as crackers, biscuit, cakes, &c., in cartons or cases; and it consists in the novel construction and combination of devices, as hereinafter set forth.

In the accompanying drawings the letter A designates a frame, of elongated form, in which the end sprockets or pulleys of the endless carriers B and C are mounted. Chain carriers are preferred when the goods are delivered in baking pans or trays. The lateral chains of each carrier are connected at intervals by means of transverse bars or scrapers D. The casing of the frame consists of side walls E and a bottom or trough portion F. The upper tray-holding portion of the upper carrier is exposed for the action of the packers, who are located when work is to be done along the sides of the apparatus before the lateral ledges or table-flanges G of the frame. Openings are provided at H at the inner edges of the packing-ledges G, said openings leading to the inclosed trough portion F, in which the lower carrier C runs. The floor of the chamber or boxing of the upper carrier is indicated at K, and in this floor, near the feed end, chutes or openings may be provided for the passage of waste material downward into the lower or trough chamber, from which it escapes through a chute *m* for such disposition as may be advisable. The lower carrier is at one end of the apparatus extended beyond the end of the upper carrier, this extension (indicated at *c*) serving to receive the empty pans or trays when they are dropped thereon by the opening of the lateral receiver-slideways S, which are provided with clearance-springs *t*. These slideways are located in parallel inclined position over the extension *c* of the lower carrier, their higher ends being near the sprockets of the chain carrier and having beveled projections, as at *u*, which are intermittently engaged by the ends of the cross-bars D during the movement of said carrier. This engagement causes the slideways to open or separate sufficiently to allow the pan or tray thereon to fall upon the lower carrier in position to be taken thereby and returned to the feed end of the apparatus. A stop extension V beyond the ends of the slideways and having an inclined bottom serves to prevent the pans or trays from passing too far beyond the ends of said slideways to be engaged by the return carrier. This stop extension also serves to cause the tray to come nearly to a counterbalance, so that it falls gently on the return chain. Elevated a little above the pan-carrier B is arranged a narrow endless carrier-belt Z, which is supported by a board *z* and serves to receive the packed cartons and conveys them away for further disposition. The carriers are moved by means of slow gearing, (indicated at W.)

The operation is as follows: An attendant at the feed end places the charged pans or trays upon the distributing-carrier B, which conveys them along between the lines of packers at the table-ledges, who, taking the biscuit or other articles from the trays as they move along on the carrier, pack them in cartons which are provided at hand and place the filled cartons on the upper small carrier Z to be conveyed away. The empty pans or trays are carried along to the end of this carrier and discharged upon the automatic slideways at its end, whereby they are dropped upon the lower carrier to be returned to the attendant. The cross-bars or scrapers of the carriers on their return movements, being turned downward, move along the floors of their respective chambers and carry such

148

waste material as may have accumulated therein to the chutes at the ends of said chambers. The importance of this apparatus in handling large quantities of delicate articles is found not only in saving time and floor-space, but also in avoiding all manipulation of the goods but that which is necessary to place them in the cartons.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. The combination with an upper endless tray-carrier, and a lower endless tray-carrier moving in the opposite direction, and extending at one end, beyond the upper tray-carrier, of the lateral intermittently-acting slideways at the end of the upper carrier and above the extension of the lower carrier, substantially as specified.

2. The combination with the upper and lower chambers, and the upper and lower tray-carriers respectively located therein, of the lateral packing-ledges of the frame, the waste chutes and openings, the carton-carrier, and the automatic drop device for the trays at the end of the upper carrier and over an extended portion of the lower carrier, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

LOUIS S. BURBANK, OF WORCESTER, MASSACHUSETTS, ASSIGNOR, BY MESNE ASSIGNMENTS, TO THE NATURAL FOOD COMPANY, OF NIAGARA FALLS, NEW YORK.

APPARATUS FOR CURING OR DRYING GRAIN.

SPECIFICATION forming part of Letters Patent No. 683,101, dated September 24, 1901.

Application filed December 30, 1899. Serial No. 742,122. (No model.)

To all whom it may concern:

Be it known that I, LOUIS S. BURBANK, a citizen of the United States, residing at Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Apparatus for Curing or Drying Grain or other Matter; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

In the accompanying drawings, Figure 1 is a plan view of my machine, partly broken away. Fig. 2 is a side elevation of the same. Fig. 3 is a central longitudinal section of the same. Fig. 4 is a section on the line 4 4, Fig. 3; and Fig. 5 is a section on the line 5 5, Fig. 3.

This invention is designed chiefly to provide means for curing grain as it comes from the boilers when it has been cooked in such manner as not to destroy the entire form of the berry, and it may be found useful for other curing or drying purposes.

The invention consists in the novel construction and combination of devices, as hereinafter set forth.

In the accompanying drawings the letters A A' A'' designate chambers or compartments which are arranged in series, but are nevertheless isolated from each other in such manner that the temperature or moisture of the air in each can be changed at will without affecting the condition of the air in any of the other chambers. The isolating walls or partitions P are usually inclined, as indicated, in order to economize space and to facilitate the employment of slatted elevator-belts, these being necessarily of broad character in order to convey the grain from one compartment to the next in spread condition.

B represents a discharge-spout delivering the grain into the first compartment and upon the upper horizontal carrying-belt of the series C C' C'', which are arranged one below another, the belts below the upper one having their end portions projecting alternately at opposite ends of successive belts beyond the ends of the overlying belts in such manner that the material falls from the end of each overlying belt upon the projecting end portion of the next belt below, and so on in succession, each belt having a reverse motion from that of the one above it. The material falling from the end of the lowest belt is received upon the lower end of the broad inclined elevator D, is carried up in spread form by the slats *d* thereof through the upper portion of the partition P, and is discharged by the spout *d'* upon the upper belt of the next compartment or chamber, in which the belts are also arranged in series one below another, with the ends of alternate belts oppositely projecting, as already described in referring to the arrangement of the carrying-belts in the first compartment. The grain from this chamber is transferred by a similar inclined elevator to the belts of the next chamber or compartment, and so on throughout the series of compartments until it is discharged from the last one of the series. Each carrying-belt consists of an endless stretch or skeleton belt of transverse slats *c* and endless straps *c'* and which is covered over with the removable endless apron *c''*. The end portions of each said slat are shown as separate from their central portions, the extremities of said end and central slat portions being glued or otherwise suitably secured to the outer straps *c'* in such manner as to allow such end portions a hinged or pivotal movement with respect to said central portions of the slats. The belts of the compartments are run by means of end rollers having suitable sprocket-wheels upon the ends of their shafts, and between these end rollers are provided supporting-rolls and plane bearings or shelving to keep the upper branch of each belt flat and prevent sagging. The speed of the series of belts in each chamber is slow and is adjustable, suitable differential driving devices being provided to enable the speed to be varied in accordance with the requirement of the material. Each compartment is in communication with a hot-air supply, as indicated at *h*, with a cold-air supply having an inlet, as at *k*, and with a steam-supply, as at *s*, these inlets having suitable cut-off valves. In the

first compartment the air is heated in order to effect the drying or partial drying of the grain, which passing into the cooler chambers is carried more slowly along, so that it becomes in a manner piled up or banked upon the belts in order that the outer portion of the berry shall become softened or cured and fit for the action of the reducing-machines. Should the grain not possess sufficient moisture for this purpose after coming from the heated drying-chambers, moist air or steam should be admitted into the banking-chambers to assist in the curing process. The transverse slats of the aprons or belts should be provided with hinged flanges or end portions designed to engage lateral guides Y, extending along the sides of the apron at their middle portion between the end rollers to allow for the heaping or banking of the grain on the aprons. These guides terminate short of the roller ends to allow room for the apron to take its flat position in passing downward over the roller. The canvas belts are designed to be taken off from the stretch-belts for removal, washing, or other purpose.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

Apparatus for the purpose described, consisting of a series of chambers having each means for regulating the temperature and moisture, traveling carriers having means for adjusting their speed, and formed of the endless straps, the transverse slats having end portions adapted to have a hinged or pivotal movement with respect to the main portions thereof, the removable aprons, the lateral guides, and transfer-elevators forming means of communication from one chamber to the next, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

LOUIS S. BURBANK, OF WORCESTER, MASSACHUSETTS.

DISTRIBUTIVE DEPOSITING OR PANNING MACHINE.

SPECIFICATION forming part of Letters Patent No. 684,782, dated October 22, 1901.

Application filed December 30, 1898. Serial No. 742,121. (No model.)

To all whom it may concern:

Be it known that I, LOUIS S. BURBANK, a citizen of the United States, residing at Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Distributive Depositing or Panning Machines; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

In the accompanying drawings, Figure 1 is a side elevation of my machine. Fig. 2 is a plan view of the same. Fig. 3 is a front elevation of the same. Fig. 4 is a section on the line 4 4, Fig. 2; and Fig. 5 is a detail view illustrating the adjusting mechanism for the depositing-lip.

The object of the invention is to provide a machine for depositing in regular order and in parallel rows upon pans or receivers sections or cakes of shredded wheat or other preparations for cooking and for such other purposes as it may be found useful; and it consists in the novel construction and combinations of devices, as hereinafter set forth.

In the accompanying drawings, illustrating this invention, the letter A designates the main frame of the machine, and B a pulley having its bearings therein near one end, its shaft *b* projecting for the application of power. Around the pulley B passes one end portion of a carrier-belt D, which extends horizontally along the frame and passes around the small end pulley *c* and below and around the take-up pulley E and the tension-pulley F, the latter being also connected to the main frame of the machine, an adjustable bearing *f* being provided for the purpose. The pulleys *c* and E are mounted in bearings of a reciprocating carriage G, the operation of which is designed to alternately shorten and lengthen the carrying portion of the belt D, so that while the receiving portion of this belt moves along continuously and steadily with the sections of biscuit or cakes deposited thereon the other end portion of the belt shortens and lengthens itself alternately, by the one movement depositing the biscuit-sections upon the receiver or pan Z' and by the other movement carrying forward the line or feed of biscuit-sections to be deposited in the second row upon said receiver or pan parallel to the first row, a lateral adjustment and longitudinal retraction of the receiver or pan taking place while the depositing-belt is lengthening. The reciprocating carriage G is geared to move at the same rate of speed as the pulley B and as the reciprocating carriage N of the receivers or pans.

The main frame is provided with slideways I for the carriage G, to which is connected the small end pulley *c* and the intermediate pulley E, which when the delivery portion of the belt is retracted by the backward movement of the carriage G also moves backward and serves as a take-up for the shortening-belt.

M indicates a reversing-shaft having a pinion *m*, which engages by its upper portion the rack *g* of the belt-carriage G and by its lower portion the rack *n* of the carriage N of the pans or receivers. By means of this pinion and a reversing-shipper, in connection with fast and loose pulleys at Z, these carriages are reciprocated in opposite directions, but at the same rate of speed.

The carriage N of the receivers having the lower rack *n* carries the sprockets of the chains S, upon which the receivers or pans are placed in position to receive the biscuit-sections from the depositing portion of the belt D. The sprocket-chains run transversely, and they are provided with guide-studs *s*, placed at proper intervals to insure the correct position of the pans when laid on said chains. The operation of these sprocket-chains by means of slide-shaft *s'*, its pawl device *r*, and the cam J serves to give the proper intermittent lateral movement to the receivers or pans. This lateral movement is effected as the carriage is moving backward, the slide-shaft of the sprockets during this movement moving its pawl device or disk along the camway R', so that one of its pawls *r* engages the spiral cam-rib R, turning said shaft. During the forward movement of the carriage the pawl *r* passes loosely over the

cam-rib, so that there is no engagement therewith, and the pan on the carriage moves in a direct line.

At the end of the carriage G is provided a depositing-lip or slide V, which takes the biscuit-sections from the end of the carrier-belt D and passes them down its incline to the receiver. By means of suitable gearing (indicated at *v* and *w* and operating in connection with the reversing mechanism) this depositing-lip is raised at the end of the movement of delivery and held in the raised position until the extended belt D is ready to place another row of biscuit-sections on the receiver, when said lip is lowered promptly to inclined position and so held until the delivery of this row is completed. The movement of reversal of the depositing-lip takes place at the time of the movement of reversal of the carriages, and is effected by the same reversing devices. A short screw *o'* in connection with the threaded end of the rod *o* serves to change the relative position of said worm, so that an adjustment of the degree of inclination of the depositing-lip may be readily effected while the machine is in motion. The reversing mechanism is operated automatically by the carriage G through its lugs *l* and *l'*, which alternately engage a bent lug *l''* of the switch-lever P. The lugs *l* and *l'* are slides which are adjustable on a longitudinally-adjustable bar at the side of the carriage, which serves as a bearing for said lugs, being engaged by longitudinal channels in the bottoms thereof. These lugs when their adjustment is final on this bar are confidently adjustable by means of a right-and-left screw *b'* engaging a threaded lug of said bar. As either or both lugs are therefore adjustable, means are provided for lengthening or shortening the stroke or varying its position. These adjustments are important in arranging the terminal position of the receiver-carriages as well as that of the delivering-lip of the carrier-belt with reference to the positions of the biscuit-sections. The switch-lever P by means of the slide *p'* actuates the reversing-belts of the fast and loose pulleys and also operates the reversing-gear of the delivery-lip. The biscuit-sections being fed in regular succession upon the belt D are by means of its reciprocating end portion and the depositing-lip placed upon the receiver or pan, the operating mechanism of which by effecting an intermittent lateral movement of said receiver or pan serves to produce an arrangement of the biscuit-sections in parallel rows thereon. As one pan is filled another pan is placed upon the carriage to be filled. Usually the receiver-carriage is made wide enough to hold two or more pans side by side in order to give the attendant time enough to remove a filled pan and to place an empty one upon the sprocket-bolts while an intermediate pan is being filled.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. The combination, with a carrier-belt having a reciprocating end portion, of a reciprocating receiver-carriage, and means for effecting the reciprocation of both in the same times, and at the same rate of speed, substantially as specified.

2. A carrier-belt, in combination with a driving-pulley at one end, and a reciprocating pulley at the other end, the adjustable tension-pulley and the intermediate reciprocating take-up pulley, and mechanism for operating the pulleys, whereby the belt is caused to lengthen and shorten itself at the delivery end, substantially as specified.

3. The combination, with the carrier-belt, its stationary and reciprocating pulleys, and the carriage, for the latter, of the rack-and-pinion device for reciprocating said carriage, substantially as specified.

4. The combination with a continuously-moving carrier-belt, having a lengthening and shortening depositing portion, of a laterally-moving receiver, substantially as specified.

5. The combination with a continuously-moving carrier-belt having a lengthening and shortening end portion, of a corresponding reciprocating receiving device having an intermittent transverse movement, substantially as specified.

6. The combination with a depositing carrier-belt of an intermittently and transversely moving receiving device, and a longitudinally reciprocating carriage for said receiver, substantially as specified.

7. The combination with a carrier-belt, having a reciprocating end portion, and a reciprocating carriage bearing the pulleys of said end portion, of a transversely-moving receiving device, and its reciprocating carriage, substantially as specified.

8. The combination with a carrier-belt, having a lengthening and shortening end portion, pulleys therefor, and a reciprocating carriage for the pulleys of said portions, of the transversely and intermittently moving receiving device, its reciprocating carriage, and reversing mechanism, substantially as specified.

9. The combination with a depositing carrier-belt, having a lengthening and shortening end portion, and a reciprocating carriage for the pulleys of said portion, of a transversely and intermittently moving receiving device, its reciprocating carriage, and rack-and-pinion mechanism, and a reversing device, substantially as specified.

10. The combination with the lengthening and shortening carrier-belt and the pulleys of its depositing portion, of the transversely and intermittently moving receiving device, the carriages for said pulleys and for said receiving device, and means for reciprocating said carriages in opposite directions at the same rate of speed, substantially as specified.

11. The combination with a reciprocating ... device, of a receiver, transverse ... sprocket-chains and sprocket-pulleys there- ... and mechanism for operating said chains ... tently, substantially as specified.

12. The combination with the reciprocating ... frame, and its transverse sprocket- ... and sprocket-wheels, of the slide ... shaft, its pawl device and cam, sub- ... as specified.

13. The combination with the reciprocating ... portion of the carrier-belt, and its pulley- ..., of the pivoted depositing lip or slide ... reversing devices, whereby said lip is ... raised and lowered, substantially ... specified.

14. The combination with a depositing car- ..., having a reciprocating end portion ... reciprocating carriage for said end por- ... reversing mechanism operated au- ... by said carriage, substantially as ... specified.

15. The combination with a depositing car- ..., and a reciprocating carriage oper- ... end portion, of adjustable reversing ... operated automatically by said car- ..., substantially as specified.

16. The combination with the receiver-frame and the carrier-belt, of the oppositely-reciprocating carriages, the transverse intermittently-moving sprocket-chains, the depositing-lip, and automatic reversing devices, substantially as specified.

17. A distributing-machine, comprising an endless carrier, having an alternately extending and retracting end portion, an alternately rising and falling depositing-lip at the end of said end portion, a transverse intermittently-moving receiver device, a reciprocating carriage therefor, and automatically-operated reversing mechanism, substantially as specified.

18. A carrier-belt having a lengthening and shortening end portion, and end pulley, and a take-up pulley and a reciprocating carriage for said end and take-up pulleys, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

SPECIFICATION forming part of Letters Patent No. 685,671, dated October 29, 1901.

Application filed December 21, 1899. Serial No. 741,072. (No model.)

To all whom it may concern:

Be it known that I, LOUIS S. BURBANK, a citizen of the United States, residing at Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Apparatus for Cooking and Drying; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

Figure 1 is a side elevation of my apparatus, partly broken away. Fig. 2 is a section on the line x x, Fig. 1. Fig. 3 is a detail perspective view of one of my carriages in connection with the sprocket-chain. Fig. 4 is a detail cross-sectional view of same in connection with the sprocket mechanism.

This invention has relation chiefly to means for cooking and drying food material in large quantities; and it consists, mainly, in the novel construction and combination of devices constituting a cooking and drying oven through which the material is passed in conveyers having vertical as well as horizontal continuous movement, as hereinafter set forth.

In the accompanying drawings, illustrating this invention, the letter A designates the wall of the oven, B the floor or base, and C the top, suitably supported by strong beams c. The parallel side walls a a are comparatively near together, being but a little more distant from each other than the length of the shafting and gearing and sufficiently close to afford bearings for the ends of the shafting beyond the gearing or sprocket-wheels which support the endless carrying chains to which the carriages or swinging shelves are connected. The length of the oven may be according to the requirement of the material and the height about four times the width, more or less.

D represents the partition between the baking-oven E and the drying-chamber F. This partition connects the side walls from the top C downward and terminates a few feet above the floor, being supported by strong iron beams d in such manner that there is provided a low passage-way or opening G below the partition, forming the sole passage or communication between the baking and drying chambers of the oven.

H H indicate the heaters or furnaces, which are supported above the floor or base B by means of suitable girders and arches h in such manner that passages G′ are provided between said heaters and the floor or base.

K represents a continuous carrying-belt composed of lateral sprocket-chains k' and shafts k'', which extend transversely between the sprocket-chains and are connected to links thereof. The arms l of the carriages L swing on said shafts, always hanging vertically and serving to carry the baking shelves or pans m, which are connected to the flanged lower ends thereof.

P P represent the upper set of sprocket-pulleys, each consisting of a shaft p and end sprocket-wheels p' p', secured thereon, said shaft being seated to turn in suitable bearings in the side wall near the top of the oven. The ends of these shafts which extend through the side wall are provided with worm-wheels W, which are operated by means of a worm-shaft w to provide a slow regular motion for the carrying-belt and at the same time to hold the sprocket-pulleys and the depending branches of said carrying-belt in proper position, so that no slipping of any portion of the chain in consequence of overweighting can occur.

Q Q indicate the lower set of sprocket-pulleys, each consisting of a shaft q and end sprocket-wheels q'. These lower sprocket-pulleys are designed to hang in the depending loops or bights of the carrying-chain K, which form vertical branches in passing over the pulleys P and under the pulleys Q. The sprocket-pulleys Q are steadied by the engagement of the ends of their shafts with guides q'' in the opposite side walls. Automatic adjustment is in this manner provided for changes in the length of the shelves caused by variations in the temperature. While the sprocket-pulleys P are located near the top of the oven, both in the baking and in the drying compartments, the lower sprocket-pulleys Q are carried at a level a little above that of the tops of the heaters or furnaces.

R R represent the return sprocket-pulleys,

which are arranged in series a little above the main floor and serve to support and carry the chain of carriages back from the delivery end to the feed end of the oven. In the end walls I indicates the feed-opening, arranged at the proper height above the feed-floor, and J the delivery-opening.

S indicates a large sprocket-pulley located in the upper portion of the opening G below the partition D and spanning the same in such manner that the chain of carriages in passing from the baking-compartment E to the drying-compartment F will be carried around the lower end of the partition through said opening.

The heaters or furnaces of the smaller compartment E are sufficient in number or size to produce a high temperature for cooking the material, while those of the larger or drying compartment are designed to produce a much lower degree of heat. It is evident that the feed may be in either direction, so that the material may be first cooked and then dried or first dried and then cooked, and in some cases when a sharp browning is desired at the end of the process the partition may be placed around the delivery end and a baking heat applied. The carrying-chain is operated by suitable worm-gearing, as hereinbefore mentioned, and as its end branch in rising passes the feed-opening the pans of biscuit or other material are laid on the carriages, which convey them upward into the higher heated portion of the baking-compartment, then downward to near the tops of the furnaces, and again upward and downward, and so on until they are passed through the opening G under the partition D into the drying-compartment. Here they are again, through successive elevations and depressions, moved slowly the length of the chamber, finally descending by the end branch of the conveying-chain near the delivery-opening in the end wall, through which the pans are unloaded, the chain continuing downward and back by the return-pulleys to the feed end to be again charged with pans of the food material.

It will be observed that the operation of this baking and drying oven is continuous, and it is so arranged that the preparatory work of forming the material in shape for baking and drying is entirely separated from that portion of the work which has to do with the cooling and packing for transportation.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

In an oven, the combination of a casing provided with guides, a vertical partition dividing the casing into a drying-chamber and a baking-chamber, said partition being spaced from the bottom of the casing, forming a passage, a series of sprockets in the upper part of the chamber, an endless chain carrying swinging shelves supported by said sprockets and looped within the chambers, a series of sprockets suspended within said loops and operating in said guides, and a plurality of furnaces situated within the lower part of said chambers, the lower part of the endless chain passing below said furnaces, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS, ASSIGNOR TO THE NATURAL FOOD COMPANY, OF NIAGARA FALLS, NEW YORK, A CORPORATION OF NEW YORK.

FILAMENTOUS CRACKER.

SPECIFICATION forming part of Letters Patent No. 718,795, dated November 18, 1902.

Application filed September 29, 1900. Renewed April 18, 1902. Serial No. 103,213. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Worcester, in the county of Worcester and State of Massachusetts, have made a certain new and useful Invention in Crackers; and I declare the following to be a full, clear, and exact description of the same, such as will enable others skilled in the art to which it appertains to make and use the invention, reference being had to the accompanying drawings, and to the letters of reference marked thereon, which form a part of this specification.

Figure 1 is a plan view of the cracker. Fig. 2 is a section on the line 2 2, Fig. 1. Fig. 3 is an end view of the cracker.

The object of the invention is to provide a cracker of filamentous or shredded wheat or other grain; and the invention consists in the novel formation of the cracker, whereby it is given compact and definite shape, while the fibrous or light structure is preserved with sufficient strength for use as an article of food of the character indicated.

In baking biscuits of wheat filaments it has been found that there is a tendency for the biscuit to become loose or somewhat open in its middle portion, owing to the swelling in the baking, and such loose structure is not suitable for the flattened or cracker form. It has also been found that when the material is compressed by a mashing action its filamentous structure, upon which depends its light and porous character, is injured. In order to remedy these conditions and provide a cracker of suitable structure, the article is made in sufficiently thin and flattened form of the filaments which extend in a more or less undulating manner in one direction, superficial ribs being provided extending in the direction of the filaments and between these ribs elongated depressions having in their bottoms locking indentations. To effect this, the filamentous material having its fibers or filaments extending in one direction is laid between baking-irons having teeth studding their inside surfaces in such manner that while the filamentous material is held between the irons during the baking by the approximation of the points of the teeth the filamentous structure is preserved, the pressure between the points being sufficient to cause the locking of the filaments by direct attachment to each other at regular intervals, so that the cracker will hold its form. In this structure it will be readily seen that as the material is distributed with its fibers extending in a more or less undulating manner in one direction the intervals between the teeth of the baking-irons will permit the filaments to extend therein in such a way that the cracker will be provided with superficial ribs *a*, extending in the direction of the filaments. Between these ribs the cracker will be provided with elongated or channel-form depressions *b*, in the bottoms of which are series of pointed or somewhat-pointed indentations *c*, which are caused by the pressure of the points of the teeth of the baking-irons. These indentations are distributed throughout the cracker and show the only places where the material is compressed with any degree of force, the general filamentous structure remaining inviolate, but presenting a close arrangement, which while it does not entirely eliminate the interstices between the filaments as actual compression would nevertheless reduces the interstices sufficiently to give the article the flattened or cracker character designed. At the same time the short binding filaments made between the attachment-points in series have more strength to sustain the form of the article than if they extended loosely across its entire breadth. The baking-iron whereby this cracker is prepared is shown in my pending application, Serial No. 24,205, series of 1900. These irons are studded on their inside surfaces with beveled teeth, which when the irons of a set or pair are placed together approximate contact with each other at their points only. The arrangement of teeth is preferably regular, as indicated, and the teeth are made long enough to provide sufficient depth in the intervals between them to avoid mashing the filamentous material, which is thus enabled to preserve its normal light character, the binding being effected at the locking indentations by the approximate contact of the points of the teeth.

Having described this invention, what I

claim, and desire to secure by Letters Patent, is—

A cracker composed of superposed filaments of grain, which are locked together at a series of points at short distances apart by utilizing the adhesive nature of the material at such points, while leaving the filaments comparatively free from one locking-point to another in such manner as to provide an open structure of even nature on both sides of the article.

In testimony whereof I affix my signature in presence of two witnesses.

No. 746,145. Patented December 8, 1903.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF NIAGARA FALLS, NEW YORK, ASSIGNOR TO THE NATURAL FOOD COMPANY, OF NIAGARA FALLS, NEW YORK, A CORPORATION OF NEW YORK.

CONTINUOUS-MOTION HEATING AND EVAPORATING APPARATUS.

SPECIFICATION forming part of Letters Patent No. 746,145, dated December 8, 1903.

Application filed March 6, 1901. Serial No. 49,883. (No model.)

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Niagara Falls, in the county of Niagara and State of New York, have made a certain new and useful Invention in Continuous-Motion Heating and Evaporating Apparatus; and I declare the following to be a full, clear, and exact description of the same, such as will enable others skilled in the art to which it appertains to make and use the invention, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 is a plan view, partly broken away to show the interior mechanism. Fig. 2 is a side view, partly broken away to show the interior mechanism. Fig. 3 is an end view of the casing and mechanism, the end wall of the casing being removed. Fig. 4 is a side view, partly broken away, showing vestibules at the ends of the casing. Figs. 5, 6, and 7 represent details of the mechanism.

The invention has relation to means for heating or evaporating food products and other articles; and it consists in the novel construction and combinations of parts, as hereinafter set forth.

In the accompanying drawings the letter A designates the wall or incasement of the heating or drying chamber, which may be provided with steam-pipes or other ordinary means for effecting a temperature of the degree desired. In this chamber are arranged along its length parallel series of vertical shafts B B, the shafts of each series being placed opposite to each other, two and two, as indicated by the drawings. Each shaft is provided with a worm-wheel C, which is rigidly secured thereto and serves when operated by a suitable worm-shaft D, extending horizontally along the series, to cause a slow rotary motion. Usually a worm-shaft is provided for each line of vertical shafts B B, these being so constructed and arranged that all the vertical shafts will be turned at the same rate of speed, but in opposite directions, in each row or line from those in the next row or line. Instead of worm-gearing other means may be employed to turn the vertical shafts; but the worm-gearing is preferred.

E E represent plane pans or trays having their lateral edges *e e* parallel and of sufficient thickness to afford purchase to the rotary grips or edge bearings J of the vertical shafts. All the pans or trays are of similar width, as they are designed to pass between the parallel rows of vertical shafts. These parallel-edge pans or trays are designed to have wire-cloth or foraminated bottoms extending in the plane of their parallel edges and in the plane of their respective edge bearings.

As usually constructed, on each shaft B is rigidly secured a circular flange or disk F, the upper surface of which is convex or in the form of an inverted saucer, and above this convex flange is provided on the same shaft a movable convex flange G, which, however, has its convexity downward in such wise that the convexities of the two flanges are toward each other. As usually arranged the convex surfaces of these flanges F and G are in contact at their central portions, or a thin washer may be placed between them. The upper flange G of each set is elastically pressed toward the lower or fixed flange by means of a spring, (indicated at H.) In this manner each shaft is provided with a rotary guide and vertical-pressure grip of elastic character adapted to engage the purchase edge *e* of the pan or tray, hereinbefore referred to. Means of adjustment are usually provided for the spring, as indicated at K, whereby the force of the grip may be regulated in accordance with the requirements of the work. There may be several grip devices or edge bearings of like character on each shaft at different levels; but whatever be the number all the other shafts must have their grip devices on the same level or levels. The distance between any two shafts or grips in succession must be less than the length of

a pan or tray and usually less that half its length unless auxiliary guides are provided to keep the trays in line with the grips, it being designed that before the engagement of a tray with one set of grips is terminated said tray shall in its forward movement become engaged with the next set of grips.

The worm-shafts are geared to give continuous rotary motion in opposite directions to the parallel rows of vertical shafts, so that the pans or trays will be carried along between them by the bearings in the same direction and in a continuous manner. The movement is designed to be slow in order to avoid great length of heating-chamber, as the drying or cooking operation must be completed when the tray arrives at the discharge end of the incasement. The action being continuous there is no waste of time in stopping for feeding or for the discharge.

At one end of the casing is usually provided a vestibule V, wherein communication is had with the feed end of the series of carrying devices, and in this vestibule is carried on the operation of feeding the charged pans or trays to the evaporator or baker, which is effected by passing them into engagement with the grips or edge bearings of the end shafts of the series. At the other end of the casing a similar vestibule is provided for the operator who takes the trays from the grips of this end after they have passed through the drying-chamber. Sometimes the vestibules may be dispensed with.

In the end walls of the heating-chamber or in the partitions Z are arranged slots or openings just sufficient for the passage of the trays and the articles thereon. The vestibules may be provided at their sides or outer ends with doors *m* in order to economize heat as much as possible. The charged trays may be loaded on racks R, and such racks may also be used in the discharging operation, the object being to avoid frequent openings of the vestibule-doors. In each slot *s* is usually provided a swinging shutter *t*, having lateral cam-flanges which are engaged by the edges of the pan and serve to open the shutter and hold it open until the pan of biscuit has passed through the slot. The shutters are thus opened and closed automatically and serve to prevent loss of heat from the closure.

The edge bearings of the vertical shafts are arranged in vertical series or in tiers, one above another, providing for moving tiers of pans, so that there is great economy of space in the apparatus.

What I claim as my invention, and desire to secure by Letters Patent, is—

1. In heating apparatus, the parallel series of vertical shafts arranged in pairs, a vertical series of vertical-pressure grip devices arranged in pairs on said shafts, horizontal shafts extending along the series of vertical shafts, and the engagement-gearing of said horizontal shafts and vertical shafts, substantially as specified.

2. The combination with a heating or drying closure, of parallel series of vertical-pressure-spring grip devices, or edge bearings, oppositely placed in pairs and in tiers, one above another, and means for rotating said parallel series in opposite directions, substantially as specified.

3. The combination with a heating or drying closure, of parallel series of vertical shafts, the tiers of pairs of convex flanges secured thereto, the movable convex flanges thereon, the pressure-springs of the movable flanges, and the gearing arranged to turn the parallel series in opposite directions, substantially as specified.

4. The combination with a heating or drying closure, of parallel shafts, the moving edge bearings connected thereto, the gearing for turning the shafts, the parallel-edged pans or trays, and the automatic shutters of said closure, substantially as specified.

5. The combination with a heating or drying incasement, and closing devices at its end openings, of parallel series of tiers of pairs of moving vertical-pressure grip devices, or edge bearings, means for rotating said parallel series in opposite directions, and parallel-edge plane foraminated trays or pans adapted to engage said grip devices, substantially as specified.

6. In an oven or closure, the combination with the parallel-edge pans or trays of a plurality of series of vertical rotating shafts, tiers of pairs of opposite edge bearings on said shafts, spring devices to close said bearings on the edges of the pans or trays, gearing for turning said shafts, and automatically-closing devices for the feed and discharge ends of said oven or closure, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

No. 770,159. Patented September 13, 1904.

UNITED STATES PATENT OFFICE.

LOUIS S. BURBANK, OF WORCESTER, MASSACHUSETTS, ASSIGNOR, BY MESNE ASSIGNMENTS, TO THE NATURAL FOOD COMPANY, OF NIAGARA FALLS, NEW YORK, A CORPORATION OF NEW YORK.

MACHINE FOR MAKING CARTONS OR FOLDING BOXES.

SPECIFICATION forming part of Letters Patent No. 770,159, dated September 13, 1904.

Application filed December 21, 1899. Serial No. 741,074. (No model.)

To all whom it may concern:

Be it known that I, LOUIS S. BURBANK, a citizen of the United States, residing at Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Machines for Making Cartons or Folding Boxes; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

In the accompanying drawings, Figure 1 is a side elevation of my machine, partly broken away. Fig. 2 is a partial plan view of same on an enlarged scale. Fig. 3 is a partial vertical longitudinal section of the machine, illustrating the guiding-rollers. Figs. 4, 5, and 6 are sectional views illustrating successive steps in the folding of the paper. Figs. 7 and 8 are detail views illustrating the operation of the creasing-rollers. Fig. 9 is a detail sectional view of the cutting and scoring rollers. Figs. 10 and 11 are detail views illustrating the operation of the cutter. Fig. 12 is an end view of the cutter, and Figs. 13, 14, and 15 are detail views of the finished carton.

This invention has relation to a machine for making cartons or folding boxes of paper; and it consists in the novel construction and combinations of devices, as hereinafter explained.

The object of the invention is to provide such folding cartons economically and in large quantities mainly for the use of factories and other sources of supply wherein the cartons are needed for casing the goods manufactured.

The folding carton made by this machine is rectangular and of doubled flat formation, its upper and lower portions or doublings being in contact with each other, as indicated at A in the drawings. Scorings are represented at *a* and *b* at right angles with each other and edge slits *b'* in line with the scorings *b*. The frame C of the machine is of elongated form and is provided with proper mountings for seating the journals of the mechanism and other special parts.

D represents bearings at the end of the machine for the axis-piece of the supply-roll *d* of paper.

E E designate the scoring-rolls, which should also be provided with edge-knives for trimming the edges of the paper which passes from the supply-roll between said scoring-rolls.

F F represent the printing-rolls.

G indicates a disk whereby a line of glue or paste is applied along one edge of the sheet of paper.

H H indicate a number of sets of edge guiding or folding rolls, whereby the edges of the sheet of paper are gradually guided upward, around, and over toward each other until one edge overlaps the other, the sheet then having the form of a cylinder or sleeve. The overlapping edge portion of the sheet is provided with the line of glue.

In this machine the paper is bent over rounded guides P P, which are secured to the frame and are arranged along the median line, their curved bearing-surfaces *p* presenting upward, preferably in order that the weight of the lateral portions of the strip of paper may assist in the bending. The guides P P are supplemented by the opposite isoclinal folding-rolls H H above referred to, which being arranged along the length of the strip in series with their axis, having gradually-increasing angular relation to the horizontal, gradually turn its edge portions around under the middle portion until it assumes tubular form, when it is supported by a shaping-mandrel Q, which fills out the tube, giving it a true cylinder form.

J represents the pressing-rolls, whereby the cylinder or sleeve is pressed flat to effect the adherence of the edge portions and to bring the doublings in contact.

K K designate the rotary knives, whereby the flattened sleeve is cut into sections, each of which is designed to be a complete folding carton.

The various rolls and moving parts may be operated by means of a longitudinal shaft L, having proper gear connections. The scoring-rolls are provided with corresponding

transverse indentations *e* and fine ribs *e'*, which extend between the edge-trimming cutters *m*. These rolls are also provided with the corresponding circumferential indentations *n* and fine ribs *n'*, alternating with short cutters *n''*, also extending circumferentially in such manner that in their work upon the sheet the longitudinal scorings alternate with the slits in the same lines, or the indentations may be omitted, as the ribs will score on a plain roll sufficiently well. The upper printing-roll F is provided with a circumferential type-face to receive ink from the small rollers of the inking apparatus *f*, and as the sheet of paper passes between the rollers F and F' the printed matter which is designed for the cartons is placed thereon. That portion of the machine along which the folding is effected through the medium of the guiding-rolls H is of considerable length, in order to provide a very gradual bending during the operation, this bending being such that when the edges of the sheet are brought to the lapping position their variation from parallelism will be inconsiderable. The long folding mechanism also allows time for the printing to dry. In order to insure the drying, however, a hot-air incasement may be provided over a portion of the folding mechanism. The disk G, whereby the line of glue or paste is applied to the edge portion of the sheet, may be located in any convenient position. If a drying-incasement is provided over the folding mechanism, it should be located beyond the incasement near the pressing-rolls J.

Lateral creasing-rolls I are arranged to engage the sides of the sheet at its bent or sleeve-form portion where it approaches the pressing-rolls J, said creasing-rolls serving to partially flatten the tube formed by the mandrel Q and its supplementary rollers and start the angular bends and at the same time guiding it in the proper direction between the pressing-rolls. By these rolls the sleeve is pressed flat and the edges of the sheet are secured together along the lapped portion. As the flat sleeve portion passes along from the pressing-rolls it is subdivided into sections or cartons by the rotary spiral shearing-knives K K, the cuts being made transversely and through the middle points of the longitudinal slits of the sheet. The shafts *k k* of the knives are horizontal and parallel to each other and extend transversely but somewhat obliquely over and under the work, and the edges of the cutting-blades are of corresponding spiral formation, adapting them to effect a straight shear at right angles to the line of feed and while the sleeve is in motion. The successive points of the spiral cutting edges as they come together in making the section are in exact transverse position. The cutters are mounted on oblique shafts, in order that the tendency of their spiral formation to move the work laterally askew will be corrected. The cutter-blades are set with their cutting edges presenting radially outward and are designed to act radially upon the work between them. The sections or cartons as they are cut off may be stacked at V.

Having described this invention, what I claim, and desire to secure by Letters Patent, is—

1. In a machine for making cartons, the combination with scoring, trimming and tube-forming rolls, of pressing-rolls, a lower rotary shaft oblique to the line of feed, an upper rotary shaft parallel to said lower rotary shaft, and corresponding oppositely-inclined spiral blades on these shafts, adapted to effect a straight shear cut at right angles to the line of feed, substantially as specified.

2. In a machine for making cartons from a continuous strip of paper, the combination with scoring and trimming rolls, and pasting devices at one end, of pressing-rolls, oblique shafts and their oppositely-inclined spiral cutters at the other end, and below the pasting devices and pressing-rolls, supports for the middle portion of the strip of paper, and opposite isoclinal guide-rolls, whereby it is bent downward, folded under in tubular form, creased, pressed, and cut off in sections, substantially as specified.

In testimony whereof I affix my signature in presence of two witnesses.

LOUIS S. BURBANK.

No. 785,554. Patented March 21, 1905.

UNITED STATES PATENT OFFICE.

RICHARD HORNER, OF YORK, ENGLAND.

APPARATUS FOR CONDITIONING GRAIN, &c.

SPECIFICATION forming part of Letters Patent No. 785,554, dated March 21, 1905.

Application filed June 7, 1904. Serial No. 211,559.

To all whom it may concern:

Be it known that I, RICHARD HORNER, miller, a subject of the King of Great Britain, and a resident of Heworth, York, in the county of York, England, (whose post-office address is Woodbine House, Heworth, York, aforesaid,) have invented certain new and useful Improvements in and in Apparatus for Conditioning Grain and other Granular Material, (for which application has been made in Great Britain, No. 3,872, dated 18th day of February, 1903,) of which the following is a specification.

This invention relates to apparatus for drying and conditioning grain, beans, oats, and other granular material. It is adapted to take the place of the usual whizzer.

The invention will be understood from the following description, reference being had to the accompanying drawings, in which—

Figure 1 is a vertical section of my apparatus; Fig. 2, a side elevation; Fig. 3, a front elevation of the receiving-chamber; Fig. 4, a vertical section of the receiving-chamber, showing a slight modification in the valves or combs; Fig. 5, an enlarged sectional view of the second dust-chamber; Figs. 6 and 7, detail views of accessories to utilize the hot air. Fig. 8 is a plan view of the grids seen on a small scale in Fig. 1. Fig. 9 is a sectional detail view, on a relatively large scale, of a dust-collector and the door at the bottom thereof.

In carrying the invention into effect I provide vertical casings or trunks A, arranged upright in a straight line at opposite sides of a middle upright chamber L, down which trunks the material to be dried flows and up which a current of air for drying the material is caused to ascend by the suction-fan R. This air-current is heated by the hot-water or steam pipes S and again reheated at intervals by the pipes Q. At the top of the trunks A is a receiving-chamber B, fitted with a hopper C and feed-rollers D, and below this hopper C in the receiving-chamber B there are at each side a series of combs or grids E E', so arranged that as the wet grain passes over the combs they permit the water, assisted by the upward current of air, to drain from the produce and drain off into the tank B^x, from whence it is discharged by a pipe. Some of the combs—viz., E'—are hinged or pivoted at *e*, so that they form valves and can be set to different angles relatively to the other combs, and when so set an opening G is left between them and the adjacent stationary parts, through which openings the air-current is drawn by the exhaust-fan. The air-current, in fact, is drawn in an opposite direction to the thin stream of descending produce as it falls over the combs E E', and the air is forced to pass through this thin descending stream and through the combs, also through the openings aforesaid, thus drawing off the water from the grain. The combs, however, can be so set that they are closed against the adjacent fixed parts, in which case the only exit for the air-current is actually through the combs themselves. Outside indexes H can be employed, so as to indicate the exact angle to which the adjustable combs are set, and thus the opening can be regulated to a nicety or closed altogether. Valves I are also provided in the receiving-chamber for regulating the outlet or discharge of air. When these are closed, the entire air-current finds its exit at the combs. By opening these valves I, however, part is drawn out (through the descending stream of produce) direct to the fan without passing through the combs at all. Thus these valves I allow air that is not required to pass through the combs E E' to be passed direct to the fan.

J represents outside indexes for the valves I.

The hinged combs may be as shown in Fig. 4, in which two combs E' are provided, hinged at e^3, instead of a single valve hinged at middle.

The trunks A, to which the wheat passes when delivered thereto by the receiving-chamber B, are provided at intervals throughout their length with valves K M. These can each consist of a hinged plate sloping downward from the hinge *k* toward the inside walls of the trunk A and are so arranged as to check the rush of wheat and allow of only a thin stream of grain flowing through between the edge of the plate and the inner wall of the trunk. They also enable the rate of descent being regulated to a nicety. The inside wall of the trunk immediately below each au-

tomatic valve is provided with holes or passages O, leading to the middle upright chamber L, and each alternate valve M in the trunk A forms a partition which divides the trunk A into a series of chambers and prevents the air passing straight upward. The middle chamber L is also divided up into compartments by partitions P. The air is therefore forced to pass in a circuitous course from the trunk A through these holes O and the descending stream of produce into the middle chamber L and from thence out through the succeeding holes O and descending stream of produce again into the trunk A, and so on, thus causing the air to take a very devious course back and forth through the wheat, and this passing of the air through the stream of produce is repeated again and again before the air finally reaches the receiving-chamber B at the top of the apparatus. The air is reheated in the middle chamber L after each passage through the cold and wet wheat as it travels up the machine, for which purpose heating-pipes Q are fitted therein. This reheats the air after each contact with the wheat and also converts any remaining water quickly into steam, which steam is immediately drawn off by the fan. There is also provided means for collecting and drawing off any chaff or dust which may accumulate without interfering with the proper working of the machine in any way—namely, a dust-collector Z and a second dust-collector 6. The former comprises chambers Z, located near the bottom of the machine. The upward air-current enters the upper part of this chamber and leaves it at 4, depositing the dust, however, in the chamber and allowing it to fall into the bottom thereof, from whence it can be removed from time to time as required through the doors 3. These doors are shown in detail in Fig. 9. The other dust-collector, 6, is located near the fan R and will be hereinafter described.

The pipe Q in the heating-chambers L is supplied with steam by the pipe Q', which is fitted with a steam-gage 5.

At the bottom of the apparatus are the heating, cooling, and discharging appliances. The heating appliance consists of passages T, one at each side of the main heating apparatus S, which latter heats the air-supply and supplies heat to the heater in the middle chamber L. These passages are fitted with a series of chutes or plates U, which are highly heated by the main heating apparatus, whereby a very high temperature is imparted to the wheat, if required, there being no circulation of air through these side passages T. The two passages converge toward a single passage W below the main heating apparatus S, through which the cold-air supply is drawn. A series of chutes or baffles V V' are placed in the passage W, which allow the cold air to play upon it, and thus chill it down after being highly heated as it is being discharged. The baffles V' are hinged, so as to enable the size of the orifice between them and the edges of V to be regulated, and the air passes back and forth through the material as it descends in a thin stream. The heat abstracted from the produce in the cooling appliance V is taken up by the air, thus slightly heating it before entering the heating-chamber. The air by this heating apparatus is raised to a very high temperature and is divided up and drawn to both trunks A of the machine, down which the wheat is falling. Doors X are provided for giving access to each chamber or pair of chambers in the trunks. The actual heating parts are so constructed and protected that there is no danger of the wheat being scorched or burned, the object being to have a machine that will cause the grain to go effectually through all the processes in one operation and by the means of one current of air which is caused to pass through the machine, which latter has such a gentle action as will obviate all danger of the wheat being roughly used or broken in any way.

The mode of action is as follows: The exhaust-fan R being put into operation a stream of cold air is drawn through the passage V into the main heating apparatus S, where it is heated, and the heated air is then divided up and drawn into both trunks A. This heated air therefore entering the trunks comes into contact with the falling grain, extracting the moisture and drying the grain, also draining off any chaff or dust and depositing it in chamber Z. The air takes a very devious course back and forth through and across the produce and at the same time is reheated after each passage through the cold and wet wheat in the chamber L. Consequently should the hot air have become cooled it is at once reheated in the middle chamber L, so that by the time it reaches the top of the machine it has effectually dried the produce and is drawn off through outlet F. This air, carrying a certain amount of dust in suspension, is discharged into the second dust-collector 6, hereinbefore referred to. It is shown in Fig. 5. 7 is the air-trunk from the fan, through which the air is driven by the fan R into the chamber 6. Inside this chamber are hoppers 2 and baffles 8. The dust-laden air having entered this chamber 6, ascends therein against the baffles 8, the dust falling into the hoppers 2. As the air-current is baffled in its ascent, the dust is bound to be deposited in the hoppers. The air, free from dust, escapes through the valves or louvers 9 at top, these being weighted to keep them just open. Should, however, the wind be blowing against them, the louvers at the side the wind is blowing against will close by the wind-pressure against them, while the others remain open and air-current passes steadily through them. This prevents the wind from any quarter working

against the fan. This dust-collector is made of fireproof material. The valves K M in the trunks A check the wheat in its fall and cause it to descend in thin streams, so that the air-currents may act upon it with the greatest possible effect. The devious course which the air-current takes facilitates the hot air getting free access to every particle of the material to extract moisture therefrom. By adjusting the valves K M in the trunk A the weight of discharge is regulated to a nicety. Finally, before leaving the machine the grain is subjected to the final heating operation in the passages T, (here it is not subjected to air-currents at all,) and then the grain is finally exposed to a current of cold air, which is drawn through V into the apparatus by the suction of the exhaust-fan R. This arrangement dispenses with the use of a separate whizzer and makes the apparatus self-contained. The intermediate sloping plates K in the trunks might, perhaps, in some cases be dispensed with or made fixtures instead of hinged.

The fan R discharges air at 85° to 95°. In order to utilize this, I propose putting, as shown in Fig. 6, a loose hopper 11 on the top of C and fixing a foraminous plate 12 in this hopper. The hot air from the fan R is discharged so as to pass through the perforations in this plate 12 and blow the grain onto the feed-rollers D, thus partly drying it before it reaches the machine. The wet grain is fed into the receptacle R and from thence fed forward by the worm 13 into the hopper 11, into which it falls at 14 and 15. In Fig. 7 the grain is fed forward in a similar manner, but falls through the chute 16 into the pipe 17. Here it meets the ascending stream of hot air from the fan R^2 and is discharged, so that the direction of the stream of grain is diverted and is delivered by the current of air to the feeding-rollers D, the action of the hot air partly drying it.

I declare that what I claim is—

1. An apparatus for drying and conditioning wheat or other granular materials, comprising upright casings, a middle upright chamber between, hinged doors or valves in the casings sloping downward from the hinge in such manner as to allow the granular material to descend in thin streams, holes or passages into said middle chamber located at intervals, through which a current of hot air, reheated at intervals, is passed back and forth across these descending streams, in such a manner as to extract moisture therefrom and effect the drying of the granular material substantially as described.

2. An apparatus for drying and conditioning grain and other granular material, having straight upright trunks for the streams of descending material, said trunks being provided with holes or passages for air, sloping hinged plates or partitions which divide the said trunks into compartments, leaving passages sufficient to enable thin, approximately vertical descending streams of granular material to pass, heating-chambers located in close proximity to the trunks, also divided into compartments and so connected to the trunks at intervals by said holes or passages that currents of air drawn upward through the trunks will be obliged to pass through these holes and the descending streams of material into said heating-chambers, and from these out through succeeding holes and the descending streams of material, again into the trunks, and so on, the air being reheated in the heating chambers every time after its passage through the material, substantially as described.

3. In apparatus for conditioning and drying grain or other granular material, the combination with the upright trunks through which the material descends, of a receiving-chamber at top thereof, means for feeding in wet material, combs or grids over which the wet material is caused to flow in thin streams, so as to permit water to drain from the material before being delivered into the trunks, and through which and through the thin stream of material an air-current is passed by a fan, to further draw off water from the material and the said fan, substantially as described.

4. In drying or conditioning apparatus of the kind mentioned, a receiving-chamber formed at each side with fixed combs or grids E, and combs or grids hinged so as to be adjustable to enable them to be set at an angle relative to the adjacent stationary combs and leave an opening between, over which the descending produce will fall, and through which and the descending stream of granular material, air-currents are passed laterally, substantially as described.

In witness whereof I have hereunto signed my name, this 23d day of April, 1904, in the presence of two subscribing witnesses.

UNITED STATES PATENT OFFICE.

HENRY D. PERKY, OF WORCESTER, MASSACHUSETTS, ASSIGNOR TO THE NATURAL FOOD COMPANY, OF NIAGARA FALLS, NEW YORK, A CORPORATION OF NEW YORK.

MACHINE FOR PREPARING FOOD.

No. 767,994. Specification of Letters Patent. Patented Aug. 23, 1904.

Application filed December 10, 1900. Serial No. 39,585.

To all whom it may concern:

Be it known that I, HENRY D. PERKY, a citizen of the United States, and a resident of Worcester, in the county of Worcester and State of Massachusetts, have made a certain new and useful Invention in Machines for Preparing Food; and I declare the following to be a full, clear, and exact description of the same, such as will enable others skilled in the art to which it appertains to make and use the invention, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

Figure 1 is a side view of one end portion of the oven, showing the feed-opening. Fig. 2 is a side view of the other end portion of the oven. Fig. 3 is a longitudinal section through the portion of the oven in which the fuel is located. Fig. 4 is a longitudinal section through the extended portion of the oven in which the heat is mainly applied. Fig. 5 is a transverse section through the feed-opening. Fig. 6 is a plan view of the electric cutter. Fig. 7 is a back view of one of the heaters or stove-sections, comprising a receiving stove-link and a covering stove-link, partly shown. Fig. 8 is a plan view of the end portions of the link-plates, showing the engagement thereof. Fig. 9 is a transverse section of a stove-section, comprising a receiving stove-link and a covering stove-link. Fig. 10 is a plan view showing the inside of a stove and its wiring. Fig. 11 is a longitudinal section of the same. Fig. 12 is a sectional view of a pneumatic transfer for the discharge. Fig. 13 is an end view of the same. Fig. 14 is a sectional plan view showing the features of the baking mechanism and pneumatic feed.

The object of the invention is to provide means for preparing from grain or other material in a continuous and rapid manner and in large quantities biscuit, crackers, and other articles of food; and the invention consists in the novel construction and combinations of devices, as hereinafter set forth.

In explaining the invention I have designed to set forth more particularly its application to the preparation of food from grain, having special relation to the fibered, filamentous, or shredded form of the reduced grain; but it will be apparent that by varying the faces of the stoves in an appropriate manner the invention may be more generally applied. So, also, I have described a mode of heating the stoves by electricity, as it is preferred; but other means of heating may be used.

In the accompanying drawings the letter A designates framework, usually of iron. B represents the oven wall or casing. C indicates a continuous feed; D, a pneumatic transfer for the feed; E, the continuous baking devices; F, the oven, which is of elongated form; G, the heating devices; H, a transfer device for the discharge; K, the conveyor or discharge for the baked biscuit or crackers.

The reducing devices may be of any known character; but I usually employ a series of grooved reducing-rolls, which shred the grain or crush it into fibrous or filamentous form, as described in Letters Patent No. 571,284, dated November 10, 1896.

The material is received upon the continuous trough-chain C', which is composed of trough-links, which move upon guideways or track-bars, said chain being carried by sprocket-wheels, of which the inner one is indicated at c'.

C'' represents the lower chain of cutter-links, and D' the upper chain of cutter-links, which are also suction-links, being open through or provided with a passage for the application of air-pressure. The lower chain of cutter-links is carried by sprocket-wheels, as indicated at c''. The upper chain of suction-links is also carried by sprocket-wheels, (indicated at d'.) The upper chain D' and the lower chain C'' are provided with cutter blades or knives e, which are arranged at intervals corresponding to the length of a chain section or width of the baking-band. Suitable trackways are provided in the framing for the links of the chains D' and C''.

The wall of the oven is suitably packed or lined with asbestos or other non-conductor of heat. The oven is of elongated form and, as shown in the drawings, extends at right angles to the direction of the feed. It is provided with an opening at f in the side near one end for the passage of the end of the feeding-chain D' of suction-links, this constituting with the chain of trough-links a continuous feed, whereby the material is brought into the oven over the baking irons or stoves. As

the trough-chain does not extend into the oven, a pneumatic device is provided to hold the material to the open or suction links, which are faced with wire-cloth, until it reaches position over the stove or baking-iron. The pneumatic device consists of an air-chamber *d*, to which is connected a suction-fan or exhaust by means of a pipe *d'*. The air-chamber is provided along its lower or mouth portion with a valve, or preferably with valves, *v*, which are operated by cam devices on a shaft *v'* to apply the air-pressure progressively as a section of the material is moving into position, when the cam devices operate simultaneously to close the valves in order to effect its deposit on the stove-link. For a further description of the feed and pneumatic transfer devices reference may be had to Letters Patent No. 681,856, dated August 27, 1901, in which I have explained the construction more at length.

The oven E, as hereinbefore mentioned, extends at right angles to the direction of the feed, the lateral opening *f* for which is much nearer one end of the oven than it is the other. At one end of the oven are provided sprocket-wheels V' for the endless outer baking-band or chain E' of receiving stove-links *e'*, and at the other end of the oven are the sprocket-wheels V'' for the inner baking-chain E'' of covering stove-links *e''*. Near and at one side of the opening *f* is provided a drive-shaft, carrying sprocket-wheels V for the inner end of said baking-band or covering-chain E''. In this construction, therefore, one of the baking-chains runs inside the other chain, which is longer than the first or inner chain and is uncovered in that portion of the oven where the feed is located, thereby forming an extension-loop for the inside feed or discharge. The covering stove-links are brought down into position on the receiving stove-links of the larger chain by the wheels V at one side of the feed. From this point the inner and outer stove-links continue together to the end of the oven and back to position at the side of the feed, where the discharge of the baked biscuit or crackers takes place.

Each chain consists of stove-links which are pivoted to each other, the pivotal axis or axis of bend of adjacent links being coincident or in line with the adjacent or meeting edges of the working or baking faces of the stoves and in the plane of such baking-faces.

The outer or receiving stove-link *e'* and the inner or covering stove-link *e''* constitute a stove-section, the parts of which must have an accurate fit in the movements, and to this end one chain, preferably the inner chain, is that which engages the sprocket-wheels of the driving-shaft *a*, while the outer chain is driven by the engagement of its links with those of the inner or driving chain. For this purpose each link of the inner chain is formed with arc-shaped shoulders or projections *b* to engage correspondingly-curved shoulders or projections *b'* of the outer stove-link. The stove-section thus formed of a receiving or outer stove-link and a covering or inner stove-link is made of proper length to take in a section of biscuit or cracker material as deposited by the feed. The outer and inner stove-links are each provided with antifriction-rollers (indicated at *c*) which run on suitable tracks or ways *f'* of the oven. As these links are designed to have the same pitch line, their tracks are arranged side by side and their body portions are formed with bent or angular arms *f''*, the bearings or rollers of which are axially flush with the faces of the stoves and axially in line with the edges of such faces, interferences being avoided by making the arms of one link longer than those of the other. In order to allow for expansion and contraction of the outer chain, each link is provided with a slightly elongated or enlarged opening for the connecting-pin. This construction keeps the working or baking faces of adjacent stoves together at their pivotal edges in moving around the curves, so that the tendency to rupture the material carried thereby is reduced to a minimum. The pivotal axis of the stoves lie in the baking-plane or plane of the baking-faces.

At one end of the oven an automatic take-up or tension is provided for the chain of stove-sections. This consists of a swinging shaft J, carrying the end sprocket-wheels V'' and being journaled in bearings in the vertical arms of the angle-levers J', whose horizontal arms are provided with adjustable weights J''. The movement of the baking-chain is slow and is communicated by means of a worm and a worm-wheel, as indicated at I.

The oven and stoves are preferably heated by means of electricity. To this end, the oven is provided with outer parallel bus-bars or conductor-bars G' G'' and with inner parallel contact-bars G'''. These contact conductor-bars are laterally arranged and parallel and are connected at convenient points to the source of supply. The contact-bars are also parallel to the baking-chains, and on one side the bars may be regarded as positive, the bars on the other side being negative.

It is designed that each stove or baking-iron shall take its heating charge independently in order to facilitate the replacement and repair of parts without undue interference with the baking operation of the machine. Contact is made with these bus-bars by means of the spring-brushes *g*, which are so bent or formed that their contact ends will be in the middle or radial plane of each stove-link, this being the most accurate and economical construction for running the curves of the bus-bars. Usually the contact-brush is formed of two leaves, one extending a little beyond the end of the other, so that the breaks

sude in the current at the cut-off intervals g' g' of the contact-bar G will not be so proportioned as to cause injurious sparking.

The contact-bars G' and G'' for the other chain of the stove-links are not usually extended around the feed end of the oven, as it is designed to cut off the electric action in this portion of the chain, where a baking heat is not needed. The contact-bars G''' for the inner chain are, however, continuous, and this chain is for nearly its entire length in baking position.

To reduce the electric action in the stove-links gradually and finally cut it off, a series of gradually-increasing resistances Z Z' Z'' is employed between the body portion of the contact-bar G' and its several separated portions or contact-sections s s' s'', which are separated from each other and from the main bar by the intervals or breaks g'. As the heads of the stove-links pass over this portion the current, taken off gradually by the several resistances in succession, will be dropped in each stove-link by degrees and finally to zero.

The outer and inner stove-links may be similar to each other, the longer roller-carrying arms of one link, however, extending beyond or encompassing the roller-carrying arms of the other link. Each link consists, according to the construction illustrated, of an elongated body portion or plate L, having a middle projection or rib l extending along its back, the plane of such projections or rib being radial with reference to its movement around the sprocket-wheels. The end arms or extensions of the rib are expanded to form the link connections, as at l'. In proper position with relation to each contact-bar is provided in the rib an opening or perforation l'', in which is seated a non-conducting bushing n, which is secured in position by and forms a bearing for the short conductor bolt or pin n', whereby the spring-brush g is also secured in position.

To the body-plate at each side of the rib l are connected detachable insulation strips or blocks n, preferably of porcelain, between which are seated the conducting-wires p p of the link, one wire serving for the entrance of the current and the other for its exit, or the wires will serve in connection with the alternating current. These wires are connected to their respective brushes g g by small flexible wires p' p', and from these same wires p' p', respectively, small terminal wires p'' p'' pass to the stove-wirings w of each stove or baking-iron through the lava plugs q, which are tapering in form and are seated in beveled openings q' in the body-plates at the sides of the middle rib, these plugs being held in position by the porcelain strips n when used.

The detachable stoves or baking-irons S are arranged in series along the body-plates transversely to the line of movement of the chain. Each stove consists of a rectangular casting, usually hollow or recessed in its outer portion or back, but having its inner or baking face formed to correspond with that of its fellow stove. The preferred construction is to form the baking-face with a surface distribution of pointed studs or projections designed to penetrate the material being cooked and carry the heat into deeper portions. These stoves or baking-irons are provided with dividing plates or knives, (indicated at s'',) which serve to indent or separate the material deposited on the stove-link into parts of convenient size to form crackers or biscuit.

The side walls or flanges of the inner stoves are of inclined formation or beveled, so that they will conform to each other in passing round the sprocket-wheels. On the floor or back of the baking-wall of the recess or chamber of the stove is laid insulating material or insulating-paint, on which is placed the distribution of fine wiring w required for the heating, this wiring being covered in by another layer of insulating material or paint. When each stove-wiring is independently connected or connected in parallel with the other stove-wirings to the link conductors p p, each stove is arranged for independent heating and may be detached without interfering with the other stoves. The recesses of the stoves are covered in with the link plate or body, to which the stoves are secured by means of short bolts or connections r, and in this manner the interior delicate wiring and insulation are effectually protected and additional insulation of air is provided.

To arrange for the clearance and discharge of the crackers or other product after baking, a lateral opening in the oven-wall is arranged near the location of the feed-opening, or the feed-opening f may be made of sufficient size to accommodate the end of the conveyer K, which extends from this location of its receiving end within the oven outward therefrom in a direction at right angles to the length of said oven. Leading to this conveyer is a guide or slide way T, which extends in an inclined or curved manner downward and from the faces of the stoves of the inner or shorter baking-chains as they pass around the upper parts of the inner sprocket-wheels. This guide or slide way is provided with an adjustable comb or clearing device T', having for use in connection with a studded baking-iron, such as has been before described, fingers t, designed to enter between the teeth or projections of the faces of the stoves. By such means as the stoves move around the wheel the biscuit or crackers will be loosened and guided off the stoves to the slideway, on which they will descend to a stop rib or flange t'.

Above the clearing device or comb T' is provided another clearer t', which is designed to

loosen the biscuit or crackers which may adhere to the stoves of the longer or outer chain and cause the same to fall upon the slideway T, above referred to.

The lower portion of the slideway T is located above and at the sides of the conveyer, and both are arranged at about the same radial distance from a shaft *a*, which carries a suction-head U, having a wire-cloth-covered mouth *a'*. This suction-head is connected to an air-exhaust by means of a curved pipe or otherwise. Suitable mechanism is employed to give this suction-head vibratory motion, its movement being quadrantal or through an arc of about seventy degrees. When it is turned toward the slideway T, the suction causes the crackers to adhere to the wire-cloth-covered mouth, whereby on the reverse movement of the head the crackers are carried over the conveyer, whereon they are dropped as the air-valve of the suction or exhaust is closed. In the drawings the exhaust-pipe *b* is indicated at U", the end of the suction-head U bearing in the end of said pipe, the latter carrying the cut-off valve or damper U', whose journal is provided with a pulley *a'*. On the end of the suction-head shaft is provided a crank-arm A, which is connected by a pitman *h'* with an eccentric H' on the shaft *a'*, the rotation of which causes a proper vibration of the suction-head. To move the air-valve or damper U', springs *k k* may be employed in connection with the cross-head or wheel *a''*, which is provided with an arm or catch *o'* to engage the trip and holding lever K', which is vibrated by means of a wheel *o''* on the suction-head shaft *a*. The lever K' has the trip-arms *k' k'*, which respectively engage the catch of the damper, according to the position in which it is thrown by the springs to open or close the air-pipe—that is to say, when the damper is open and the exhaust is on and the suction-mouth applied to the material on the slideway T. The damper is held in this position by engagement with one of the arms *k'* of the trip-lever. As the suction-head moves back over the conveyer the trip-lever is gradually moved until the damper is released from the trip-arm which held it and is suddenly closed by the spring tension, this movement also serving to effect the engagement of the damper-catch with the other trip-arm of the lever K'. The damper is opened in a similar way by the reverse movement of the trip-lever. In order to protect the stove-wirings from injury through short-circuiting or from other accidental increase of current, fuses are provided in the conductors *p' p'*, leading to the brushes, such fuses consisting usually of sections of fine copper wire, or the conductor-wire *p'* may constitute the fuse.

The pneumatic transfer to take the articles from the baking-chain links and deposit them on the conveyer-belt may be dispensed with because they will then readily slide down the guideway to the belt. In this case the slideway T is constructed without ledges to stop the biscuit or crackers.

It is not designed to confine this invention to the construction shown and described, as the stoves and other portions of the mechanism may be varied in ways known to those skilled in the art without departing from the principles involved.

What I claim as my invention, and desire to secure by Letters Patent, is—

1. A machine for preparing food consisting of a series of moving baking-stoves, conduction devices attached to each stove, independent conductors in connection with the conduction devices of each stove, and an electric-supply conductor common to such independent conductors, substantially as specified.

2. In a machine for preparing food, the combination with an endless series of moving baking-stoves, of conduction devices attached to each stove, moving conductors for supplying said conduction devices with electricity, and a fixed conductor common to said moving conductors, substantially as specified.

3. The combination with a body-plate, of a series of detachable stoves or baking-irons, cutting-plates, and means of attachment of said stoves and plates to said body-plates, substantially as specified.

4. An endless chain of link-plates, pivoted to each other, and a transverse series of detachable stoves or baking-irons, attached to each link-plate, substantially as specified.

5. The combination with an inner chain of stove-links, of an outer chain of stove-links engaging said inner chain, and extending beyond the same to form a reception-loop for the food and discharge, substantially as specified.

6. The combination with an endless covering baking-chain, of a longer endless receiving baking-chain having an extension for the feed beyond the shorter covering baking-chain, substantially as specified.

7. The combination with an endless inner baking-band, of an endless outer baking-band, having an extension beyond said inner baking-band for the feed, substantially as specified.

8. A stove-link plate having a back rib or projection extending lengthwise, and provided with expanded link-connection-bearing arms at its ends, substantially as specified.

9. The combination with side-by-side trackways of a receiving stove-plate and a covering stove-plate having bearing-arms of unequal length for such trackways, substantially as specified.

10. A link-plate having a series of detachable stoves connected thereto, and provided at its ends with link connections, and bearings axially flush with the faces of said stoves, substantially as specified.

11. The combination with an elongated link-

plate of a series of independent detachable stoves attached to said plate, and independent wiring for electric heating connected to each stove, substantially as specified.

12. An elongated heater-plate, having a back rib or projection carrying insulated conductors, insulated conductors extending along said plate, detachable stoves, connected to said plate, insulated wiring for said stoves, and conductor-wires extending from said wiring to the conductors extending along said plate, substantially as specified.

13. An elongated plate, having a back rib or projection, insulated conductors attached thereto, detachable insulation on each side of said rib or projection, conductors carried by such detachable insulation, stoves connected to the plate, insulated wiring on said stoves, and independent connecting-wires from such wiring to the conductors carried by said detachable insulation, substantially as specified.

14. In a machine for preparing food, the combination with a driving-wheel, and an endless driving-chain of baking-stoves engaging said driving-wheel, an endless driven chain of opposite baking-stoves, and means of engagement between the opposite stove-links of the driven chain, and driving-chain, substantially as specified.

15. In a continuous baking-machine, the combination with an endless outer or receiving chain of stove-links, of an endless inner or covering chain, of stove-links, sprocket-wheels, and automatic devices to allow for the expansion and contraction of such chains, substantially as specified.

16. In a continuous baking-machine, the combination with the endless outer or receiving chain of stove-links, and the sprocket-wheels, of the endless inner or covering chain of stove-links, and engaging devices of the latter, whereby the outer or receiving chain of stove-links is driven, substantially as specified.

17. The combination with a continuous pneumatic feed of a continuous baking device extending at right angles to the line of movement of such feed, substantially as specified.

18. The combination with an endless baking-band of a continuous pneumatic feed, substantially as specified.

19. The combination with an elongated oven, having a lateral opening for the feed, and track-ways, of an endless outer receiving baking-band, a shorter endless inner or covering baking-band, and means for heating, substantially as specified.

20. The combination with an elongated oven, having an opening for the feed and track-ways, of a long endless outer or receiving chain of stove-links, a shorter endless inner or covering chain of stove-links, and means for heating, substantially as specified.

21. The combination with an oven, having a lateral opening for the feed, and side-by-side trackways, of a long endless outer chain of stove-links, and a shorter endless chain of stove-links, having the same pitch-line, sprocket-wheels for such chains, and means for heating, substantially as specified.

22. The combination with an elongated oven, having a feed-opening, of a feed and a discharge at right angles to the length of the oven, a clearing-slideway, an endless outer or receiving baking-chain, a shorter endless inner or covering baking-chain, and trackways for said chains, substantially as specified.

23. The combination with a long endless outer baking-band, of a shorter endless inner baking-band, clearing devices for such bands, and feeding and discharging devices extending within the loop of the outer band, and at right angles to the length thereof, substantially as specified.

24. The combination with an oven, and an endless baking-band, of the wiring of such band, the contact-bars extending parallel to such band, and the contact-brushes, substantially as specified.

25. The combination with an oven, its trackways, and contact-bars, of the endless chains of stove-links, the link conductors, the series of stoves or baking-irons connected to said links, the wiring of said stoves, and the spring-brushes adapted to engage the contact-bars, substantially as specified.

26. In a baking-machine, the combination with an endless feed, of an endless baking-chain, and conducting devices for the application of electricity to said baking-chain, substantially as specified.

27. In a baking-machine, the combination with endless-motion carrying devices of endless-motion feeding devices, and stoves or heaters connected to said carrying devices, and means for heating the same, substantially as specified.

28. The combination with endless sectional baking mechanism, of an endless pneumatic feed, and an automatic discharge, substantially as specified.

29. In a machine for preparing food, the combination with a continuous feed and endless baking-bands moving at right angles to the direction of the feed, or baking the material in sections, means for indenting the material and locking the same together at points to secure compactness with lightness of structure, and means for discharging the baked product upon a conveyer, substantially as specified.

30. A continuous baking-machine, comprising an endless chain of baking-links upon which the material is received, an endless chain of baking-links adapted to cover in the material upon the links of the first chain, means of engagement, whereby the links of

the two baking-chains are run in exact relation to each other, and means for heating the baking-chains, substantially as specified.

17. A machine for preparing food, comprising two endless chains of links, and means of engagement between said chains, baking-irons connected to said links and wired for electric heating in connection with brushes of said links, conductor-bars in contact with which the brushes of the links move, and means for automatically cutting off the electric action where it is unnecessary, substantially as specified.

18. In a machine for preparing food, the combination with moving stoves, of the insulated line-wiring connected thereto, the electric conductors extending parallel to the line of movement of such stoves, and the moving brushes in connection with said wiring and engaging said electric conductors, substantially as specified.

19. The combination with moving stoves, of the conduction devices attached to said stoves, the electric conductors extending parallel to the line of movement of such stoves, the moving brushes in connection with said conduction devices and engaging said electric conductors, and an automatic graduated cut-off for the electric action, substantially as specified.

UNITED STATES PATENT OFFICE.

CHARLES E. SMITH, OF NIAGARA FALLS, NEW YORK, ASSIGNOR TO THE SHREDDED WHEAT COMPANY, OF NIAGARA FALLS, NEW YORK.

MEANS FOR MANUFACTURING FILAMENTOUS BISCUIT.

1,195,114. Specification of Letters Patent. Patented Aug. 15, 1916.

Application filed January 22, 1912. Serial No. 672,893.

To all whom it may concern:

Be it known that I, CHARLES E. SMITH, citizen of the United States, resident of Niagara Falls, in the county of Niagara and State of New York, have made a certain new and useful Invention in Means for Manufacturing Filamentous Biscuit; and I declare the following to be a full, clear, and exact description of the same, such as will enable others skilled in the art to which it appertains to make and use the invention, reference being had to the accompanying drawings, and to letters or figures of reference marked thereon, which form a part of this specification.

Figure 1 is a side view of a roll machine illustrating the invention. Fig. 2 is a transverse view, enlarged and partly in section, on line *y—y* Fig. 3. Fig. 3 is a top view enlarged and partly in section on line *x—x* Fig. 2.

The object of the invention is to provide means for manufacturing filamentous biscuit of smaller size than the width of the reducing rolls, and it consists in the novel construction and combinations of devices, as hereinafter set forth.

Roll machines for the manufacture of filamentous biscuit are of considerable size, the grooved reducing rolls being usually made about five inches long, because smaller rolls would materially increase the complication and expense of connected apparatus for preparing and feeding the grain, as well as of the rolls themselves, considered in relation to the production. The band of piled filaments which is formed on the receiver must be subdivided into biscuit forms, and this has been accomplished by means for pinching the band transversely, this pinching serving not only to subdivide the band into biscuit sections, but also to compress the filaments together at the lines of subdivision, so that each biscuit form is an entirety, its filaments being pinched together and securely joined at their ends. The width of these biscuit forms, however, corresponds with the length of the reducing rolls. In order to make biscuit of less width from such a band of filaments, it is designed to pinch the band longitudinally, that is to say in the direction in which the filaments lie, substantially parallel to each other, in the receiver; and as these filaments are loosely piled they are designed to be brought somewhat closer together, so that the pinching will be effective in forming the edges of the biscuit. In the accompanying drawings, illustrating the mechanism preferred to accomplish these results, the numeral 2 indicates the reducing roll heads, having finely grooved rolls 3, from which the grain, softened by water and cured in the usual manner, is discharged in filament form by discharging strips 4 upon a moving receiver 5, which is in the form of a belt of links 6, which run upon a suitable track 7. The link 6 has a flat bottom 8 and lateral flanges 9.

Means are provided to produce longitudinal divisional creases in the layers or band of filaments upon the receiver, said means consisting preferably of a flanged roller of proper width to run easily between the flanges of the links 6. To this end, supports 11 are secured to the framing 10 at the sides of the track, and these supports are connected by a transverse bar 12, and provided each with a vertical slot, through which passes a bearing lug 13 of a bail-form frame 14 having an adjusting screw 15.

The creasing roller 16, of proper width to run easily between the flanges of the links 6, is provided with a shaft whose journals are seated in the bearing lugs of the frame 14; and, as it is preferred to run the roller by a positive drive, the shaft is provided with a sprocket wheel which is geared to a sprocket wheel 17 in connection with the belt-moving mechanism. On the roller 16 are circumferential V-form or laterally beveled flanges 18, designed to crease or pinch the band of filaments longitudinally against the bottoms of the links of the receiver belt. This roller is suspended by the bail-frame 14 and its adjusting screw, its shaft engaging the bearing lugs of said bail-frame; and engaging these lugs on top or in the upper portions of the slots of the supports 11 are springs 19, which, in turn, are in engagement with adjusting screws 20, seated in said supports. In this way it is designed to regulate the pressure of the springs interposed between the bearings of the creasing roller and the support, to compensate for the adjustment of the yieldable bail-form frame. Inequalities of motion of the receiver and variation in the consistency of the filament material are also provided for.

The adjustable screw 15 of the bail-form frame, bearing upon the support, is capable of being lifted and separated therefrom under strain. Extending into the supports 11 below the bearing lugs are check screws 21, whereby the downward movement of the roller 16 is limited and the thickness of the layer is gaged. The link receiver belt is designed to pass between an upper endless belt 22 of cutting or pinching links and a lower endless belt 23 of cutting or pinching links, the links of each belt having transverse flanges which operate between the carrying links 6 of the receiver. The smooth surface of the roller 16, between its flanges, serves to somewhat compress the filaments together and shape the tops of the sections of the band of filaments, so that they are made of even thickness. The beveled form of the flanges of the roller is designed not only for compressing the filaments laterally, but also to give form to the sides of each section or subdivision and to provide that the flanges shall leave the band of filaments easily and without adhesion. By these devices it is designed that the band of longitudinal filaments piled on the receiver shall be creased or pinched longitudinally and transversely, to subdivide it into small uniform sections. Owing to the preferably limited number of filaments piled upon each other it is quite open in structure and freely pervious to air, and it is designed that the longitudinally creasing means shall compress the band of filaments to substantially close the interstices thereof.

Having thus described my invention, what I claim as new and desire to secure by Letters Patent is:

1. In a machine of the class described, a support, a yieldable frame having an adjustable device bearing upon said support and capable of being lifted and separated therefrom under strain, and a creasing roller having bearings in said frame and yieldable therewith.

2. In a machine of the class described, a support, a yieldable frame having an adjustable device bearing upon said support and capable of being lifted and separated therefrom under strain, a creasing roller having bearings in said frame and yieldable therewith, and adjustable means underlying said bearings for limiting the downward movement of said frame and of said roller.

3. In a machine of the class described, a support, a yieldable frame having an adjustable device bearing upon said support, a creasing roller having bearings in said frame and yieldable therewith, springs interposed between said bearings and said support, and means for adjusting the tension of said springs.

4. In a machine of the class described, a support, a yieldable frame, an adjustable screw threaded in the central portion of said frame and having a bearing upon said support capable of being lifted and separated therefrom under strain, a creasing roller having bearings in said frame and yieldable therewith, springs interposed between said bearings and said support, and means for adjusting the tension of said springs.

5. In a machine of the class described, a support, a yieldable frame, an adjustable screw threaded in the central portion of said frame, having a bearing upon said support capable of being lifted and separated therefrom under strain, a creasing roller having bearings in said frame, springs interposed between said bearings and said support, screws upon said support for adjusting the tension of said springs, and screws underlying said bearings for limiting the downward movement of said frame and of said roller.

6. In a machine of the class described, a support bridging the track of a movable receiver and provided with slots, a yieldable frame having lateral arms engaging said slots, a central adjustable screw carried by said frame and having a bearing upon said support, a creasing roller having bearings in said arms, springs interposed between said arms and said support, screws threaded in said support and engaging said springs, and check screws underlying said bearings to limit the downward movement of said frame and of said roller.

In testimony whereof I affix my signature, in presence of two witnesses.

UNITED STATES PATENT OFFICE.

GEORGE M. ANDERSON, OF WASHINGTON, DISTRICT OF COLUMBIA, ASSIGNOR TO THE SHREDDED WHEAT COMPANY, A CORPORATION OF NEW YORK.

MACHINE FOR MANUFACTURING FILAMENTOUS BISCUITS.

1,334,429. Specification of Letters Patent. Patented Mar. 23, 1920.

Application filed July 17, 1917. Serial No. 181,128.

To all whom it may concern:

Be it known that I, GEORGE M. ANDERSON, a citizen of the United States, resident of Washington, District of Columbia, have made a certain new and useful Invention in Machines for Manufacturing Filamentous Biscuit; and I declare the following to be a full, clear, and exact description of the same, such as will enable others skilled in the art to which it appertains to make and use the invention, reference being had to the accompanying drawings, and to letters or figures of reference marked thereon, which form a part of this specification.

Figure 1 is a side view of the invention as applied.

Fig. 2 is a section on the line 2—2, Fig. 1.

Fig. 3 is a similar view with the belts moved the length of half a link.

Fig. 4 is a detail side view of a section of the upper belt.

Fig. 5 is a plan view of the same.

Fig. 6 is a detail side view of a section of the middle belt.

Fig. 7 is a detail plan view of the same.

Fig. 8 is a detail side view of a section of the lower belt.

Fig. 9 is a detail plan view of the same.

The invention has relation to machines for manufacturing filamentous biscuit, wherein a continuous band of filaments is laid down from the shredding or reducing machines upon a moving carrier or belt, said band being usually transversely indented or cut in straight lines, the object of the present invention being the economical production of a round or rounded biscuit. In carrying out this object means are provided transversely dividing the band of filaments on curved or crooked lines, approximately triangular parts of the band of filamentous material being thereby cut away between the biscuit, means being provided to convey these cut-away portions of the filamentous band to the hoppers of the shredding machines, to be again used or shredded with other grain fed to said hoppers.

The invention consists in the novel construction and combinations of parts, as hereinafter set forth.

In the accompanying drawings, illustrating the invention, the letter A designates the frame of a machine for cutting the endless band of filaments into uniform sections, said machine shown and described generally in Letters Patent No. 681,650, dated August 27, 1901, and the present invention including certain modifications of this patented machine, as hereinafter explained. The frame A is provided with overlying tracks, *b*, *c* and *d*, upon which the endless upper, middle and lower chain belts, E, F and G, respectively travel, said belts passing over end sprocket wheels H, I and J.

The middle belt F constitutes an endless sectional pan, having between the sections or links thereof narrow intervals for passage of the upper and lower cutter blades 15′ and 21. The cutter blades 21 of the lower belt pass upwardly in succession between the sections of the middle belt, entering sufficiently therebetween to lift the filamentous material somewhat and to coact with the blades of the upper cutter belt.

The links 2 of the middle belt F each carry, rigidly connected therewith, a pan or receptacle 3, and are provided respectively with a reduced extension 4, the latter engaging at one end with a central seat 5 of the adjacent link, the links being pivoted together by transverse pins 6, located centrally of the pans 3 and carrying end rollers 7, traveling upon the tracks *c*. Each pan 3 is substantially circular and is provided with short lateral upwardly extending flanges 8.

The links 9 of the upper belt E each carry, rigidly connected therewith, a depending cover plate 10, overlying and of similar form to that of the pan 3 corresponding thereto, said cover plate having downturned lateral flanges 11, of similar dimensions to and coöperating with the flanges 8 as hereinafter stated. Each link 9 is provided with a reduced extension 12, engaging at one end with a central seat 13 of the adjacent link, the links being pivoted together by transverse pins 14, located centrally of the cover plates and having end rollers 15, traveling upon the tracks *b*.

The arcuate knives 15′ of the upper belt are connected in pairs, each pair to a vertical stem or shank 16, said shank provided with a horizontal slot 17, the latter being engaged by the reduced extension 12 of a link 9, there being one pair of knives to each said link. The shank 16 has vertical reciprocatory movement in a suitable guideway of the link 9, said guideway usually formed by rollers 18, carried by said link. The arcuate knives 15′ are concentric with and overlie the arcuate spaces between the pans 3.

The links 19 of the lower cutter belt G are pivoted together by transverse pins 19', carrying rollers 20, traveling upon the tracks *d*, and each link carries a pair of arcuate knives 21, cooperating with the knives 15' of the upper belt in cutting the biscuit.

The cover plates 10 of the upper belt E are preferably rounded or beveled at the margins, to gather the filamentous material somewhat and give it shape as it presses thereon in its downward movement. At the adjacent edges of the sections this marginal bevel of the cover plates serves to compress the filamentous material against the rising blades of the lower knives 21, in this manner facilitating the action of the knives of the upper belt in their descent, the upper and lower knives having a shearing action.

The upper and lower cutter blades or knives will, in the cutting operation, inclose each biscuit, except at the portions of the sides bounded by the flanges 8 and 11, these flanges inclosing such portions of the biscuit, which is in this way entirely inclosed and guarded against the blast hereinafter described.

In order to effect the reciprocation of the cutter blades of the upper belt, inclined or cam tracks *c* are provided, above the track *b*. In the operation of the machine, rollers 16' of the knife shanks of the upper belt will enter the cam tracks and, traveling downwardly therein, will depress the knives 15 to make the cut, and then raise said knives, withdrawing the same from the filamentous material. The upper knives are held normally in raised position by springs 17'.

The three endless belts travel at the same rate of speed, and are accurately formed and geared, in order that the action of the upper and lower knives shall be neat and close.

The filamentous material laid down upon the middle belt F by the reducing machines will fill the pan sections of the belt and will bridge the narrow tapering spaces 3' between the pan sections.

The tracks *c* and *d*, whereon travel the rollers of the middle and lower belts, as also the links of these belts, are of a breadth considerably less than the width of the pans 3 and of the filamentous band from which the biscuit are cut, so that the triangular pieces cut from said band in the making of the rounded biscuit will have their descent or fall facilitated. Transverse inclined bridge blocks 22 are located between the knives 21 of the lower belt G, and are of a breadth (or length transversely) somewhat in excess of the breadth of the tracks *c* and *d* and the links of the belts traveling thereupon, whereby the filamentous material deposited between the pans 3 of the middle belt and cut from between the rounded biscuit, will in falling be directed outwardly and enabled to drop freely. In the rise of the lower knives 21, the bridge blocks 22 between said knives engage lower notches 23' of the reduced extensions 4 of the middle belt, said notches having rounded lower corners. In this way the lower knives are accurately guided in making the cut. The reduced extensions 4 of the links 2 of the middle belt F fit within central upper notches 21' of the knives 21 of the lower belt G.

The spaces at each side of the belts E and F are closed in at the outer sides by vertical walls 23, and the upper cutter belt and its knives are inclosed at 25, forming a blast chamber 26, located at the lower part of the cam tracks *c* and through the branches 26' of which a blast of air is delivered by fan 28. This blast chamber extends downwardly at both sides of the overlying belts, and the breadth of the track *b* and of the links of the belt traveling thereon being less than the width of the pans 3, the branches of the blast chamber overlie the lateral margins of the biscuit and of the filamentous band. The blast chamber 26 is suitably closed in at the ends.

Located below the blast chamber 26 is a chute 30, also suitably closed in at the sides and ends, and through which the blast of the fan will carry the triangular pieces of the filamentous band cut from between the rounded biscuit, as also all loose filaments or scrap material located upon the belts and outside the lines of the inclosed biscuit, and, being assisted by gravity, will convey these pieces and material to an elevator 31, whereon they will be deposited and carried upwardly, being delivered from said elevator to the hoppers 32 of the reducing machines 33.

I claim:

1. In a machine for manufacturing filamentous biscuit, means for reducing the material to filaments, a moving carrier upon which the filaments are deposited in a continuous band, means for cutting said band transversely to form the biscuit, and waste removing means operating simultaneously with the cutting means for directing a blast of air downwardly at each side of that portion of the band engaged by the cutting means.

2. In a machine for manufacturing filamentous biscuit, means for reducing the material to filaments, a moving carrier upon which the filaments are deposited in a continuous band, means for cutting said band transversely to form the biscuit and for covering and protecting the biscuit, and waste removing means operating simultaneously with the cutting means for directing a blast of air downwardly at each side of that portion of the band engaged by the cutting means.

3. In a machine for manufacturing fila-

mentous biscuit, means for reducing the material to filaments, an endless carrier chain belt having pans upon which the filaments are deposited in a continuous band, an upper endless chain belt having covers for said pans, a lower endless cutter belt, upper cutters carried by the cover belt, and waste removing means operating simultaneously with the cutters for directing a blast of air downwardly at each side of that portion of the band engaged by the cutters.

4. In a machine for manufacturing filamentous biscuit, means for reducing the material to filaments, an endless carrier chain belt having pans upon which the filaments are deposited in a continuous band, an upper endless chain belt having covers for said pans, a lower endless cutter belt, upper cutters carried by said cover belt, lateral tracks for the carrier belt, the cover belt, the lower cutter belt and the upper cutters all located within the lateral bounding edges of the links of said belts, and waste removing means operating simultaneously with the cutters for directing a blast of air downwardly at each side of that portion of the band engaged by the cutters.

5. In a machine for manufacturing filamentous biscuit, means for reducing the material to filaments, an endless carrier chain belt having pans upon which the filaments are deposited in a continuous band, an endless chain belt having covers for said pans, a lower endless cutter belt, upper cutters carried by the cover belt, lateral tracks for the carrier belt, the cover belt, the lower cutter belt and the upper cutters all located within the lateral bounding edges of the links of said belts, a housing for the tracks of the cover belt and the upper cutters, the pans of the carrier belt projecting laterally over and covering the tracks thereof, and waste removing means operating simultaneously with the cutters for directing a blast of air downwardly at each side of that portion of the band engaged by the cutters.

6. In a machine for manufacturing filamentous biscuit, means for reducing the material to filaments, an endless carrier chain belt having pans upon which the filaments are deposited in a continuous band, an endless chain belt having covers for said pans, a lower endless cutter belt, upper cutters carried by the cover belt, lateral tracks for the carrier belt, the cover belt, the lower cutter belt and the upper cutters all located within the lateral bounding edges of the links of said belts, a housing for the tracks of the cover belt and the upper cutters, the pans of the carrier belt projecting laterally over and covering the main portions of the tracks thereof and of the lower cutter belt, the last named belt having inclined bridge means between the links thereof and projecting over and covering the tracks thereof and of the carrier belt at points between the links of both belts, and waste removing means operating simultaneously with the cutters for directing a blast of air downwardly between the links of the carrier belt and at each side of that portion of the filamentous band engaged by the cutters.

In testimony whereof I affix my signature in presence of two witnesses.

GEORGE M. ANDERSON.

UNITED STATES PATENT OFFICE.

HENRY ALONZO HOUSE, OF BRIDGEPORT, CONNECTICUT, ASSIGNOR TO THE SHREDDED WHEAT COMPANY, OF NIAGARA FALLS, NEW YORK, A CORPORATION OF NEW YORK.

MACHINE FOR MANUFACTURING AND PACKING ARTICLES OF FOOD.

Application filed April 30, 1926. Serial No. 105,683.

This invention relates to the manufacture of articles of food, such as cereal biscuits, and has to do more particularly with automatic apparatus for performing the several operations involved in producing the articles and packing them in selected quantities in sealed cartons ready for commercial distribution. The apparatus, while capable of use in the manufacture of numerous products, is especially adapted for the production of cereal filamentous biscuits of the shredded wheat type, and a form of the apparatus suitable for that product will be described, although it is to be understood that this use is merely by way of example.

In the manufacture of cereal biscuits as now practiced, numerous manual operations are required. For example, the biscuits formed from the cereal grain by appropriate devices are deposited upon trays which are conveyed to the baking ovens where the trays are inserted in and removed from the ovens manually by the bakers. Then, in a further manual operation, the trays of baked biscuits are caused to traverse a heated chamber wherein the biscuits are thoroughly dried, after which the trays are conveyed to packing tables where the biscuits are removed by packers who prepare cartons from blanks and fill the cartons. The filled cartons are then placed on a conveyor which carries them through devices for closing and sealing the cartons and delivers them at a convenient point in condition for shipment. Owing to the numerous manual operators, such as packers, bakers, etc., required to carry out this method of manufacture, the labor charge is an important element in the final cost and the necessary distribution of the different machines and ovens requires a great deal of floor space. Also, the rate of production is relatively low and can only be increased by duplication of mechanism and of the number of operators.

The object of the present invention is to provide a machine in which the several operations involved in the production of the biscuits and the formation, filling, and sealing of the cartons may be carried on by mechanism which operates automatically and continuously, the various steps in the manufacture being carried out in proper sequence so that the product passes from one mechanism to another successively, eventually being led to a carton-filling mechanism where the biscuits are packed into cartons of the desired capacity and the cartons are closed and sealed ready for distribution.

The new machine includes a baking oven of substantial size, a conveyor which moves into, through, and out of the baking oven and if desired a drying chamber, automatic mechanism for shredding the wheat, making the biscuits from the shreds and depositing the uncooked biscuits upon the conveyor at a suitable point, and automatic mechanism cooperating with the conveyor at a point outside the oven for removing the cooked biscuits from the conveyor and placing them in selected quantities in cartons. The conveyor employed is preferably arranged for continuous slow movement as a whole and periodic arresting of the movement of a portion or portions thereof which cooperate with the automatic mechanism for supplying the uncooked biscuits to the conveyor and removing the cooked ones therefrom.

The operations of making the biscuits and supplying them to the conveyor are preferably accomplished by a mechanism similar to those heretofore employed and this mechanism is arranged transverse to the travel of the conveyor so that a plurality of uncooked biscuits are delivered at regular intervals to the conveyor in a row extending across the latter. This mechanism receives the prepared wheat, shreds it, deposits the shreds upon a traveling link-belt, cuts the strand of shreds to form the biscuits, then supports the biscuits from above while carrying them out over the conveyor and then drops a plurality of the biscuits simultaneously to deposit them on the conveyor in a row extending crosswise thereof. This mechanism is actuated in synchronism with the movement of the conveyor so that the dropping of a row of biscuits takes place when the portion of the conveyor which receives the biscuits is, in effect, at rest.

The automatic mechanism for removing the cooked biscuits from the conveyor includes a reciprocating member which engages a group of biscuits on the conveyor

and moves these biscuits in a row off the conveyor and upon a suitable receiver. A series of individual engaging elements, one for each biscuit in a row, is mounted upon this reciprocating member so that each biscuit is moved free of contact with every other biscuit of the row. This is of importance both to prevent injury to the fragile biscuits, and also to keep accurate control of the positions of all the biscuits and thus make automatic packaging possible. The operation of this reciprocating member or rake is timed accurately with reference to the movement of the conveyor so that the removal of a row of biscuits takes place when the portion of the conveyor with which the rake cooperates, is, in effect, at rest.

This automatic delivery mechanism moves the biscuits of a row or group from the conveyor to a carton-filling station, each biscuit being moved in a straight line transverse to the direction of movement of the conveyor. Preferably the movement is in several steps, the biscuits being first moved off the conveyor and upon and inspection platform, along which they are moved in successive steps to a position from which they are delivered to the carton-filling devices. The cartons are moved to the carton-filling position automatically, being fed successively from a stack of cartons in collapsed condition and in the course of their movement opened and acted upon by folding devices which turn the flaps of the cartons appropriately. At the filling station, groups of biscuits are introduced into the cartons to form successive layers therein, the cartons containing, for example, twelve biscuits in four layers of three biscuits each. Strips of paper are placed in the cartons between successive layers by appropriate mechanism during the filling operation. Since the biscuits are of a delicate structure, they cannot be allowed to drop into position in the cartons. Consequently, at the filling station a platform is provided which is projected up through the carton to be filled. A layer of biscuits is then moved upon the platform and the platform lowered a step. A strip of paper is now placed over the layer of biscuits; then another layer of biscuits is put in position and the platform lowered a second step, these operations being repeated until the carton is filled. It is then ejected from the packing devices, acted upon by a folding mechanism which turns the flaps to close the carton, and then the carton is sealed by suitable sealing devices.

For a better understanding of the invention, reference will be made to the accompanying drawings, in which there is illustrated an embodiment of the invention suitable for the manufacture of shredded wheat biscuits. In these drawings,

Fig. 47 is a detail sectional view on the line 47—47 of Fig. 45,

Fig. 48 is a perspective view of mechanism for conveying the filled cartons and for folding the flaps thereof,

Fig. 49 is a view, partly in elevation and partly in section, taken on the line 49—49 of Fig. 50,

Fig. 50 is a transverse vertical sectional view on the line 50—50 of Fig. 49, and

Fig. 51 is a detail view showing one of the collapsed cartons folded in the manner in which it is supplied to the machine.

In the drawings, and with reference particularly to Fig. 1, the apparatus is shown as including an oven 60 of considerable length and a conveyor 61 which moves into, through, and out of this oven. The conveyor is provided with transverse pans and at one point in its travel, preferably outside the oven, the conveyor receives unbaked biscuits deposited in rows in the pans by a feeding mechanism, generally designated 62. The conveyor carries the biscuits through the oven and after being baked and dried the biscuits are removed from the pans by a delivery device, generally designated 63. This device has the form of a reciprocating rake and it removes the biscuits from the pans in rows and deposits them upon an inspection platform. The biscuits are moved across this platform in successive steps, and are eventually delivered in two groups of three to a packing station to which cartons are fed from a supply 64 by suitable devices which open the cartons, fold the flaps appropriately, and move the cartons into position to be filled. After the biscuits have been placed in the cartons to the capacity of the latter, the cartons are moved rearwardly along guide-ways 65 to a conveyor 66 which advances the cartons through sealing mechanism 67. After being sealed, the cartons are discharged.

The biscuits are made from cereal grain given a preliminary cooking treatment and then delivered to the hoppers of shredding devices 68 (Fig. 2) which include a pair of rolls which act on the grain and transform it into a plurality of continuous filaments which are deposited upon an endless link belt 69. Several of these shredding devices are employed so that the strand may have the desired thickness. The belt 69 is made up of links 70 and rollers 71 and the upper horizontal stretch on which the strand is deposited runs on tracks 72. Above this stretch of the belt is an upper cutter chain 73 made up of links 75 connected by rollers 76, and the upper stretch of the chain trav-

els over a track 77 and the lower stretch beneath a track 78. The links 76 carry cutter blades 79 and are hollow, as shown at 80 (Fig. 3) their lower faces being covered by wire screens 81. The upper cutter chain is guided so that its lower stretch lies close to the upper horizontal stretch of the conveyor belt and the chain extends a considerable distance beyond the end of the belt. The lower cutter chain made up of links 82 connected by rollers 83, which carry cutter blades 84, lies within the loop of the conveyor belt and its upper stretch is guided over a track 84' in close proximity to the under surface of the belt. The links of the conveyor belt are separated in such manner that the cutter blades 79 and 84 of the two chains pass between the spaces between the links of the conveyor chain and cooperate to divide the strand of filaments carried by the conveyor into a plurality of individual biscuits.

The portion of the upper chain which extends beyond the end of the loop of the conveyor chain serves as a part of the feeding mechanism and disposed within the loop of the upper chain and extending beyond the end of the conveyor chain loop, is a vacuum chamber 85 with which may be associated a compressed air chamber 86. Both chambers have similar lengthwise slots 87 and 88 in their lower walls. Mounted on suitable flanges on the lower walls of the chambers is a slide 89 which carries a series of valve plates 90 arranged lengthwise of the chambers for controlling the flow of air through the slots. These valve plates move in seats in the slide and have openings 91, 92 separated by a solid part 93. By moving the valve plates horizontally, the openings in the plates will open one chamber and close the other. Each plate is actuated by a rocker arm 94 pivoted on a slide 95 extending along the side wall of the chamber 85, and this rocker arm is rocked by a cam 96 on the shaft 97 mounted in brackets on the slide 95. At the side opposite that engaged by the rocker arm, each plate carries a rod 98 encircled by a spring 99 bearing at one end against a part of the plate and at the other against an extension of the slide 89.

It will be seen that the links in the lower horizontal stretch of the upper cutter chain lie close to the lower walls of the chambers, and in the operation of the mechanism the strand carried by the conveyor is first subdivided by the action of the cutter chains into individual biscuits, and as the biscuits pass along on the conveyor chain in contact with the hollow links of the upper cutter chain, at the appropriate instant the valve plates 90 are moved successively by the rocker arms to a position in which the hollow links are placed in communication with the interior of the vacuum chamber 85. The vacuum lifts the biscuits from the conveyor chain and holds them against the lower faces of the hollow links, and as these links pass along beyond the end of the loop of the conveyor chain, a row of biscuits is thus removed therefrom. The chambers 85 and 86 extend out over the baking conveyor 61 and when a group of biscuits held by suction against the faces of the hollow links is sufficient in number to fill a pan, the valve plates 90 are operated simultaneously throughout the length of the chambers to close the vacuum chamber from the links and to put the pressure chamber in communication with the links. This causes the biscuits to be dropped from the links upon one of the pans 100 of the baking conveyor.

The portion of the baking conveyor passing beneath the depositing mechanism moves with a step by step movement, each step of the movement resulting in a pan being placed in position to receive biscuits. When this pan is filled, another pan is brought into position and during this period the upper cutter chain continues to move, the valve plates are again moved one after another to place the links in communication with the suction chamber, and another row of biscuits is removed from the strand conveyor, brought out over the next pan, and deposited therein.

While it is possible to discharge a group of biscuits upon a pan while the pan is moving continuously beneath the feeding mechanism, the depositing taking but an instant, it is preferable to give the pans the step by step movement and to charge each pan in one of the periods of rest of this movement. For this purpose the conveyor construction illustrated in Figs. 4 and 5 is employed. The conveyor is endless and has a portion which lies within the oven chamber, entering the latter near the top of the front wall and leaving through the front wall near the bottom. The conveyor chain is formed of a pair of side chains made up of links 101 connected loosely by transverse rods 102 which carry lugs 103 to which are secured the pans 100. From the ends of the rods 102 depend lugs 104 connected by links 105. These links form a suplementary chain and by moving this chain with reference to the main chain in an appropriate manner, the pans may be maintained upright, regardless of the position of the links 101 with reference to the pans.

The conveyor entering the oven near the top of the latter is led through the oven in a plurality of horizontal stretches, indicated at 106. The top stretch of the conveyor passes to a point near the far end of the oven and is led around a sprocket wheel 107. The conveyor is then led forwardly, passing around another sprocket wheel 108 near the front end of the oven, and a plu-

rality of open loops are thus formed in the conveyor so that the biscuits on the pans traverse the oven a number of times during the baking operation. Within the oven are heating units, generally desigated 109 and here illustrated conventionally as electrical heating elements. Other heating means for the oven, however, may be employed. These heating devices are arranged so that the unbaked biscuits entering the oven are exposed to a relatively high temperature and then passing downwardly through the oven, are exposed to decreasing temperatures, so that after the preliminary baking the biscuits are dried.

In view of the great length of the conveyor, it is not desirable to move it as a whole with a step by step movement, but those parts of the conveyor that are to receive the biscuits and from which biscuits are to be removed, I prefer to move intermittently in order to facilitate these operations. For this purpose the portion of the conveyor outside the oven is guided through a depending loop consisting of two vertical stretches connected by a horizontal stretch. This horizontal stretch is moved to and fro in a direction lengthwise of the coveyor, and although the conveyor as a whole is moving continuously, the pans in the horizontal stretch of the loop are moved with a step by step movement. These pans pass beneath the biscuit depositing device and successive pans receive biscuits at each period of rest of the movement. The removal mechanism presently to be described also operates to remove biscuits from the pans while the latter are at rest and it is preferable to lead the conveyor through two loops, one associated with the biscuit depositing device, and the other with the biscuit removal mechanism. This permits the deposition and removal of biscuits from portions of the conveyor moving step by step and affords sufficient room for the two groups of mechanism.

The conveyor chain passing out from the bottom of the oven, is led around sprocket wheels 110, one for each of the side chains of the conveyor, the sprocket wheels being mounted on a shaft 111 in suitable bearings. From the sprocket wheels 110, the conveyor passes upwardly over sprocket wheels 112 mounted on a shaft 113. This shaft is journaled in bearing blocks 114 slidable in suitable guide-ways provided in the framing and moved to maintain the conveyor chain taut by means of springs 115. From the sprocket wheels 112, the conveyor passes down in a vertical stretch 116, then around sprocket wheels 117, mounted in rods 118 pivotally suspended from a bar 119 of the frame. From the sprocket wheels 117, the conveyor passes in a horizontal stretch 120, suitably supported on tracks 121, to sprocket wheels 122 mounted on a shaft carried in the lower ends of similar arms 118. The two sets of arms 118 are connected by a cross member 123. From the sprocket wheels 122, the conveyor extends upwardly to sprocket wheels 124 supported on shafts mounted on the framing, then across to similar sprocket wheels 125 and then downwardly around sprocket wheels 126 supported on a shaft in the lower ends of arms 118. From sprocket wheels 126, the conveyor passes in a horizontal stretch 127 running on a track 128 to sprocket wheels 129 mounted on the shaft on the ends of another pair of arms 118. The conveyor then passes upwardly and around sprocket wheels 130 supported on a shaft journaled in bearings in the framing and from the sprocket wheels 130 the conveyor passes in a horizontal stretch 131 into the oven through an opening in the front wall.

The conveyor led around the sprocket wheels in the manner described, forms two depending loops having horizontal stretches 120 and 127. The arms 118 in each loop are connected by rods 123 and the arms of the two loops are connected by a connection rod 132. Connected to the bearing of the shaft of sprocket wheels 126, is a rod 133 having an adjustable connection with a rock arm 134 pivotally mounted on the bed of the machine at 135. This arm 134 is reciprocated by means of cams 136 mounted on a driven shaft 137.

The conveyor as a whole is driven by means of the sprocket wheels 108 at one end of the oven, which are driven by suitable gearing connections from vertical shafts 138 driven by gearing from a main drive shaft 139, which is in turn driven from any suitable source of power. A horizontal shaft 140 is driven through gearing connections from the vertical shaft 138 and through gearing connections drives the shaft on which sprocket wheels 130 are mounted. A second horizontal shaft 141 is driven through a suitable connection from shaft 140, and this shaft drives the shaft of sprocket wheels 125 and also drives the vertical shaft 142 which drives the shaft 111. A horizontal shaft 143, driven through gearing from the shaft 138, drives a transverse shaft 144 which drives the shaft 137 through suitable connections (not shown). The sprocket wheels 112 and 124, and the sprocket wheels carried in the ends of the depending arms 118, are idlers. The spring take-up for the shaft 113 keeps the conveyor chain taut outside the oven, and similar spring take-ups are employed in connection with the shafts of the sprocket wheels 107.

The conveyor as a whole has a continuous movement, but the portions forming the horizontal stretches of the two loops are reciprocated on their tracks by means of the

cams 136 and the rocker levers 134. In each movement of the rock levers in a direction opposite to that in which the conveyor is moving, one link of the conveyor chain in each vertical stretch 116 of the loops is placed by the sprocket wheels 117 and 126 on the tracks 121 and 128, and sprocket wheels 122 and 129 release a link carrying a pan from this horizontal stretch and permit the link to move upwardly. The remaining links of the horizontal stretches remain at rest. When the rock levers 134 reciprocate in the direction in which conveyor chain is moving, the horizontal stretches are advanced by one link. Accordingly, the pans are brought successively to rest in one loop beneath the depositing mechanism 62 and in the other loop beneath the biscuit removal mechanism 63. At each period of rest of the pans, a group of biscuits is deposited in a pan by the depositing mechanism and a group of biscuits is removed from a pan by the biscuit removal mechanism.

In order that the pans may be maintained upright at all times throughout the movement of the conveyor chain, suitable guiding devices are provided for the supplementary chain. One of such devices is illustrated in Fig. 5, where the conveyor chain is shown passing about a sprocket wheel such as 107. On the journal box of the shaft 146 of the sprocket wheels 107 is mounted an eccentric disc 148 and a ring 149 is mounted for rotation on this disc. This ring is provided with seats 150 in its rim and each seat receives the end of a lug 104 as the conveyor chain passes around the sprocket wheels 107. The eccentricity of the disc 148 is such that the lugs 104 are given a movement relative to the links 101 sufficient to maintain the pans in vertical position, even though the links 101 are inverted after their movement around the sprocket wheels 107. Similar guiding devices are employed at each point where the conveyor chain changes direction.

The oven enclosure through which the conveyor chain is led is formed of side walls of suitable installating material and is provided with a partition 150' dividing the enclosure into an upper shallow baking chamber and a lower deeper drying chamber. Passing out of the oven near the bottom of the front wall through a suitable opening, the conveyor travels through a conduit indicated generally at 151 and provided with a gate 152 at its rear end, by which the ingress of air may be controlled. Additional air may be introduced into the oven through the opening near the top of the front wall through which the conveyor chain enters the oven, and at the rear end of the oven is an air outlet 153 connected to suitable air suction means by which air may be drawn through the openings mentioned and passed completely through the oven from one end to the other. A branch line 154 leads to openings in the top of the oven (not shown) and provides means for removing the moisture-laden air from the oven chamber.

The delivery mechanism (Figs. 6, 7, 43 to 47, inclusive) by which the baked dried biscuits are removed from the conveyor, is disposed opposite the first conveyor loop at the right in Fig. 4, and operates in timed relation to the intermittent movement of the pans in the horizontal stretch of the loop, the biscuits thus being removed from the pans while the latter are temporarily at rest. This device is mounted on the bed plate 155 supported on suitable standards 156, 157. Beneath the bed plate near one end is journaled a main drive shaft 158 driven from any convenient source of power and preferably connected with the drive shaft 139, the shaft 158 carrying a fly wheel 159. The shaft 158 drives the biscuit removal mechanism directly and drives the cartor feeding and filling devices through gearing, and the drive is so arranged that by operating a clutch 160 only the biscuit feeding mechanism will continue in operation, the other devices being disconnected from the shaft. This clutch mechanism includes the clutch 160 actuated by a lever 161 pivoted at 162 on the bed plate and controlled from the front of the machine by a rod 163 sliding in a bearing 164. At its forward end the rod has a handle by which it may be manipulated by the attendant.

The delivery mechanism includes upright supports 165 and 166 secured to the bed plate 155 and carrying spaced parallel bars 167 and 168 which are of square cross-section and turned edgewise to resist bearing strain. Upon these bars is slidably mounted the frame consisting of uprights 169 and 170 having passages therein engaging the bars 167 and 168 and connected at their upper ends by a cross piece 171 having an arched handle portion 172. These uprights are connected at their lower ends by a cross piece 173.

Upon the front faces of the uprights 169, 170 are stud bolts 174, 175 upon which are mounted vertical slotted extensions 176, 177 of an elongated plate 178 which is adapted to have a longitudinal movement in unison with the frame and a vertical movement relatively thereto. Within the frame and slidably mounted upon the bars 167, 168, is a slide piece 179 preferably formed of two pieces bolted together and provided at each side of its lower end with adjustably mounted bolts 180, 181, arranged to engage stop lugs 182, 183, upon the cross piece 173 as the slide piece is moved to the right or left. Upon the upright parts of the frame 169, 170 are pivotally mounted bell crank

levers 184, 185, the lever 185 being inverted with reference to the lever 184. The arms of the levers are connected to the slide block 179 by links 186, 187, while the long arms are connected by links 188, 189 to the plate 178. As the slide block is moved to the right relative to the slide frame, the bell cranks are moved to lower the plate 178, and when the slide block is moved to the left with reference to the slide frame, the bell cranks are caused to raise the plate 178.

A long stroke lever 190 (Fig. 6) is pivotally mounted to the base at 191 and is connected at its upper end to the slide block 179 by a link 192. This lever is jointed at 193 for adjustment and is connected with the upper end of a lever 194 pivoted to the standard 156 at 195. The lever 194 has a slot 196 engaged with a slide block 197 mounted eccentrically upon a disc 198 which is mounted on the main drive shaft 158. The oscillation of the disc imparts a compounded long swing to the lever 190 and in operation the initial swing to the right slides the block 179, lowering the plate 178 through the rotation of the bell crank levers 184 and 185 until the bolt screw 181 strikes the stop lug 183, the slide block and the frame then moving in unison. On the reverse movement, the block 179 first moves to the left, causing the plate 178 to be lifted, this raising movement continuing until the bolt screw 180 engages the lug 182, whereupon the frame and slide block are moved in unison toward the left.

On the plate 178 is a series of blades which are adapted to engage behind the biscuits and feed them forwardly. The horizontal stretch of the conveyor in the first loop passes beneath the end of the plate 178 and mounted on the bed plate of the machine is an inspection table 199 supported on uprights 200. This inspection table extends close to the ends of pans 100 and in each period of rest in the intermittent movement of the conveyor, one of the pans lies with its end in registry with the platform 199. During such movement the plate 178 has moved out to a position over the pan and at the proper instant the plate is lowered so as to bring the blades close to the surface of the pan, the blades entering the spaces between adjacent biscuits on the pan. The plate 178 now moves in unison with the slide block so that the blades carry the biscuits from the pan to the inspection platform and at each reciprocation of the plate 178, six biscuits are moved from the pan to the platform and twelve biscuits previously deposited on the platform are moved by the blades in successive steps to a position whence they are to be transferred to the packing mechanism. As each pan contains twelve biscuits in a row and the removal device only removes six biscuits, a second removal device removing biscuits from the opposite side of the pan is intended to be used in this machine. This biscuit removal mechanism, and the packing devices associated with it, are the same as those illustrated, but they are merely reversed in operation.

Each of the blades 201 by which the individual biscuits are engaged, each biscuit thus being removed under exact control from the pan and similarly advanced along the platform, is flexibly mounted on a pair of pivotal frames 202, 203 which are supported on shafts 204, 205, mounted in brackets 206 secured to the outer side of the plate 178. The side portions of the frames 202 and 203 are slotted so that the shafts 204 and 205 are slidably mounted therein, coil springs 207, 208 being disposed between the shafts and the cross pieces 209 and 210 of the frames so that pressure in either direction on the blades will move either the upper or lower frame relatively to the shafts compressing the springs. Upon release of the pressure, the blades assume their normal positions. A stop pin 211 engaging the under side of the frame 202, limits the downward movement of the blades, the frame being yieldably held against the pin by a spring 212 which is coiled about the shaft and tensioned through the engagement of its end 213 with the bracket 206. The construction is such that the blade is capable of yielding upwardly, forwardly, and rearwardly so that if a biscuit is in the path of the blade when the blade is moved down, the blades will yield so as not to damage the biscuit.

As the biscuits are moved along the platform 199 in successive steps, they are eventually deposited in front of a feed bar 454. The packing mechanism is arranged to fill two cartons simultaneously, and the biscuits are fed to the cartons in groups of three. The six biscuits deposited in front of the feed bar by the action of the biscuit removal device are equally spaced and as the feed bar reciprocates at right angles to the direction in which the biscuits have been led to it, delivering the biscuits to the packing devices, the biscuits are divided into groups of three by a V-shaped deflector 215.

The cartons are supplied from a hopper which comprises an inclined base 216 (Figs. 10 and 11) supported between side plates 217 and 218 secured at their flanged bases 219 and 220 to the bed plate. The cartons are stacked vertically in flattened condition in the hopper, and these cartons have side and end flaps at top and bottom which are turned outwardly so as to lie against the vertical walls of the cartons. A slide follower 221 is mounted in the hopper to force the stack of cartons into the lower end thereof, this hopper having a guide rod 222 which

is mounted in the sides 223 and 224 of the hopper and projects through slots 225, 226 in the side plates. To the ends of the rod are connected cords 227, 228, which extend over guide rolls 229, 230, 231, 232 and carry weights 233 and 234, at their lower ends. These weights force the follower against the stack of cartons.

The front end of the hopper is normally closed by a sliding feed member 235 and extending from the hopper at one side along the feed plate is a guide-way having a hollow wall 236 at one side. Its inner surface is substantially flush with the lower end of the hopper and the other wall 237 of the guide-way is also hollow and is spaced from the wall 236 a distance equal to the width of an opened carton. This longitudinally extending guide-way communicates at its end with a guide-way extending forwardly therefrom and at right angles, this guide-way having a width corresponding to the length of an opened carton and being bounded by hollow walls 238, 239. This guide-way in turn communicates with a third guide-way extending at right angles thereto and parallel to the first guide-way, being bounded by hollow walls 240, 241.

These several hollow walls are suitably secured together by air-tight connections and the spaces between the contacting walls are in communication. The inner surfaces of the walls are perforated as indicated at 242 and a partial vacuum is maintained within the walls by means of a suction chamber 243 connected to an air exhaust by a pipe 244 and to flanged outlets 245, 246 of the walls 236 and 237 by pipes 247 and 248. The suction walls exert a grip on the side walls of the cartons, tending to maintain them in opened condition. The guide-ways are arranged in the manner described so that the cartons may be conveniently fed one by one from a hopper, opened and delivered in single file with their ends in contact to a position in front of the packing devices where the two end cartons are moved abreast to the packing station. In the movement of the cartons from the hopper to the packing station, the bottom end flaps of the cartons must be turned inwardly and this is conveniently done by feeding the cartons at one point along a guide-way through which the cartons move with their sides uppermost, folding devices acting on the bottom end flaps in this movement and turning them inwardly.

The reciprocating feed member 235 moves to and fro in front of the hopper and at its forward end carries a pusher head 249 which is guided in its movement by means of an angle flange 250 projecting at one side and engaging a slotted guide block 251 fixed to the bed plate. The inner face of the slide member is provided with a recess 252 having a shoulder 253 at the end of the recess. As the slide member moves across the end of the hopper, the shoulder picks up a flattened carton and moves it forwardly into engagement with the inner surface of the wall 236, and as the slide member retracts, the flattened carton remains in contact with the surface of the wall, being held there by the suction. The part 254 of the wall adjacent the hopper is solid and unperforated, this part having a length corresponding substantially to the width of the end of a carton. The carton fed by the slide feed member and deposited against the inner surface of the wall 236, is gripped along its side by the suction action, while its end opposite the unperforated part of the wall is free.

The slide feed member 235 is reciprocated by means of a lever 255 pivotally mounted at 256 on an extension 257 of the base of standard 157, the lever extending upwardly through a slot 258 in the bed plate and being connected to a forked link 259 adjustably secured in a slot 260 in the lever. A connecting rod 261 extends from the lever 255 to a lever 262 pivotally mounted at its lower end 263 upon standard 156 and provided on its upper end with an enlarged head having parallel slots 264, 265, the slot 264 being relatively wide and having its axis coincident with the axis of rotation of the lever, while the narrower slot 265 is offset and is pivotally connected to the end of the rod 261 by an adjustable connection 266. The slot 264 receives an eccentric crank pin 267 slidable therein, this pin being mounted on a disc 268 secured to the end of an auxiliary drive shaft 269 journaled in the frame and driven by the main shaft 158 by gears 270 and 271 (Fig. 9) and an intermediate gear 272 mounted on a stud shaft 273. The gear ratio is such that the shaft 269 is rotated once for each two rotations of the shaft 158. Thus, for each four rotations of the main drive shaft, two cartons are fed from the hopper. The gear 270 is loose upon the shaft 158 and is connected thereto through the operation of the clutch 160 so that upon occasion the shaft 158 may rotate without driving the gear 270.

At the end of the wall 237 and substantially diagonal with reference to the solid portion 254 of the wall 236, there is disposed a swinging suction head 274 (Figs. 8, 10, 11, 21) which is hollow and has perforations 275 in its front face. Its rear face has a flanged outlet 276 connected by flexible pipe 277 to the suction chamber 243. Near its base the head has projecting arms 278, 279 which are pivotally connected to the ends of the crank arms 280, 281 mounted on the upper ends of shafts 282, 283 journaled in the bed plate and carrying crank arms 284, 285 on the lower ends beneath the bed plate. A third crank arm 286 is mounted upon a

stud shaft 287 below the bed plate and the ends of the three arms 284, 285, and 286 are connected by a bar 288 so that they will operate in unison.

The bar 288 is swung to and fro transversely of the bed plate to oscillate the crank arms by means of a lever arm 289 to which it is connected by a link 290, adjustably and pivotally connected at one end 291 in a slot 292 in the end of the lever 289 and pivotally connected at its other end to the bar 288. The lever 289 is pivotally connected at 293 to the under side of the bed plate and is provided intermediate its ends with a roller 294 sliding in a cam groove 295 of a cam plate 296 mounted on the reciprocating cam supporting frame comprising rails 297 and 298 (Figs. 8, 18) connected at their rear ends to a dove-tailed slide bar 299 which is slidably mounted in beveled guides 300 and 301. The forward ends of the rails are connected by a plate 302 which has a forwardly extending arm 303 slidably mounted in dove-tailed guides 304 and 305 secured to the under side of the bed plate. An intermediate cross piece 306 also connects the two side rails, a lug 307 formed on its under surface being connected by a link 308 to the lever 255 so that the lever in its oscillation reciprocates the cam frame.

The cam groove 295 of the plate 296 is so arranged that as the lever 255 and the cam frame are moved in a direction to withdraw the slide feed member 235, the lever 289 is swung forwardly from the position shown in Fig. 3. In such movement the head 274 is swung to the full line position shown in Fig. 7 and it contacts with the inner wall of a carton which has been fed by the sliding head. As the cam frame moves in the opposite direction, the head is swung back to its original position and swings the carton open. As the slide feed member 235 again moves forwardly, feeding a flattened carton, its head 249 engages the opened carton and pushes it forward in the guide-way, together with the carton previously opened.

At the corner formed by the meeting ends of the side walls 237 and 239 there is an opening 309 (Figs. 11, 22) bridged over by the reduced ends 310 and 311 of the side walls. Within this opening is a pusher head 312 which is adapted to receive cartons pushed forwardly by the head 235 and to advance these cartons along the guide-way between the walls 238 and 239. The head 312 is mounted at one end upon a bracket 313 which is mounted on the slide rod 314 and the head is connected at its rear face by a link 315 to a post 316 mounted on a slide rod 317 disposed beneath the rod 314 and arranged for movement relative thereto. The bracket 313 and the post 316 extend upwardly through a slot 318 in the bed plate (Fig. 22) and the slide rods are moved in a channeled guide 319 secured to the under side of the bed plate and provided with retaining strips 320, 321, projecting over the channel to hold the rods therein. The rod 314 has a slot 322 formed in it into which enters a pin 323 mounted on the rod 317. The pin 323 is arranged so that when rod 317 is moved in either direction, it first moves relatively to rod 314, then the two move in unison.

The forward movement of the slide member 235 advances a carton beyond the corner formed by the walls 236 and 237 and as the carton advances, the head 312 is being withdrawn and rod 317 first moves relatively to the rod 314 so as to swing the head 312 out of the path of the advancing cartons. On the continued rearward movement of the rod 317, the two rods 314 and 317 move together until the outer swinging end of the head engages the wall 237, whereupon the further movement of the rod 317 causes a slight forward movement of the pin in the slot, resulting in the head 312 being straightened and aligned with the inner surface of the wall 237.

The rear end of the rod 317 is connected to a link 324 (Fig. 8) adjustably and pivotally connected at its end to the slotted end 325 of a lever 326 pivotally mounted at its opposite end 327 on a convenient part of the machine frame. The lever 326 carries a cam roller 328 lying within a cam groove 329 in a cam plate 330 carried on the reciprocating cam frame. This cam groove forms a closed path for the roller and within the cam groove are leaf springs 331 and 332, one end of each of which is embedded flush with the surface of the groove (Fig. 19) while the free ends of the leaf springs are forced upwardly by coil springs 333 in sockets 334. In the reciprocation of the cam frame, the ends of the leaf springs projecting into the cam groove prevent the return movement of the roller along the same path, and insure that the roller will travel in such a way as to swing the lever 326 to advance and retract the rod 317 and with it the head 312.

As the cartons are fed between the walls 238 and 239, their bottom end flaps are turned inwardly partially to close the bottoms of the cartons, by means of flap-folding devices disposed at each side of the guide-way. These devices comprise shoes 335, 336 (Figs. 12, 13) which are mounted above openings 337 and 338 in the bed plate and have bracket lugs 339 secured to the bed plate by screws 340. The shoes extend upwardly into elongated openings 341 and 342 formed in the walls 238 and 239 respectively, the opening 341 being relatively higher and extending forwardly to the end of the wall 240 to accommodate a carton feeding head presently to be described. The front end of each shoe is provided with a

beveled nose portion 343 and at the under side each shoe has a depending turning flap 344 which terminates at one end rearwardly of the nose of the shoe, its beveled edge 345 being substantially a continuation thereof. The flange is bent inwardly beneath the plate 346 which extends over an opening 347 of the bed plate. The plate 346 is flush with the surface of the bed plate and is held in position by screws 348 and 349 which enter a projecting portion 350 of the bed plate, the plate 346 extending rearwardly of the end of the shoe and having its end spaced from the beveled end 351 of the opening 347 to form an outlet slot for the turned end flap. As the cartons move forwardly, the nose portions 343 of the shoes enter between the up-turned end flaps, turn them outwardly along the edges 345 of the flanges to the folded-in position between flanges 344 and plates 347, the inwardly turned flaps then moving out through the slots to the ends of the plates 346.

The cartons advanced to the ends of the guideway defined by walls 238 and 239, are now fed at right angles thereto between walls 240 and 241. The mechanism by which the cartons are advanced in the new direction includes spaced lugs 352, 353, 354, (Fig. 14) on a flange 355 at the forward end of the arm 303 of plate 302. In these lugs are journaled the shafts 356, 357, and 358 to which are secured crank arms 359, 360 and 361, connected at their outer ends by a bar 362. To the upper ends of the shafts 357 and 358 are secured lever arms 363, 364 on which there is pivotally mounted a pusher head 365 disposed in the opening 341 of the wall 238 and adapted to move through a communicating opening 366 (Fig. 12) provided in the wall 240. A link 367 is pivotally connected to one end of the bar 362 and at its other end is connected pivotally to the slotted end of a lever arm 368 pivotally mounted at 369 on the plate 302. A roller 370 carried on an extension of the arm enters an opening 371 in the plate 302 and cooperates with a cam projection 372 provided on a stationary plate secured beneath the bed plate of the machine.

The cam projection 372 cooperates with the wall of the opening to form a closed path of travel for the roller 370 and a leaf spring 373 secured at one end and having its other end forced upwardly by a coil spring 374 disposed beneath it, lies in the path of travel of the roller, so that as the cam slide reciprocates, the roller is forced to pass around opposite sides of the cam projection in its forward and return movement. On the shaft 357 is a coil spring 375 which tends to force the crank arms in a clockwise direction and through the linkage the lever 368 is yieldingly forced to one side so that the roller in one movement bears against the wall of the opening 371, and in the other against the rounded surface of the cam projection.

In the operation of the mechanism, as the cam frame and plate move to the left (Fig. 8) the roller rides along the straight side of the cam and the pusher head 365 engages the end of a carton and pushes the carton, and two other cartons in front of it, forwardly between walls 240 and 241. In the return movement of the frame and plate, the roller passes along the rounded surface of the cam, causing the lever 368 to swing and this movement, through the linkage, moves the pusher head out of the guide-way as indicated in dotted lines in Fig. 7, so that its longitudinal face is flush with the inner surface of the wall 240 and the guide-way is free to receive another carton from the communicating guide-way. When the cam frame reaches the end of its return movement, the lever again assumes the position shown in Fig. 8, and the pusher head is swung into feeding position.

The cartons moving along the guide-way defined by walls 240 and 241 have their end walls in contact. The packing stations at which the two end cartons are to be filled are separated, so that the cartons must similarly be spaced before being advanced to the packing stations. For this purpose there is a hollow suction head 376 at the end of the guide-way having perforations 377 in the front face, the head being connected by a pipe 378 to the suction chamber 243. The head normally lies in such a position that the feeding movement of the head 365 causes a carton to be advanced into contact with the suction head, the end wall of the carton being gripped by the suction face of the head. Secured to the rear of the head is a rod 379 projecting through a guide block 380 and the head is held normally in advanced position by a coil spring 381 encircling the rod. The end of the rod is bent downwardly at 382 through a slot 383 in the bed plate and lies in the path of a pin 384 on a disc 385 on a shaft 386. As the shaft is rotated, the pin moves the head from full line to dotted line position (Fig. 42), drawing the end carton away from the one next to it by the desired amount.

The shaft 386 is journaled in suitable bearings on the under side of the bed plate and at one end carries a gear 387 meshing with a gear 388 on the end of the shaft 389 journaled in suitable bearings and driven intermittently from the shaft 269 by gears 390 and 391, one of these gears having blank sections, as shown in Fig. 9. The shaft 386 makes one rotation for each two rotations of the shaft 269.

The two end cartons in the guide-way defined by walls 240 and 241, separated by the mechanism described, are now pushed for-

wardly to the packing stations along spaced guide-ways formed by outer guide walls 392 and 393 and a central guide wall 394. The cartons are fed by means of a pusher plate 395 having top and bottom edge flanges 396 and 397. This pusher plate normally lies within a recess 398 in the wall 240, so that the cartons can be advanced to a position in front of it. The wall at this point is of skeleton form.

The pusher plate is provided with feeding arms 399 and 400 which extend through a suitable opening in the wall, the arm 399 being pivotally secured to one end of the pusher plate, and the arm 400 being similarly connected to the plate intermediate its ends. The arm 400 is secured at one end to the end of a slide bar 401 (Fig. 26) reciprocating in a guide 402, and on the upper surface of the bar 401 slides a second bar 403 connected to bar 401 by a slot and pin connection 404, 405. The arm 399 is connected to the outer end of the bar 403 and when the bar 401 is reciprocated to the right (Fig. 26) the bars are moved together so that the plate 395 engages a pair of cartons which lie in a line and advances these cartons abreast in the separate guide-ways to the packing station. Upon the reverse movement of the bar 401, it moves independently of the bar 403 for a distance corresponding to the length of the slot, so that the plate is swung about the end connected to arm 399 as a center. Its free end is thus retracted in advance of the connected end, moving out of the way of the cartons being advanced to a position in front of the plate, the plate being swung to normal position at the end of its retractile movement.

The end of the bar 401 is flexibly connected by a link 406 to the slotted end 407 of a lever 408, this lever cooperating with a cam groove 409 of the barrel cam 410 and having latch mechanism, presently to be described, by which the lever is rendered inoperative throughout certain rotations of the cam.

The barrel cam 410 is mounted loosely on the main shaft 158 and is driven therefrom by the countershaft 269 through a gear 411 secured to the shaft 269, an intermediate gear 412 journaled on the stud shaft 413, and a gear 414 secured to the end of the cam. The lever 408 is pivotally mounted upon a stud shaft 415 (Figs. 15, 16) having a rotatable bushing 416 at is lower end in the cam groove 409. Between the bushing and the lever is pivotally mounted on the stud shaft the end of a rock lever 417 having a hub end 418 pivotally journaled upon a vertical shaft 419 suspended from the bed plate. On the end of the lever 408 is an arcuate head 420 which slidably engages an enlargement 421 of lever 417 below a retaining arm 422, projecting from the hub 418. On the lower end of the shaft 419 and between the flange 423 and a head 424 on the extremity of the shaft is pivoted a lever 425 held in position against flange 423 by a coil spring 426. The lever carries a locking pin 427 which extends through a passage 428 in the enlargement 421 of lever 417 and in its upper position (Fig. 15) the pin projects into a socket 429 in the arcuate head 420 and thus locks the levers 408 and 417 together.

On the hub of lever 425 are upper and lower flanges 430 and 431 engaged by trunnion pins 432 in the forked end of a lever arm 433 secured on a horizontal rock shaft 434 supported in suitable brackets upon the bed plate. A rock lever 435 is secured upon the shaft and at its end carries a roller 436 which rides upon the surface of a cam 437 on a shaft 438 supported in suitable bracket bearings and driven by the shaft 158 by suitable gearing. The gearing is so arranged that the cam has one rotation for every four rotations of the shaft 158, and this cam is so formed that during three-quarters of the rotation of the cam the arm 435 depresses the lever 425, thus releasing the levers 408 and 417. When thus released, the lever 408 is oscillated about its pivotal connection to the bar 401 by the action of the cam, but causes no movement of the bar. At the same time the lever 417 is swung about its shaft 419. During the remaining quarter turn of cam 437, the two levers are locked together and are thus rocked as a unit by the cam 410. This rocking movement causes a movement of the lever 401 and the cartons are moved into position to be filled, by head 395.

The packing mechanism as illustrated is arranged to pack two cartons simultaneously, each carton receiving twelve biscuits arranged in four layers of three biscuits each, with a strip of paper inserted between adjacent layers. The biscuit feeding mechanism is actuated by the barrel cam 410 which has a cam groove 439 engaged by a bushing 440 on a lever arm 441 pivotally mounted on the bed plate at 442 and connected at its other end by a link 443 to a slide bar 444 mounted to reciprocate in a guide-way 445 (Figs. 9, 25) secured to the under side of the bed plate. At its forward end the bar 444 has an offset portion 446 (Figs. 9, 12) in which is journaled an elongated shaft 447, the offset portion 446 also having an upstanding arm 448 which, at its upper end, is provided with a sleeve 449 in which is housed a shaft 450 carrying a rocker arm 451 connected by a rod 452 to a rock lever 453 on the end of the shaft 447. Upon the inner end of the shaft 450 is mounted a feed bar 454 which rests upon a plate 199 upon which the biscuits are fed by the removal mechanism in groups of six.

The biscuits are deposited by this removal

mechanism in front of the bar 454 which feeds the biscuits forwardly into openings 455 and 456 above the cartons to be filled. In the plate 109 is a glass insert plate 457 so that the position of the cartons beneath the plate may be observed. On the front face of the bar 454 are mounted plates 458, 459, carried on springs 460, these plates engaging the biscuits lightly and moving them forward as the plate advances.

The shaft 447 is slidable in a bracket 461, depending from the bed plate, and is connected to the bar 444 to reciprocate therewith by means of an arm 462 extending from the bar 444 and having a portion through which the shaft extends, retaining collars 463 on the shaft being placed on either side of the arm. At its inner end the shaft is provided with a gear 464 having a spline entering an elongated slot 465 in the shaft 309, this connection permitting the movement of the shaft lengthwise with reference to the gear but connecting the two rigidly for rotation. The gear 464 is intermittently rotated by means of a segmental gear 466 carried on a shaft 467 mounted in suitable bearings beneath the bed plate of the machine and continuously rotated by means of a sprocket gear 468 and a sprocket chain 469 from a sprocket gear 470 on the shaft 269.

When the biscuit feeding bar 454 reaches the end of its feeding movement, the gear 466 meshes with the gear 464 and turns it through a partial rotation. This causes a movement of the rock arms 451 and 453, resulting in the feed bar being swung upwardly about the shaft 450 as a pivot. The feed bar remains raised until it returns to its retracted position, whereupon the segmental gear 466 is disengaged from the gear 464 and the feeding bar is permitted to drop back into its lowered position. The raising of the bar permits the next group of biscuits to be fed into place before the feeding bar has been fully retracted, and as the feeding bar thus moves forward and backward, biscuits are placed in position to be fed during the backward movement of the bar and these biscuits are advanced to the packing station in the forward movement of the bar.

The cartons fed forwardly in the separate guide-ways by means of the pusher plate 395 are supported on a floor plate 471 having openings 472 and 473. When the cartons are in position, a collapsible platform is projected through each opening into the carton, expanding near the top of its upward movement to provide a support for a layer of biscuits. As each layer of biscuits is received by the platform, the latter is lowered by a step, the operations continuing until the carton is filled. In the last step in the downward movement of the platform it is collapsed and withdrawn from the bottom of the carton and the filled carton is then ejected from the packing position by suitable mechanism.

The packing mechanism, (Figs. 27–36) includes a shelf 474 suspended below the bed plate 471 by tubular posts 475, 476, 477, 478, and a frame 479 provided with apertured corner pieces 480 through which the posts extend, is mounted for sliding movement on the posts. On the under side of the frame are secured downwardly extending posts 481, 482, connected at their lower ends to arms 483, 484 of a piston rod 485 connected to the piston head 486 slidable in a suction cylinder 487 supported from the shelf 474 by hanger rods 488 and having a connection at its upper end to a vacuum chamber by a pipe 489. The suction above the piston tends to move it upwardly at all times to raise the frame to its uppermost position.

At the ends of the frame are racks 490, 491, having four teeth engageable by pawls 492 carried on vertically reciprocating shafts 493 and 494 mounted in sleeves 495 and 496, these sleeves being mounted for vertical movement relative to the shafts. Guide collars 497 on the plate 471 support the upper ends of the sleeves, while the lower ends slide in apertures 498 of the shelf 474. Each pawl 492 is pivotally mounted in an opening 499 of the shaft and a leaf spring 500 normally forces it through a slot 501, in the sleeve to a position in which it engages the rack.

The lower ends of the shafts 493 and 494 project beyond the ends of the sleeves and are connected to the ends of a cross beam 502 having a central roller 503 which is engaged by a cam 504 on a shaft 505 journaled in suitable bearing brackets 506 and driven from the main shaft 269 by sprocket gears 507 and 508 and a sprocket chain 509.

The upper ends of the shafts extend above the plate 471 and are provided with shoulders 510 against which bear helical expansion springs 511, bearing at their other ends against the plate and exerting a lifting force on the shafts which retain the roller 503 in engagement with its cam. The rotation of the cam causes the intermittent raising and lowering of the shafts and the pawls successively engage the racks to force the frame downwardly one tooth of the rack at a step.

The posts 475, etc., are provided longitudinally on their outer sides with a series of openings 512 having the form of teeth, and within each of the posts is a slide bar 513 having a groove 514 in which are mounted spaced blocks 515 provided with projecting teeth portions 516 oppositely inclined to the teeth 512. Each bar is arranged to be moved upwardly relatively to the posts by a suitable mechanism so that the teeth 516 are

brought into such relation to the teeth 512 that a substantially unbroken outer surface on the posts is provided. When the strips are lowered the teeth are separated so as to form recesses which may be engaged by pawls 517 in slots 518 in corner blocks 480, the pawls being held yieldably in position by leaf springs 519.

The ends of the rods 513 extend below the shelf 474 and are connected in pairs by bars 520 and 521 secured to the rods by set-screws. Rock shafts 522 and 523 mounted in suitable bearings depending from the shelf 474 carry yoke members 524 and 525 which embrace the sleeves 495 and 496 and have slots 526 in their arms which engage trunnion pins 527 provided on the ends of the sleeves. At the outer sides of the bearings the rock shafts carry yoke members 528 and 529, each comprising side arms and a connecting bar, the connecting bars engaging the bars 520 and 521 from beneath. At one end of each rock shaft is a lever arm 530 and 531, these arms being connected by links 532 and 533 to the arms of a rock lever 534 on the end of a shaft 535 mounted in suitable bearings. At the end of the shaft 535 is a lever 536 connected by a link 537 to one end of a lever 538 suitably journaled in a bracket depending from the bed-plate. The end of the lever 538 enters a cam slot 539 provided in the end of the slide bar 401 (Figs. 25, 26).

In the operation of the mechanism for raising and lowering the frame, when the frame is in its uppermost position the pawls 492 engage the lowermost teeth of the racks 490 and 491 and as the cam 504 rotates, the shafts 493 and 494 are reciprocated, causing the pawls to move the racks downwardly by the amount of one tooth at each reciprocation. At each step in the downward movement of the frame, the latter is held against return upward movement after it is released by the pawls by means of the pawls 517 entering the teeth 512. The frame is thus moved downwardly with an intermittent movement of four steps, and when it reaches the end of its downward movement it is restored to its uppermost position in a single step. To permit such movement, the lever 538 is swung by the cam slot, and through the linkage rocks lever arms 530 and 531, which raise the cross bars 520 and 521 and with them the shafts 513, thus raising the toothed blocks 515 from the position shown in Fig. 30 to that shown in Fig. 29, the pawls 517 being forced out of engagement with the teeth. At the same time the yoke members 524 and 525 swing downwardly, drawing the tubular posts 495 and 496 downwardly so that the upper ends of each slot 501 forces the pawl 492 into the opening 499 collapsing spring 500 and thereby releasing the frame (Fig. 33). The frame is now free to move upwardly and is so moved by the action of the suction cylinder.

The frame 479 (Fig. 27) carries a pair of collapsible platforms which are of similar construction, so that but one need be described. Each platform comprises telescoping plates 540 and 541, the plate 540 having side flanges 542 which embrace the side edges of the plate 541. The plates are supported on upright arms 543 pivotally connected at their lower ends at 544 to the frame and at their upper ends to the under sides of the plates at 545. Two of the arms are connected to the outer end of each plate, and one of the arms is connected centrally at the inner end of the lower plate, this latter arm preventing the tilting of the plates in their collapsing or expanding movements. Slots 546, 547, are formed in the plate 541 to permit the plate to be moved together to the collapsed position. A cross bar 548 connects the arms supporting one plate of one of the platforms and a link 549 connects this cross bar to a cross bar 550 connecting similar arms supporting the same plate of the other platform (Fig. 27). The other pair of arms of the first platform are connected by a cross bar 551 connected by a link 552 to the end of a link 553, the other end of which is connected to a cross bar 554 connecting the other pair of arms of the second platform.

A transverse shaft 555 mounted in the frame carries a bell crank lever having three arms. Arm 556 is connected with the link 549, arm 557 is connected to the connection between links 552 and 553, and arm 558 carries a roller 559 which lies between the ends of vertical stop posts 560 and 561 provided on the plate 471 and the platform 474, post 561 projecting through an opening in the base of the frame in the lowered position of the latter.

As the frame is raised to its upper position, the roller 559 strikes the post 560 (Fig. 31) and the bell crank lever is rocked clockwise. Through the linkage this causes the arm supporting the plates of the two platforms to swing and move the plates to expand the platforms. When the frame is lowered step by step the roller eventually strikes the lower post, rocking the bell crank in the opposite direction and causing the platforms to be collapsed so as to pass through the openings in the plate 471. When the platforms have thus been moved out of the lower ends of the cartons, the latter are completely filled and feeding mechanism is operated to remove the filled cartons and bring empty cartons into position. When this occurs, the cam 539 through the mechanism described, releases the frame and the latter is drawn to its upper position by the action of the suction

cylinder, the platforms entering the cartons and expanding to form surfaces to receive biscuits.

Above the cartons in position to be filled is a vertically reciprocating bar 562 provided with a series of curved plates 563 which are arranged to engage the separate biscuits and to hold these biscuits against movement when the platforms lower the biscuits into the cartons. The bar 563 is supported at its ends on end blocks 564 and 565 which are carried on the upper ends of the vertical slide rods 566 which are guided through projecting portions 567 of the walls 392 and 393 and are connected beneath these portions by cross pieces 568.

At the upper ends of the shaft 493 and 494 (Fig. 37) there are reduced extensions 569 which project through openings centrally of the cross pieces and provided at their upper ends with enlargements between which and the cross pieces are helical expansion springs 570. As the shafts move downwardly to lower the frame step by step, the connection of the frame with the cross bar 526 permits the latter to partake of the initial downward movement, but the shafts continue their down stroke after the bar is stopped by abutment of the stops 571 against the upper surfaces of the walls 392 and 393.

The layers of biscuits within the cartons are separated by strips of paper which are placed in the cartons beneath each layer of biscuits, the proper length of paper being cut as each layer is fed downwardly. The paper feeding mechanism includes supporting standards 572 and 573 (Figs. 25, 27), at the sides of the walls 392 and 393.

Guide rollers 574 and 575 are mounted on suitable shafts on the standard 572 and rollers 576 and 577 are similarly mounted on standard 573. A strip of paper drawn from a supply roller 578 on standard 572 is fed between rollers 574 and 575 and another supply roll 579 is mounted on this standard, from which the strip is drawn around a guide roller 580 in the upper end of standard 573 and thence downwardly between rollers 576 and 577. The rollers 575 and 577 are intermittently operated to feed the proper lengths of paper by sprocket connections with the intermittently rotated shaft 389 (Fig. 25) the connections consisting of a sprocket pinion 581 secured to the shaft of roller 575 which is connected by a sprocket chain 582 to a sprocket gear 583 on a shaft 584 mounted below the bed plate and a sprocket pinion 585 on the shaft of roller 577 connected by a chain 586 to a sprocket gear 587 on the shaft 389. The shaft 584 is driven in correspondence with shaft 389 by a sprocket chain 588, extending around sprocket gears 589, 590 on the respective shafts. The feed rolls draw paper from the supply rolls and feed the paper across the tops of the cartons being packed. When strips of the desired length have been drawn from the supply, these strips are severed by means of knife blades 591 and 592 secured on the inner sides of the end blocks 564 and 565 and cooperating with the inner edges of the walls 392 and 393.

When the cartons are filled they are moved forwardly through the guide-ways formed by walls 392, 393, and 394, to permit empty cartons to be fed to filling position, and the filled cartons are moved by ejecting mechanism so that their weight will not cause the collapse of the cartons advancing to be filled. The walls 392, 393, and 394 are slotted (Fig. 37) and in these slots are reciprocating feed bars, generally designated 593. The bars are of similar construction. On the outer side of the wall 392 is pivotally mounted a lever arm 594 connected by a link 595 to the bar 401 and connected intermediate its ends by a tie rod 596 to a lever 597 pivotally mounted on a bracket 598 extending downwardly from the bed plate of the machine. The upper end of the lever 597 is connected to the jointed ends of links 599 and 600, the link 599 being connected to the end of a feed bar 593, while the link 600 is connected to the lower end of a lever 601 secured to a rock shaft 602 journaled in suitable brackets on the upper surfaces of the walls of the guide-ways and extending across them. At its other end the rock shaft is provided with a lever arm 603 connected by a link 604 to another of the bars 593 and intermediate its ends it is provided with a lever arm 605 which extends downwardly in an opening 606 of the wall 394 and is connected by a link 607 to the other bars 593. Thus as the bar 401 is reciprocated to feed empty cartons to filling position, the bar, through the linkage described, causes a reciprocation of the feed bars 593.

The construction of these bars is illustrated in Figs. 38–41. Each bar is made up of two parts 608 and 609 which have a limited relative movement through the pin and slot connection 610 and 611. As the part 608 is positively reciprocated in one direction or the other, it has a limited initial movement independently of the other part 609, but thereafter the two parts move as one. The part 609 has a series of openings 612 in each of which is a finger 613 pivotally mounted at its forward end upon a pin 614 and at its rear end having a tooth 615 of such size that it may be drawn entirely into the opening when the finger is swung on its pin. Each finger 613 is connected to the part 608 by a link 616 in a slot 617 of the part 608 and pivotally mounted on a pin 618.

As the part 608 is reciprocated rearwardly to feed cartons, its initial movement inde-

pendent of part 609 forces the fingers out of the openings 612, so that the teeth of the fingers engage one of the cartons. The continued movement of the two parts of the bar in unison then causes the cartons to be fed to the rear, the bar 395 at the same time feeding the empty cartons into position to be filled through the reciprocation of the bar 401. In the reverse movement of the part 608 its initial movement relative to the part 609 causes the fingers to be withdrawn into the pockets, where they are held until the forward movement again begins.

As the cartons are fed to the rear by the ejecting mechanism, their upper end flaps are turned inwardly over the tops of the cartons by folding devices 619, 620, 621, 622 (Figs. 7, 27) these devices being so shaped as to enter between the flaps which are folded down against the ends of the cartons and to turn the flaps inwardly over the upper ends of the cartons, where the flaps are held thereafter by holding-down wires 623. The intermediate folding devices 620 and 621 are combined, as shown in Fig. 7 and the folder 621 is placed in front of the folder 620 so that the flaps of the cartons in the right-hand guide-way will be folded before the flaps of the cartons in the left-hand guide-way, thus preventing interference between the flaps in the folding operation.

The cartons fed through the guide-ways from the packing station are received upon a longitudinal platform 624 (Fig. 48) mounted upon supports 625 and provided with guide flanges 626 and 627 which extend along the edges of the platform for a portion of its length to retain the lower side flaps of the cartons folded upwardly. An endless conveyor chain 628 running around sprocket wheels 629, 630, carries spaced arms 631 which are moved over the platform 624 with a step by step movement, so that as two cartons are moved upon the platform a feeding arm engages these cartons and moves them along the platform, the extent of the movement being sufficient to permit the next pair of cartons to be moved to position during the period of movement of the chain. The chain is driven from the shaft 269 by means of an intermittent spur gear 632 which meshes with a pinion 633 upon the shaft of sprocket 629 and is mounted upon a vertically disposed shaft 634 which is provided with beveled pinion 635 meshing with a beveled gear 636 on the end of the shaft 269.

Beyond the flanges 626 and 627 the platform is provided with a raised extension 637 (Fig. 48) overlying the end of a longitudinal platform 638 and slightly spaced therefrom, as indicated at 639. As the cartons are fed along the platform 624 upon the portion 637 between flanges 626 and 627, they are presented to the flap-turning members 640 and 641 mounted on the end of the platform 638 and arranged to turn the side flaps of the cartons inwardly at top and bottom. These flap-turning members are provided at their sides with projecting fingers 642, 643, having their forward edges sharpened and arranged to enter between the flaps and the sides of the cartons, the upper edges of the members 642 and 643 being curved so that the flaps are turned inwardly, the lower flaps being first folded beneath the extension portion 637 of platform 624 and then passing through the space 639 upon the platform 638. A holding-down wire 644 (Fig. 7) extends above the platform 625 to the flap-turning member 640 and serves to hold the inwardly turned end flaps in their down position. Similar holding-down wires 645 and 646 extend from the member 640 above the platform 638 and hold the side flaps in their down position until the cartons are presented to the sealing devices. These devices paste sealing strips along the adjacent edges of the side flaps across the space between them and the ends of the paper strips overlie the folded-in end flaps, thus sealing the cartons and preventing the displacement of the flaps.

The sealing mechanism is illustrated in Figs. 49 and 50 and includes side plates 647 and 648 mounted on the platform 638 at each side of the cartons, the plate 647 being bent outwardly as at 649 to embrace the chain 628. These plates at their ends support mechanism for feeding and pasting the strips to be applied to the upper sides of the cartons and are provided with downwardly extending portions 650 and 651 beneath the platform 638 for supporting mechanism for feeding and pasting strips on the bottoms of the cartons. The two mechanisms are alike but in inverted relation, so that the description of the upper mechanism following applies equally to the lower mechanism.

On a shaft 652 is mounted a roll of pasting tape which is led between feed rollers 654 and 655 mounted on shafts 656 and 657, and thence beneath the pressure roller 658 which engages the upper sides of the cartons, this pressure roller being mounted on the shaft 659. The shaft 656 of roller 654 is yieldingly mounted in slots 660 in the side plates and forced toward the roller 655 by springs 661 so that it engages the paper tightly. A driving shaft 662 is journaled in the plates and carries pulleys 663 and 664 which are connected by belts 665 and 666 with pulleys 667 and 668 provided on the shafts 657 and 659 of the feed and pressure rolls respectively. The drive shaft 662 of the upper mechanism is driven from the corresponding drive shaft of the lower mechanism by a belt 669 which extends over pulleys 670 and 671, the drive shaft

of the lower mechanism being intermittently driven by the mechanism by which the carton feeding mechanism is driven by a sprocket chain 672 extending around a sprocket gear 673 on the lower driving shaft 602 and a sprocket gear 674 on the shaft 675 which is driven from the shaft 634 upon which the chain driving sprocket 629 is mounted, by beveled gears 676 and 677.

The strip fed by rollers 654 and 655 beneath the roller 658 is cut periodically in proper lengths by means of a stationary knife blade 678 mounted between supporting plates with its edge in proximity to the inner face of the paper strip, while at the outer side of the latter is a blade 679 transversely disposed and mounted on a reciprocating bar 680 slidable in the guide 681 and connected at its end to one end of a trip lever 682 upon a shaft 683, this lever being provided at its other end with a roller 684 engaging a cam 685 on the shaft 602. A spring 686 is connected at one end to a pin 687 of the guide block 681 and at its other end to a pin 688 on the bar 680 which moves in the slot 689 in the block 681. The spring holds the roller 684 in engagement with the cam, and as the shaft is revolved the cam intermittently trips the lever 682, moving the blade 679 to cooperate with the stationary blade 678 to sever the length of paper.

The paper preferably employed is gummed on one side and as it is fed, the gummed surface is moistened by a roller 690 engaging a roller 691 which is rotated in a water pan 693. These rolls may be positively driven or driven by frictional contact of the roller 690 with the surface of the tape. As the cartons are fed through the strip-pasting devices, they advance along the platform 638 and are removed from the machine as the arms 631 pass around the sprocket gear 630, the filled cartons then being removed and delivered to the point where they are to be packed in cases.

The different associated devices in the apparatus are driven in suitable timed relation, and in the operation of the machine the shredding devices deposit a continuous cereal strand upon the strand conveyor, where the strand is divided into individual biscuits by the cutter chains. These biscuits are picked up by the upper cutter chain, carried out over the baking conveyor, and deposited in rows on the pans of this conveyor brought successively to rest beneath the depositing mechanism. The filled pans are carried through the oven and the drying chamber with a continuous movement and then are brought successively to rest beneath the delivery mechanism, where the individual blades of that mechanism engage adjacent biscuits in a row and transfer a group of biscuits to the inspection platform. The group of biscuits are moved across this platform in successive steps to a position in front of the feed bar by which two sub-groups, in this case of three biscuits each, are moved simultaneously to the two cartons. The group of three biscuits forms a layer in a carton and this layer is lowered in place by the packing platform. After a layer is placed in the carton, the platform moves downwardly a single step and the operations continue until the cartons are filled, whereupon the filled cartons are ejected and empty cartons fed to filling position. During the packing operation collapsed cartons are withdrawn from the hopper and opened, and the opened cartons fed successively to the packing station. In this movement the bottom end flaps of the opened cartons are turned inwardly.

The operation of the carton opening and moving devices is so timed that while the packing devices are filling the cartons in a succession of operations, two empty cartons are placed in position in front of the packing station. Upon the next action of the parts, the filled cartons are removed, two empty cartons substituted in their places, and the packing platforms moved to the tops of these cartons to receive the first layers of biscuits. In the last filling operation for each carton, the platforms are withdrawn from the lower end of the cartons so that the cartons may be ejected. Beneath each layer of biscuits is placed a strip of paper, the paper being drawn from a supply and strips of the desired length severed from it. Passing from the filling devices, the cartons have their flaps folded appropriately to close the cartons, and thereafter a sealing mechanism operates to apply sealing strips to hold the flaps in closed position.

I claim:

1. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, a traveling feeding mechanism cooperating with a portion of the conveyor to deposit articles to be baked thereon, and a delivery device spaced from the feeding mechanism and cooperating with a portion of the conveyor lying outside the oven, this device having a movement transverse to the direction of movement of the conveyor and operating to remove the articles from the conveyor after they have been carried on the latter through the oven.

2. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, means for advancing the conveyor with a

continuous movement, means for giving a portion of the conveyor lying outside of the oven an intermittent advancing movement during the continuous movement of the remainder of the conveyor, a traveling feeding mechanism cooperating with the portion of the conveyor lying outside the oven to deposit articles to be baked upon a portion of the conveyor while it is at rest, and a delivery device spaced from the feeding mechanism lengthwise of the conveyor and operating in a direction transverse to the direction of movement of the conveyor to remove baked articles from a portion of the conveyor while it is at rest.

3. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through and out of the oven, a traveling feeding mechanism cooperating with a portion of the conveyor to deposit articles thereon in rows extending across the conveyor, and a delivery device spaced from the feeding mechanism and movable in a direction transverse to the direction of movement of the conveyor to withdraw groups of baked articles from the conveyor in single file.

4. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, means for advancing the conveyor with a continuous movement, means for advancing a portion of the conveyor lying outside the oven with an intermittent movement during the continuous movement of the remainder of the conveyor, a traveling feeding mechanism cooperating with a portion of the conveyor to deposit articles to be baked thereon in rows extending across the conveyor while said portion of the conveyor is at rest, and a delivery device spaced from the feeding mechanism lengthwise of the conveyor and operating to remove from a portion of the conveyor groups of articles arranged in single file while the said portion is at rest.

5. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, a traveling feeding mechanism cooperating with the portion of the conveyor lying outside the oven to deposit articles to be baked upon the conveyor, and a delivery device spaced from the feeding mechanism and cooperating with the conveyor, this device carrying a plurality of members each of which is adapted to engage an individual article and to remove this article from the conveyor upon the operation of the device.

6. In apparatus of the type described, the combination of an oven, an endless conveyor having a portion lying within the oven, a traveling feeding mechanism operable to deposit articles on the conveyor in rows extending transversely of the conveyor, and a delivery device spaced from the feeding mechanism and having a plurality of members arranged in line and each adapted to engage an article in a row across the conveyor, the delivery device being movable in a direction transverse to the direction of movement of the conveyor and in correspondence with this movement whereby the articles of a row on the conveyor are moved individually in single file from the conveyor.

7. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, a traveling feeding mechanism cooperating with a portion of the conveyor to deposit articles to be baked upon the conveyor, and a delivery device spaced from the feeding mechanism and cooperating with the conveyor to remove the articles from the conveyor after they have been carried on the latter through the oven and to deliver these articles to a selected point in successive steps.

8. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, means for advancing the conveyor with a continuous movement, means for giving a portion of the conveyor lying outside the oven an intermittent advancing movement during the continuous movement of the remainder of the conveyor, a traveling feeding mechanism operating to deposit articles to be baked upon a portion of the conveyor while it is at rest, and a delivery device spaced from the feeding mechanism lengthwise of the conveyor and operating to remove baked articles from a portion of the conveyor while it is at rest and to deliver the articles from the conveyor to a selected point in successive steps.

9. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, means for advancing the conveyor with a continuous movement, means for giving a portion of the conveyor lying outside the oven an intermittent advancing movement during the continuous movement of the remainder of the conveyor, a traveling feeding mechanism cooperating with a portion of the conveyor and operating to deposit articles on the conveyor in rows extending across the conveyor, and a delivery device spaced from the feeding mechanism lengthwise of the conveyor and operating in a direction transverse to the direction of movement of the conveyor to remove groups of baked articles arranged in single file from said intermittently advancing portion of the conveyor while it is at rest, this device being arranged to deliver these groups of ar-

ticles to a selected point in successive steps.

10. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, means for advancing the conveyor with a continuous movement, means for giving a portion of the conveyor lying outside the oven an intermittent advancing movement during the continuous movement of the remainder of the conveyor, a traveling feeding mechanism cooperating with a portion of the conveyor to deposit articles on the conveyor in rows extending across the conveyor, and a delivery device spaced from the feeding mechanism and having a plurality of members arranged thereon in line and each adapted to engage an article in a row across the conveyor, said device being movable in a direction transverse to the direction of movement of the conveyor and in correspondence with the step by step advance of said intermittently advancing portion of the conveyor to remove a group of articles from the conveyor in single file, the device having a movement of less extent than the length of a row.

11. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, a continuously moving feeding mechanism operating to deposit articles to be baked on the conveyor, and a reciprocating delivery device spaced from the feeding mechanism and cooperating with the portion of the conveyor lying outside the oven, this device reciprocating in a direction transverse to the conveyor and operating upon each reciprocation away from the conveyor to remove articles therefrom after they have been carried on the conveyor through the oven.

12. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, a traveling feeding mechanism operating to deposit articles to be baked upon the conveyor, and a delivery device spaced from the feeding mechanism and cooperating with the conveyor to remove articles from the conveyor after they have been carried on the latter through the oven, this device including conveying means operating to transfer the articles out of the path in which they are removed from the conveyor to a packing station.

13. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, a traveling feeding mechanism operating to deposit articles to be baked upon the conveyor, and a delivery device spaced from the feeding mechanism and operating to remove articles from the conveyor after they have been carried on the latter through the oven, this device including reciprocating conveying means operating to transfer the articles removed by said device out of their path of travel from the conveyor to a packing station.

14. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, a traveling feeding mechanism cooperating with the conveyor to deposit articles to be baked upon the conveyor, a platform outside the oven adjacent the conveyor and spaced from the feeding mechanism, and a delivery device outside the oven cooperating with the conveyor to remove articles from the conveyor after they have been carried on the latter through the oven and to deposit the articles upon the platform.

15. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, a traveling feeding mechanism cooperating with the conveyor to deposit articles to be baked thereon, a platform adjacent the conveyor and spaced from the feeding mechanism, and a delivery device cooperating with the portion of the conveyor to remove articles from the conveyor along a path transverse to the conveyor after the articles have been carried on the conveyor through the oven and to deposit the articles upon the platform, this device including conveying means for transferring the articles deposited upon the platform to a packing station.

16. In apparatus of the type described, the combination of an oven, an endless conveyor movable into, through, and out of the oven, a traveling feeding mechanism cooperating with a portion of the conveyor to deposit articles to be baked thereon, and a delivery device spaced from the feeding mechanism and operating in a direction transverse to the direction of movement of the conveyor to remove articles from the conveyor after they have been carried on the latter through the oven and to deliver these articles to a selected point in successive steps.

17. In apparatus of the class described, the combination of an oven, a conveyor movable into, through, and out of the oven, means for depositing articles to be baked on the conveyor, a delivery device operating to withdraw groups of baked articles from the conveyor in single file and to deliver these articles to a packing station, means for feeding cartons to the station, and packing mechanism at the station operating to introduce the delivered groups of articles into the cartons while maintaining the articles in the arrangement in which they were removed from the conveyor.

18. In apparatus of the class described, the combination of an oven, a conveyor movable into, through and out of the oven,

means for depositing articles to be baked in transverse rows on the conveyor, a delivery device operating transverse to the conveyor to withdraw groups of baked articles from the conveyor in rows in single file and to deliver these articles to a packing station, means for feeding cartons to the station, and packing mechanism at the station operating to introduce the delivered groups of articles into the cartons while maintaining the articles in the arrangement in which they are removed from the conveyor.

In testimony whereof I affix my signature.

UNITED STATES PATENT OFFICE.

EARL P. WEBSTER, OF NIAGARA FALLS, NEW YORK, ASSIGNOR TO THE SHREDDED WHEAT COMPANY, OF NIAGARA FALLS, NEW YORK, A CORPORATION OF NEW YORK.

BISCUIT-DEPOSITING MEANS.

Application filed March 11, 1925. Serial No. 14,727.

This invention relates to the manufacture of food products by automatic machines in which the products are continuously formed by suitable devices, deposited on a conveyor and carried through a baking oven. The present invention has to do more particularly with the mechanism by which the uncooked products are deposited on the conveyor, and affords means for adjusting the depositing means so that the products will be properly centralized and positioned in the receptacles on the conveyor in which they are to be baked. For purposes of illustration, the device of the present invention will be described in connection with mechanism used in the manufacture of cereal biscuits of the shredded wheat type, but it is to be understood that its utility is not limited to any particular product.

In the manufacture of shredded wheat biscuits, the cereal grain is shredded by suitable devices and deposited in the form of a continuous strand upon a conveyor. The strand, while being conveyed, is subdivided into individual biscuits which are carried to a position above the pans of the baking conveyor and then discharged in transverse rows upon the pans. The transfer of the biscuits from the strand conveyor to the pans may be accomplished by means of an endless chain having hollow links, these links being brought into contact with the upper surfaces of the biscuits on the strand conveyor and suction applied to remove the biscuits from the strand conveyor and carry them along in position on the surfaces of the hollow links. The chain extends out over the baking conveyor and as each pan is brought to rest beneath it, a row of biscuits held against the links is carried out over the pan; then all the links are shut off from the vacuum and the row of biscuits dropped upon the pan.

The mechanism for effecting the transfer includes a suction chamber lying above the hollow links and a plurality of valve plates are used to control the vacuum. These plates are moved successively to place the chamber in communication with the links as the latter move along the chamber until the time for deposition occurs, when all the plates are moved to closed position simultaneously. In order to insure that the row of biscuits is properly centralized in the pan, mechanism is included to move the plates and their actuating devices to different positions of adjustment relative to the chamber and the present invention has to do with improved adjusting means for the purpose. A depositing device of the general type but without the improvement, is illustrated in Patent No. 678,625, issued July 16, 1901, to H. D. Perky, and this invention permits the utilization of the Perky device in connection with a baking conveyor having a series of pans to be filled successively.

For a better understanding of the invention, reference will be made to the accompanying drawings, in which

Fig. 1 is a side view of the shredding devices, the strand conveyor, and the cutter mechanism,

Fig. 2 is a complementary side view from the opposite side, showing the means for depositing the biscuits upon the baking conveyor,

Fig. 3 is a plan view of the depositing mechanism,

Fig. 4 is a transverse view on the line 4—4 of Fig. 2, and,

Fig. 5 is a detail in perspective of a pair of links of the cutter chain.

Referring now to the drawings, the baking conveyor B is shown as made up of links b connected by pivots b', these links being spaced apart as indicated at b^2. This strand conveyor B is endless and at one point passes beneath a plurality of shredding devices C, which continuously form a cereal strand and discharge it upon the conveyor B. The conveyor B runs on a track p and at one point in its travel, passes between upper and lower cutter chains E and D. The chain E is made up of links e connected by pivots e', these links being provided with cutter blades e^2, and this chain runs over a track r in its upper stretch. In its lower stretch its links lie in contact with the strand on the conveyor B. The second cutter chain D lies within the loop of the strand conveyor, and it is made up of links d connected by pivots d', these links having cutter blades d^2 which are arranged to cooperate with the cutter blades e^2. The upper horizontal stretch of the cutter chain D rides over a track q in close proximity to the under side of the

links of the chain B. The cutter chains are arranged so as to pass through the spaces b^3 of the strand conveyor chain, and the blades divide the strand into individual biscuits.

The upper cutter chain extends at one end a considerable distance beyond the end of the strand conveyor, and this end overlies a baking conveyor 1, provided with transverse pans 3. In this extension of the chain is a housing provided with a vacuum chamber H and a compression chamber H'. The lower walls of both chambers have slots *m* which lie close to the rear surfaces of the links *e* of the upper cutter chain. These links are hollow and have openings *f* in the rear walls through which the interior of the links may be placed in communication with the chamber H or H'. The faces of the links are closed by screens *ax*, and the chain runs on tracks *r* which hold the links in close proximity to the walls of the chambers.

Mounted in a slide 52 beneath the chambers H, H' are valve plates G, these plates moving in seats g^3. The valves have openings such as g', separated by blank spaces g^2, and may be moved so that one or the other of the chambers H, H' is cut off from the links *e*, while the other is in communication with the links. The valve seats *g* assist in guiding the valve plates in their movement. Each plate carries an extension *l* surrounded by a spring which bears at one end against the plate and at the other against an extension from the slide 52. Each plate also has a part which may be acted on by a rocker arm Z mounted for swinging movement on a slide 54, and rotary cams V on a shaft V' driven from a suitable source of power, actuate the arms Z and serve to move the plates to place one or the other of the chambers H, H' in communication with the links at the desired instant. As the biscuits reach the end of the strand conveyor, the first valve plate in the series is moved to open the suction chamber and this biscuit is picked up and held against the under surface of a link *e*. As the link moves beneath the next plate, this plate is moved so that as the operation progresses a succession of biscuits, each of which is held against a link *e* by suction, is continuously moved out over a pan 3. When the row of biscuits is sufficient to fill the pan, all the valve plates are moved simultaneously to shut off the vacuum chamber from the links and connect the pressure chamber thereto. This substitution of pressure for vacuum causes the row of biscuits to be deposited on the pan.

In order to adjust the mechanism so that the biscuits may be properly centralized in the pans, a single adjusting device is provided by which the entire series of valve plates and the entire series of operating cams and arms may be adjusted lengthwise of the chambers so that the deposition of biscuits will occur at the right instant to centralize these biscuits with reference to the pans 3. For this purpose, the slide 54 is provided with an adjustment screw 55 and the slide has bolted thereto at 54' a bracket 54'' which carries the shaft V' on which the cams are mounted. The shaft Z', on which the rocker arms are mounted, is similarly supported on lugs 55' of the slide. A slide 52 which carries the valve plates G, is secured to the slide 54 by means of the end brackets 54'' which extend downwardly to the slide 52 and are bolted thereto. With this arrangement consequently, the operation of the single adjustment screw permits all the valve plates and their operating devices to be moved to different positions lengthwise of the chamber H, H', and thus by a single adjusting means the centering of the row of biscuits in the pans is readily secured.

I claim:—

1. Mechanism for depositing biscuits which comprises a conveyor for carrying biscuits, a second conveyor movable at an angle to the first, and means for depositing successive groups of biscuits upon the second conveyor from the first, this means including a suction chamber overlying a stretch of the first conveyor and having openings, a series of valve plates controlling the openings, a series of operating devices for the plates, and means for simultaneously adjusting the entire series of plates and their operating devices relative to the second conveyor to centralize the groups of biscuits deposited on the second conveyor.

2. In mechanism for depositing biscuits, a conveyor, a second conveyor, means for depositing successive transverse rows of biscuit upon said second conveyor from the first named conveyor including a suction chamber overlying the lower stretch of said first named conveyor and having openings, a slide, a series of valve plates carried thereby and controlling said openings, a second slide, and a series of operating arms and cam devices for said valve plates carried thereby, and means for adjusting simultaneously the entire series of valve plates and the entire series of operating arms and cam devices relative to the said second conveyor to centralize the deposit of the biscuit rows thereon including means of connection for said slides and a single adjustment device only connected to one of said slides.

3. In mechanism for depositing biscuits, a conveyor carrying a succession of biscuits, a second conveyor for receiving groups of biscuits, the two conveyors extending at an angle with the lower stretch of the first conveyor lying in proximity to the upper stretch of the second conveyor, a suction

chamber overlying the lower stretch of the first conveyor and having openings through which the links of the conveyor are in communication with the interior of the chamber, a series of valve plates controlling these openings, a series of operating devices for the valve plates, and means for simultaneously adjusting the position of all the plates and all the operating devices therefor with reference to the second conveyor to centralize the groups of biscuits deposited thereon.

In testimony whereof I affix my signature.

Patented Mar. 22, 1927.

UNITED STATES PATENT OFFICE.

GEORGE M. ANDERSON, OF WASHINGTON, DISTRICT OF COLUMBIA, ASSIGNOR TO THE SHREDDED WHEAT COMPANY, A CORPORATION OF NEW YORK

METHOD OF MARKING SHREDDED WHEAT BISCUIT.

Application filed May 17, 1916, Serial No. 235,144. Renewed August 3, 1926.

Figure 1 is a diagrammatic view of a means for carrying out the invention.

Figure 2 is a perspective view of the product.

Figure 3 is a diagrammatic sectional view of a shredding machine, showing a modified means for carrying out the invention.

The invention has relation to a method of superficially marking shredded wheat biscuit, with the idea of distinguishing the product, or to denote origin of the biscuit, and it consists in the novel construction and combinations of parts, as set forth in the appended claim.

In the accompanying drawings, illustrating a preferred means for carrying out the invention, the numeral 2 designates a gang of shredding machines, laying down bands 3 of cereal material upon a moving carrier or belt 4, the band 5, made up of the several superposed layers, being of the thickness of the biscuit, and suitably divided or cut transversely into biscuit form all as disclosed in the prior art, for instance in the patents to H. D. Perky, 681,656, dated August 27, 1901, for continuous cutting machine, and F. Regnier, No, 1,027,762, dated May 28, 1912, for grain shredding machine.

At one end of the gang of shredding machines a shredding machine 6 is provided, shown as of smaller size than the machines 2, and the rollers 7 of which are of the usual character.

The narrow band of shredded material 9, laid down from the machine 6 upon the top of the composite band 5 for the biscuit proper, is designed to be of the thickness of one shred only, and will not materially or appreciably increase the thickness of the biscuit, which can be packed as usual, with no appreciable increase in weight.

This narrow band 9 of shredded material is suitably colored, for instance by chocolate or annatto, mixed with the grain fed to the hopper of the shredding machine 6, and will be easily recognized, contrasting with the color of the top of the biscuit, and the edibility of the biscuit being in no way impaired thereby. This transverse band 9 appears as a hump or projection embossed or in relief upon the top of the biscuit.

A modification of the invention consists in providing a biscuit the top layer of which is of the usual dimensions, but particolored, having one transverse portion, as the central portion thereof, suitably colored before being laid down as stated, and the balance, or the transverse side portions, of natural color, the advantage being that a shredding machine having rolls of full size may be employed, and further in that the resulting product will be of the customary form, having no unusual protuberances or projections upon its top surface.

A means for carrying out this modification involves the use at one end of the gang of shredding machines of a shredding machine 10, the hopper 11 of which is divided by suitable partitions 12 into two or more chambers 13, into one of which grain suitably colored is fed, and into the other or others of which grain of natural color is fed.

I claim:

A method of making and simultaneously distinctively marking shredded cereal biscuit, consisting in laying down superposed bands of shredded cereal to form a composite band of the proper thickness, treating cereal material with a coloring agent and laying down from the same a distinctively colored top band upon said composite band and finally dividing the composite band and said top band transversely to form biscuit.

In testimony whereof I affix my signature.

UNITED STATES PATENT OFFICE.

RALPH E. VALENTINE, OF WORCESTER, MASSACHUSETTS.

MACHINE FOR PREPARATION OF CEREALS.

No. 831,909. Specification of Letters Patent. Patented Sept. 25, 1906.

Application filed June 28, 1906. Serial No. 267,892.

To all whom it may concern:

Be it known that I, RALPH E. VALENTINE, a citizen of the United States, residing at Worcester, in the county of Worcester and State of Massachusetts, have invented certain new and useful Improvements in Machines for the Preparation of Cereals; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

This invention relates to improvements in machines for the preparation of cereals, and is more especially related to machines of that type designed for shredding the cereals.

The main and primary object of the present invention is to provide a machine of the character referred to the construction of which shall be much more effectual in reducing the cereals to a shredded state than the machines now commonly employed, one whereby the capacity of the machine shall be increased, and one wherein the shredding-rolls may be quickly and easily adjusted in their operative relation to compensate for wear, and to also regulate the character of the output of the machine.

The invention further contemplates the provision of a novel form of shredding-rolls designed to effect a saving in the cereals operated upon, thus enabling the machine to be used with the highest degree of economy and with but a minimum loss of the cereals.

Having these general objects in view and others, which will appear as the nature of the improvements is better understood, the invention consists, substantially, in the novel construction, combination, and arrangement of parts, as will be hereinafter fully described, illustrated in the accompanying drawings, and pointed out in the appended claims.

In the drawings, Figure 1 is an end elevation of a machine constructed in accordance with and embodying the herein-described invention. Fig. 2 is a side elevation thereof. Fig. 3 is a top plan view of the machine. Fig. 4 is a longitudinal sectional view on the line 4 4, Fig. 3. Fig. 5 is a fragmentary plan view, on an enlarged scale, of the shredding-rolls. Fig. 6 is a transverse sectional view of one of said rolls.

Referring in detail to the drawings, the numeral 1 designates the supporting-standards of the herein-described machine, which standards may be arranged upon any suitable supporting-base to give solidity to the machine, and said standards may also be formed of any suitable material adapted for the purpose. Adjacent one end of each of the standards 1 is a bearing 2, in which is journaled a shaft 3, and said shaft carries a roll 4 for acting upon the cereal to be treated. By reason of the bearings 2 being formed as a part of the standards 1 it will be seen that the roll 4 is stationary and immovable except by rotation in relation to said standards. The ends of the standards 1 opposite to the bearings 2 are recessed, as at 5, and arranged in said recesses is a pair of bearings 6, which bearings are formed upon a substantially U-shaped support 7, the lower end of which receives a fixed shaft 8, arranged in the lower portions of the standards 1, and upon which shaft the support 7 is adapted to swing, and thereby enable the bearings 6 to approach or recede from the bearings 2. It will also be seen that the bearings 6 are not connected to the standards 1 except through the medium of the shaft 8, and hence said bearings are freely movable for a purpose to be presently stated.

Mounted in the bearings 6 is a shaft 9, which shaft carries a roll 10, which coöperates with the roll 4 for reducing the cereal, and it will therefore be seen that the roll 10 lies in parallelism with the roll 4 and that the edges of said rolls will contact for effectually reducing the cereals fed thereto. The degree of contact of the roll 10 with the roll 4 may be varied in accordance with the character of the cereal operated upon and also in accordance with the character of the output of the machine. To vary the degree of contact, the roll 10 is swung toward or away from the roll 4, and for effecting this adjustment of the roll 10 a pair of adjusting-screws 11 is arranged at the end of the machine contiguous to the bearings 6, said screws being mounted in threaded bosses 12 and having their inner ends impinging against contact-faces 13, formed upon the outer sides of the bearings 6. Upon proper rotation of the screws 11 the same will force the bearings 6 toward the bearings 2, thus bringing the contiguous faces of the rolls 10 and 4 into closer relationship with each other, and by reversely rotating the screws 11 the space between said rolls may be increased. For locking the shaft 8 in fixed position within the standards 1 a set-screw 14 or its equivalent may be employed.

The shaft 3 of the roll 4 is preferably elongated to provide for the application of power

for driving the machine, and mounted upon said shaft and the shaft of the roll 10 is a pair of intermeshing gears 15, whereby motion is communicated from the shaft 3 to the shaft 9 and the rolls 4 and 10 rotated in opposite directions. It will of course be understood that the direction of rotation of the rolls is such that the cereals fed upon the top thereof and opposite to the meeting edges of the rolls will be drawn inwardly between the latter for action thereon by the meeting faces of the rolls.

As before premised, it is one of the objects of the present invention to provide a novel form of shredding-rolls, whereby it is possible to effect saving in the cereals operated upon, and thus enable the machine to be used with the highest degree of economy and with but a minimum loss of the cereals. Referring, therefore, to Figs. 5 and 6, the construction of the shredding-rolls will be very clearly seen, and it will be noted that each of these rolls is provided with a series of circumferential grooves 16 and that between the grooves of the respective rolls a series of plain surfaces or projecting ribs 17 is formed. The ribs 17 alternate with the grooves 16; but the relation of the respective rolls to each other is such that the ribs 17 of each fit within the grooves 16 of the other. It will also be noted that the bottoms of the grooves are shown as substantially semicircular. This is but a preferred form, however, and any configuration desired may be given to the bottoms of the grooves; but it is requisite that the extreme outer edges of the sides of the grooves shall be perfectly straight and at right angles to the axes of the rolls for a slight distance below the face of the projecting ribs 17 and that the width of the grooves must always equal the width of the projecting ribs or be slightly greater than such width. The purpose of this construction is to enable the projecting ribs 17 to enter to a slight extent the grooves 16, whereby the shredding is effected by a shearing or cutting action rather than by crushing or mashing. The interfitting of the ribs of the respective rolls doubles the capacity of the rolls and also decreases the power required for operating the same.

In order to prevent loss of the cereals, one of the rolls, preferably the roll 4, is provided at each of its ends with an annular flange 18, the diameter of said flanges being greater than the diameter of the roll, and consequently when the rolls 4 and 10 are in operative relation the latter roll fits between the flanges 18, which act as guides for the rolls and effectually prevent the diverting of the cereals at the ends of the rolls. To strip the cereal from the faces of the rolls after the same has passed between the latter, a pair of scrapers 19 and 20 is employed. The scraper 19 is arranged in recesses 21, formed at the under side of outwardly-projecting lugs 22, which lugs are formed upon the ends of the standards 1 adjacent to the bearings 2, the scraper 19 being held in position through the medium of bolts 23 or their equivalent, which bolts have a slotted connection with the scraper 19, and in order to adjust the position of the latter to vary the position of the teeth thereof in relation to the grooves of the roll 4 a pair of adjusting-screws 24 is employed, said screws being threaded in the free ends of the lugs 22 and bearing against the outer edge of the scraper 19. The scraper 20 is arranged in notches 25, formed at the under side of outwardly-projecting lugs 26, which lugs are carried by the bearings 6, said scraper being held in position within the notches 25 through the medium of bolts 27, having a slotted connection with the lugs 26, and by reason of the lugs 26 being carried by the bearings 6 it is obvious that the position of the scraper 20 in relation to the roll 10 will always remain the same, irrespective of the adjustment of said roll relative to the roll 4. To adjust the position of the scraper 20 in relation to the roll 10, adjusting-screws 28 are employed, said screws being threaded in the outer ends of the lugs 26 and impinging against the scraper 20. The adjustment of the scraper through the medium of these screws is obvious.

In the operation of the herein-described machine the cereal after being properly prepared by boiling, steaming, or soaking and brought to the proper constituency, which latter is determined by the results at the machine, is fed into the rolls through the medium of a tube or hopper or by any other suitable form of feeding device. The rolls 4 and 10, rotating toward each other, receive the cereals so fed, and by reason of their upper surfaces converging it is obvious that the cereal will pass in between the rolls. In the passage of the cereal the same is pressed into the grooves of the respective rolls, where it is formed into filaments, and in such form the cereal is delivered from the rolls. These filaments will be formed and delivered continuously, as the kernels of the grain will adhere to each other, and they are acted upon by the pressure due to the convergence of the roll-surfaces. The flanges 18 effectually act as guides for the rolls, so that there is no loss of cereal at the ends of the rolls. In the passage of the cereal through the rolls the ribs 17 shear or cut the same in contradistinction to crushing or mashing the cereal, and consequently but a minimum of power is required for operating the rolls. After leaving the rolls the product may be taken up by any suitable form of conveyer or deposited in suitable receptacles for the purpose. The roll 10 may be readily adjusted toward or away from the roll 4, thus decreasing or increasing the space in said rolls, which adjustment is effected by varying the position of the swinging support 7.

Having thus described the invention, what is claimed as new, and desired to be secured by Letters Patent, is—

1. In a machine for preparing cereals, a frame, a stationary roll mounted in said frame, a scraper carried by the frame and cooperating with the stationary roll to strip the cereal therefrom, a support pivoted in the frame, a roll journaled in said support and cooperating with the fixed roll, a scraper carried by said support and coöperating with the movable roll to strip the cereal therefrom, and means for adjusting the position of the movable roll relatively to the stationary roll.

2. In a machine for preparing cereals, a frame, a stationary roll mounted in said frame, a scraper carried by the frame and cooperating with the stationary roll to strip the cereal therefrom, a support pivoted in the frame, a roll journaled in said support and cooperating with the fixed roll, a scraper carried by said support and coöperating with the movable roll to strip the cereal therefrom, and screws carried by the frame for adjusting the position of the movable roll relatively to the stationary roll.

3. In a machine for preparing cereals, a frame, a roll mounted in stationary bearings in said frame, outwardly-projecting lugs carried by the frame, a scraper carried by said lugs and coöperating with said roll to strip the cereal therefrom, means for adjusting the scraper on said lugs relatively to said roll, a support pivoted in the frame, a roll journaled in said support and coöperating with the first-mentioned roll, outwardly-projecting lugs carried by said support, a scraper carried by said lugs and coöperating with the movable roll to strip the cereal therefrom, and means for adjusting the scraper on said lugs relatively to said movable roll.

4. In a machine for preparing cereals, a frame, a roll mounted in stationary bearings in said frame, outwardly-projecting lugs carried by the frame, a scraper carried by said lugs and coöperating with said roll to strip the cereal therefrom, screws carried by said lugs for adjusting the scraper thereon relatively to said roll, a support pivoted in the frame, a roll journaled in said support and cooperating with the first-mentioned roll, outwardly-projecting lugs carried by said support, a scraper carried by said lugs and coöperating with the movable roll to strip the cereal therefrom, and screws carried by said lugs for adjusting the scraper thereon relatively to said movable roll.

5. In a machine for preparing cereals, a frame, a roll mounted in stationary bearings in said frame, outwardly-projecting lugs carried by the frame, a scraper carried by said lugs and coöperating with said roll to strip the cereal therefrom, screws carried by said lugs for adjusting the scraper thereon relatively to said roll, a support pivoted in the frame, a roll journaled in said support and cooperating with the first-mentioned roll, outwardly-projecting lugs carried by said support, a scraper carried by said lugs and coöperating with the movable roll to strip the cereal therefrom, screws carried by said lugs for adjusting the scraper thereon relatively to said movable roll, and means for adjusting the position of the movable roll relatively to the stationary roll.

In testimony whereof I affix my signature in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

RALPH E. VALENTINE, OF BATTLE CREEK, MICHIGAN, ASSIGNOR TO KELLOGG TOASTED CORN FLAKE CO., OF BATTLE CREEK, MICHIGAN.

MACHINE FOR MAKING BISCUITS OF SHREDDED CEREAL.

1,102,614. Specification of Letters Patent. Patented July 7, 1914.

Application filed January 12, 1914. Serial No. 811,800.

To all whom it may concern:

Be it known that I, RALPH E. VALENTINE, a citizen of the United States, residing at Battle Creek, Michigan, have invented certain new and useful Improvements in Machines for Making Biscuit of Shredded Cereal, of which the following is a specification.

This invention relates to a new and improved machine for making biscuit of shredded cereal.

The objects of this invention are: First, to provide a machine for making shredded cereal biscuit which delivers layers of the shredded material to the baking pans and molds, and forces the covers thereon. Second, to provide in such a machine an improved automatic device for forcing the covers on the baking pans. Third, to provide in a machine of the type described, improved means for molding the biscuits whereby they are formed without waste. Fourth, to provide in a machine of the type described, means for preventing the operation of the molding means, when the pans and molds passing through the machine are not properly covered.

Further objects, and objects relating to details and economies of construction and operation will definitely appear from the detailed description to follow.

I accomplish the objects of my invention by the devices and means described in the following specification.

The invention is clearly defined and pointed out in the claims.

A structure which is a preferred embodiment of my invention is clearly illustrated in the accompanying drawing forming a part of this specification, in which:

Figure I is a side elevation of the machine, parts thereof being broken away. Fig. II is a sectional view on the line 2—2 of Fig. I, showing in detail one set of the shredding rolls and its connection with the motor. Fig. III is a sectional view on the line 3—3 of Fig. II, showing in detail the connection of a set of shredding rolls with the motor. Fig. IV is a sectional view on the line 4—4 of Fig. III. Fig. V is a top plan view of a set of shredding rolls, the chutes delivering to said rolls being omitted. Fig. VI is a sectional view on lines 6—6 of Figs. II and V, showing the shredding rolls in further detail. Fig. VII is a sectional view on the line 7—7 of Fig. VI, showing the engagement of the smooth and grooved rolls in detail. Fig. VII[A] is a sectional view showing both rolls grooved in accordance with the modified form illustrated in my Patent No. 831,909, of September 23, 1906, the same being sectional on line corresponding to the view of Fig. VII. Fig. VIII is a perspective view of the rear end of the machine. Fig. IX is a top plan view of the rear of the machine, the conveying belt and the guide track therefor being omitted. Fig. X is a sectional view on the line 10—10 of Fig. IX, showing in detail the cam wheel actuating the pitman rod. Fig. XI is a perspective view of the pneumatic device for forcing the covers on the baking pans. Fig. XII is a longitudinal sectional view through said pneumatic device taken on the line 12—12 of Fig. XIII. Fig. XIII is a transverse sectional view taken on the line 13—13 of Fig. XII. Fig. XIV is a sectional view on the line 14—14 of Fig. XIII, showing in detail the connection of the valve operating shaft. Fig. XV is a top plan view of a portion of the conveying belt. Fig. XVI is a view in side elevation of a portion of said belt. Fig. XVII is a sectional view on the line 17—17 of Fig. XIII, showing in detail the slide valve controlling the compressed air supply and the means for operating the same. Fig. XVIII is a perspective view of a baking pan and molds with the cover applied thereto. Fig. XIX is a sectional view through said baking pan on the line 19—19 of Fig. XVIII.

In the drawing, similar reference characters refer to similar parts throughout the several views and the sectional views are taken looking in the direction of the little arrows at the ends of the section lines.

Considering the numbered parts of the drawing, 1—1 are the frame members, which are supported on the base members 2—2 provided at suitable intervals. The machine is provided with a number of sets of shredding rolls, and as each set of rolls is identical, a description of one will suffice.

3—3 are supporting members secured to the top of the frame members 1—1, and having journaled therein the shaft 4 to

which the smooth roll 5 is secured. Gear 6 is secured on the outer end of the shaft 4. Links 7 are pivoted at 8 to the supporting members 3—3, and the shaft 9 is journaled in the upper ends of said links, and has secured thereto the grooved roll 10 which has a plurality of grooves 10', as shown in Fig. VII. Shaft 9 carries on its outer end the gear 11 which is in mesh with the gear 6. Set screws 12 are threaded into the upper part of the supporting members 3 and engage the tops of links 7 so as to regulate the engagement of the smooth and grooved rolls. Bracket 13 is secured to the supporting members 3 and carries the scraper 14 engaging the smooth roll 5, and held in adjusted position by means of the set screw 15. Set screw 16 is mounted in the upturned outer end of the bracket 14 and serves to regulate the engagement of the scraper with the smooth roll 5. The links 7 are provided with a similar bracket 17 carrying a scraper provided with a plurality of teeth 18 engaging in the grooves of the roll 10. This scraper is adjusted relative to the rolls by means of the set screw 20 carried by the outer upturned end of the bracket 17 and the scraper is held in adjusted position by means of the set screw 21.

To the inner end of the shaft 9 is secured the gear 22 which is in mesh with a gear 23, splined to the shaft 24, which is journaled in the supporting members 3. On the inner end of shaft 24 is mounted the gear 25 which is in mesh with a gear 26 driven by a motor 27. A disk 28 is splined to the inner end of the shaft 24 and carries a pin 29 engaging in the slot 30 in the gear 25. The motor 27 rests on a bracket 31, supported by the frame member 1 and a standard 32.

The material, preferably prepared in accordance with the process set forth in the application of John L. Kellogg, Serial No. 720,471, filed September 16, 1912, is fed to the shredding rolls through the chutes 23.

39 is a shaft suitably journaled on the frame members 1 and carries on its inner end the pulley 34 which is connected by the belt 35 with a motor 36, resting on a bracket 37, supported by the standard 38 and the frame 1. Shaft 39 carries on its outer end the gear 40 in mesh with the gear 41 on shaft 42, which is suitably journaled in the frame members. Gear 43 is secured to the center of shaft 42 and meshes with a gear 44 carried by shaft 45 which is also suitably journaled in the frame members 1. Shaft 45 carries on its inner end the cam wheel 46. Gear 44 is in mesh with a gear 47 on shaft 48, which is journaled in the frame members 1, and carries the sprocket wheels 49.

On the front end of the machine are provided the sprocket wheels 51, carried on a shaft 52, having its ends journaled in blocks 53 which are disposed in grooved ways 54, secured to the sides of the frame members 1. Adjusting screws 56 are disposed in lugs projecting from the frame members and engage the blocks 53. By this means the shaft 52 can be moved back and forth so as to regulate the tension on the carrying belt.

The conveying belt 50 passes over the sprocket wheels 51 and 49 and carries the pans and molds, to be filled with the shredded cereal, through the machine. This conveyer is made up of the cross members 57 provided at either end with the upstanding members 58 which are connected together by means of the pins 59. The outer ends of said pins are connected together by means of the links 60, and rollers 61 are journaled on said pins between the links 60 and the upstanding members 58, said rollers also serving to keep the links 60 spaced from the upstanding members 58.

Rock shaft 61 is journaled in a bearing 62 secured to the under side of the frame members 1, and upon the ends of this rock shaft are secured the lever arms 63. The upper ends of these lever arms are connected by means of a rod 64, to the center of which is adjustably secured the pitman rod 65. To the inner lever arm 63 the pitman 66 is connected. To the other end of the pitman rod 66 is secured the bar 67, provided with slot 68, through which the shaft 45 passes. The outer end of the bar 67 carries a pin 69 which engages in the cam slot 70 provided in the cam wheel 46. It will thus be seen, that for every revolution of the shaft 45 there is a complete reciprocation of the pitman 66, and this motion is multiplied and communicated to the pitman rod 65 by means of the lever arms 63. The pitman rod 65 is connected to the rear end of the pneumatic device, which I will now describe.

The device for pressing the covers on the baking pans comprises, the base plate 71, provided with the side members 72, on which are journaled the rollers 73 which run on the tracks 75, supported by the brackets 74 on the frame members 1. In the central part of the base plate is provided the housing 76 in which is the piston chamber 77. From the top of the housing 76 is supported the standard 78. The piston 79 moves in the piston chamber 77 and is provided with the piston rod 80, the upper end of which has a bearing 81 in the standard 78. A collar 82 is secured to the upper end of the piston rod to limit its downward movement. Housing 76 is also provided with an air passage 83 communicating with the bottom of the piston chamber and compressed air is supplied to said air passage through the pipe 84 and valve 85.

Links 86 are pivoted on the rods 87 secured at the ends of said base plate, and the upper ends of these links are pivoted on the rods 88 carried by the forked outer

ends of the levers 90. The inner ends of these levers are connected by means of links 91 with a collar 92 fitting around the piston rod 80 and resting on a shoulder 93 thereon. The levers 90 are provided with bosses 94 through which pass the rods 95, to the outer ends of which the rods 96 are secured. Rods 96 pass through lugs 97 provided on the side members 72 of the base plate and through lugs 98 provided on the side members 99 of the presser plate 100. The presser plate is held in position by means of the nuts 101 on the threaded lower ends of said rods 96.

In a supporting bracket 102, which is integral with one of the side members 72, is journaled a shaft 103 which carries on its inner end the turning plug 104 in the valve 85. This turning plug is provided with a pair of oppositely disposed slots 105, forming the narrowed portion 106 of said turning plug, which serves to open and close the valve 85'. On the outer end of said shaft 103 is secured the ratchet wheel 107, provided with the teeth 108. Pawls 109 are pivoted at 110 to the gear 113 which is journaled on the shaft 103. These pawls 109 engage the ratchet teeth 108 and are held resiliently in engagement therewith by means of the spring 111 secured at its ends to the pins 112 on the pawls 109. Gear 113 is in mesh with a rack 114 provided on the outer track 75. As a result the gear 113 will be given a rotary motion as the pneumatic device is moved back and forth. Pitman rod 65 is connected to the presser plate 100 at 115.

Compressed air is admitted to the valve 85 through the pipe 116, which is provided with a pet cock 117, and is connected with the main supply pipe 118' by the slide valve 118. The slide valve is provided with a valve rod 119 provided with a port 120 therethrough, through which the compressed air passes when said port is in alinement with the passage through the pipes 118' and 116. To the lower end of the valve rod 119 is secured the bar 121 which is fastened to the plate 122. Plate 122 is slidably connected to the side member 72 by means of screws 123 which pass through the slots 124 in plate 122. The ends of said plate are rounded at 125 so that they will ride up on the pin 138 carried by the covers of the baking pans. Spring 126 is interposed between the bar 121 and the base of the slide valve 118 and serves to hold the plate 122 normally down so that port 120 is out of alinement with the passage through the pipes 118' and 116. By this means the flow of compressed air is cut off except when the covered baking pans are passing through the machine.

127 is the exhaust head for permitting the escapement of air from the pistor chamber 77.

128 is an oil cup provided on the supply pipe 118' for oiling the valves.

Tracks 129 are suitably supported from brackets on the frame members 1 and upon these tracks the rollers 61 of the conveyer run as the conveyer passes through the machine. Tracks 130 are also provided, which are secured to the frame members 1 and upon which the rollers 61 of the conveyer travel as the belt is returning to front of the machine. The ends of these tracks are downwardly curved somewhat, as at 131, so that the conveyer will run upon them smoothly.

132 is a baking pan provided with the biscuit molds 133 secured thereto. 134 is the cover for said baking pan to which the molds are secured and which is provided with the upturned flanges 136 fitting snugly inside the upturned flanges 137 of the baking pan. The cover flanges are provided with pins 138 fitting in the notches 139 provided in the flanges of the pan. These pans are fully illustrated and described in my application, No. 673,214, filed January 24, 1912.

From the description of the parts given above the operation of this machine should be very readily understood. The material, which has preferably been prepared in accordance with the process set forth in the application of John L. Kellogg, No. 720,471, referred to above, is delivered by the chutes 33 to the shredding rolls 5 and 10. These rolls are geared to turn in opposite directions and act as squeeze rolls. Due to the grooved roll 10 the material is delivered from the rolls into the pans below, which are carried by the conveyer belt, in a shredded condition. Each set of shredding rolls delivers a layer of shredded material into the baking pan, and as many sets of rolls can be provided as desired, depending upon the number of layers of shreds which it is desired to incorporate into the biscuit. Each set of shredding rolls is driven by a separate electric motor. The scrapers 14 and 18 serve to keep the rolls clean. The baking pans are placed upon the conveyer before it reaches the first set of shredding rolls. After the pans carried by the conveyer leave the last set of shredding rolls, covers are placed thereon with the pins 138 engaging in the notches 139 of the pans. The sprocket wheels which move the conveyer are driven by the motor 36 which is connected to the pulley 34, the latter being connected by a train of gears with the sprocket wheels 49. The train of gears also serves to drive the shaft 45 carrying the cam wheel 46 and, due to the engagement of the pin 69 in the cam slot 70 carried by said cam wheel, a reciprocating movement is imparted to the pitman rod 66. This reciprocating movement is communicated to the

pitman rod 65 and multiplied by means of the lever arm 63. In this manner, the device for pressing the covers on the baking pans is given a reciprocating movement by the motor 36, the pulley 84 and the train of gears connected thereto. The gears are so proportioned and the pitman rod 66 is connected to the lever arm 63 at such a point that the device for pressing the covers on the pans is moved at the same rate as the conveyer which carries the pans through the machine. Due to the engagement of the gear 113 with the rack 114, carried by the fixed track 75, the gear 113 is given a rotary motion as the device is moved back and forth. When the device is being moved toward the front of the machine, that is, in a direction opposite to the movement of the conveyer, the pawls 109 ride over the surface of the ratchet wheel and no motion is communicated to the shaft 103. However, when the device is moved in the same direction as the moving conveyer, the pawls 109 engage the ratchet teeth 108 and turn the shaft 103 with the gear 113. This turns the plug 104 so as to admit air from the compressed air supply through the air passage 83 into the piston chamber. This lifts the piston 79 and forces upwardly the inner ends on the ends of links 86. The result of this movement is to lift the presser plate 100 by means of the rods 96 and force the same against the bottom of the conveyer belt so as to clamp the baking pans and their covers between the base plate 72, and the presser plate 100. This securely clamps the covers upon the pans. A further movement of the device causes the gear 113 to rotate so as to turn the plug and open the passage from the pipe 84 to the exhaust head 127 so as to relieve the pressure in the piston chamber and allow the piston 79 to drop. The weight of the presser plate 100 will cause it to drop and aid in returning the parts to their normal position. The slide valve 118 is provided so that the compressed air supply is automatically cut off except when covered baking pans are passing through the machine. This is due to the fact that the bottom edge of the plate 122 engages the pins 138 on the pan covers and lifts the valve rod 119 so as to bring the port 120 into alinement and admit compressed air to the pipe 116. If no pans are passing through the machine, or the pans which are passing through the machine do not have covers thereon, the plate 122 will not be lifted and the air will be cut off.

In Fig. I the device for pressing the covers on the baking pans is shown at the beginning of its stroke. As the device is drawn forward by the pitman rod 65 in time with the moving belt, the valve 85 opens so as to admit compressed air to the piston chamber to lift the piston. This lifts the presser plate against the bottom of the conveyer and clamps the covers on the pans. During the last part of this movement the valve is opened so as to relieve the pressure in the piston chamber and allow the parts to return to their normal position. When the device is ready to start on its return movement, the presser plate is free from the belt and the pans. As the device is moved backward to its first position, the pawls 109 ride on the surface of the ratchet wheel 107 and hence the shaft 103 is not rotated, and the valve is left in the position in which it was at the end of the forward stroke of the device. The device moves backward until it is in its original position when the operation is repeated. It will thus be seen that at each revolution of the cam wheel the device presses the cover on one baking pan and moves back into position to receive a new pan.

It is evident that while I have shown and described electric motors for driving the shredding rolls and the conveyer connected thereto, that other means of driving these parts might be used. Furthermore, while I have described this machine as adapted to treat material prepared in accordance with the process set forth in the application of John L. Kellogg, above referred to, it is evident that this machine may be used for making biscuits from any material requiring a similar treatment. The baking pans are delivered from the rear of the machine and are then placed in the oven for baking.

I show in Fig. VII[A] a modification of the grooving of the rolls which is available for use in a machine of this kind, in which both sets of rolls are grooved in accordance with my Patent No. 831,909, of Sept. 25, 1906.

I am aware that the particular embodiment here set forth, is susceptible of considerable variation without departing from the spirit of my invention, and I, therefore, do not wish to be restricted to the same. However, I have found that in actual practice this embodiment is to be preferred, and I desire to claim the same specifically as well as broadly as indicated by the appended claims.

Having thus described my invention, what I claim as new and desire to secure by Letters Patent, is:—

1. In a machine of the class described, the combination of a frame, sprocket wheels suitably journaled thereon, a conveyer belt carried by said sprocket wheels and adapted to carry baking pans through the machine, means for driving said sprocket wheels, a plurality of sets of shredding rolls journaled on said frame and adapted to deliver layers of shredded material to said baking pans, independent means for driving each set of shredding rolls, a device for pressing covers on said pans, a cam wheel, means for

driving the same operatively connected with said sprocket driving means, and a pitman rod connected to said device for reciprocating the same, reciprocatory motion being communicated to said pitman rod by means of the cam wheel, all coacting as specified.

2. In a machine of the class described, the combination of a frame, sprocket wheels suitably journaled thereon, a conveyer belt carried by said sprocket wheels and adapted to carry baking pans through the machine, means for driving said sprocket wheels, a plurality of sets of shredding rolls journaled on said frame and adapted to deliver layers of shredded material to said baking pans, means for driving said shredding rolls, a device for pressing covers on said pans, a cam wheel, means for driving the same, and a pitman rod connected to said device for reciprocating the same, reciprocatory motion being communicated to said pitman rod by the cam wheel, all coacting substantially as described for the purpose specified.

3. In a machine of the class described, the combination of a frame, sprocket wheels suitably journaled thereon, a conveyer belt carried by said sprocket wheels and adapted to carry baking pans through the machine, means for driving said sprocket wheels, a plurality of sets of shredding rolls journaled on said frame and adapted to deliver layers of shredded material to said baking pans, means for driving said shredding rolls, a device for pressing covers on said pans, and means for reciprocating said device, all coacting substantially as described for the purpose specified.

4. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt and provided with side members, rollers journaled on said side members, tracks secured to said frame on which said rollers travel, a housing provided on said base plate, a piston chamber in said housing, an air passage communicating with the bottom of said piston chamber, a piston reciprocating in said piston chamber and provided with a piston rod, a collar slidably mounted on said piston rod and resting on a shoulder thereon, links pivoted to the ends of said base plate, levers having forked outer ends pivoted to the upper ends of said links, the inner ends of said levers being pivotally connected to said collar, a presser plate disposed beneath said conveyer belt, rods pivotally connected to said levers and secured to said presser plate, lugs on the side members of said base plate through which said rods pass, a valve controlled by the forward movement of said device, for admitting compressed air to said air passage, means, adapted to be actuated by the covers on the baking pans, for admitting compressed air to said valve, and means for reciprocating said device.

5. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said baking pans, comprising a base plate carried above said conveyer belt and provided with side members, a housing provided on said base plate, a piston chamber in said housing, an air passage communicating with the bottom of said piston chamber, a piston reciprocating in said piston chamber and provided with a piston rod, a collar slidably mounted on said piston rod and resting on a shoulder thereon, links pivoted to the ends of said base plate, levers having forked outer ends pivoted to the upper ends of said links, the inner ends of said levers being pivotally connected to said collar, a presser plate disposed beneath said conveyer belt, rods pivotally connected to said levers and secured to said presser plate, lugs on the side members of said base plate through which said rods pass, a valve controlled by the forward movement of said device for admitting compressed air to said air passage, means, adapted to be actuated by the covers on said baking pans, for admitting compressed air to said valve and means for reciprocating said device, all coacting substantially as described for the purpose specified.

6. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt and provided with side members, a housing provided on said base plate, a piston chamber in said housing, an air passage communicating with the bottom of said piston chamber, a piston reciprocating in said piston chamber and provided with a piston rod, links pivoted to the ends of said base plate, levers having forked outer ends pivoted to the upper ends of said links, the inner ends of said levers being pivotally connected to said piston rod, a presser plate disposed beneath said conveyer belt, rods pivotally connected to said lever and secured to said presser plate, lugs on the side members of said base plate through which said rods pass, a valve controlled by the forward movement of said device for admitting compressed air to said air passage, means, adapted to be actuated by the covers on said baking pans, for admitting compressed air to said valve and means for reciprocating said device, all coacting substantially as described for the purpose specified.

7. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers

on said pans, comprising a base plate carried above said conveyer belt, a housing provided on said base plate, a piston chamber in said housing, an air passage communicating with the bottom of said piston chamber, a piston reciprocating in said piston chamber and provided with a piston rod, links pivoted to the ends of said base plate, levers having forked outer ends pivoted to the upper ends of said links, the inner ends of said levers being pivotally connected to said piston rod, a presser plate disposed beneath said conveyer belt, means connecting said presser plate with said levers, a valve controlled by the forward movement of said device for admitting compressed air to said air passage, means, adapted to be actuated by the covers on said baking pans, for admitting compressed air to said valve, and means for reciprocating said device, all coacting substantially as described for the purpose specified.

8. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing provided on said base plate, a piston chamber in said housing, an air passage communicating with the bottom of said piston chamber, a piston reciprocating in said piston chamber, and provided with a piston rod, levers fulcrumed on the ends of said base plate, the inner ends of said levers being pivotally connected to said piston rod, a presser plate disposed beneath said conveyer belt, means connecting said levers with said presser plate, a valve controlled by the forward movement of said device for admitting compressed air to said air passage, means, adapted to be actuated by the covers on said baking pans, for admitting compressed air to said valve, and means for reciprocating said device, all coacting substantially as described for the purpose specified.

9. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, levers fulcrumed on the ends of said base plate, a presser plate disposed beneath said conveyer belt, means connecting said levers with said presser plate, means controlled by the forward movement of said device and the covers on said baking pans for lifting the inner ends of said levers, and means for reciprocating said device, all coacting substantially as described for the purpose specified.

10. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing on said base plate, a piston chamber in said housing, a piston reciprocating in said piston chamber, a presser plate disposed beneath said conveyer belt, means operated by said piston for lifting said presser plate against said conveyer belt, a valve controlled by the forward movement of said device for admitting compressed air to said piston chamber, means, adapted to be actuated by the covers on said pans, for admitting compressed air to said valve and means for reciprocating said device, all coacting substantially as described for the purpose specified.

11. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing on said base plate, a piston chamber in said housing, a presser plate disposed beneath said conveyer belt, means operated by said piston for lifting said presser plate against said conveyer belt, a valve for admitting compressed air to said piston chamber, a valve operating shaft suitably journaled on said base plate, a turning plug operating in said valve and carried on one end of said shaft, a ratchet wheel on the other end of said shaft, a gear rotatably mounted on said shaft and in mesh with a rack carried by the frame, pawls pivoted on said gear and engaging ratchet teeth on said ratchet wheel, a spring resiliently holding said pawls in engagement with said ratchet wheel, means adapted to be actuated by the covers on said baking pans, for admitting compressed air to said valve, and means for reciprocating said device, all coacting substantially as described for the purpose specified.

12. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing on said base plate, a piston chamber in said housing, a piston reciprocating in said piston chamber, a presser plate disposed beneath said conveyer belt, means operated by said piston for lifting said presser plate against said conveyer belt, a valve for admitting compressed air to said piston chamber, a valve operating shaft suitably journaled on said base plate, a turning plug operating in said valve and carried on one end of said shaft, a ratchet wheel on the other end of said shaft, a gear rotatably mounted on said shaft and in mesh with a rack carried by the frame, means operatively connecting said ratchet wheel with said gear

during the forward movement of the device, means, adapted to be actuated by the covers on the baking pans, for admitting compressed air to said valve and means for reciprocating said device, all coacting substantially as described for the purpose specified.

13. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing on said base plate, a piston chamber in said housing, a piston reciprocating in said piston chamber, a presser plate disposed beneath said conveyer belt, means operated by said piston for lifting said presser plate against said conveyer belt, a valve for admitting compressed air to said piston chamber, a suitably journaled valve operating shaft, a turning plug operating in said valve and carried on one end of said shaft, means whereby the forward movement of the device rotates said shaft, means, adapted to be actuated by the covers on said baking pans, for admitting compressed air to said valve, and means for reciprocating said device, all coacting substantially as described for the purpose specified.

14. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing on said base plate, a piston chamber in said housing, a piston reciprocating in said piston chamber, a presser plate disposed beneath said conveyer belt, means operated by said piston for lifting said presser plate against said conveyer belt, a valve for admitting compressed air to said piston chamber, means whereby the forward movement of the device opens and closes said valve, means, adapted to be actuated by the covers on said baking pans, for admitting compressed air to said valve, and means for reciprocating said device, all coacting substantially as described for the purpose specified.

15. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing on said base plate, a piston chamber in said housing, a piston reciprocating in said piston chamber, a presser plate disposed beneath said conveyer belt, means operated by said piston for lifting said presser plate against said conveyer belt, a valve for admitting compressed air to said piston chamber, means whereby the forward movement of the device opens and closes said valve, a pipe admitting compressed air to said valve, a slide valve in said pipe comprising a valve rod, a plate secured to the lower end of said rod and adapted to be engaged by pins on the pan covers to lift said rod, a port in said valve rod adapted to be brought into alinement with the passage through said pipe when said plate is lifted, a spring normally holding said rod with the port out of alinement with said passage, and means for reciprocating the device, all coacting substantially as described, for the purpose specified.

16. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing on said base plate, a piston chamber in said housing, a piston reciprocating in said piston chamber, a presser plate disposed beneath said conveyer belt, means operated by said piston for lifting said presser plate against said conveyer belt, a valve admitting compressed air to said piston chamber, means whereby the forward movement of the device opens and closes said valve, a pipe admitting compressed air to said valve, a slide valve in said pipe comprising a valve rod, means on the lower end of said valve rod adapted to be engaged by pins on the pan covers to lift said rod, a port in said valve rod adapted to be brought into alinement with the passage through said pipe when said plate is lifted, and means for reciprocating said device, all coacting substantially as described for the purpose specified.

17. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing on said base plate, a piston chamber in said housing, a piston reciprocating in said piston chamber, a presser plate disposed beneath said conveyer belt, means operated by said piston for lifting said presser plate against said conveyer belt, a valve admitting compressed air to said piston chamber, means, whereby the forward movement of the device, opens and closes said valve, means, adapted to be actuated by the covers on said baking pans for admitting compressed air to said valve, a pitman rod connected to said presser plate, lever arms journaled on said frame and connected to the other end of said pitman rod, a second pitman rod connected to one of said lever arms, a slotted bar on the other end of said pitman rod, a pin on the outer end of said bar, a cam wheel having a cam slot therein in which said pin engages, a shaft

on which said cam wheel is mounted, said shaft passing through the slot in said bar and means for driving said shaft, all coacting substantially as described for the purpose specified.

18. In a machine of the class described, the combination of a frame, a conveyer belt adapted to carry baking pans through the machine, and a device for pressing covers on said pans, comprising a base plate carried above said conveyer belt, a housing on said base plate, a piston chamber in said housing, a piston reciprocating in said piston chamber, a presser plate disposed beneath said conveyer belt, means operated by said piston for lifting said presser plate against said conveyer belt, a valve admitting compressed air to said piston chamber, means, whereby the forward movement of the device opens and closes said valve, means adapted to be actuated by the covers on said baking pans for admitting compressed air to said valve, a pitman rod connected to said presser plate, lever arms journaled on said frame and connected to the other end of said pitman rod, a second pitman rod connected to one of said lever arms, means for reciprocating said second pitman rod, all coacting substantially as described for the purpose specified.

In witness whereof, I have hereunto set my hand and seal in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

JOHN L. KELLOGG, OF BATTLE CREEK, MICHIGAN, ASSIGNOR TO KELLOGG TOASTED CORN FLAKE CO., OF BATTLE CREEK, MICHIGAN.

PROCESS OF PREPARING SHREDDED CEREAL PRODUCTS.

1,159,045. Specification of Letters Patent. Patented Nov. 2, 1915.

No Drawing. Application filed September 16, 1913. Serial No. 790,471.

To all whom it may concern:

Be it known that I, JOHN L. KELLOGG, a citizen of the United States, residing at Battle Creek, Michigan, have invented certain new and useful Improvements in Process of Preparing Shredded Cereal Products, of which the following is a specification.

This invention relates to improvements in shredded cereal-products and the process of preparing same.

The objects of this invention are: First, to provide a superior shredded wheat or cereal food product in which the product has been thoroughly and completely cooked and aerated. Second, to provide an improved process of thus treating wheat or similar cereal.

My invention relates to and is particularly adapted for the treatment of whole wheat, but other grains may be similarly treated.

In the preferred method and process I take whole wheat and grind the same on a French bur stone to crush and not cut and destroy the texture. To a six hundred pound batch of such whole wheat unbolted flour, I add two hundred and fifty pounds of water in which I have previously thoroughly dissolved six per cent. of sugar and two per cent. of salt. I then mix the flour in this water with a rotary mixer very thoroughly for a period of ten minutes, or thereabout, until the mass is a very thick, heavy dough. This dough is delivered from the mixer and rolled out into a thick slab about two inches thick, and preferably into a layer about twenty-four inches wide and twelve inches long, the material passing under a suitable roller for the purpose. This heavy dough is then placed in covered pans and put in a steam retort, where it is subjected to steam heat for a period of about one and one half hours at fifteen pounds' pressure, which gives a temperature of about 250 degrees Fahr. The material thus cooked is taken from the pans and placed in wire racks where it is dried for a period of twenty-four hours in the open air. This dried and cooked dough is then passed through a rotary swing hammer breaker, which breaks the material up into cubes about one inch square. These lumps are then passed through a breaker or grinder which reduces to dimensions of about the size of a split pea.

The material thus reduced to the size of a pea is passed through a Hess drier, or similar drier, and a current of dry air is delivered through the same until the material is thoroughly air dried. The material in the air dried condition is then passed through shredding rollers and delivered in layers to suitable bake pans and is cut up into suitable biscuits, or any form that may be desired and suitably compressed and passed in the baking pans, suitably covered, to a suitable oven where the same is baked for thirty minutes at a temperature of from 450° to 500° Fahr. This thoroughly bakes the material, and it is then passed from the baking oven, removed from the bake pans and passed through a drying oven, where, for a period of one hour, a current of air at a temperature of from 250° to 300° Fahr. is caused to circulate over and through the biscuits or shredded material thus formed. The biscuit, when thus thoroughly cooked and dried, has much the appearance of the ordinary shredded wheat biscuit, the difference being that the material is thoroughly cooked and converted to dextrin, making a very digestible aerated bread or food, the other constituents not being destroyed but thoroughly cooked.

I desire to state that this process can be considerably varied. It is a requirement that the flour be whole wheat or whole grain flour, and that the same be ground by crushing, as distinguished from a cutting of the texture of the grain. The grain should be thoroughly treated and mixed and steamed, and thereafter reduced to granules, shredded, baked and dried in order to secure the best results. A fairly complete conversion of the starchy material to dextrin is accomplished without injury to the food values of the other constituents of the grain, and the whole is aerated and light and palatable.

Having thus described my invention, what I claim as new and desire to secure by Letters Patent is:

1. The process of preparing a shredded biscuit consisting in first grinding the grain by a crushing action, second, cooking the same in a suitable steam retort at about fifteen pounds' pressure, air drying the steamed mass for substantially twenty-four hours, reducing the dried mass to granules, air drying the granules in a current of air, subjecting the granules to the action of

shredding rollers, baking the material in covered pans in an oven at a temperature of from 400° to 500° Fahr., and removing from the pans and drying the same in an air current at a temperature of 250° to 300° Fahr.

2. The process of preparing a shredded biscuit consisting in first grinding the grain by a crushing action, second, cooking the same in a suitable steam retort at about fifteen pounds' pressure, air drying the steamed mass, reducing the dried mass to granules, air drying the granules, subjecting the granules to the action of shredding rollers, baking the material in covered pans in an oven at a temperature of from 400° to 500° Fahr., and removing from the pans and drying the same at a temperature of 250° to 300° Fahr.

In witness whereof, I have hereunto set my hand and seal in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

JOHN LEONARD KELLOGG, OF BATTLE CREEK, MICHIGAN, ASSIGNOR TO KELLOGG TOASTED CORN FLAKE COMPANY, OF BATTLE CREEK, MICHIGAN, A CORPORATION OF MICHIGAN.

MANUFACTURE OF BRAN FOOD.

1,189,130. Specification of Letters Patent. Patented June 27, 1916.

No Drawing. Application filed December 18, 1915. Serial No. 67,504.

To all whom it may concern:

Be it known that I, JOHN LEONARD KELLOGG, a citizen of the United States, residing in Battle Creek, in the county of Calhoun and State of Michigan, have invented a new and useful Improvement in the Manufacture of Bran Food, of which the following is a specification.

My invention relates to the manufacture of laxative food products from bran wholly or in combination with cereals or other healthful materials, and has for its principal object to provide bran food products of this nature in the form of loose shreds and also in the form of a shredded biscuit, which will be more digestible, palatable and appetizing than the bran foods commonly sold, and which can be eaten alone or in combination with any other cereal food, or with sugar and cream or other food elements like other cereal foods.

My invention consists of certain improvements in the process of preparing bran food products and also in bran food products, and in order that my invention may be fully understood, I shall first set forth in detail the mode in which I at present prefer to carry my invention into practice and then particularly point out in the claims the novel features of the improved process and product.

In carrying my invention into practice, I at present take the desired quantity of pure bran, preferably wheat bran, that has been thoroughly cleansed, thoroughly moisten the same and place it by preference in shallow pans. The pans I at present use are approximately 24 inches long by 12 inches wide and 6 inches deep. I then place the pans, by preference, in an ordinary steam retort and cook the bran at about 250° F. temperature for from thirty minutes to one hour.

Before or after the cooking process, I may mix with the bran any desired quantity from 5% to 50% of whole wheat or other gelatinous cereal flour or any other suitable starch-bearing material. After the bran, with or without the added starch-bearing material, is thus cooked, it is dried in the ordinary hot air drier, which leaves the cooked bran or mixture in a more or less lumpy condition. These lumps are then preferably pressed through a one-quarter inch wire mesh, so as to make the material into tiny lumps which may be about the size of a kernel of rice. These tiny lumps are then fed through shredding mills of the ordinary kind.

To make the product in the form of loose shreds, the shredding mills are preferably of such character as to make the separate shreds of varying curly and wavy ribbon-like form. To make the product in the form of biscuit, the shredding mills are of such a character as to make the separate shreds either in the same curly and wavy ribbon-like form, but preferably in the ordinary fine filamentary form.

In making the loose ribbon-like shreds, the elongated shreds are caught from the shredding mills, preferably on an ordinary conveyer belt and distributed into an ordinary flight oven, wherein they drop from one flight to another to the bottom where the shreds are finally toasted. These toasted bran shreds are then, by preference, broken into particles of crisp, short, curly and wavy ribbon-like form in which form the product is ready for the market, this form being shown in my pending application for patent filed May 17, 1915, Serial No. 28,586.

This product, owing to the described process of manufacture, is thoroughly cooked, is exceptionally palatable, digestible, appetizing and healthful, and owing to its attractive crisp, curly and wavy ribbon-like form has an exceptionally appetizing appearance.

In making the bran biscuit, the fine shreds, at present preferably used for this product, formed as above described by the shredding mills, are gathered, preferably on an endless belt and pressed into biscuit of any suitable form, which are baked in suitable ovens for about thirty minutes at a temperature of from about 450° to 500° F. A current of dried air is then by preference caused to circulate over and through the biscuits thus formed, thoroughly to dry the same, whereby the final product is formed ready for the market. These biscuits, owing to the described process of manufacture, possess an easy digestibility and are exceptionally palatable, appetizing and healthful.

It is evident that the process above described may be greatly varied in the charac-

ter of its performance and in the ingredients and appliances employed, without departing from the scope or spirit of my invention, which is defined by the following claims.

I claim as my invention:

1. A process of preparing a shredded bran food, during the performance of which the bran is moistened, cooked and dried, reduced to small particles, and the particles shredded and baked or toasted.

2. A process of preparing a shredded bran food, during the performance of which the bran is moistened, cooked and dried, and starch-bearing material added thereto, the mixture reduced to small particles, and the particles shredded and baked or toasted.

3. A process of preparing a shredded bran food, during the performance of which the bran is moistened, cooked and dried, and reduced to small particles, the small particles shredded into elongated ribbon-like shreds, and the ribbon-like shreds baked or toasted.

4. A process of preparing a shredded bran food, during the performance of which the bran is moistened, cooked and dried, and reduced to small particles, the small particles shredded, the shreds molded into biscuit form and the biscuits baked or toasted.

5. A shredded bran food consisting of a mass of separate shreds.

6. A shredded bran food consisting of a mass of separate curly shreds.

7. A shredded bran food consisting of a mass of separate wavy shreds.

8. A shredded bran food consisting of a mass of separate ribbon-like shreds.

9. A shredded bran biscuit consisting of separate shreds pressed together.

JOHN LEONARD KELLOGG.

UNITED STATES PATENT OFFICE.

JOHN L. KELLOGG, OF BATTLE CREEK, MICHIGAN, ASSIGNOR TO KELLOGG TOASTED CORN FLAKE COMPANY, OF BATTLE CREEK, MICHIGAN, A CORPORATION OF MICHIGAN.

MANUFACTURE OF SHREDDED-CEREAL BISCUIT.

1,197,297. Specification of Letters Patent. Patented Sept. 5, 1916.

No Drawing. Original application filed May 17, 1915, Serial No. 28,588. Divided and this application filed December 31, 1915. Serial No. 69,936.

To all whom it may concern:

Be it known that I, JOHN L. KELLOGG, a citizen of the United States, residing in Battle Creek, in the county of Calhoun and State of Michigan, have invented a new and useful Improvement in the Manufacture of Shredded-Cereal Biscuit, of which the following is a specification.

My invention relates to the manufacture of shredded cereal foods from grains, such as wheat, corn, oats, rye and malt, and has for its primary object to provide an improved method of introducing an artificial flavoring into the product, and to make a product having such improved flavoring, which has been thoroughly and completely cooked and aerated, and also having an exceptionally attractive and appetizing form and appearance.

Before my present invention shredded cereal foods such as shredded wheat and shredded wheat biscuit were usually manufactured from the grains without the use of flavoring, the grains being, in one process, boiled for about thirty (30) minutes or until partly cooked, allowed to temper for a few hours and then shredded. It was usually found impossible to cook any saccharine flavoring or salt into wheat, for example, without impairing the shredding qualities of the grain. Wheat, especially, has an outside coating of bran which is impossible to penetrate with a syrup, the syrup sticking to the outside of the berry. When the berry was shredded, it was found that the particles of wheat would not stick together and form a shred on account of the syrup producing an action which would not allow the carbo-hydrates of the grains to unite. I, therefore, conceived the idea of pulverizing the grain, such as wheat, corn, oats, rye or malt, into a fine flour, mixing therewith the flavoring material, such as sugar, malt extract, salt and water in sufficient quantities to give the flavor desired; mixing the whole into a stiff dough; and forming the same, by preference, into small individual slabs. These slabs were then cooked and dried and broken up into small particles. These particles were then in the preferred process air dried and placed in the shredding mills and reduced to shreds of, by preference, elongated, ribbon-like form. These elongated ribbon-like shreds from the shredding mills were cut up and pressed into biscuit form and baked in special ovens to form light biscuits consisting of the crisp, curly and wavy ribbon-like shreds interlaced and united.

In order that my invention may be fully understood, I shall first describe in detail the mode in which I carry the same into practice.

In the preparation of the ribbon shred cereal biscuit, I prefer first to pulverize the grain, which may be whole wheat, corn, oats, rye, malt or other suitable cereal, into a fine flour, preferably on a French bur stone so as to crush but not cut and destroy the texture. To, for example, six hundred pounds of such whole wheat unbolted flour, I add, by preference, two hundred and fifty pounds of water in which I have previously thoroughly dissolved six per cent. of sugar and two per cent. of salt. I then mix the flour in this solution with a rotary mixer very thoroughly for a period of about ten minutes until the mass is a thick, heavy dough. I then by preference break the dough through an ordinary dough breaker, and roll or mold it, preferably, into small individual slabs. In actual practice, I make these slabs about 12″ wide, 24″ long and 2″ or 3″ thick. These slabs are then cooked preferably by laying them in ordinary steel trays one on top of the other and placing the trays in an ordinary canner's steam retort and cooking them for about an hour and a half at about fifteen pounds steam pressure, which gives a temperature of about 250° F. After cooking, the slabs are by preference piled up in wire racks and allowed to dry in the atmosphere until quite dry. It generally takes from twenty-four to forty hours to accomplish this drying. These cooked and dried slabs are then, by preference, broken up by ordinary swing hammer mills into rough cubes about one inch square, and then by a breaker or a grinder into small particles about the size of a pea or grain of wheat. These particles are then, by preference, passed through a Hess drier or similar drier and a current of dry air delivered through the same until the material is deprived of all surplus moisture and reduced to the proper consistency for shredding. The dried particles are then placed, by preference, in shredding mills of the ordinary kind and shredded so as to form shreds of

elongated ribbon-like form. The elongated ribbon-like shreds, formed as above described by the shredding mills, are, by preference, gathered upon an endless belt from ten or more shreds, cut and pressed into biscuits and baked in suitable ovens for about thirty minutes at a temperature of from 450° to 500° F. A current of dried air is then, by preference, caused to circulate over and through the biscuits thus formed, thoroughly to dry the same, forming the final product, ready for the market. These biscuits owing to the attractive curly and wavy ribbon-like form of their loosely interlaced and united constituent shreds, present an exceptionally appetizing appearance to the eye and possess also the easy digestibility and a peculiarly palatable flavor imparted by this process of manufacture.

I claim as my invention:

1. A process of preparing a shredded cereal food biscuit, during the performance of which the cereal grain is pulverized and mixed with water to form a dough, the dough cooked, dried and broken into small particles, the particles shredded into elongated flat ribbons, the flat ribbons cut up into shorter pieces, the pieces pressed together into biscuit form, and the biscuits baked or toasted.

2. A process of preparing a shredded cereal biscuit during the performance of which small pieces of a cooked and dried cereal material are shredded into elongated flat ribbons, the elongated ribbons cut up into shorter pieces, the pieces pressed into biscuits, and the biscuits baked or toasted.

3. A shredded cereal food biscuit consisting of dried elongated flat ribbons cut up into shorter pieces and the pieces pressed together and baked or toasted.

JOHN LEONARD KELLOGG, OF BATTLE CREEK, MICHIGAN, ASSIGNOR TO KELLOGG COMPANY, OF BATTLE CREEK, MICHIGAN, A CORPORATION OF DELAWARE

COMBINATION TOASTING AND SHREDDING OVEN

Application filed November 8, 1922. Serial No. 599,578.

This invention relates to an improvement in a combination shredding machine and toasting oven, and with respect to its more specific features to mechanism for forming the shredded material into biscuits and for transferring the biscuits to the oven.

An object of the present invention is to provide in a unitary structure, mechanisms for shredding cereals, for forming the shredded cereal into biscuits, and for puffing and drying the biscuits.

Another object is to provide mechanism in the form of cooperating upper and lower mold sections movable over endless paths arranged to superpose the upper sections on the lower sections during a portion of their travel.

Another object is to provide means to form limiting walls at the opposite sides of the lower mold sections during the feeding of the material and the forming of the same into biscuits.

Another object is to provide means for coordinating the movement of the upper and lower sections to cause them to register during the superposing of the sections.

Another object is to provide mechanism for bodily moving the sections of one series to correct inaccuracies of register and timing.

Another object is to provide means controlled by the moving of the sections, to press them together when they are superposed thereby to separate the shreds of the material between the biscuits.

Another object is to provide molding mechanism, in the form of a series of molds, movable in succession past the shredding mechanism, and controlled to open and closed position by the movement of the molds.

Another object is to provide an oven, having one end arranged to puff the biscuits and the other end arranged to dry the biscuits, and having in connection therewith a conveyor for moving the formed biscuits through the oven.

Another object is to provide mechanism for transferring the biscuits from the forming means to the conveyor without interfering with the continuous movement of either the forming means or the conveyor.

Another object is to provide in the transferring mechanism a pick-up head moving during portions of its travel adjacent to the forming means and to the conveyor, and at the same speed, to transfer the biscuits from the forming means to the conveyor, wherein the pick-up mechanism is controlled by the movement of the said means.

Other objects will be in part obvious and in part pointed out hereinafter.

The invention accordingly consists in the features of construction, combinations of elements and arrangement of parts which will be exemplified in the construction hereinafter set forth, and the scope of the application of which will be indicated in the following claims.

In the accompanying drawings forming a part of this specification wherein similar reference characters refer to similar parts throughout the several views,

Fig. 10 is an end view of the shredding machine with parts in section,

Fig. 11 is a longitudinal section through the shredding mechanism,

Fig. 12 is a detail in plan of one of the supporting arms for the transferring mechanism, and its connections,

Fig. 13 is a section on the line 13—13 of Fig. 12,

Fig. 14 is an enlarged side view of the controlling valves for the suction head, and

Fig. 15 is a detail sectional view of one of the valves.

In the present embodiment of the invention, a shredding mechanism is provided for shredding cereal, the said mechanism consisting of one or more shredding mills, which convert the material into shreds, and deliver the shreds to mechanism which forms them into biscuits. The mechanism for forming the shreds into biscuits is constituted by endless chains of upper and lower mold sections arranged to travel over endless paths and with the upper sections superposed on the lower sections during a part of their travel. The shredded material is fed into the lower sections, before the upper sections are superposed thereon, and mechanism is provided to form limiting walls at the opposite sides of the lower sections, during the filling thereof, and during the early part of their movement with the upper sections superposed. The oven, which is composed of two chambers, one of which is heated by gas, and is designed to puff the biscuits, the other being heated by steam, and designed to dry the biscuits, receives the formed biscuits, and bakes them. The biscuits are passed through the oven by a continuously moving conveyor, and transferring mechanism is provided for removing the biscuits from the forming mechanism and transferring them to the conveyor, arranged to travel between the forming mechanism and the conveyor, and to travel with said mechanism and conveyor when picking up the biscuits from the forming mechanism and depositing them on the conveyor.

Referring to Figures 1, 7, 8, 10 and 11, in which the shredding mechanism is more particularly shown, it will be noted that one or more shredding mills is provided, each of which is supported by a base 1, and each mill comprises a pair of annularly grooved rolls 2 journaled to rotate on parallel axes in a suitable casing 3, which is mounted on the base 1. The mills are arranged alongside each other, and they are supplied with a suitable cereal to be shredded, from a trough 4 which has discharge chutes 5 delivering to the respective mills, and the shredded material passes from between the rolls onto an endless chain of lower mold sections, to be presently described. The cereal is fed through the trough 4, by a screw conveyor, driven from a suitable source of power, by means of a sprocket wheel 6. The rolls 2 are adjustable toward and from each other, by means of toggle mechanism indicated at 7, arranged between the support of one roll and a fixed abutment 8 supported by the base 1. The toggle is operated by a hand wheel 9 on a shaft 10 journaled transversely of the casing 3, and connected to vertical screws 11 having threaded connection with the casing 3, by means of bevel gearing 13. The lower ends of the screws are connected to the toggles by links 14, and by moving the screws in the proper direction, the toggles may be bent or straightened, to move the adjacent roll 2 toward or from the other roll. The shredded material is removed from the grooves of the rolls by means of scraper plates 15 engaging the grooves, and supported by arms 16 pivoted at 17 to the casing 3. The scrapers are adjusted toward and from the rolls by means of set screws 18 threaded through the casing 3, and engaging the arms 16 to swing the lower ends of the arms toward and from the rolls, and each set screw has a lock nut for holding it in adjusted position. The rolls 2 have intermeshing gears 19, and they are driven from a drive shaft 20 journaled in brackets 21 on the base 1. The shaft has a friction roller 22, at each mill, which engages the face of a friction disc 23, secured to a shaft 24 journaled transversely of the casing 3, and has at the end remote from the friction disc a pinion 25 which meshes with a gear wheel 26 on the shaft of the adjacent roll 2. Each friction roller 22 is adjustable longitudinally of the shaft 20, to engage the adjacent disc 23 nearer to or farther from the center thereof, thereby to increase or diminish the speed of rotation of the rolls. The rollers are moved by means of forks 27 which engage annular grooves in the hubs of the rollers, and the forks are slidable on a rack shaft 28 supported above the shaft 20 in parallelism therewith. The bodies of the forks 27 have bearings 29 slidable on the rack shaft, and a shaft 30 is journaled in each bearing, transversely of the rack shaft. Each shaft 30 (see Fig. 10) has a pinion 31 meshing with the rack shaft, and a hand wheel 32 for rotating the shaft. By turning the wheel 32 in the proper direction, the fork may be slid longitudinally of the rack shaft, to move the roller 22 toward or from the center of the disc 23. The disc 23 may be moved away from the roller 22 to stop the operation of the adjacent mill, by means of a lever 33. Each of these levers is pivoted at 34 to the base 1 of the mill, and has a rotatable connection with the hub of the disc 23 at its upper end. The lower end has a bearing engaging a screw 35 extending outwardly from the base and having threaded thereon outside the bearing a handled screw 36. By turning the screw 36 in the proper direction, the disc may be moved out of contact with the friction roller, to stop the operation of the adjacent mill. The shaft 20 is driven by a suitable motor 37, in the present instance an electric motor, which is connected to the shaft by a belt 38.

The shredded material is fed to lower mold sections 39, which are linked together in an endless chain, the upper run of the chain being horizontal, and moving below the shredding mills. The upper run of the chain moves on guides 40 supported by the bases 1 and by a suitable framework 41 at the end

remote from the shredding mills. At the ends of the machine, the chain passes over sprocket wheels 42 and 43, one of which, 43, is driven in a manner to be presently described, and the lower run moves on a suitable guide 44 supported by the bases 1 and the frame 41. The shaft of the wheels 42 is supported in a carriage 45, which is slidable in an extension frame 46 at the end adjacent to the shredding mills, and the carriage is moved by means of set screws 47, which have lock nuts in connection therewith for holdling them in adjusted position. By moving the wheels 42, the tension of the chain may be adjusted.

While the shredded material is being deposited in the lower mold sections, means is provided to form a limiting wall at each side of the chain of molds, the wall moving with the molds. The wall in the present instance (see Fig. 11) is formed by side plates 48 which are connected in an endless chain by links 49. The chain carrying the side plates is mounted to move over an endless path, the upper run of which is below the upper run of the chain of lower mold sections. The arrangement is such that the chain 48—49 of side plates moves upon the guides 40, while the chain of mold sections moves on the chain 48—49, and the side plates are of sufficient length to extend well above the mold sections, as shown in Figures 9 and 11. The endless chain 48—49, is supported by rollers 50 journaled in the frames 41 and 46, and one of the rollers is driven in a manner to be presently described. The lower run of the chain 48—49 is supported by the guides 44 before mentioned, for supporting the lower run of the chain of mold sections. Referring to Figure 11, it will be seen that this guide extends through openings in the bases 1, and the upper run of an endless belt 51 of leather or the like moves upon the guide supporting the chains. The lower run of the chain of mold sections engages the leather belt, and the chain of side plates rests on the chain of mold sections. The belt 51 is supported at its ends by suitable rollers 52, and intermediate its ends on the lower run, by rollers 53. The belt 51 supports and moves with the mold sections, so that the said sections do not contact with the guides, but are supported in their movement thereover. The chain of side plates is shorter than the chain of mold sections, so that the side plates leave the mold sections after the compression of the material into biscuits. A series of upper mold sections 54 is linked together to form an endless chain, and this chain is supported by sprocket wheels 55, with its lower run adjacent to the upper run of the chain of lower sections. The respective wheels are secured on shafts 56 and 57, the shaft 56 being driven in a manner to be presently described, to drive the chain. The shaft 56 is journaled in bearings 58 supported on the side members of a frame 59, which is mounted to slide longitudinally of the chain of lower mold sections. The side members of the frame are slidable in bearing sleeves 60 supported by the frame 41 and the adjacent base 1. The frame is moved in the bearings by means of a shaft 61 journaled on the end of the frame remote from the shredding mills, and having bevel gear connections 62 with screw rods 63, which are threaded through nuts 64 on the inner faces of the bearings 58 adjacent to the shaft 61. The shaft 61 has a hand wheel 65, and by turning the wheel in the proper direction, the entire chain of upper mold sections may be adjusted longitudinally of the upper run of the chain of lower sections, to correct the setting of the chains should they get out of time or adjustment. The shaft 57 is journaled in arms 66 which are pivoted to the sides of the frame 59, and the upper ends of the arms are connected by a roller 67. A rod 68 engages this roller intermediate its ends, and the other end of the rod is threaded, and passes through a bearing in an arch 69 which connects a pair of links 70, whose ends, adjacent to the arch, are journaled on the shaft 56 before mentioned. A nut 71 is threaded onto the rod adjacent to the arch, and by turning the nut in the proper direction the shaft 57 may be moved toward or from the shaft 56, to tension the chain.

The links 70 before mentioned support a device for moving the lower run of the upper chain into close engagement with the upper run of the lower chain, thereby to mold the biscuits between the mold sections and the side plates, the side plates constituting the ends of the molds. The said device comprises a block 72 which is adjustably connected to a crossbar 73 supported by the links 70 before mentioned intermediate their ends. A hanger 74 is connected to the crossbar by screws 75, and the hanger is connected to the block by set screws 76 having lock nuts as shown. Other set screws 77 are threaded through the hanger into engagement with the block, and by means of the screws 76 and 77 the position of the block with respect to the hanger, may be varied. Means is also provided for adjusting the block with respect to the contacting runs of the chains, that is toward and from the guides 40. A threaded rod 78 is pivoted to the end member of the frame 59 adjacent to the shaft 57, and the rod passes through a bearing 79 connecting the forward ends of the links 70. A nut 80 is threaded onto the rod below the bearing, and a coil spring 81 encircles the rod above the bearing. The upper end of the spring is engaged by a hand wheel 82 threaded onto the rod, and a second wheel 83 is threaded onto the rod above the wheel 82. By means of the nut 80 the position of the adjacent end of the links, and the position of the presser block 72

with respect to the guides 40 may be varied. The spring 81 permits the presser block to yield upwardly in case a hard object should pass between the mold sections. The tension of the spring is adjusted by the hand wheels 82 and 83, the latter serving as a lock to lock the wheel 82 in adjusted position.

The operation of the above described mechanism is as follows—

The material shredded by the rolls 2 drops upon the lower mold sections, between the side plates, and as the mold sections travel, the side plates travel therewith, the sections eventually arriving at the position shown in Fig. 9. As the sections pass beneath the shaft 57, the upper mold sections begin to descend between the side plates, and the said sections are gradually moved toward the lower sections, until they engage therewith, beneath the lowest part of the presser block 72. The mold sections cooperate to cut the shreds connecting individual biscuits, the biscuits being formed between the upper and lower sections and the side plates. Referring to Fig. 9, it will be seen that four mold sections and two side plates cooperate for the forming of each biscuit. As the biscuits pass toward the shaft 56, the upper sections begin to lift away from the lower sections, and just before the biscuits pass beneath the shaft 56 the side plates begin to move around the wheels 50 and to move away from the mold sections. Beyond the shaft 56, the biscuits lie on the lower mold sections, in convenient position to be lifted therefrom and transferred to the oven.

The sprocket wheel 43 is mounted on a shaft 84 which is journaled in suitable bearings 85 and 86. A shaft 87 is journaled in bearings 88 at the end of the shaft 84 and in parallelism therewith, and the shafts 84 and 87 are connected by a chain and sprocket connection indicated at 89. The shaft 87 is connected by a sprocket connection indicated at 90 with a Reeves variable transmission indicated generally at 91, and driven by a motor 92, through a sprocket connection 93. The motor 92 drives the chain of lower mold sections through the variable transmission, and the chain of upper sections is driven by a sprocket connection 94 from a shaft 95 which is geared to a shaft 96 by gearing 97. The shaft 96 is journaled on the frame between the runs of the chain of lower mold sections, assists in supporting the upper run of the chain and is driven thereby.

The oven (see Figs. 1, 2, 4 and 6) consists of a casing 98 of suitable construction and material. An endless conveyor travels through the oven, whose long axis is at right angles to the direction of travel of the biscuit forming mechanism, constituted by the chains of upper and lower mold sections. The conveyor consists of chains 99 connected by transversely extending flights 100, of perforated material, and the chains are supported on the upper run of the conveyor intermediate the ends of the run by sprocket wheels 101, secured on pipe shafts 102 journaled in bearings 103 in the oven walls. At its ends the conveyor extends beyond the oven, and it is supported in a manner to be presently described. The lower run of the conveyor is supported by rollers 104 journaled in bearings 105 in the oven wall, and the body of the oven is separated from the combustion chamber by a housing 106, which is arranged below the rollers 104, and below the lower run of the conveyor, and which extends upwardly at each side wall in spaced relation, to near the top of the oven, as indicated at 107. The spaces between the extension 107 and the oven walls provide passages for distributing the heat from the combustion chamber into the top of the baking chamber, thus to bake the biscuits from the top down, utilizing the moving heated air, instead of radiant heat.

The combustion chamber is heated in that portion of the oven which is adjacent to the biscuit forming mechanism by a burner 108 of suitable construction, in the present instance a gas burner, the pipes of the burner being arranged beneath the housing 106, which is supported from the bottom of the oven by means of struts 109, the pipes of the burner being arranged between the struts. Gas is supplied to the burner by a supply pipe 110, and an air pipe 111 is provided for supplying the burner with air, the pipes 110 and 111 being valve controlled as shown. A lighter 112 extends the full width of the oven for lighting the burner 108, and the lighter is supplied with gas by a pipe 113, which is also valve controlled. The oven has suitable damper controlled vent flues 114 for removing the vapor and gases. The drying chamber of the oven, which is that portion remote from the biscuit forming mechanism, is heated by steamcoils 115, supplied from a header 116 which is connected with the coils and with a steam line 117. The header also has a drain pipe 118 leading to a steam trap 119. The drying chamber of the oven differs from the puffing chamber in its heating mechanism and in the ommission of the brick enclosing walls and the sheet metal extensions 107. The conveyor 99—100 moves continuously through the oven, delivering the completed biscuits at the end remote from the forming mechanism. The oven conveyor moves at right angles to the biscuit forming mechanism, which is also a conveyor, and transferring mechanism is provided for transferring the biscuits from the forming mechanism to the oven conveyor.

The said mechanism (see Figs. 3, 4, 5 and 6) includes a distributing pipe or chamber 120 having a pick-up nozzle or suction head 121 of rectangular outline, and covered on its open or bottom side by a screen 122 of fine

mesh. The area of the open side of the nozzle depends upon the number of biscuits which it is desired to transfer at one time, usually a gross being simultaneously picked up and moved to the flights of the oven conveyor. The head is supported by arms 123 at its ends, the arms being slidably and swingably connected with bracket arms 124 secured to the ends of the chamber 120, a pair of vertically spaced bracket arms being provided at each end of the chamber. Referring to Figs. 12 and 13, it will be noticed that the arm 123 slides through a sleeve 125, which is pivoted between the bracket arms 124 to swing on a vertical axis, and the arm is keyed to the sleeve to permit the sleeve to slide longitudinally thereof, but to prevent relative angular movement of sleeve and arm. Each arm 123 has a transverse bearing 126 intermediate its ends, which is received between arms of a yoke 127, and is pivotally connected thereto as shown. Each yoke has a depending pin 128, which is journaled in a bearing 129 supported by a bracket 130 upstanding from a frame 131 at the front of the oven casing. The arms 123 are thus mounted to swing in a horizontal plane, and in a vertical plane, and the swinging in both directions as well as the movement of the suction head on the arms, is controlled by cams on a shaft 132 journaled transversely on the front of the oven in brackets 133, and driven in a manner to be presently described. Cams 134 are secured to the shaft near its ends, each cam having a cam surface 135 on its inner face with which cooperates a roller 136 journaled on the adjacent end of the arm 123. When the roller engages the elevated surface of the cam, the arms are swung into the dotted line position of Fig. 12, carrying with them the suction head. In picking up biscuits from the forming means, the swinging movement of the arms above mentioned enables the suction head to travel with the forming mechanism during the picking up of the biscuits, and the arms are then swung in a vertical plane to slightly elevate the suction head, so that it will not interfere with the lines of oncoming biscuits. The vertical swinging is brought about by barrel cams 137 on the shaft 132, a cam 137 being arranged adjacent to each cam 134. The adjacent end of each arm 123 has a fork 138 at the cam 137, and the arms of the fork engage above and below the cam. The barrel cam has a depressed portion as shown in Fig. 13 which when the suction head is in position to pick up biscuits from the forming mechanism will register with the lower fork arm, and the suction head will be permitted to drop slightly to engage the biscuits, and will be immediately raised, to move the picked up biscuits far enough above the forming mechanism to prevent interference with the oncoming biscuits. The suction head is moved toward and from the oven, to deposit the picked up biscuits on the flights of the oven conveyor, by means of the cams 134. A crank arm 139 is arranged at each end of the suction head, each arm being pivoted at one end to the brackets 124, and at the other to a wrist pin 140 on the cam. The crank arms have bearings 141 and 142 which engage the bracket and wrist pin respectively, and the body of the crank arm is hinged to the bearings as shown in Fig. 12, to swing on vertical axes, so that there is no interference with the swinging movement of the suction head. The arms 123 are connected in rear of the brackets 130 and are constrained to swing together by a cross-rod 143, which is pivoted at its ends to the arms, adjacent to the forks 138. The shaft 132 is driven from the shaft 84 before mentioned. A shaft 144 is journaled in the framework 131 adjacent to the furnace wall, and the shaft is connected to the shaft 84 by bevel gearing 145. The ends of the oven conveyor which extend beyond the ends of the oven casing, are supported by sprocket wheels on shafts 146 and 147 respectively, the former being at the rear of the furnace, while the latter is at the front, being supported by the frame 131. Other shafts 148 and 149 are journaled in the frame between the shafts 144 and 147, the four shafts 144, 147, 148 and 149 being in the same horizontal plane. The shafts 144 and 148 are connected by gears 150 and 151, the former being on the shaft 144, while the latter is on the shaft 148. The shafts 148 and 149 are connected by gears 152 and 153, the former being on the shaft 148, while the latter is on the shaft 149. The shafts 149 and 147 are connected by gears 154 and 155, the former being on the shaft 149, while the latter is on the shaft 147. The shaft 156 is journaled in the brackets 130 before mentioned, directly above the shaft 149, and it carries a gear 157 meshing with the gear 155 on the shaft 147. A train of gears 158 connects the shaft 156 with the shaft 132. Thus both conveyors, the forming mechanism being in effect a conveyor, and the cam shaft for controlling the suction head, which is a transferring mechanism, are driven by the same motor 92.

The distribution chamber 120 has connected therewith a plenum chamber 159 having an inlet 160 which is connected by a flexible connection 161 with an elbow 162. The elbow which is supported by springs 163 communicates by means of a second elbow 164 with a valve casing 165, which in turn is connected with the inlet of a suction fan 166 supported on the furnace casing, and driven by a motor 167 through a belt connection 168. Within the valve casing (Figs. 5, 14 and 15) is arranged a series of valves, in the form of shutters arranged to overlap, to close communication through the chamber, or to be moved into parallelism, to open the chamber.

Each valve comprises a shaft 169 journaled in opposite walls of the casing, and having secured thereto within the casing a shutter leaf 170. In the present instance the shutter leaves are hollow bodies, diamond shaped in cross-section, the shaft extending through the body at the center thereof and being secured thereto. Each shaft is provided with a pinion 171 outside the casing, and all of the pinions are engaged by a rack bar 172 having guided movement on the side wall of the casing, as shown in Fig. 14. The lower end of the rack bar is linked to one end of a lever 173 pivoted intermediate its ends, and connected at its opposite end by a link 174 with one end of a cam lever 175 pivoted on the oven casing, and having at the opposite end from the link a friction roller engaging the periphery of the cam 134. This cam has on its periphery a cam surface or elevated portion 176, which when the suction head is above the forming mechanism will operate the lever 175 to open the valves in the valve casing, to connect the suction head with the exhausting mechanism. The valves will be held open by the cam, until the suction head is above the oven conveyor, when the roller passes off the elevated portion of the cam, and a counter-weight 177 returns the valves to closed position. The lever 173 is supported by a pillar 178 or other suitable support. The upper run of the chain or lower mold sections, which is of considerable length, is supported intermediate its ends by sprocket wheels 179 on the shaft 96 before mentioned, and in order to prevent disengagement of the chain from the sprocket wheels at this point, an electromagnet 18 is arranged below the chain, the pole of the magnet being directly beneath the chain.

The operation of the improved machine is as follows:—

A suitable cereal is fed to the shredding machine, and formed into shreds by the shredding rolls 2. The shreds are scraped from the rolls by the scrapers 15, and deposited on the upper run of the chain of lower mold sections 39, the side plates 48 at this time being in place at opposite sides of the chain, to hold the material from overflowing. As the mold sections move away from the shredding mills, they come beneath the upper mold sections 54, which are gradually superposed thereon, forming the shreds into biscuits with the cooperation of the side plates, and separating the adjacent biscuits from each other. When the upper mold sections lift from contact with the lower sections, the biscuits lying on the lower sections are moved along to the transferring mechanism 120. At regular intervals, the suction head 121 is moved above the chain of lower mold sections 39, and a plurality of biscuits is lifted from the chain. The suction head swings with the chain of mold sections during a portion of its travel, so that there is no interference with the oncoming biscuits, and as the biscuits held by the suction head are lifted above the level of the biscuits on the forming chain, the head is moved toward the oven conveyor, and the biscuits are dropped thereon. The air valves 170 are opened when the suction head engages the biscuits on the forming chain, to connect the head with the source of fluid pressure, and the valves are closed when the suction head is above the flights of the oven conveyor, so that the biscuits are dropped thereon. At the proper speed, the biscuits are moved through the puffing and drying ovens, and emerge from the end of the oven remote from the forming chain in finished condition. The movement of all of the parts is coordinated, so that they operate in the proper relation with respect to each other to continuously produce finished biscuits when in operation.

The shaft 87 may be connected to the shaft 84, or disconnected therefrom, by means of a clutch indicated at 180. The clutch is operated from the shredding mill end of the machine, by means of a handle 181 pivoted at its lower end to a fixed support, and connected intermediate its ends to one end of a lever 182, pivoted on the frame 41. The other end of the lever 182 is connected by a link 183, with one end of a lever 184 pivoted on the frame 131. The other end of the lever 184 is pivoted to the body of a fork 185, whose arms engage the clutch and the body of the fork is pivoted to a fixed support. By means of the handle 181, the clutch may be operated to connect or disconnect the shafts 84 and 87.

As many changes could be made in the above construction and many apparently widely different embodiments of this invention could be made without departing from the scope thereof, it is intended that all matter contained in the above description or shown in the accompanying drawings shall be interpreted as illustrative and not in a limiting sense.

It is also to be understood that the language used in the following claims is intended to cover all of the generic and specific features of the invention herein described, and all statements of the scope of the invention, which, as a matter of language, might be said to fall therebetween.

Having described my invention, what I claim as new and desire to secure by Letters Patent is:—

1. In a machine of the class described, in combination, shredding mechanism, moving means to receive the shredded material and mold it into biscuits comprising upper and lower mold sections cooperating with each other to mold said material by pressure, the pressure being applied solely by said sections, an oven, a conveyor for transporting the biscuits through the oven, and means for transferring the biscuits from the molding means

intermediate the ends of the range of travel of said moving means to the conveyor.

2. In a machine of the class described, in combination, shredding mechanism, means for removing shredded material from said mechanism, means for forming biscuits from said material, comprising endless chains of upper and lower mold sections having runs thereof adjacent to which said material is delivered, means for supporting and moving each chain, adjustable means for coordinating the movement of the chains to cause the sections of one chain to register with those of the other on the adjacent runs, means for imparting relative movement toward and from each other to the adjacent runs, and means for bodily moving one chain at will to correct the adjustment of the chains.

3. In a machine of the class described, in combination, mechanism for forming biscuits including an endless chain of bottom mold sections, and a second endless chain of substantially flat plates forming walls at opposite sides only of the mold sections during the filling thereof.

4. In a machine of the class described, in combination, mechanism for forming biscuits, including an endless chain of bottom mold sections, shredding mechanism delivering to the sections, and means comprising an endless chain of substantially flat plates cooperating with said sections to form walls solely at the sides of the chain to prevent overflow of the shredded material, and to assist in molding the material during travel of the sections.

5. In a machine of the class described, in combination, mechanism for forming biscuits, including an endless chain of mold sections, a second chain composed of flat side plates, and means for moving the chains to cause the first chain to ride upon the second chain between the plates during a portion of the travel of the sections.

6. In a machine of the class described, in combination, mechanism for forming biscuits, including lower mold sections, and upper mold sections, each section being formed of a plurality of parts, means for moving the upper and lower sections over endless paths with the upper sections above the lower sections during a portion of their travel, means comprising flat plates movable in endless paths, to form mold completing walls at opposite sides of the lower sections during the early portion of their travel adjacent to the upper sections, means to retain said walls in position until the biscuit is formed and means controlled by the movement of the upper sections for pressing them toward the lower sections.

7. In a machine of the class described, in combination, upper and lower mold sections, means for moving the sections over endless paths with the upper sections above the lower sections during a portion of their travel, means for feeding material to the lower sections prior to their arrival below the upper sections, mold completing side walls for said mold sections movable independently of said mold sections, and means to position said walls at opposite sides of the lower sections while they are being filled and during the early portion of their travel beneath the upper sections.

8. In a machine of the class described, in combination, cooperating top, bottom and side mold sections for forming biscuits, means for moving the sections over endless paths with the sections adjacent during a portion of their travel, means controlled by the movement of the sections for gradually moving them together during the said portion of their travel, and adjustable means for coordinating the movement of the top and bottom sections to cause them to register when they are moved together, and means to vary the tension on said top mold sections.

9. In a machine of the class described, in combination, upper and lower mold sections, means for moving the sections over endless paths with the upper sections above the lower sections during a portion of their travel, and manually adjustable means controlled by the movement of the sections for gradually moving the sections into contact during the said portion of their travel, and a frame in which said upper mold sections are mounted, and means to vary the position of said frame thereby to vary the position of said upper sections relative to said lower sections.

10. In a machine of the class described, in combination, molds for forming the biscuits including upper and lower sections concave from side to side and adapted to contact at their opposite sides, and side plates engaging the ends only of the sections to close and complete the molds.

11. In a machine of the class described, in combination, molds for forming biscuits composed of upper and lower sections mounted to move over endless paths with the upper sections above the lower sections during a portion of their travel, said sections being concave from front to rear, and means moving with the sections when they are superposed and engaging the opposite sides only thereof to close and complete the molds.

12. In a machine of the class described, in combination, molds for forming biscuits composed of upper and lower sections mounted to move over endless paths with the upper sections above the lower sections during a portion of their travel, said sections being concave from front to rear, means controlled by the movement of the sections for moving them into contact while the upper sections are above the lower sections, and means moving with the sections during the said portion

of their travel and engaging opposite sides only of the sections to close and complete the ends of the molds.

13. In a machine of the class described, in combination, shredding mechanism, a series of molds formed of sections, said molds being divided intermediate their ends, means for moving the molds past the shredding mechanism in succession, and means controlled by the movement of the molds for successively assembling the sections to form open containers for receiving material and to afterwards close the molds to mold the material into biscuits.

14. In a machine of the class described, in combination, shredding mechanism, a series of molds formed of sections, said molds being divided intermediate their ends, means for moving the molds past the shredding mechanism in succession, and means controlled by the movement of the sections for successively assembling the sections to form open containers and closed molds, and for afterwards disassembling the sections to expose the molded biscuits.

15. In a machine of the class described, in combination, shredding mechanism, a series of molds formed of sections, said molds being divided intermediate their ends, means for moving the molds past the shredding mechanism in succession, means controlled by the movement of the sections for successively assembling the sections to form open containers and closed molds, and for afterwards disassembling the sections to expose the molded biscuits, and means for removing the biscuits.

16. In a machine of the class described, in combination, shredding mechanism, a series of molds formed of sections, said molds being divided intermediate their ends, means for moving the molds past the shredding mechanism in succession, means controlled by the movement of the sections for successively assembling the sections to form open containers and closed molds and for afterwards disassembling the sections to expose the molded biscuits, an oven, and means for removing the biscuits and transporting them through the oven.

17. In a machine of the class described, in combination, shredding mechanism, molding mechanism and an oven, a conveyor for said molding mechanism, and a conveyor for said oven, said conveyors, movable continuously in directions at substantially right angles to each other, and means movable with each conveyor over a portion of its travel and at substantially the same speed for transferring the articles from the mold conveyor to the oven conveyor.

18. In a machine of the class described, in combination, shredding mechanism, molding mechanism, and an oven, a conveyor for said molding mechanism and a conveyor for said oven, said conveyors movable continuously in directions transverse to each other, means movable along the line of travel of the mold conveyor during a portion of its movement and along the line of travel of the oven conveyor during a subsequent portion of its movement, for picking up articles from the mold conveyor and transferring the articles to the oven conveyor.

19. In a machine of the class described, in combination, shredding mechanism, molding mechanism, and an oven, a conveyor for said molding mechanism and a conveyor for said oven, said conveyors movable continuously in directions transverse to each other, and means independent of said conveyors for picking up articles from the mold conveyor and transferring the articles to the oven conveyor, said means movable with the first conveyor during a portion of its travel.

20. In a machine of the class described, in combination, shredding mechanism, molding mechanism, and an oven, a conveyor for said molding mechanism and a conveyor for said oven, said conveyor movable continuously in directions transverse to each other, and means for picking up the articles from the mold conveyor and transferring the articles to the oven conveyor, said means movable with the first conveyor during a portion of its travel, and toward and from the conveyor to pick up and transfer the articles.

21. In a machine of the class described, in combination, shredding mechanism, molding mechanism, and an oven, a conveyor for said molding mechanism and a conveyor for said oven, said conveyors movable continuously in directions transverse to each other, means for picking up articles from the mold conveyor and transferring the articles to the oven conveyor, including a pick-up device, and means for moving the said device in the direction of movement of one of the conveyers during a portion of its travel and at the same speed.

22. In a machine of the class described, in combination, shredding mechanism, molding mechanism, and an oven, a conveyor for said molding mechanism and a conveyor for said oven, said conveyors movable continuously in directions transverse to each other, means for picking up articles from the mold conveyor and transferring the articles to the oven conveyor, including a suction head movable between the conveyors, means for moving the head in the direction of travel of the first conveyor during the picking up of the articles, and means synchronized with the movement of the head between the conveyors for controlling the suction.

23. In a machine of the class described, in combination, shredding mechanism, molding mechanism, and an oven, a conveyor for said molding mechanism and a conveyor for said oven, said conveyors, adapted to travel at right angles to each other, and means for

picking up articles from the mold conveyor, transferring same laterally thereof, and depositing them on the oven conveyor.

24. In a machine of the class described, in combination, shredding mechanism, molding mechanism, and an oven, a conveyor for said molding mechanism, and a conveyor for said oven, said conveyors, adapted to travel at right angles to each other, means for picking up articles from the mold conveyor and depositing them on the oven conveyor, including a pick-up device movable between the conveyors for the articles, and means for moving the said device in the direction of travel of the first conveyor and at the same speed.

25. In a machine of the class described, in combination, molding mechanism, including a conveyor therefor, baking mechanism including an oven and a conveyor therefor, a pick-up device, arms for supporting the device, means for swinging the arms laterally, and means for moving the device longitudinally of the arms, whereby said device will cooperate with each of said conveyors in turn.

26. In a machine of the class described, in combination, molding mechanism, including a conveyor therefor, baking mechanism including an oven and a conveyor therefor, a pick-up device, arms for supporting the device, means for swinging the arms laterally, means for moving the device longitudinally of the arms, and means for swinging the arms vertically to raise and lower the device, whereby said device will cooperate with each of said conveyors in turn.

27. In a machine of the class described, in combination, molding mechanism, including a conveyor therefor, baking mechanism including an oven and a conveyor therefor, a pick-up device including a suction head, arms for supporting the head, means for swinging the arms laterally and vertically, and means for moving the head longitudinally of the arms, whereby said device will cooperate with each of said conveyors in turn.

28. In a machine of the class described, in combination, molding mechanism, including a conveyor therefor, baking mechanism including an oven and a conveyor therefor, a pick-up device including a suction head, arms for supporting the head, means for swinging the arms laterally and vertically, means for moving the head longitudinally of the arms, and means controlled in coordination with the movement of the arms for controlling the pressure in the head, whereby said device will cooperate with each of said conveyors in turn.

29. In a machine of the class described, in combination, molding mechanism, including a conveyor therefor, baking mechanism including an oven and a conveyor therefor, a pick-up device, arms pivoted intermediate their ends for supporting the device, a plurality of means for swinging the arms in horizontal and vertical planes, and for sliding the device on the arms, and means for coordinating the operations of the several means, whereby said device will cooperate with each of said conveyors in turn.

30. In a machine of the class described, in combination, shredding mechanism, means for molding the shredded material into biscuits, comprising a chain of upper mold sections, a chain of lower mold sections, and a chain of end mold plates, each mold being formed by adjacent ends of the upper mold sections, adjacent ends of the lower mold sections and said plates.

31. In a machine of the class described, in combination, shredding mechanism, means for molding the shredded material into biscuits, comprising a chain of upper mold sections each having a transverse abutment intermediate its ends, a chain of lower mold sections each having a transverse abutment intermediate its ends, and a chain of end mold plates, each mold being formed by adjacent ends of the upper mold sections, adjacent ends of the lower mold sections and said plates, the molds extending from the abutments of one set of sections to the abutments of the adjacent set.

32. In a machine of the class described, in combination, a series of molds each composed of a plurality of upper mold sections, a plurality of lower mold sections, and a plurality of end plates, and means for supporting and moving the corresponding sections of all of the molds over endless paths lying adjacent during a portion of their travel, and means controlled by the movement of the sections for assembling the sections during a portion of such travel, and for afterwards dis-assembling the sections to expose the molded biscuit.

33. In a machine of the class described, in combination, molding mechanism comprising a series of sectional molds, the sections of which move in endless paths, each mold being formed from eight parts, comprising two upper sections, two lower sections, and two plates at each end of said upper and lower sections.

34. In a machine of the class described, in combination, molding mechanism comprising a series of upper mold sections, a series of lower mold sections, and a series of end mold sections, said sections being movable through endless paths, the molds being formed by the cooperation of adjacent halves of the upper mold sections with adjacent halves of the lower mold sections.

35. In a machine of the class described, in combination, shredding mechanism, a series of molds formed of a plurality of sections, means for moving a portion of the molds past the shredding mechanism in succession, and means controlled by the movement of the molds for successively assembling the sections to form open containers for receiv-

ing material and to afterwards close the molds to mold the material into biscuits, said sections each forming a portion of two adjacent molds.

36. In a machine of the class described, in combination, means for forming biscuits, comprising lower mold sections to which the shreds are delivered, upper mold sections, means for moving the sections along converging paths, and means for coordinating the movement of the sections to cause the upper sections to register with the lower sections during a portion of their travel, comprising a frame in which said upper mold sections are mounted and an adjusting member effective to move said frame and all of said upper mold sections longitudinally of said lower mold sections.

37. In a machine of the class described in combination, means for forming biscuits, comprising lower mold sections to which the shreds are delivered, a chain of upper mold sections, means for moving the sections along converging paths, means for coordinating the movement of the sections to cause the chain of upper sections to register with the lower sections during a portion of their travel, comprising a frame in which said chain of upper mold sections are mounted and an adjusting member effective to move said frame and all of said upper mold sections longitudinally of said lower mold sections, and means to vary the tension on said chain.

38. In a machine of the class described, in combination, means for forming biscuits, comprising lower mold sections to which the shreds are delivered, upper mold sections, means for moving the sections along converging paths, means for coordinating the movement of the sections to cause the upper sections to register with the lower sections during a portion of their travel, comprising a frame in which said upper mold sections are mounted and an adjusting member effective to move said frame and all of said upper mold sections longitudinally of said lower mold sections, and means for imparting relative movement to the sections toward and from each other when they are in register.

39. In a machine of the class described, in combination, means for forming biscuits, comprising lower mold sections, to which the shreds are delivered, a chain of upper mold sections, means for moving the sections along converging paths, means for coordinating the movement of the sections to cause the chain of upper sections to register with the lower sections during a portion of their travel, comprising a frame in which said chain of upper mold sections is mounted and an adjusting member effective to move said frame and all of said upper mold sections longitudinally of said lower mold sections, means for imparting relative movement to the sections toward and from each other when they are in register, and means to vary the tension on said chain.

40. In a machine of the class described, in combination, means for forming biscuits comprising chains of upper and lower mold sections, means for moving the chains of sections over endless paths with the upper section above the lower section during a portion of their travel, and means for coordinating the movement of the sections to cause the sections to register when they are adjacent, comprising a frame in which said upper mold sections are mounted and an adjusting member effective to move said frame and all of said upper mold sections longitudinally of said chain of lower mold sections, and means for imparting relative movement of the sections toward and from each other when they are in register.

41. In a machine of the class described, in combination, means for forming biscuits comprising chains of upper and lower mold sections, means for moving the chains of sections over endless paths with the upper section above the lower section during a portion of their travel, means for coordinating the movement of the sections to cause the sections to register when they are adjacent, comprising a frame in which said upper mold sections are mounted and an adjusting member effective to move said frame and all of said upper mold sections longitudinally of said chain of lower mold sections, means for imparting relative movement to the sections toward and from each other when they are in register, and means to vary the tension of said upper chain.

42. In a machine of the class described, in combination, means for forming biscuits, comprising chains of upper and lower mold sections, means for moving the chains of sections over endless paths with the upper section above the lower section during a portion of their travel, means for coordinating the movement of the sections to cause the sections to register when they are adjacent, comprising a frame in which said upper mold sections are mounted and an adjusting member effective to move said frame and all of said upper mold sections longitudinally of said chain of lower mold sections, and means for imparting relative movement from and toward each other to the adjacent runs.

43. In a machine of the class described, in combination, means for forming biscuits, comprising chains of upper and lower mold sections, means for moving the chains of sections over endless paths with the upper section above the lower section during a portion of their travel, means for coordinating the movement of the sections to cause the sections to register when they are adjacent, comprising a frame in which said upper mold sections are mounted and an adjusting member effective to move said frame and all of said upper

mold sections longitudinally of said chain of lower mold sections, means for imparting relative movement from and toward each other to the adjacent runs, and means to vary the tension of said upper chain.

In testimony whereof I affix my signature

JOHN LEONARD KELLOGG.

UNITED STATES PATENT OFFICE.

ORIN A. HANFORD, OF ROCHESTER, NEW YORK, ASSIGNOR TO JOHN L. KELLOGG, OF BATTLE CREEK, MICHIGAN.

PACKAGING-MACHINE.

1,091,509. Specification of Letters Patent. Patented Mar. 31, 1914.

Application filed January 13, 1913. Serial No. 741,792.

To all whom it may concern:

Be it known that I, ORIN A. HANFORD, a citizen of the United States, residing at Rochester, New York, have invented certain new and useful Improvements in Packaging-Machines, of which the following is a specification.

This invention relates to improvements in packaging machines.

The main objects of this invention are, first, to provide an improved packaging machine by which articles of the character of shredded wheat biscuits or other articles of a more or less friable nature may be effectively packed without injury thereto. Second, to provide an improved packaging machine which is automatic in its operations and of large capacity. Third, to provide in a structure of the class described, improved carton feeding means. Fourth, to provide in a structure of the class described, an improved means for filling and discharging the filled cartons. Fourth, to provide an apparatus of the class described, which is comparatively simple in structure and not likely to get out of repair.

Further objects, and objects relating to structural details, will definitely appear from the detailed description to follow.

I accomplish the objects of my invention by the devices and means described in the following specification.

The invention is clearly defined and pointed out in the claims.

A structure which is a preferred embodiment of my invention is clearly illustrated in the accompanying drawing forming a part of this specification, in which:

Figure I is a side elevation of a structure embodying the features of my invention, the outer ends of the several conveyers being broken away. Fig. II is a plan view partially in horizontal section, on a line corresponding to line 2—2 of Fig. I. Fig. III is a detail plan view of the carton feeding mechanism, the parts removed by the sectioning in Fig. II being here shown. Fig. IV is a transverse vertical section on a line corresponding to line 4—4 of Fig. I, showing details of the article feeding mechanism. Fig. V is a vertical transverse section on a line corresponding to line 5—5 of Fig. I, showing further details of the article feeding mechanism. Fig. VI is a detail vertical section on a line corresponding to line 6—6 of Fig. IV, showing the packer actuating cam 49. Fig. VII is a detail vertical section on a line corresponding to line 7—7 of Fig. V showing the table actuating cam 35. Fig. VIII is a detail vertical transverse section on a line corresponding to line 8—8 of Fig. I, showing features of the holders and cartons feeding mechanism. Fig. IX is a detail vertical transverse section on a line corresponding to line 9—9 of Fig. I, showing details of the carton feeding mechanism. Fig. X is a detail horizontal section on a line corresponding to line 10—10 of Fig. IX. Fig. XI is a detail vertical section on a line corresponding to line 11—11 of Fig. IX, showing details of the carton flap spreading mechanism. Fig. XII is a detail vertical longitudinal section on a line corresponding to the broken line 12—12 of Fig. III, showing further details of the carton feeding mechanism. Fig. XIII is a detail vertical transverse section on a line corresponding to line 13—13 of Fig. XII. Fig. XIV is a detail vertical transverse section on a line corresponding to line 14—14 of Fig. III showing details of the carton feed table. Fig. XV is a detail section on a line corresponding to line 15—15 of Fig. I, showing details of the packing mechanism and the means for discharging the cartons.

In the drawing similar reference characters refer to similar parts throughout the several views, and the sectional views are taken looking in the direction of the little arrows at the ends of the section lines.

Referring to the drawing, the frame 1 is shown mainly in conventional form and may be of any desired construction to properly support the parts and their driving connections.

The driving shaft 2 is driven by the pulley 3 and the driving belt 4. The articles to be packaged are conveyed to the machine on trays 5 by the conveyer or feed belt 6. The trays are returned or discharged from the machine by the conveyer 7. The empty cartons are carried into the machine by the conveyers 8 while the filled cartons are carried from or discharged from the machine by the conveyer 9. The outer ends of these conveyers are not illustrated as the means for delivering the filled trays to the conveyers 6 or the unsealed cartons to the conveyers 8 or for handling the filled cartons form no part of this invention. In practice, the filled

cartons are preferably delivered to the conveyers 8 from a suitable bottom sealer and from the conveyer 9 to a top sealer.

The conveyer 6 is driven by the shaft 10 provided with a suitable roller or pulley 11. The shaft 10 is connected by the gears 12 and 13 to a shaft 14. The shaft 14 is connected by the sprocket chain 15 to a shaft 16 disposed toward the bottom of the frame. The shaft 16 is connected by the sprocket chain 17 to a shaft 18 extending across the frame. The shaft 18 is in turn connected on the opposite side of the machine by the sprocket chain 19 to the driving shaft 2. The several sprocket wheels are not designated by numerals as their arrangement will be readily understood. Other parts are driven through this connection as will appear as the description proceeds.

The trays 5 are provided with flanges 20 on their longitudinal edges. The trays are delivered from the feed conveyer 6 onto the table 21 by a mechanism consisting of the sprocket chains 22 having flight-like pusher bars 23 mounted thereon. The sprocket chains 22 are supported to travel above and parallel with the inner end of the conveyer 6 by means of sprocket wheels 24 and 25 carried by a shaft 26 and the shaft 14 respectively, the sprockets 25 being the driving sprockets. As the flights or pushers 23 are carried along by the sprocket chains, they engage the rear ends of the trays 5 and push them from the inner end of the conveyer 6 onto the table 21. As the trays are pushed onto this table, the biscuits or other articles to be packaged, carried by the trays, are picked up by the scoop or pick-up 27 which is disposed above the table and in proper spaced relation thereto, so that the tray passes under the scoop and the articles onto it. The structure illustrated, is designed for simultaneously filling two series of cartons.

The scoop is provided with diverging chutes 28 at its rear end. See Figs. II, IV, and V. The scoop is flanged at its edges to retain and guide the articles thereon. The structure illustrated, is especially designed for the packaging of shredded cereal biscuits which are placed on the trays in two rows. The trays are in practice preferably baking trays so that the biscuits are packaged direct from the ovens without handling. The flights or pushers 23 engaging the rear ends of the trays, serve to support the biscuits as well as to carry the trays along so that the biscuits are delivered onto the scoop as described.

The table 21 is provided with a guide flange 29 at one side. This table 21 is pivoted at 30 and is supported in its operative position by means of the link 31 mounted on the slide 32. This slide 32 travels in the vertical slide-way 33 as shown in Fig. V. As the structural details of this slide and slide-way are not a part of this invention they are not here shown. The slide 32 is provided with a roller 34 traveling on the cam 35 on the shaft 16. As the cam revolves, the roller 34 drops into the low point 36 of the cam, allowing the table to tilt or swing down on its pivot, discharging the empty tray onto the tray return conveyer 7. This operation is timed and the cam is shaped so that the table is swung up to operative position to receive the succeeding tray. The articles are delivered from the chutes 28 into the holders or packing receptacles 37. These holders or receptacles 37 are carried by arms 38 radially mounted on the shaft 39, the structure illustrated being provided with a double series of four holders each.

The arms 38 carrying the holders, are connected by braces 40. See Fig. I. The shaft 39 is driven intermittently through a Geneva stop gear 41 on the shaft 39 and the coacting gear 42 and arm 43 on the shaft 44. The shaft 44 is connected by the sprocket chain 45 to the shaft 16 which is driven through the connections previously pointed out. As the details of the driving connections for the shaft 44 to the holder carrying shaft 39 do not form a part of this present invention, I do not describe the same with further detail herein, the object of this type of driving connection being to drive the shaft 39 with a step by step movement properly timed to bring the holders 37 into position to receive the articles as they are delivered from the chutes 28.

The articles are delivered from the chutes 28 into the holders by the packers 46 supported on the arms 47 on the rock shaft 48 extending across the frame above the chutes. The packers 46 are actuated from the cams 49 on the shaft 14. The cams 49 act upon the reciprocating rods 50 supported in suitable bearings in the brackets 51. The rods 50 are connected to levers 52 on the shaft 53, the levers being connected by the links 54 to the arms 47 of the packers. The cams 49 are provided with a plurality of cam projections 55, (see Fig. VI), there being twelve of these projections on the cams of structure illustrated, so that each package contains twelve articles. The rods 50 are provided with rollers 56 traveling on the cams.

To support the articles in proper position as they are being packed in the holders 37, and also to eject them into the cartons and the cartons from the holders, I provide the holders with plungers 57 supported by the stems 58 reciprocating in suitable sleeves 59 within the holder carrying arms 38. The plungers are yieldingly supported by the coiled springs 60 arranged within the sleeves. The plungers are provided with racks 61 with which the pawls 62 coact. See

Fig. XV. These pawls 62 are provided with actuating springs 63. As the articles are packed into the holders by the packers 46, the plungers are forced inwardly against the tension of the springs 60 and are retained by the pawls until released by the pawl trips 64 which are positioned to act after the cartons have been slipped over the holders so that the articles are delivered into the cartons. This step in the cycle of operations of the machine will be again referred to in its proper sequence.

The shaft 39, is, as stated, actuated with a step by step movement, each step being a quarter revolution of the shaft. From the filling position, the holders are actuated to a vertical position to receive the cartons 65 which are slipped over the holders.

The cartons are, as stated, conveyed to the machine by the conveyers 8, the cartons being arranged on the conveyers on their sides with their open ends facing inwardly. The conveyers 8 are driven through the sprocket chains 134 connecting them to the shaft 2. The cartons are carried by the conveyers 8 against the stops 66. From these conveyers 8 the cartons 65 are delivered or shifted onto the feed table 67 which projects forwardly so that the holders 37 swing under its forward end when they are brought to the vertical position from their filling position.

The carton shifter members 68 are provided with fixed fingers 69 at their outer ends adapted to engage the outer ends of the cartons and pivoted plate-like clamping fingers 70 adapted to engage opposite sides thereof. The clamping fingers or plates 70 are mounted on the pivots 71 on the arm 72 on the member 68. Springs 73 support the clamping fingers 70. The member 68 is arranged upon a spindle 74 carried by an oscillating member 75 mounted on the shaft 76. The oscillating member 75 is provided with a segment 77 which is actuated by the rack 78 arranged in a vertically disposed slide bearing member 79, see Fig. IX. The rack 78 is connected by the link 80 to the lever 81 mounted on the shaft 81′ extending transversely across the frame. The lever 81 is actuated by the cam 82 on the shaft 83. This shaft 83 is connected by the sprocket chain 84 to the shaft 85 which is connected by the gears 86 and 87 to the driving shaft 2, the sprocket chain being arranged on one side of the frame and the gears on the opposite. This driving connection for the oscillating member 75 swings it from a horizontal position shown by dotted lines in Fig. IX, to the vertical position shown therein.

To rock the member 68 from its carton engaging or picking up position as shown by dotted lines in Fig. IX, to its delivery position, as shown by full lines, it is provided with a segmental gear 88 coacting with a fixed segmental rack 89. It will be obvious that with the segment 88 in engagement with the rack, when the member is swung from its vertical to its horizontal position or vice versa, it is oscillated. The cartons are inverted by this shifter and carried into position to be delivered onto the table 67. To effectively deliver the cartons to the table the flaps 90 thereof are spread out to a horizontal position, as shown in Fig. IX. The flap spreading or opening fingers 91 are pivoted at 92 on the vertically adjustable member 98. This member 98 is mounted for vertical movement in the bracket 93. The member 98 is connected by the link 95 to the lever 96 mounted on the shaft 81′, the lever being actuated by a cam 97 on the shaft 83. The member 98 is connected to the link 95 by means of the clip 99 on the lower end of member 98. To spread and collapse the fingers, the inwardly projecting arms 100 thereof are connected to the rod 101 reciprocating in the member 98. See Fig. XI. The arms 100 are slotted at 102 to engage pins 103 on the reciprocating rod 101. The rod 101 is connected by the link 104 to the lever 105 on the shaft 81′ actuated by the cam 106 on the shaft 83. By thus arranging the parts, the spreader is first actuated to carry the spreader fingers up within the flaps by the upward movement of the member 98 which is accomplished through the connection described. The fingers are then spread by the upward movement of the rod 101 which is accomplished through its connection described, the movements being properly timed through their driving connections. The cartons are pushed from this position shown in Fig. XII, that is, after the flaps have been spread or bent to a horizontal position onto the table 67. The feed members 107 by which this is accomplished are carried by the slides 108 arranged in suitable ways 109 provided therefor in the table. See Figs. XII, XIII, and XIV. These slides 108 are provided with racks 110 on their under sides, which are driven through the pinions 111 on the shaft 112 arranged below the table. The shaft 112 is driven through the train of gears 113, 114, 115, and the oscillating segment 116 which meshes with the gear 115. The segment 116 is pivoted at 117 on shaft 81′. The segment is provided with an arm 118 having a roller 119 thereon traveling on the cam 120. The table 67 is provided with guides 121 for the cartons, the guides being supported on overhanging arms 122 so that the lower edges of the guides 121 are spaced from the table to permit the flaps to project under the guides. The table 67 is provided with openings 123 at its forward end to which the cartons are delivered through the holders 37.

I have described only one shifter mecha-

nism, one flap spreader mechanism, and one carton feeder, as the other is a duplicate mechanism. The operating connections for the shifter and flap spreader mechanism are duplicate. The two feed or pusher members 107 are actuated through the single cam 120.

The cartons are supported in position above the openings 122 in the feed table by their flaps. From this position, they are pushed through the opening and over the holders 37 by the members 124 mounted to reciprocate on the vertical rods 125 carried by the table 67.

The delivery members 124 are connected by the links 126 to the levers 127 mounted on the transverse shaft 128. These levers are in turn connected by the links 129 to the bent levers 130 mounted on the transverse shaft 131. The bent levers 130 are actuated from the cams 132 acting on the rods 133 arranged to reciprocate in suitable bearings in the brackets 51. The springs 134' on the rods 50 return the packer fingers. The springs 134 on the rods 133 return the plungers to their initial position. As stated, the holders 37 are swung under the openings 122 in the feed table in which position the cartons are pushed over the holders by the members 124. The cartons are then carried by the holders around to the lower position above the delivery conveyer 9 in which position, the trips 64 act upon the pawls 63 releasing the plungers 57 so that the articles in the holders are pushed out or ejected into the cartons which are simultaneously pushed off the holders and onto the conveyer 9. The next actuation brings the emptied holder into position to receive the articles. This completes the cycle of movements of the machine, which are the delivery of articles to be packaged on suitable trays as 5 on the conveyer 6; the transfer of the trays from the conveyer 6 onto the table 21 during which time the articles are picked up from the trays by the scoop 27 and pushed along thereon up the chutes 28 to the packers 46; the discharge of the empty trays from the table 21 onto the return conveyer 7; the delivery of the empty cartons on the conveyers 8, shifting therefrom to the feed table and spreading the flaps and feeding the cartons to the members 124 by which they are pushed onto the holders; the discharge of the charged holders into the cartons as the same are pushed from the holders and the delivery of the filled cartons from the machine by the conveyer 9.

My improved packaging machine is entirely automatic in its operation. The cartons are effectively delivered so that they are not distorted or injured and articles such as described are effectively packaged without injury thereto.

I have illustrated and described my improvements with considerable detail in the embodiment illustrated. I have not attempted to illustrate or describe various modifications which I contemplate as being possible and practical as such modifications will undoubtedly be readily understood by those skilled in the art to which this invention relates. I desire, however, to be understood as claiming my improvements specifically in the form illustrated as well as broadly within the scope of the appended claims.

Having thus described my invention, what I claim is new and desire to secure by Letters Patent is:

1. In a structure of the class described, the combination with a delivery chute; a shaft; holders open at their outer ends and disposed radially on said shaft; means for rotating said shaft with a step by step movement whereby the holders are successively brought to a horizontal position at the rear end of said chute; a packer oscillating above the rear end of said chute to push the articles into said holders; plungers within said holders; springs by which said plungers are yieldingly supported, said plungers being provided with ratchet bars; pawls coacting therewith whereby said plungers are retained in their depressed position as the holders are filled; means for feeding cartons arranged to deliver the cartons over the holders when the holders are in their upright position; and means for tripping said pawls when the holders are in their inverted position whereby the articles are ejected from the holders into the cartons as the cartons slip from the holders to the delivery conveyer.

2. In a structure of the class described, the combination with a delivery chute; a shaft; holders open at their outer ends and disposed radially on said shaft; means for rotating said shaft with a step by step movement whereby the holders are sucessively brought to a horizontal position at the rear end of said chute; a packer oscillating above the rear end of said chute to push the articles into said holders; and means for feeding cartons arranged to deliver the cartons over the holders when the holders are in their upright position, the articles dropping from the holders into the cartons as the cartons slip from the holders while in an inverted position, all coacting for the purpose specified.

3. In a structure of the class described, the combination of a feed mechanism; a shaft; holders open at their outer ends and radially disposed on said shaft; means for rotating said shaft with a step by step movement whereby the holders are successively brought to filling position; plungers within said holders; springs by which said plungers are yieldingly supported, said plungers being provided with ratchet bars; pawls coacting therewith whereby said plungers are

retained in their depressed position as the holders are filled; means for feeding cartons arranged to deliver the cartons over the holders when the holders are in their upright position; a delivery conveyer disposed below said shaft; and means for tripping said plunger pawls when the holders are in their inverted position above said delivery conveyer whereby the material is ejected from the holders into the cartons as the cartons slip from the holders.

4. In a structure of the class described, the combination of a shaft; holders open at their outer ends and radially disposed on said shaft; means for rotating said shaft with a step by step movement whereby the holders are successively brought to filling position; a feed mechanism adapted to deliver to the holders while the holders are in their filling position; spring actuated plungers within said holders; detents for said plungers; means for feeding cartons arranged to deliver the cartons over the holders when the holders are in their upright position and means for releasing said plunger detents, all coacting for the purpose specified.

5. In a structure of the class described, the combination with the feeding means comprising a delivery chute; a shaft; holders open at their outer ends and radially disposed on said shaft; means for rotating said shaft with a step by step movement whereby the holders are successively brought to a horizontal position at the end of said chute; a packer oscillating above the rear end of said chute to push the material into said holders; plungers within said holders; springs by which said plungers are yieldingly supported, said plungers being provided with ratchet bars; pawls coacting therewith whereby said plungers are retained in their depressed position as the holders are filled; means for feeding cartons arranged to deliver the cartons over the holders after they are filled; and means for tripping said pawls whereby the material is ejected from the holders into the cartons.

6. In a structure of the class described, the combination with the feeding means comprising a delivery chute; a shaft; holders open at their outer ends and radially disposed on said shaft; means for rotating said shaft with a step by step movement whereby the holders are successively brought to a horizontal position at the end of said chute; a packer oscillating above the rear end of said chute to push the material into said holders; and means for feeding cartons arranged to deliver the cartons over the holders after they are filled.

7. In a structure of the class described, the combination of holders open at their outer ends; a holder filling means; means for actuating said holders with a step by step movement whereby they are successively brought to filling position; plungers within said holders; springs by which said plungers are yieldingly supported, said plungers being provided with ratchet bars; pawls coacting therewith whereby said plungers are retained in their depressed position as the holders are filled; a carton feed means arranged to deliver cartons over the holders after the holders are filled; and means for tripping said plunger pawls whereby the material is ejected from the holders into the cartons as the cartons are removed from the holders.

8. In a structure of the class described, the combination of holders open at their outer ends; a holder filling means; means for actuating said holders with a step by step movement whereby they are successively brought to filling position; spring actuated plungers within said holders; detents for said plungers; a carton feed means arranged to deliver cartons over the holders after the holders are filled, and means for tripping said plunger detents, all coacting for the purpose specified.

9. In a structure of the class described, the combination of holders open at their outer ends; a holder filling means; means for actuating said holders with a step by step movement whereby they are successively brought to filling position; spring plungers within said holders, said plungers being depressed and retained in their depressed positions as the holders are filled, means for delivering cartons over the holders after the holders are filled; and means for releasing said plungers whereby the material is ejected from the holders into the cartons as the cartons are removed from the holders.

10. In a structure of the class described, the combination of a carton feed conveyer; a carton stop above said conveyer; a shifter member provided with a fixed finger at its outer end adapted to engage the ends of the cartons and pivoted clamping fingers adapted to engage their sides; an oscillating shifter member support having a spindle for said shifter member; a segment on said support; a reciprocating rack coacting with said segment; a segment on said shifter member; and a fixed rack coacting therewith whereby the shifter member is oscillated on its spindle as the spindle is oscillated to and from its horizontal and vertical positions.

11. In a structure of the class described, the combination of a feed table; a carton feed conveyer arranged at the side of said table, the cartons being delivered by said conveyer on their sides with their open ends toward the table; a shifter member provided with carton engaging fingers; an oscillating shifter member; means for oscillating said

shifter member on its support as the support is oscillated to and from its horizontal and vertical positions; a flap spreader comprising a vertically reciprocating finger member, fingers pivotally mounted thereon to swing radially, said fingers being provided with inwardly projecting slotted arms; a reciprocating rod having pins thereon engaging said slotted arms of said fingers; means for reciprocating said finger member and said rod timed so that the finger member is actuated to introduce the fingers between the flaps and the rod actuated whereby the flaps are spread to a horizontal position; and a reciprocating feed member adapted to push the cartons from the shifter member to the table.

12. In a structure of the class described, the combination of a feed table; a carton feed conveyer arranged at the side of said table, the cartons being delivered by said conveyer on their sides with their open ends toward the table; a shifter member provided with carton engaging fingers, an oscillating shifter member support; means for oscillating said shifter member on its support as the support is oscillated to and from its horizontal and vertical positions; and a reciprocating feed member adapted to push the cartons from the shifter member to the table.

13. In a structure of the class described, the combination of a feed table having a delivery opening therein; a carton feed mechanism comprising means for supporting the cartons in an inverted position; a flap spreader comprising a vertically reciprocating finger member, fingers pivotally mounted thereon to swing radially; reciprocating rod connected to said fingers; means for reciprocating said finger member and said rod timed so that the finger member is actuated to introduce the fingers into the flaps and the fingers spread to swing the flaps to a horizontal position; a reciprocating feed member adapted to push the cartons from said supporting member across the table to delivery position; carton guides supported in a spaced relation to the feed table to permit the flaps to project thereunder as the cartons travel along on the table to delivery position said cartons being supported in delivery position above the delivery opening by their flaps; carton holders actuated with a step by step movement to bring them under the delivery opening of the table; and a vertically reciprocating member for delivering the cartons from the table to the holders.

14. In a structure of the class described, the combination of a feed table having a delivery opening therein; a carton feed mechanism comprising means for supporting the cartons in an inverted position; a flap spreader, a reciprocating feed member adapted to push the cartons from said supporting member across the table to delivery position; carton guides supported in a spaced relation to the feed table to permit the flaps to project thereunder as the cartons travel along on the table to delivery position, said cartons being supported in delivery position above the delivery opening by their flaps; carton holders actuated with a step by step movement to bring them under the delivery opening of the table; and a vertically reciprocating member for delivering the cartons from the table to the holders.

15. In a structure of the class described, the combination of a feed table having a delivery opening therein; a carton feed mechanism comprising means for supporting the cartons in an inverted position; a flap spreader comprising a vertically reciprocating finger member, fingers pivotally mounted thereon to swing radially; a reciprocating rod connected to said fingers; means for reciprocating said finger member and said rod timed so that the finger member is actuated to introduce the fingers into the flaps and the fingers spread to swing the flaps to a horizontal position; a reciprocating feed member adapted to push the cartons from said supporting member across the table to delivery position; said cartons being supported in delivery position above the delivery opening by their flaps; carton holders actuated with a step by step movement to bring them under the delivery opening of the table; and a vertically reciprocating member for delivering the cartons from the table to the holders.

16. In a structure of the class described, the combination of a feed table having a delivery opening therein; a carton feed mechanism comprising means for supporting the cartons in an inverted position; a flap spreader; a reciprocating feed member adapted to push the cartons from said supporting member across the table to delivery position, said cartons being supported in delivery position above the delivery opening by their flaps; carton holders actuated with a step by step movement to bring them under the delivery opening of the table; and a vertically reciprocating member for delivering the cartons from the table to the holders.

17. In a structure of the class described, the combination of a feed table; a carton feed conveyer arranged at the side of said table, the cartons being delivered by said conveyer on their sides with their open ends toward the table; a shifter member provided with carton engaging fingers; an oscillating shifter member support; means for oscillating said shifter member on its support as the support is oscillated to and from its horizontal and vertical positions; a flap spreader and a reciprocating feed member adapted to push the cartons from the shifter member to the table.

18. In a structure of the class described,

the combination of a feed table; a carton feed conveyer arranged at the side of said table, the cartons being delivered by said conveyer on their sides with their open ends toward the table; a shifter member provided with carton engaging fingers; an oscillating shifter member support; and means for oscillating said shifter member on its support as the support is oscillated to and from its horizontal and vertical positions.

19. In a structure of the class described, the combination of a feed table; a carton feed conveyer; a shifter member provided with carton engaging fingers; means for actuating said member to pick up the cartons from the feed conveyer and support them in an inverted position; a flap spreader adapted to spread the flaps to a horizontal position while supported by said shifter member; a feed member adapted to push the cartons from the shifter member across the table to delivery position; guides supported in a spaced relation to the table to permit the flaps to project thereunder as the cartons are pushed to delivery position; carton holders; and a member for delivering cartons from the table to the holder.

20. In a structure of the class described, the combination of a feed table; a carton feed conveyer; a shifter member provided with carton engaging fingers; means for actuating said member to pick up the cartons from the feed conveyer and support them in an inverted position; a flap spreader adapted to spread the flaps to a horizontal position while supported by said shifter member; and a feed member adapted to push the cartons from the shifter member to the table.

21. In a structure of the class described, comprising a table means for supporting the cartons in an inverted position; a flap spreader comprising a vertically reciprocating finger member, fingers pivotally mounted thereon to swing radially, said fingers being provided with inwardly projecting slotted arms; a reciprocating rod having pins thereon engaging said slotted arms of said fingers; means for reciprocating said finger member and said rod timed so that the finger member is actuated to introduce the fingers between the flaps and the fingers spread to swing the flaps to a horizontal position; and a reciprocating feed member adapted to push the cartons from said supporting member to the table.

22. In a structure of the class described, the combination of a feed table having a delivery opening therein; a carton feed mechanism comprising means for supporting the cartons in an inverted position; a flap spreader adapted to spread the flaps to a horizontal position while the cartons are so supported; a feed member adapted to push the cartons from the said supporting means across the table to delivery position; guides supported in a spaced relation to the table to permit the flaps to project thereunder as the cartons are pushed to delivery position, the cartons being supported in delivery position by their flaps; and a reciprocating member for delivering the cartons.

23. In a structure of the class described, the combination of a feed table having a delivery opening therein; a carton feed mechanism comprising means for supporting the cartons in an inverted position; a flap spreader adapted to spread the flaps to a horizontal position while the cartons are so supported; a feed member adapted to push the cartons from the said supporting means across the table to delivery position; and a reciprocating member for delivering the cartons.

24. In a structure of the class described, the combination of a feed table, a carton feed mechanism comprising means for supporting the cartons in an inverted position; a flap spreader adapted to spread the flaps to a horizontal position while the cartons are so supported; and a feed member adapted to deliver the cartons from said supporting means to the table.

In witness whereof, I have hereunto set my hand and seal in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

RALPH E. VALENTINE, OF BATTLE CREEK, MICHIGAN, ASSIGNOR TO KELLOGG TOASTED CORN FLAKE CO., OF BATTLE CREEK, MICHIGAN.

BAKING-PAN AND MOLD FOR BISCUITS.

1,124,363. Specification of Letters Patent. Patented Jan. 12, 1915.

Application filed January 24, 1912. Serial No. 673,214.

To all whom it may concern:

Be it known that I, RALPH E. VALENTINE, a citizen of the United States, residing at Battle Creek, Michigan, have invented certain new and useful Improvements in Baking-Pans and Molds for Biscuits, of which the following is a specification.

This invention relates to improvements in baking pans and molds for biscuits, particularly biscuits like shredded wheat or biscuits made from flaked cereals and the like.

The objects of this invention are: first, to provide a baking tray or mold in which the biscuits are cut and molded and retained in the forms during the baking process and with means for securing even baking without scorching or excessive browning of the edges of the biscuits. Second, to provide improved means of insuring register of the parts together so that the biscuits will be molded accurately without waste of material, the mass of which is distributed within the pan.

Further objects, and objects relating to details and economies of construction and operation will definitely appear from the detailed description to follow.

I accomplish the objects of my invention by the devices and means described in the following specification. The invention is clearly defined and pointed out in the claims.

A structure constituting the preferred embodiment of my invention is fully illustrated in the accompanying drawing, forming a part of this specification, in which:

Figure I is a perspective view of a pan and mold embodying the features of my invention. Fig. II is a detail plan view of one end thereof. Fig. III is an enlarged detail sectional view taken on a line corresponding to line 3—3 of Figs. I, II, and IV, showing details of the pan part and the devices for clamping and securing the registering of the mold whereby the biscuits are properly cut from the material introduced into this pan or tray. Fig. IV is a detail longitudinal sectional view taken on a line corresponding to line 4—4 of Figs. II and III. Fig. V is an enlarged detail sectional view through the sides or edges of adjacent molds and the pan showing the form of the cutting edges and the protection of the molds from undue heat.

In the drawing, the sectional views are taken looking in the direction of the little arrows at the ends of the section lines, and similar numerals of reference refer to similar parts throughout the several views.

Referring to the numbered parts of the drawing, the tray 1 has vertical side flanges 2. The tray cover 3 is similarly formed with upturned vertical flanges 4 that fit closely between the side flanges 2 of the tray. Laterally extending register pins 5—5 are disposed at intervals on the side flanges 4 and fit into registering notches 6 in the vertical flanges 2 of the tray 1.

Disposed in the tray 1 are half biscuit molds 7, which are rectangular in form and are secured in place by rivets 8, (see particularly Figs. III, IV and V). These bottom molds are perforated to permit the ready escape of moisture and the penetration of heat and are disposed over apertures 10 in the tray so that there is only a thin layer of perforated sheet metal incasing the under side of the biscuit, which allows the heat to penetrate very readily and evenly brown the biscuit.

Exactly corresponding half molds 11 are secured to the under side of the tray cover 3 by suitable rivets 12—12. These upper half molds are perforated at 13, and the tray cover 3 is apertured at 14 so that there is but a thin layer of perforated sheet metal embracing the top side of the biscuit, which allows the heat to penetrate and brown at that point as well.

The precise form of the cutting edges 17 of the molds appears in Fig. V where it will be noted that the cutting edges of the molds are beveled on the inside and that the cutting edges of adjacent molds substantially coincide and the cut off dough or shredded or flaked mass is forced within the mold.

The tray 1 and the tray cover 3 are creased at 15—15 between the biscuit molds to strengthen the frame work and also to effectively locate and support the biscuit molds which are attached to the said tray and its cover and form an inclosed air space 16 between the molds. By this arrangement, the molds also serve as cutters for the dough or material which is to be molded and baked and by distributing a mass of material, such as shredded wheat or flakes in the tray and

then inserting the cover 3 and forcing it to place, owing to the registering means, the damp dough will be cut off and there will be no wastage to take care of, the entire mass being properly formed into biscuits within the various molds.

The biscuits can be entirely baked in these molds as they can very readily aerate, or, if desired, after the same have become partially baked and set, the cover can be removed and the material be allowed to expand freely. It is very desirable, however, to preserve the biscuits exactly in form, and the correct amount of dough or prepared material is distributed in the tray 1 before the cover is shut down to cut the same and confine it within the molds. Where the biscuits are baked within the molds, undue browning of the thin edges is avoided by the inclosed air space 16.

Having thus described my invention, I desire to state that I have produced my improved baking pans and molds in the preferred form. However, I realize that they can be considerably modified in details and secure very satisfactory results without departing from my invention.

I desire to claim the invention specifically as illustrated, and also broadly as pointed out in the claims appended hereto.

Having thus described my invention, what I claim as new and desire to secure by Letters Patent is:

1. The combination in a baking pan and mold, of a tray with vertical flanged sides, with register notches therein, with apertures in the bottom thereof for receiving individual molds, a tray cover corresponding thereto with upturned flanged sides fitting within the tray sides with laterally extending register pins corresponding to the notches in the tray sides, also with apertures corresponding to those in the tray, half molds of perforated metal with their cutting edges in proximity to each other, rectangular in form entirely filling the said tray, with cutting edges beveled on the inner side of the upper edge, suitably disposed over apertures therein and secured thereto, and corresponding half molds of perforated metal on the under side of the tray cover suitably disposed beneath apertures in the said tray cover and secured thereto, the said tray and cover being suitably creased between said molds to reinforce and strengthen the same and form confined air spaces therebetween: all coacting substantially as described and for the purpose specified.

2. The combination in a baking pan and mold, of a tray with vertical flanged sides, with register notches therein, with apertures in the bottom thereof for receiving individual molds, a tray cover corresponding thereto with upturned flanged sides fitting within the tray sides with laterally extending register pins corresponding to the notches in the tray sides, also with apertures corresponding to those in the tray, half molds of perforated metal provided with cutting edges in proximity to each other, rectangular in form entirely filling the said tray, suitably disposed over apertures therein and secured thereto, and corresponding half molds of perforated metal on the under side of the tray cover suitably disposed beneath apertures in the said tray cover and secured thereto, the said tray and cover being suitably creased between said molds to reinforce and strengthen the same, all coacting substantially as described and for the purpose specified.

3. The combination in a baking pan and mold, of a tray with vertical flanged sides with register notches therein, with apertures in the bottom thereof for receiving individual molds, a tray cover corresponding thereto with upturned flanged sides fitting within the tray sides with laterally extending register pins corresponding to the notches in the tray sides, also with apertures corresponding to those in the tray, half molds of metal provided with cutting edges in proximity to each other, rectangular in form entirely filling the said tray and secured thereto, and corresponding half molds of metal on the under side of the tray cover suitably disposed beneath said tray cover and secured thereto, all coacting substantially as described and for the purpose specified.

4. The combination in a baking pan and mold, of a tray with vertical flanged sides with register devices, and with apertures in the bottom thereof for receiving individual molds, a tray cover corresponding thereto with upturned flanged sides fitting within the tray sides with register devices, also with apertures corresponding to those in the tray, half molds of metal provided with cutting edges in proximity to each other, rectangular in form entirely filling the said tray and secured thereto, and corresponding half molds of metal on the under side of the tray cover suitably disposed beneath said tray cover and secured thereto, all coacting substantially as described and for the purpose specified.

5. The combination in a baking pan and mold, of a tray with a series of half molds therein provided with suitable registering devices, and with cutting edges in proximity to each other, the said half molds entirely filling the said tray, and a tray cover with half molds secured to the under side thereof, corresponding to the tray with its half molds, provided with coöperating registering devices, as specified.

6. The combination in a baking pan and mold, of a tray with a series of half molds

therein entirely filling the said tray, and provided with cutting edges in proximity to each other; and a tray cover with half molds secured to the under side thereof, corresponding to the tray with its half molds, as specified.

In witness whereof, I have hereunto set my hand and seal in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

RALPH E. VALENTINE, OF BATTLE CREEK, MICHIGAN, ASSIGNOR TO KELLOGG TOASTED CORN FLAKE COMPANY, OF BATTLE CREEK, MICHIGAN.

OVEN.

1,143,151. Specification of Letters Patent. Patented June 15, 1915.

Application filed January 24, 1913. Serial No. 743,218.

To all whom it may concern:

Be it known that I, RALPH E. VALENTINE, a citizen of the United States, residing at Battle Creek, Michigan, have invented certain new and useful Improvements in Ovens, of which the following is a specification.

This invention relates to improvements in ovens.

It relates to ovens particularly designed for the baking of shredded wheat biscuits or flake cereal biscuits, although the oven is admirably adapted to a great variety of uses.

The objects of the invention are first, to provide an improved construction of oven in which the heat can be effectively regulated and controlled and the heating can be done with great economy by direct circulation of the products of combustion from the furnace; second, to provide an improved pan support and conveyer means for such an oven; third, to provide improved feeding devices for delivering the bake pans to such an oven; fourth, to provide improved discharge devices for discharging the contents from such an oven.

Further objects, and objects relating to details and economies of construction and operation will definitely appear from the detailed description to follow.

I accomplish the objects of my invention by the devices and means described in the following specification.

The invention is clearly defined and pointed out in the claims.

A structure constituting a preferred embodiment of my invention is fully illustrated in the accompanying drawing, forming a part of this specification, in which:

Figure I is a side elevation view of an oven embodying the features of my invention. Fig. II is a vertical longitudinal detail sectional elevation through such an oven taken on a line corresponding to line 2—2 of Figs. III and XI. Fig. III is a detail transverse sectional elevation partially in broken section, taken on a line corresponding to line 3—3 of Figs. I, II and XI. Fig. IV is an enlarged detail view of the feeding mechanism for delivering the bake pans to the oven, the wall portions and certain of the shafts being taken in section, on a line corresponding to line 4—4 of Figs. VI and VII, the main machine parts in this connection being shown in full lines. Fig. V is an enlarged detail sectional view taken on a line corresponding to line 5—5 of Figs. IV and VI, showing the details of the driving means of the feed mechanism. Fig. VI is an enlarged detail plan view in broken section of the feed mechanism leading to the oven, the same being taken on a line corresponding to line 6—6 of Figs. II, IV and VII. Fig. VII is an enlarged detail sectional view on a line corresponding to line 7—7 of Figs. II and IV of the feed mechanism at that point. Fig. VIII is a detail sectional view on line 8—8 of Fig. VII, showing the chain guides and other related stops and supports. Fig. IX is an enlarged detail longitudinal vertical sectional view through the delivery or discharge portion of the oven apparatus, showing how the pans are automatically discharged. Fig. X is an enlarged detail sectional view on a line corresponding to line 10—10 of Fig. III, showing the damper regulating means for controlling the flues to the chimneys and to the oven. Fig. XI is a detail sectional plan view on a line corresponding to line 11—11 of Figs. I, II and III, showing the damper means for controlling the flues and the relations thereof and of the flues the one to the other. Fig. XII is an enlarged detail perspective view of one of the pans which is handled by this improved oven. Fig. XIII is an enlarged detail transverse sectional view on line 13—13 of Fig. XII, showing the means of coupling these parts together. Fig. XIV is a detail transverse sectional view on line 14—14 of Fig. XIII, showing details of the pan, its cover and molds contained therein.

In the drawing all of the sectional views are taken looking in the direction of the little arrows at the ends of the section lines and similar numerals of reference refer to similar parts throughout the several views.

Referring to the numbered parts of the drawing, my improved oven structure is supported on a suitable foundation 1, and is made up of a base 2 which contains a series of furnaces 3—3—3, six in number, coupled in pairs, of any usual or desired construction, the same being here illustrated in conventional form. A series of chimneys 4, three in number, are placed back of the furnaces, and the furnaces are connected thereto by flues 5, one chimney serving for two of the furnaces, as clearly appears from a consideration of Figs. I, III and XI. A

flue connection 6 is between the body of the furnace and the base of the chimney 4. A flue 7 leads directly up from the furnace to the oven above to deliver the hot products of combustion directly thereto.

A damper 8 controls the flue 5 in the chimney, and a damper 9 controls the flue 7 which leads from each furnace up to the oven above. Horizontal rods 10 extending through suitable apertures in the walls of the furnace and chimney connect to these dampers for controlling the same. A rack 11 connected to each rod 10 is controlled by the action of a pinion 12, which pinions are carried in pairs on a common shaft 12 suitably supported on brackets outside each furnace, the same being controlled by a hand chain 14 on a sprocket wheel 13' within easy reach of the operator.

The oven 15 is of considerable height, extending in the present instance through three stories of a building, the floors of which 15' 15' are indicated in Figs. I and II. The oven 15 rests upon base part 2, and embraces the flues 7 of the various furnaces, which furnaces deliver their heated products of combustion directly up into the same. Flues 16—16, six in number, are provided at the top of the oven and connect to the chimneys 4 above the oven.

Dampers 17 are provided in the flues 16 and are controlled by suitable chain connections 18 extending through the floor below. An inlet opening or door 19 leads into the oven, at a convenient height from the second floor 15', and a discharge door or opening 20 is at the opposite side.

Within the furnace is an endless conveyer 21 made up of pairs of sprocket chains extending in loops over driven sprocket wheels 22 supported on suitable shafts 27 that extend out into bearings at each side of the oven toward its top. The conveyer 21 loops under sprocket wheels 23 disposed in pairs at each end of shafts 33 at the bottom. The conveyers pass down at the discharge side of the oven. Idle sprocket wheels 24 on shaft 24' and pairs of wheels 25—25—25 supported on idle shafts 25' are disposed in the lower part of the oven to support and guide the conveyer on its return to the feeding point and idle sprocket wheels 26 supported on shaft 26'. The direction of rotation is indicated by the arrow at the left of Fig. II, being up on the intake side of the oven and down on the discharge side.

The transverse shafts 27 are each provided with bevel gears 28 which are driven by the intermeshing bevel gears 29. The gears 29 are carried on the longitudinal driving shaft 30 which is supported on suitable boxing 31—31 at intervals along the side of the oven, and are driven by the pulley 32 or by any suitable means as a chain and wheel.

Tension is maintained on the conveyer by supporting the transverse shafts 33 on pivoted arms 34, the same being pivoted at 35, and weights 38 at the opposite end preserve the required tension. There is an arm and weight for each downwardly depending loop of the conveyer, and the shafts 33 play in slots 33' at the sides of the oven, whereby an even tension is preserved upon the conveyer throughout its travel.

Carriers 39 on each chain are connected together by cross bars 40, and are pivoted at 41 41 between the chains of conveyer 21 which are in pairs for carrying these pivoted carriers. The bottom cross portions of these carriers are slightly upturned to afford a retaining means for the bake pans that are delivered thereto. An endless conveyer 42 with projection attachments 43 on certain of the links serves to carry and deliver the bake pans 63 (see Fig. IV) to the carriers 39 of the conveyer 21. The endless conveyer 42 is carried by a pair of sprocket wheels 44—44 at one end and sprockets 45—45 at the opposite end. The sprocket wheels 44 are supported on a shaft 46 which is carried in suitably projecting brackets 46' 46' in proper position to deliver the bake pans to the carrier 21 within the oven. The sprocket wheels 45 45 are supported on the shaft 47 which is supported in suitable bearings.

The shaft 47 is driven by sprocket chains 49 over the sprocket wheel 48 from the sprocket wheel 50, which is supported on the shaft 51. A pair of these chains serves to drive these parts perfectly even to deliver the bake pans in perfectly square position into the oven. The shaft 51 is supported in suitable bearing brackets 52 52 at each side thereof. See particularly Figs. IV, V and VI. The shaft 51 is driven by the gears 56 which are driven by suitable connections from the bevel gear 55 which is driven by bevel gear 54 on the vertical shaft 53. The vertical shaft 53 is driven by the gear 58 which intermeshes with the bevel gear 57 on the main driving shaft 30.

An auxiliary endless conveyer 59 is made up of a pair of sprocket chains carried on sprocket wheels 60 at one end and on sprocket wheels 61 at the opposite end. The sprocket wheels 61 are supported on the shaft 47 already described. The sprocket wheels 60—60 are supported on the shaft 62. This conveyer is driven by the same connection that drives the conveyer 42. This auxiliary conveyer comprises wooden slats and is very light, as it is not required to withstand the high degree of heat to which the main conveyer is subjected in delivering the pans to the oven.

The bake pans 63 are carried by the conveyers 59 and 42 and delivered into the oven by passing onto a set of rollers 64,

which are supported on an extension 65 of the brackets 46.

An angle bar 66 serves as a support for cross bars 67 which carry the series of the said rollers 64 (see particularly Fig. IV).

Within the oven are upright guide and stop bars 68 made of angle bars which are joined together by suitable transverse bars 68' disposed therethrough at top and bottom, being secured to pairs of arms 69 at the bottom and to the pairs of arms 70 at the top. These arms extend from bottom and top respectively of the guide bars 71. The guide bars 71 are provided with side flanges which diverge at 72—73 at the bottom to receive the upwardly traveling chain, and also diverge at 74—75 at the top to permit the chain to be passed freely up and yet be properly retained at the receiving point to insure correct engagement of each carrier with the pans as they are successively delivered.

Laterally projecting ears 76 serve as a securing means for attaching these guide bars or plates 71 to the sides of the oven, three pairs of these being provided for each of the said guide bars 71. Stop bars 68 are coupled together by an angle bar 77, which carries the cross bars 79 which extend forwardly toward the cross bars 66 in which are journaled the rollers 78. A gap is left between the two sets of rollers for the passage of the cross bars 40 which couple the carrier sides together. It will thus be seen that the chain of the carriers may pass upwardly between the sets of rollers 64—78 and pick up by their projecting ends the pans 63 which are delivered thereto by the conveyer 42, as before described.

As the carriers are pivoted and hang down, they serve to carry the pans 63 through the oven up and down from front to rear until they come to the discharge opening 20.

At the discharge opening 20, the delivery apparatus is substantially duplicated, except that the rollers are on an incline downwardly and outwardly for discharging the bake pans out of the oven. The guides 71 are at each side and secured in the same way,—see particularly Fig. IX. An angle guide bar 80 corresponds to the guiding stop bar 68 and to this is secured a horizontal bar 81 corresponding to bar 77 on which are supported the discharge rollers 82 on the inclined cross bars 83. A corresponding bar 89 is on the opposite side and carries rollers 85 on the inclined cross bars 86, which are separated from the inclined cross bars 83 to permit the carriers to descend between the same. When the carrier descends, the bake pans 63 come into contact with the inclined rollers and are discharged downwardly and outwardly to a suitable conveyer 87. The carrier 87 is carried on the shaft 88 which supports the sprocket wheels 89 which carry the chains constituting the same. Brackets 90 with journal bearings support the shaft 88. The cross angle bar 84 is secured to extensions 90' of these brackets 90.

The carrier 87 is driven in precisely the same manner as the carrier which feeds the pans to the oven except it conveys from the oven and it is thought not to be necessary to detail these parts. The vertical shaft 91 is driven from the horizontal shaft 92 by the intermeshing bevel gears 93—94, the shaft 92 being driven by the bevel gear 95 from the bevel gear 96 on the vertical shaft 53 (see particularly Fig. I for these details).

The pans 63 are specially constructed and provided with covers 97, and the pans 63 carry half molds 98 and the covers 97 also carry half of the molds 8'. These parts register together by the fitting of the cover within the pan, and projecting pins 99 on the cover engage the notches 100 on the upwardly turned flanges at the sides of the bake pan to secure the longitudinal register, the flanges fitting the one within the other to insure the fitting in the opposite direction. These bake pans are made the subject matter of my copending patent application filed on even date herewith, Patent No. 1,124,363, and will not be described in detail at this point.

My improved oven I desire to state and its various devices are capable of great modification without departing from my invention. I believe the specific form in which I have shown the different parts and their combinations to be preferable to any other, and desire to claim the same specifically. I desire, however, to claim the invention broadly, as pointed out in the appended claims. The pans may be delivered into this oven by the hands of an operative, although that would be a tedious process and would involve considerable risk and waste over the method of delivering the same by the conveyer. Also an operative might, by proper devices, withdraw the pans from the oven when they are delivered at that point, but the devices which I have made use of are automatic and of the highest utility, resulting in great saving of labor and insuring high speed in the operation of the oven, which is made of such capacity that the chain conveyer therein has a comparatively rapid movement.

I desire to state that the same devices might be made use of in ovens otherwise heated, but I believe they are especially well adapted to the particular oven which I have shown, and I desire to claim the same in combination therewith.

Having thus described my invention, what I claim as new and desire to secure by Letters Patent is:

1. In an oven apparatus, the combination of a suitable oven; a suitable endless con-

veyer disposed within the said oven and moving upward at the intake side and downward at the discharge side; suspended carriers thereon, the ends of each of which are connected by a suitable rod and which are provided with depending engaging portions to engage and convey a pan; a divided support with suitable rollers disposed at the intake side of said oven in the ascending path of said conveyer, one portion disposed without the said conveyer and the other portion disposed and supported within the said conveyer; feed conveyer means for delivering bake pans to the said support timed to cooperate therewith whereby said pans will be picked up by the rising carriers; and discharge devices for the said oven disposed at the discharge side in the descending part of said conveyer comprising a divided support, one portion of which is disposed without the said conveyer and the other portion of which is disposed within the same, the said parts being inclined outwardly to automatically discharge the bake pans from the descending conveyer, all coacting substantially as described and for the purpose specified.

2. In an oven apparatus, the combination of a suitable oven; a suitable endless conveyer disposed within the said oven and moving upward at the intake side and downward at the discharge side; suspended carriers thereon, the ends of each of which are connected by a suitable rod and which are provided with depending engaging portions to engage and convey a pan; and discharge devices for said oven provided with suitable pan engaging rollers, all coacting substantially as described and for the purpose specified.

3. In an oven apparatus, the combination of a suitable oven; a suitable endless conveyer disposed within the said oven and moving upward at the intake side and downward at the discharge side; suspended carriers thereon, the ends of each of which are connected by a suitable rod and which are provided with depending engaging portions to engage and convey a pan.

4. The combination with an oven of an endless conveyer made up of sprocket chains with carriers secured thereto; rods connecting said carriers, driving sprocket wheels in the upper part of said oven for conveying the same, over which the endless conveyer is looped; idle sprocket wheels carried on shafts extending transversely of said oven, levers pivoted to the walls of said oven in which said shafts are journaled, and suitable weights disposed on the ends of said levers whereby the slack from said conveyer is taken up; suitable guides for the said conveyer chains disposed at each side of the oven at the intake and discharge side thereof, with suitable feed and discharge devices associated therewith, all coacting substantially as described and for the purpose specified.

5. In an oven apparatus, the combination of suitable conveyer chains, pan engaging supports carried by said chains, rods connecting opposite pan engaging supports; suitable guides therefor; supports projecting within the oven for supporting pans to be engaged by the said carriers; and endless conveyers for delivering pans to the said support to be taken up successively by the said conveyers so that the same can be fed one at a time automatically; and suitable spacing devices for distributing the pans in such position whereby they will be taken up by the said conveyer one at a time.

6. In an oven apparatus, the combination of a suitable oven provided with intake and discharge openings therein, an endless conveyer disposed within the said oven and moving upward at the intake side and downward at the discharge side thereof, said conveyer comprising a pair of carrier chains, pan engaging members carried by said chains and connected by rods, a support carried by the wall of the oven, a set of rollers carried by said support adjacent the intake opening of said oven, a second support carried by the wall of the oven, and a second set of rollers carried by said second support in line with the first set of rollers, feed conveyer mechanism carrying baking pans to said supports whereby they will be picked up by the rising pan engaging members, said conveyer mechanism being disposed in alinement with said rollers so as to deliver the pans directly thereon, and driving means for said endless carrier, all coacting substantially as described for the purpose specified.

7. In an oven apparatus, the combination of a suitable oven provided with intake and discharge openings, an endless conveyer disposed within the said oven and moving upward at the intake side and downward at the discharge side thereof, said conveyer comprising a pair of carrier chains, pan engaging members carried by said chains, rods connecting said pan engaging members, a divided support carried by the wall of the oven adjacent the intake opening therein, said divided support being provided with suitable rollers, a feed conveyer in line with said rollers for delivering pans thereto whereby they will be picked up by the rising pan engaging members, said rollers being spaced apart to permit the rods carried by the carrier chains to pass therebetween, and means for driving said endless conveyer, all coacting substantially as described for the purpose specified.

8. In an oven apparatus, the combination of a suitable oven provided with intake and discharge openings, an endless conveyer disposed within the said oven and moving up-

ward at the intake side and downward at the discharge side thereof; said endless conveyer comprising a pair of carrier chains, pan engaging members carried by said carrier chains, rods connecting said pan engaging members, a divided support carried by the walls of said oven adjacent the discharge opening therein, rollers carried by said divided support in position to be engaged by the descending pans, said rollers being spaced apart to permit the rods carried by said carrier chains to pass therebetween, said support being inclined downwardly toward the discharge opening, conveyer means in line with said rollers for receiving and carrying away the pans discharged therefrom, and driving means for said endless conveyer, all coacting substantially as described for the purpose specified.

In witness whereof, I have hereunto set my hand and seal in the presence of two witnesses.

No. 782,109. Patented February 7, 1905.

UNITED STATES PATENT OFFICE.

MORTIMER E. COOLEY, OF ANN ARBOR, MICHIGAN, ASSIGNOR OF ONE-HALF TO G. FRANK ALLMENDINGER, OF ANN ARBOR, MICHIGAN.

SHREDDING-MACHINE.

SPECIFICATION forming part of Letters Patent No. 782,109, dated February 7, 1905.

Application filed May 11, 1903. Serial No. 156,560.

To all whom it may concern:

Be it known that I, MORTIMER E. COOLEY, a citizen of the United States, residing at Ann Arbor, county of Washtenaw, State of Michigan, have invented a certain new and useful Improvement in Shredding-Machines; and I declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it pertains to make and use the same, reference being had to the accompanying drawings, which form a part of this specification.

This invention relates to shredding-machines, and has for its object a machine intended to produce shreds or thin strips of dough that are adapted to be afterward used in constructing what are known as "shredded-wheat" biscuits.

In the drawings, Figure 1 is a side elevation. Fig. 2 is a plan of the front end of the belt and of the pressure-roll. Fig. 3 is a cross-section of the belt. Fig. 4 shows a smooth belt with grooved pressure-roll. Fig. 5 shows a grooved belt with the corrugations made separate from the main body of the belt.

A indicates a frame on which there are mounted two rolls B and C on shafts *b* and *c*. These rolls are both smooth and are similar to large broad belt-wheels. Around them is stretched a belt D, preferably of steel, like that used for band-saws. The belt D is provided with grooves which run lengthwise of it on the external side thereof—that is, on the side which does not come in contact with the rolls B and C. A pressure-roll E, of smooth material, is held in suitable adjustable boxes *e* on the frame A, and a feed-hopper F is mounted above the tangential point of the belt D and the pressure-roll E. Brackets G support a stripper-comb H, that is held pivotally to the bracket and is held in engagement against the belt D by a weight K. One of the rolls, as the roll C, is adjustable with respect to the other and is provided with means for both adjusting and tramming it. For this purpose the boxing in which the shaft *c* engages slides in a guide R, that forms part of the frame A and is actuated in its sliding motion by a screw *d*. The boxing *e* of the pressure-roll E is arranged to be adjusted by the same character of adjustment by screw *f*.

In the mouth of the hopper F is a force-feed wheel *g* on the shaft of the main driving-wheel *c'*. The main driving-wheel *c'* meshes with a gear-wheel on the shaft of the roll B.

Instead of a plain roll E and a corrugated belt D a grooved roll E' is used in connection with a smooth belt D'. The belt D' is constructed with a smooth body K and with attached strips *j j*, such construction being used to overcome difficulties of construction of the tempered-steel belt D.

What I claim is—

1. In a shredding-machine, the combination of parallel rollers, means for varying the distance between them, a flexible belt traveling on said rollers, said belt being grooved longitudinally and externally, and a pressure-roll engaging against the belt and a stripper engaging against the belt, substantially as described.

2. In a shredding-machine, the combination of an endless belt grooved longitudinally and externally thereof, means for carrying it, means for actuating it, and a pressure-roll whose axis is transverse to said belt, engaging closely against the high parts of the surface thereof, substantially as described.

3. In a shredding-machine, the combination of a belt grooved longitudinally and externally, rolls on which the belt is carried, means for adjusting the rolls, a pressure-roll engaging against the belt, and a stripper engaging against the belt, substantially as described.

4. The combination of a belt grooved longitudinally and externally, means for supporting and actuating the belt, a pressure-roll engaging against the belt, a feeding device, and a stripper engaging against the belt, substantially as described.

In testimony whereof I sign this specification in the presence of two witnesses.

UNITED STATES PATENT OFFICE.

WILLIAM ERASTUS WILLIAMS, OF CHICAGO, ILLINOIS.

SHREDDED-WHEAT BISCUIT.

No. 820,899. Specification of Letters Patent. Patented May 15, 1906.

Application filed October 4, 1904. Serial No. 227,147.

To all whom it may concern:

Be it known that I, WILLIAM ERASTUS WILLIAMS, a citizen of the United States of America, and a resident of Chicago, county of Cook, and State of Illinois, have invented certain new and useful Improvements in Shredded-Wheat Biscuits, of which the following is a specification.

The object of my invention is to provide a biscuit of pleasing appearance that shall have many advantages over biscuits heretofore in use. With this end in view, suitable food materials are converted into filamentary form and then made into cup-shaped biscuits.

In the accompanying drawings, Figure 1 is an axial section of such a cup-shaped biscuit. Fig. 2 is a top plan view of the same biscuit. Fig. 3 shows the biscuit in side view.

Any suitable material may be used, but cereals, and preferably whole wheat, corn, barley, rye, or oats, or some blending of them, is employed.

Whatever the material the filaments are assembled in the form of a cup A, preferably having all its walls of approximately the same thickness, which may be varied as desired, and, as appears from the drawings, the filaments are so arranged that although they interlace by passing toward and away from the interior of the cup the general course of nearly all of them is around the cup in various directions, the result being that the structure has a peculiar nest-like appearance while an axial section shows principally filament ends.

The biscuit described may be formed in any suitable manner, for example, by gently forcing into a suitable cavity or mold the desired quantity of more or less interlaced fibers having for the most part the same general direction, the fibers being given a somewhat annular direction, either beforehand or while they are passing into the cup. In the latter case the cup may be rotated or the fibers themselves may be carried in the desired direction.

The size and form of the cup are such that it approximately fits the dishes in which such foods are ordinarily served, and obviously cream and sugar or the like may be placed in the cavity B, whence the sponge-like biscuit absorbs them.

This biscuit entirely eliminates the evils incident to pouring cream upon the convex surface of biscuit whose ends or some filaments of them often project beyond the margin of the containing dish. It has advantages also in that its comparatively thin shell is readily broken down with a spoon or fork and in that meats, fruits, eggs, jellies, and many other articles of food may be very conveniently served in the cup and thus a great variety of appetizing and healthful dishes may be quickly formed with this biscuit as a basis.

The biscuit being merely a thin shell in comparison with the ordinary biscuit, it is quickly and evenly baked and its exposed surface is relatively so large that nearly all the filaments of the whole mass of the biscuit is made brown and brittle, either originally or when slight dampness has lessened the very desirable crispness.

The biscuit being of such a light filamentary character has the quality of tenderness or crispness without the use of any leavening or shortening material and because it contains no such foreign material it readily takes on the flavor of even delicately-flavored foods placed within it.

What I claim is—

1. A cup-shaped biscuit made up of interlaced cereal filaments whose general courses are around the cup in various directions, forming a nest-like structure.

2. A cup-shaped biscuit having its walls made up of interlaced cereal filaments forming a nest-like structure with a rounded edge the general course of which is approximately followed by the filaments visable at that edge.

Signed at Chicago the 28th day of September, 1904.

Application filed October 4, 1904. Serial No. 227,148.

To all whom it may concern:

Be it known that I, WILLIAM ERASTUS WILLIAMS, a citizen of the United States of America, and a resident of Chicago, county of Cook, and State of Illinois, have invented certain new and useful Improvements in Shredding-Machines, of which the following is a specification.

The object of this invention is to provide an improved machine for shredding cereals and the like for making shredded wheat biscuits and similar products.

In the accompanying drawings, Figure 1 shows my machine in side elevation. Fig. 2 shows the same in plan view. Fig. 3 is a view partly in section, looking from the left in Figs. 1 and 2. Fig. 4 is a detail view showing in longitudinal section a part of two shredding rollers in normal contact. Figs. 5 and 6 are, respectively, plan and sectional views of portions of certain scrapers.

In this machine, a pair of grooved rolls, 1, 2, are revolubly mounted, in contact, in a frame 3 and connected by gears 4, 5, driven from any suitable source of power by means of a belt pulley 9, shaft 8, pinion 7 and gear 6. The rolls are both provided with many circumferential, V-shaped grooves 10 so spaced as to leave between successive grooves an intact portion of the roller perhaps twice as wide as the grooves themselves, and each groove of each roller is located opposite an intact portion of the companion roller.

At one end of the roll 2, the roll shaft is mounted in a fixed bearing 12 against which a hub-like projection, *x*, of the roll bears, while at the opposite end of the roll the shaft is borne by a sleeve 14, flanged at its outer end, adjustably mounted in a bearing 13, and normally made to hold the opposite end of the roller in contact with the bearing 12 by means of screws 15 which draw its flange toward the bearing 13 in which the screws work, and thus make it possible to compensate wear.

It is desirable that the companion roll, 1, should be adjustable longitudinally, to secure accurate registry between the grooves of one roll and the spaces between the grooves of the other roll, and also that it should be adjustable laterally and provided with means for pressing it toward the roll 2. With these objects in view, the shaft of this roll is mounted, at both ends of the roll, in sleeves 19, 20, similar to the sleeve 14, already described, and like it pressed against the corresponding ends of the roller by screws, which in this case are designated by the numerals 21, 22, respectively. The bearings 16, 17, corresponding to the bearing 13, are in this case made wider than the sleeves which lie in them and these sleeves are adjusted laterally by screws 18, the flanges of the sleeves being slotted, as shown, to allow the sleeves to move laterally although the bolts or screws 21, 22 remain fixed.

The material to be shredded is placed in a hopper 24 whence it falls between the rolls, and as the latter are in contact, as nearly as may be, the material normally passes only in the grooves, from which it is removed by scrapers 25, 26 consisting of spring fingers 27 clamped in rocking bars 28, supported on rods 29, 30 and provided with counterweights 31 holding the spring fingers up to their work. If owing to imperfect contact material should pass between the cylindrical surfaces of the rollers, such material will be split into thin narrow ribbons by the spring fingers and will be removed by similar scrapers 32 mounted upon rods 33 and yieldingly held against the rollers by counterweights 34. The material on leaving the rolls falls upon a belt conveyer 35 driven in any suitable manner. It is to be observed that this arrangement of grooves permits nearly as many shreds as would be formed were one roller provided with closely contiguous grooves and yet gives a large body of metal between consecutive grooves. The rolls are thus much more durable and metal may be used that would otherwise be unsuitable.

What I claim is—

1. In a shredding machine, the combination with a pair of parallel, osculating coacting rolls each having a series of circumferential grooves registering with ungrooved portions of the companion roll, of means for removing material from the grooves.

2. In a shredding machine a set of grooved rolls having alternate grooves and flat spaces, mounted in such manner that the grooves of one are opposite the spaces of the other and provided with adjustments for the rolls to secure a nicety of adjustment of the spaces, and means for removing the material from the grooves.

3. In a shredding machine a set of rolls provided with alternate grooves and flat spaces, with means for adjusting the rolls

to and from each other, and means for adjusting them longitudinally, and provided with scrapers for scaping the material from the rolls.

4. In a shredding machine, a set of rolls provided with alternate circumferential grooves and flat spaces with means for adjusting the rolls together and longitudinally, with scrapers composed of individual fingers for scraping the grooves, and with flat scrapers for scraping the spaces substantially as shown.

Signed at Chicago this 28th day of September 1904.

UNITED STATES PATENT OFFICE.

WILLIAM ERASTUS WILLIAMS, OF CHICAGO, ILLINOIS.

BISCUIT-BAKING APPLIANCE.

No. 896,964. Specification of Letters Patent. Patented Aug. 25, 1908.

Application filed June 30, 1905. Serial No. 267,788.

To all whom it may concern:

Be it known that I, WILLIAM ERASTUS WILLIAMS, a citizen of the United States, residing at Chicago, county of Cook, State of Illinois, have invented a new and useful Improvement in Biscuit-Baking Appliances, of which the following is a specification.

The object of the invention is to provide convenient devices for use in the commercial manufacture of biscuits and particularly of biscuits of shredded cereals having a cup-like form. In making such biscuits, it has been a very difficult matter to form a cup-like mass that is neither too loose in texture nor too compact and that is not crushed down at any point but is uniformly light and open throughout. Obviously a slight pressure upon soft uncooked filaments destroys this practically indispensable characteristic. So when the material has been cooked it is very fragile and it has been very difficult to remove it from the cup in which it is baked without injuring its filaments. To avoid these difficulties and provide for charging and discharging the cups perfectly, rapidly and certainly are among the more specific objects of the invention. The desired ends are attained by providing novel cups to be used in a set in a novel pan.

In the accompanying drawings, Figure 1 is a perspective view illustrating the manner of using the novel cups and pans, preparatory to putting the same in the oven. Fig. 2 is a plan view of one of the baking cups. Fig. 3 is a vertical section of a baking pan filled with such cups. Fig. 4 illustrates the manner of using the novel pan when the cups are all to be removed bodily therefrom. Fig. 5 is a vertical section of one of the baking cups. Fig. 6 shows the method of removing the baked product from a set of the cups by taking advantage of their peculiar construction. Fig. 7 is a vertical section of the removable bottom of one of the baking cups.

The tables and special devices for using the pans and cups are without novelty herein claimed and are shown only to make clear the nature and objects of the invention.

In these figures, 1 represents the cylindrical body of a metal baking cup and 2 a bottom for the cup, made to slide easily into and out of the same and having the form of an inverted cup provided with central perforations 16 and also perforations 15 in its upwardly curved flange 3, of approximately semicircular cross-section. The highest part of the bottom is materially below the plane of the upper edge of the body, so that when the cup is filled the material takes a cup-like form and is not a mass having a central opening. When these cups are filled they are placed in pans 4 adapted to hold somewhat closely a definite number. Each pan lacks one side wall, so that a set of cups may slide together into and out of the pan, and is provided with a bail 6 pivoted to the sides of the pan at some distance from its open side in position to swing down into the plane of the missing side and obstruct the movement of the cups, and to swing upward when desired, above the plane of the cups which may slide in beneath it in filling the pan, and to serve also as a handle when the cups are to slide out of the pan, these uses being illustrated in Figs. 1 and 4. When a set of cups is secured in the pan, each occupies a fixed position, and centrally beneath each is an aperture 8, and, thereby the pan may be pressed down upon a set of pins (Fig. 6), which thus raise the loose bottoms simultaneously lifting the biscuits out of the bodies of the cups and holding them in position for conveniently removing the baked product. The perforations in the loose bottoms not only allow circulation of air but permit drawing the filaments into the cup by atmospheric suction, which is necessary if they are to be evenly and compactly distributed without crushing.

What I claim is:

1. A baking cup having an upwardly removable bottom projecting upward, centrally, to form an inverted cup of materially less height than the lateral walls, and provided with a series of central perforations and a series of perforations near its margin.

2. The combination with a baking pan provided with a series of perforations in its bottom, of a set of baking cups having upwardly removable bottoms registering with said perforations, respectively.

UNITED STATES PATENT OFFICE.

WILLIAM ERASTUS WILLIAMS, OF CHICAGO, ILLINOIS.

SHREDDED-WHEAT BISCUIT.

No. 897,182. Specification of Letters Patent. Patented Aug. 25, 1908.

Application filed January 29, 1908. Serial No. 413,260.

To all whom it may concern:

Be it known that I, WILLIAM E. WILLIAMS, a citizen of the United States, residing at Chicago, county of Cook, State of Illinois, have invented new and useful Improvements in Shredded-Wheat Biscuits, of which the following is a specification.

The object of my invention is to produce a preferably flat shredded wheat biscuit which, instead of being compact, dense and harsh, as some have been made in order that they may bear handling and shipping, shall be of loose or open texture, crisp, and fragile and yet capable of withstanding the rough treatment just mentioned. Children, especially, almost invariably dislike the compact biscuits mentioned, while they are usually especially fond of the fragile products made in accordance with this invention.

In the accompanying drawings: Figure 1 is a plan view of one form of the novel biscuit. Fig. 2 is an edge view of the same.

The body 2 of the biscuit consists of a preferably flat mass of variously curved, overlapped and interlaced cereal shreds, and surrounding this body is a narrow, relatively thin, continuous strip 3, 4 of the same material as the shreds and integrally connected along its inner edge with the central mass of shreds, from which it is in fact usually formed as hereinafter stated. The strips form a sort of frame, preferably in the medial plane of the biscuit, as shown, and when the biscuit is baked this strip or rib though brittle becomes rigid enough to support and protect the more fragile shreds.

The biscuits may be formed in any suitable way, but I prefer to make them by first forming a relatively wide, flat sheet of open texture made up of variously curved, interlaced and overlapped shreds in a more or less plastic condition, and then compressing narrow bands, of the material forming the sheet, along intersecting lines, preferably at right angles, and dividing these bands longitudinally. In those portions of the fibrous sheet which are compressed to form the bands, the shreds lose their individuality and become a thin, practically homogeneous ribbon. The sheet is thus divided into biscuits like that shown in the drawings, each consisting of a comparatively loose or open mass entirely surrounded by an integral, narrow, thin, relatively compact and dense projecting rib or frame which when dried or baked protects the body, although it forms but a small fraction of the entire biscuit.

What I claim is:

1. A biscuit composed of a mass of loosely interlaced and overlapped shreds integrally united around its entire margin by a narrow compact mass of the same material.

2. An approximately flat biscuit composed of a body of curved, interlaced and overlapped shreds, forming a loose or open mass, integrally connected on all sides with a narrow compact frame, of the same material, in the medial plane of the biscuit, protecting the same in handling and during transportation.

In witness hereof I have hereunto subscribed my name on this 24th day of January, 1908, in the presence of two subscribing witnesses.

UNITED STATES PATENT OFFICE.

WILLIAM ERASTUS WILLIAMS, OF CHICAGO, ILLINOIS.

MACHINE FOR MAKING SHREDDED-WHEAT BISCUITS.

No. 911,245. Specification of Letters Patent. Patented Aug. 17, 1909.

Application filed June 30, 1905, Serial No. 267,737. Renewed March 18, 1909. Serial No. 484,270.

To all whom it may concern:

Be it known that I, WILLIAM ERASTUS WILLIAMS, a citizen of the United States, residing at Chicago, in the county of Cook and State of Illinois, have invented a new and useful Improvement in Machines for Making Shredded-Wheat Biscuits, of which the following is a specification.

The object of my invention is to provide a desirable machine for making shredded wheat or other biscuits, and the invention consists in the devices set forth in the claims.

Reference will be had to the accompanying drawing in which—

Figure 1 is a plan view of the machine. Fig. 2 is a side elevation of the machine. Fig. 3 is a plan detail of the delivery end of the machine. Fig. 4 is a side sectional detail of the front end of the machine. Fig. 5 is a detail of parts of the timing device. Figs. 6 and 7 are details of the cup spindles. Fig. 8 is a sectional elevation on line 8—8 of Fig. 1. Fig. 9 is a vertical sectional detail through the shredding rolls. Fig. 10 is a transverse sectional detail showing the guides for the carrier belts. Figs. 11 and 12 are views of the baking cups.

I provide a shredding device of any suitable construction which I show in the drawing as made of rolls 1 and 2 mounted upon any suitable frame 3. The shreds are delivered upon shred carriers of any suitable construction, but I prefer to use the belts 4 which deliver the shreds into baking cups or forms 5 which are carried upon spindles 6 mounted to revolve in a carrier wheel 7 having a vertical axis 38 in the frame. An air suction is produced by any suitable means of exhaust (not shown) and is connected by a pipe 8 to a chamber 9 which is connected by cavities 10 and 63 through the spindles 6 to the inside of cups 5 to suck the shreds down into the cups when the cups are in position to be filled. The chamber 9 extends only under the cups that are being filled and the lower side of the wheel 7 fits as a cover over the top of chamber 9. In addition to the suction to place the shreds into the cups, I provide sets of tampers or packers 11 which reciprocate vertically, pushing the shreds into place in the cups as the shreds are delivered by the belts 4. The spindles 6 are made to revolve intermittently by a belt 12 while they are being filled. The carrier wheel 7 is made to move intermittently allowing a period of rest sufficient to fill the cups. Thus the wheat or the suitable prepared stock from which the shreds are to be made is placed in the hopper 13 and the rolls convert it into shreds which are formed into shape in the cups 5 which are removed by hand, or other suitable means and fresh cups supplied in a similar manner.

The machine is driven by a belt wheel 14 driving a shaft 15 carrying a pinion 16 which drives a spur gear 17 on the shaft of one of the rolls and the rolls are geared together by gears 18. The pulleys 62 on shaft 15 drive the belts 4 much faster than the lineal rate of delivery of the shreds whereby the shreds assume a straighter position on the belts and are discharged with impact into the forms.

The mechanism for moving the carrier wheel 7 the packers and the cup spindles 6 is driven by the gear 20 on shaft 21 on which there is a crank 22 which is connected by a link 23 to a walking beam 24, having an axis 25 on the frame of the machine. Walking beam 24 is provided with an arm 26 having apertures which carry the packers, the lower ends of which are guided by perforated blocks 27, which are supported by the curved hoppers or guide way 28, which directs the shreds into the cups as the shreds are delivered by belts 4. A shaft 29 and the fixtures thereon act as a timing device and it extends across the machine and is driven intermittently by ratchet 30 and pawl 31 carried by an arm 32 moved by a link 33 connected to walking beam 24. The shaft 29 carries a block 34 which when in an upward position engages a block 35 on an arm 36 pivoted at one end 37 to the frame of the machine and at the other end 38 connected to a link 39 connected to a bar 40 which is connected to crank 22. The bar 40 reciprocates horizontally with every stroke of the crank. And its outer end 41 rides freely upon roller 42 at all times save only when block 34 engages block 35 which engagement lifts the end 41 of bar 40 and causes the block 43 on bar 40 at its next stroke to engage one of the pins 44 on wheel 7 and move the wheel or carrier two spaces or two cups bringing two empty cups under the discharge of the belts and removing the two filled ones. Thus the timing of filling the cups is determined by the rate of revolution of the shaft 29 carrying its block 34, this may be varied by causing the pawl 31 to engage more or less teeth of the ratchet at a stroke which is accomplished

by moving the connection of the arm 33 into different holes in walking beam 24 giving more or less stroke to pawl arm 32. The shaft 29 carries a belt wheel 45 which drives belt 12 which is trained around suitable guide rollers 46, 47, and 48 bringing the belt 12 into engagement with the head block of cup spindles 6 thereby causing them and the cups mounted thereon to move at each intermittent movement of ratchet or timing shaft 29, which movement takes place while the packing pokers are above the cups 5, thereby not disturbing the shreds in the cups by the revolution of the cups. The pokers 11 slide loosely in their supports and go down by gravity thereby adjusting themselves to the mass of shreds as they accumulate. Weights 49 are provided to give proper thrust to the pokers. Above the cup spindles on the carrier wheel 7 there is a cutting disk 50 provided with apertures 51 over the cup spindles.

Mounted to slide on the top of cutting disk 50 there is fixed plate 52 to which the curved hoppers 28 are attached. The plate 52 and disk 50 act as a shear to cut off the shreds at each movement of the carrier with the cups. The cups 5 are perforated at the bottom to provide a connection to the suction chamber 9 through the cavities 10 and 63 of spindles 6. Whereby the suction can act on the shreds as they fall into the cups. Instead of suction I may use an air blast from above but I prefer to use the suction. Below the rolls 1 and 2 there are provided guide or deflecting plates 53 and 54 for directing the falling shreds upon the center of carrier belts 4. The belts 4 are made of two thicknesses, one on top of the other and the upper or outer one is the thinner and more flexible of the two and they are connected together by rivets 55 along a central line. Along the upper or carrying side of the belts there are provided guide boards 56, which extend inward between the parts of the belt causing the upper layer to assume the shape of a trough thereby holding the shreds in place on the belt and preventing thus displacement as they are carried along.

The rolls are provided with suitable adjustments to hold them in position to each other and also with suitable scrapers 57 to strip the shreds off them. The cups 5 are the subject of another patent and they are made in two pieces, the outer or shell piece sits over the top of the spindle 6 on to the shoulder 59, while the cone piece rests on the surface 60. Thus the cups are held upon the spindles, yet may easily be removed as there is clearance between the top of the cups and the under side of plate 50.

In place of the rolls for producing the shreds I may use any suitable shredding device or provide a suitable source of supply of the shreds in any manner.

What I claim is:—

1. The combination with devices for producing cereal shreds or filaments, of a series of laterally closed independent cups or forms, means for bringing said forms successively into position, and automatic means for filling each form with an independent mass of loose shreds from said devices while in such position.

2. The combination with a suitable form, of means for feeding long cereal shreds into said form, to fill the same gradually, and means for rotating the form upon its own axis during such feeding, whereby the long shreds are wound spirally in the form.

3. The combination with a series of suitable forms, of automatic means for bringing said forms successively, to rest in position for filling, means for rotating each form upon its own axis while so at rest, and means for delivering long cereal shreds in the form while it is so rotating; whereby each form of the series is filled with a nest-like body of spirally wound shreds.

4. The combination with a series of suitable forms, of automatic means for bringing the forms to rest successively in a predetermined position, means for rotating each form upon its own axis while it is in such position, means for continuously delivering cereal shreds in each form during such rotation, and means for cutting off the supply of shreds when the form is filled to the proper extent.

5. The combination with a suitable form, of means for progressively feeding cereal shreds into said form, and means for producing an air current through the form during such feeding, to gently urge the individual shreds toward proper position.

6. The combination with a suitable form, of means for progressively delivering in said form loose cereal shreds, and a packer arranged for gently pressing the shreds during such delivery.

7. The combination with a suitable form, of means for progressively delivering loose cereal shreds in said form, a packer arranged for gently pressing the shreds into place during such delivery and means for rotating the form while it is being filled.

8. Means for bringing cereal shreds from a source of supply, forms for receiving the shreds, packers for packing the shreds in the forms, and means for revolving the forms, and means for moving the forms in relation to the source of supply.

9. Means for bringing cereal shreds from a source of supply, forms for receiving the shreds, packers for packing the shreds in the forms, means for revolving the forms, means for moving the forms in relation to the source of supply, means for cutting off the shreds in the forms from the source of supply.

10. The method of forming biscuits of cereal shreds which consists of aggregating loose shreds and giving the mass a desired shape by gently pressing the shreds into a suitable form by means of a current of air.

11. The method of forming biscuits of cereal shreds which consists in progressively introducing the shreds into a suitable form and meantime creating an air current through the gradually increasing mass.

12. Means for supplying shreds, forms for receiving the shreds, an air current to place the shreds in the forms and packers to pack the shreds in the forms.

13. Means for supplying shreds, forms for receiving the shreds, an air current, and mechanical packers for placing the shreds in the forms, and means for revolving the forms.

14. Means for supplying shreds, forms for receiving the shreds, an air current and mechanical packers to place the shreds in the forms and means for moving the forms in relation to the source of supply.

15. Means for supplying shreds, forms for receiving the shreds, an air current and mechanical packers for placing the shreds into the forms and means for cutting off the source of supply from the shreds in the forms.

16. Means for supplying shreds, forms for receiving the shreds, an air current and mechanical packers for placing the shreds in the forms, means for moving the forms in relation to the source of supply, means for cutting off the shreds from the source of supply.

17. Means for supplying shreds, forms for receiving the shreds, an air current and mechanical packers for placing the shreds in the forms, means for revolving the forms in relation to the source of supply, means for cutting off the shreds in the forms from the source of supply.

18. Means for supplying shreds, forms for receiving the shreds, a guideway or hopper for directing the shreds into the forms, packers and an air current for placing the shreds in the forms.

19. Means for supplying shreds, forms for receiving the shreds, from the source of supply, a guideway or hopper for directing the shreds into the forms, means for packing the shreds in the forms and means for revolving the forms, and means for moving the forms in relation to the source of supply.

20. Means for supplying shreds, forms for receiving the shreds, a movable carrier for the forms, means for revolving the forms while on the carrier and means for packing the shreds in the forms on the carrier.

21. Means for supplying shreds, forms for receiving the shreds, a movable carrier for the forms, means for revolving the forms on the carrier, means for packing the shreds in the forms and means for cutting off the shreds from the source of supply.

22. A shredding device, a carrier for the shreds, forms for receiving the shreds from the carrier, said carrier moving faster than the shredding device, delivering the shreds drawn out in lines and when free from the shredder moving with impact thereby aiding in their packing in the forms.

23. A source of supply of the shreds, forms for receiving the shreds, the said forms mounted upon revolving spindles, said spindles mounted on a movable carrier, means for the revolving the spindles intermittently.

24. An apparatus of the class described, the combination with a suitable form having apertures in its walls, of means for delivering cereal shreds in the form, and means for simultaneously passing an air current through said aperturs, substantially as set forth.

25. The combination with a suitable form having aperturs in its walls, of means for delivering cereal shreds in said form, and means for withdrawing air from the space around the exterior of the form, substantially as set forth.

26. The combination with a rotary carrier, of a series of forms revolubly mounted in the carrier, means for rotating the carrier step by step, means for rotating certain of said forms while the carrier is at rest, means for progressively delivering cereal shreds to the rotating forms, and means for continuously urging the entering shreds toward the form walls, substantially as set forth.

UNITED STATES PATENT OFFICE.

WILLIAM ERASTUS WILLIAMS, OF CHICAGO, ILLINOIS.

MACHINE FOR MAKING SHREDDED-WHEAT BISCUITS.

949,013. Specification of Letters Patent. Patented Feb. 15, 1910.

Application filed January 29, 1908. Serial No. 413,879.

To all whom it may concern:

Be it known that I, WILLIAM ERASTUS WILLIAMS, a citizen of the United States, residing at Chicago, in the county of Cook and the State of Illinois, have invented a new and useful Improvement in Machines for Making Shredded-Wheat Biscuits, of which the following is a specification.

This invention has for its object to make automatically a cup shaped biscuit or a round biscuit out of any shredded or fibrous material such as shredded wheat, grain, codfish or any other suitable material.

Reference will be had to the accompanying drawings in which:

Figure 1 is a vertical elevation of the machine on the side at which it receives the material that it operates upon to form the cup-shaped biscuits. Fig. 2 is a vertical elevation corresponding to the left side of Fig. 1. Fig. 3 is a top plan view with certain parts broken away to show those below. Fig. 4, is a plan sectional view with parts broken away as will be understood by reference to the corresponding parts in Figs. 1 and 2. Fig. 5 is a vertical sectional detail of certain parts of the base of the machine. Fig. 6 is a vertical detail of the packing plungers. Fig. 7 is a vertical detail of the receiving hoppers for the shreds. Fig. 8 is a sectional detail of one of the cutting plungers. Fig. 9 is a view similar to that of Fig. 8 but at right angles thereto. Fig. 10 is a vertical sectional view through the axis of the delivery belt. Fig. 11, on the same sheet with Fig. 3, is a vertical sectional detail. Fig. 12 (Sheet 3) is a vertical detail of the locking mechanism. Fig. 13 (Sheet 2) is a plan detail of the ratchet movement that drives parts of the mechanism. Figs. 14 and 15 on Sheet 1 are details that will be described later. Fig. 16 is a detail of the cutting plungers. Fig. 17 is a sectional view of the cups or forms. Fig. 18 is a detail view of a certain cross bar and blocks shown also in Figs. 3 and 6.

The machine is provided with a suitable frame made of members of angle section, 2, 3, 4, 5, and 26.

Fig. 17 is a cup or form into which the shreds are placed by the machine and which holds them till they are baked or dried and thereby set sufficiently to keep the shape given them by the form. This cup or form 116 is provided with a cone shaped central projection 117 in its bottom, around and over which the shreds are placed by the machine in an interlacing manner extending upward, downward and obliquely of the cone shaped bottom and at the same time in a general direction around the cup and also inward and outward from the center toward the rim whereby the biscuit thus formed is bound together and yet the shreds are not packed tightly but left open and interstitial. The cups 116 are usually made of tin and are supplied to the machine from a magazine not shown, by a chute 111 and the function of the machine is chiefly to handle these cups and pack the material therein which material is delivered to the machine by the moving carrier belt 109 coming from a shredding machine or other suitable source of supply of the shreds. The shreds lying, as nearly as practicable, lengthwise of the carrier belt are discharged endwise into the hoppers 30 of the machine which hoppers 30 are arranged in a ring supported on a ring shaped disk 29 forming a part of a wheel carried on a vertical shaft 21. The hoppers 30 are spaced apart in the ring the right distance to suit the size of the cups 116 whereby the wheel carrying the hoppers 30 may receive a continuous line of cups 116 from the chute 111 and hold the cups 116 apart from each other by fingers 31 which are fastened by screws 112 to a plate 23 which is the main plate or body of the wheel and to which many other parts are fastened, which plate is fixed by screws 24 to a flange, 22, Fig. 4 fixed to shaft 21 supported in a step bearing 25 on cross member 26 of frame. The cups 116 are thus carried around by the wheel underneath the delivery of the carrier belt 109 and while underneath the said delivery receive a sufficient quantity of shreds to form the biscuits desired and are finally discharged by an arm 114 fixed by screws 115 to the frame 2 of the machine. A guide plate 113 directs the discharged cups into any suitable receiving device. The cups 116 are revolved during the time that they receive the shreds in order to interlace the shreds and to do this revolving there are provided rotating disks 32 upon which the cups 116 set as they are carried around by the wheel. These disks are seated in cavities in plate 23, and are supported by spindles 33 journaled in a lower disk ring 28 and also supported in an upper disk ring 27, both of which rings, 27 and 28, are fixed by studs 110 to plate 23. At the back of disks 32 and

above the plate 23 there are rollers 34 so arranged as to location that they engage the cups 116 as they set concentrically upon disks 32 and these rollers 34 are fixed upon shafts 35, journaled in plates 23, 27 and 28, and carrying drive pulleys 36 which are driven by a belt 37. A belt 86 engages the disks 32 and the cups 116 themselves so that the cups are engaged on the bottom and at 3 points on their sides by driving members so that they revolve during the time that they receive the shreds.

The shreds of grain are light and are usually long sometimes almost continuous strings, so that they do not drop readily into the cups 116 but must be forced down into place, and this is accomplished by a series of plungers or packers 60 mounted upon a vertically reciprocating cross head composed of the plates 56 and 57 connected together by members 54 which engage the guides 55 fastened to frame 2. The wheel which carries the cups is given an intermittent movement which permits the plungers 60 to descend into the cups 116 and force the shreds down out of the hoppers 30 into the cups or forms in the proper form desired and the ends of the plungers 60 are provided with cavities 61, which are so shaped as to give the proper form to the shreds in the cups at each stage of the filling of the same, the delivery belt 109 being wide enough to deliver into several hoppers 30 and cups 116 simultaneously and as the wheel moves by impulses the distance of one full space of a cup at a time each cup will receive several impacts of the plungers while being filled and some of the plungers are located beyond the points of delivery of the shreds to the cups to give a finish to the shape of the shreds in the cup which shreds are then properly biscuits. The plungers 60 are made round or cylindrical and engage the shreds on all sides of the central cone of the cup, at the same time preventing the drawing up of the shreds over the top of the cone on one side while they are being pushed down on the other side.

Since the shreds are often continuous strings and the supply on the carrier 109 is endless the shreds will extend over the top of one hopper 30 into that of its neighbor owing to the moving of the wheel carrying the hoppers past the points of delivery of the shreds to them. And to cut these shreds clear from hopper to hopper there are provided cutting walls 72 between the hoppers 30 and coacting therewith there are reciprocating cutting plungers composed of the cutting plates 68 fastened to blocks 69 which are fastened by screws 70 to plate 57 of cross head before mentioned that carries the packing plungers 60. The plates 68 on the descent of the cross head embrace each side wall 72 of hoppers 30 and thereby cut and force down into hoppers any shreds that hang over the division walls 72 of the hoppers.

In the cutting of the shreds by the plungers as described some shreds will stick to the plates 68 and be lifted up as the plungers rise and to free these shreds there are provided the blocks 67 mounted upon rods 66 which slide through the plates 56 and 57 and terminate in a nut or cap 64 against which a spring 65 resting on plate 56 keeps blocks 67 in an upper position at all times save only when the cross head is at its upward limit of travel when the nuts or caps 64 engage fixed blocks 63 mounted upon a fixed cross bar 58 and thereby the blocks 67 are forced downward between plates 68 spreading them apart and stripping the shreds off their ends. (See Fig. 16.) On the return downward of the plungers the springs 65 withdraw blocks 67 to a normal position as shown in Fig. 9.

The inside lower corners of plates 68 of cutting plungers are provided with guide blocks 71 which insures proper registry of the cutting plungers with the cutting walls 72 of the hoppers to allow slight variations in the registry of the hoppers at each impulse of movement of the wheel carrying them.

The plungers or packers 60 are mounted upon rods 59 sliding in plates 56 and 57 of the cross head and springs 62 acting between the plungers 60 and plate 57 provide for an elastic contact with the shreds in the cups 116, preventing too great a mashing of the shreds in the cups and also insures against breaking the parts in the event of a derangement of the timing of the machine.

The machine is driven by a belt wheel 6 driving a shaft 7 which carries a crank plate 8 carrying a wrist pin 9 connected by a rod 10, to an arm 11, mounted upon a rocker shaft 93 supported by boxes fixed to frame 2 and rocker shaft 93 carries an arm 12 provided with a wrist pin 13 carrying a universal joint 14 connected by a rod 15 to a joint 16 on a rocker arm 17 journaled on vertical shaft 21 (on which is mounted the cup carrier wheel) and provided with a pawl 18 held by a spring 19 into contact with ratchet teeth of a large ratchet 20 whereby on each revolution of the belt wheel an impulse equaling the distance of one cup on the carrier wheel is given the cup carrying wheel and its parts. The impulses given the cup carrying wheel are quick and jerky and to insure close registration of the hoppers and cups with the packing and cutting plungers there is provided a locking catch or stop 102 (Fig. 4) fixed at 104 to a spring arm 100 screwed at 101 to frame 2 and this catch or stop 102 engages notches 103 in ring 28 and is released therefrom at the beginning of each movement of carrier

wheel by a cam block 98 (see Fig. 12), mounted upon a pin 99 and connected at 97 to a rod 96 connected to a wrist pin 95 in an arm 94 fixed on rocker shaft 93. Whereby at the back stroke of pawl arm 17 the catch 102 is released from the notches 103 in plate 28 of the carrier wheel then on the forward movement of arm 17 during which the carrier wheel is moving the catch 102 is allowed to come into engagement with notches 103 in time to prevent the movement of the wheel carrying it too far. Backlash is prevented by another spring catch 107 on arm 105 fixed at 106 to frame 2 and this catch is disengaged by the movement of the wheel itself.

The shock of stopping the carrier wheel is lessened by means of a friction disk brake 38 having friction blocks 39 placed up against the under side of the wheel plate 23 and held in elastic adjustment thereto by the springs 40 resting on blocks 41 and screws 43 in blocks 42 (see Figs. 4 and 5), and the disk is held against rotation by arms 108 shown only in dotted lines in Fig. 4. Thus by the above disk brake the wheel is prevented from too free a movement thereby saving some of the shock of stopping it.

The cross head carrying packing plungers and cutting plungers is vibrated by the former mentioned wrist pin 9 connected by a link 44 to a wrist pin 45 of an arm 46 connected to a rocker shaft 47 mounted in suitable bearings 48 fixed to frame of machine and rocker shaft 47 carries arms 49 connected at 53 to rods 52 connected to the cross head before mentioned. Consequently on each impulse of the cup carrying wheel the plungers descend to pack the material and cut it at the division walls of the hoppers. The plunger cross head is counter balanced on the rocker shaft 47 by a weight 51 fastened at 50 to arms 49.

Motion is given to the belts 86 and 87 by means of the belt wheel 73 engaging and driving the belt 74 which is trained around two guide pulleys 75 on a shaft 76 over a pulley 77 on a vertical shaft 78 which is supported in bearings 79 and carries a fixed pulley 85 on its lower end and also a bevel gear 84 which gear engages a gear 82 mounted upon a stud 83 and running idle thereon and engaging a gear 81 fixed to a pulley 80 which is loosely mounted on shaft 78 whereby shaft 78 drives pulley 85 in one direction and pulley 80 in an opposite direction.

The belt 86 before mentioned passes around pulley 80 and then over an idler 88 on a stud 89 in brackets 90, then around a pulley 91 supported by brackets 92 and then back along the carrier wheel rim engaging the tin cups or forms 116 and disks 32 and thereby rotating them back to and around the pulley 80 as described. The belt 87 passes around the pulley 85, then over an idler 88 on stud 89 before mentioned, then around another idler supported in brackets 92 before mentioned and then back in contact with and rotating pulleys 36 thereby rotating rollers 34 and thence back to pulley 84 as mentioned. Thus as the carrier wheel presents the cups to be filled with shreds to form biscuits it brings the cups into contact with the belts as above described which revolve the cups all the time that they are receiving the shreds.

The hoppers 30 are connected to back flange plate 118 held down to ring 29 by rods 37 and this plate 118 prevents the discharge of the shreds from the delivery belt 109 beyond the hopper 30.

What I claim is:

1. In a machine of the class described, the combination of movable forms or molds in which the biscuits are molded, a carrier for the forms, devices for revolving the forms while in the carrier, a source of supply of the shreds delivering to the forms or molds, hoppers directing the shreds from the source of supply into the forms or molds, circular packing plungers for forcing the shreds into the forms, cutting devices for cutting the shreds between the hoppers and forms, packing plungers for giving shape to the biscuits after the required mass of shreds has been delivered to the forms, and discharging devices for discharging the forms containing the biscuits from the carrier.

2. In a machine of the class described, the combination of movable forms or molds in which the biscuits are molded, a carrier for the forms, devices for revolving the forms while in the carrier, a source of supply of the shreds delivering to the forms or molds, hoppers directing the shreds from the source of supply into the forms of molds, packing plungers for forcing the shreds into the forms, cutting devices for cutting the shreds between the hoppers and forms, packing plungers for giving shape to the biscuits after the required mass of shreds have been delivered to the forms, and discharging devices for discharging the forms containing the biscuits from the carrier.

3. The combination of forms for the biscuits to be made, a carrier for the forms, devices for automatically delivering the forms to the carrier, devices for giving the carrier an intermittent motion, a source of supply for the shreds, devices engaging the forms on the bottom and two sides to revolve them during the filling, reciprocating packing plungers for packing the shreds in the forms, reciprocating cutting plungers for cutting the shreds from the source of supply, and devices for removing the forms from the carrier.

4. The combination of molds for receiving the shreds, a carrier for the molds, hoppers mounted to move in time with the car-

rier for directing the shreds into the molds, reciprocating packing plungers passing down through the hoppers and packing the material into the molds, reciprocating cutting plungers for cutting the shreds between the molds, and discharging devices for removing the molds from the carrier.

The combination of a mold carrier, hoppers mounted to move with the carrier, and division walls between the molds adapted to coact with a reciprocating plunger in cutting the shreds between the molds.

6. The combination of, a mold carrier, a series of hoppers adapted to move with the carrier and direct the supply of shreds to the molds, division walls between the hoppers adapted to coact with a reciprocating cutting plunger for cutting the shreds between the hoppers, and reciprocating plungers forcing the material into the molds simultaneously with the cutting of the shreds between the molds.

7. The combination of a carrier holding molds or pockets into which the shreds are deposited, division walls between the molds on the carrier, means for packing the material into the molds of the carrier, and reciprocating cutting plungers cutting the material at the division walls between the molds and means for revolving the molds.

8. The combination of a carrier wheel having pockets or receptacles for receiving material to be handled, devices for moving the carrier wheel intermittingly, locking devices for locking the wheel in exact registration at each impulse of movement, reciprocating packing plungers engaging the material in the pockets at each impulse of the wheel, and cutting devices for cutting the material between the pockets at the time that the wheel is at rest.

9. The combination of, a carrier for forms, said carrier provided with a seat for each form, each seat adapted to revolve and carry the form with it, rolls mounted adjacent to the seat and adapted to engage the form on the seat and assist in revolving the same, a source of supply for the material and means for moving the carrier with the forms across the source of supply.

10. The combination, of a carrier for forms, seats upon the carrier for holding the forms, said seats adapted to be revolved, rollers engaging the forms on the seats, and belts for revolving the rollers and forms.

11. The combination of a carrier for forms, seats upon the carrier for holding the forms and adapted to be revolved, rollers adapted to revolve the forms upon the carrier, belts for driving the rollers, seats and the forms, and reciprocating packing plungers for packing the material in the forms while the same are upon the seats.

12. The combination of a carrier carrying forms across a source of supply of material, reciprocating packing plungers packing the material while it is coming from the source of supply and reciprocating cutting plungers for cutting the material between the forms, said packing and cutting plungers mounted upon the same moving cross head substantially as shown.

13. The combination of, a seat for holding a form, two rollers located above the seat and adjacent thereto whereby the said rollers may act upon a form located upon the seat, a belt passing on one side of the seat and engaging the seat and form located thereon and thereby holding the form back against the rollers, pulleys on the shafts of the rollers, a belt for driving the pulleys, and means for driving the belts.

14. The combination of a seat for holding a form, two rollers located above the seat and adjacent thereto whereby the said rollers may act upon a form located upon the seat, a belt passing on one side of the seat and engaging the seat and form located thereon and thereby holding the form back against the rollers, pulleys on the shafts of the rollers and a belt for driving the pulleys, means for driving the belts, and reciprocating packing plungers for packing the material in the forms.

15. The combination of a seat for holding a form, two rollers located above the seat and adjacent thereto whereby the said rollers may act upon a form located upon the seat, a belt passing on one side of the seat and engaging the seat and form located thereon and thereby holding the form back against the rollers, pulleys on the shafts of the rollers and a belt for driving the pulleys, means for driving the belts, reciprocating packing plungers for packing the material in the forms, and reciprocating cutting plungers for cutting the material between the forms.

16. The combination of a seat for holding a form, two rollers located above the seat and adjacent thereto whereby the said rollers may act upon a form located upon the seat, a belt passing on one side of the seat and engaging the seat and form located thereon and thereby holding the form back against the rollers, pulleys on the shafts of the rollers and a belt for driving the pulleys, means for driving the belts, reciprocating packing plungers for packing the material in the forms, reciprocating cutting plungers for cutting the material between the forms, and an ejecting device for removing the forms from the carrier.

17. The combination of a carrier for carrying movable forms across or past a point of delivery of the shreds, seats upon the carrier for holding movable forms, said seats adapted to revolve and hold a single form, fingers moving with the carrier and separating the forms from each other, rollers

mounted adjacent to the seats one for each form but located on a line between the seats and forms and of such diameter that each roller is adapted to engage two forms one on each adjacent seat, and means for revolving the seats and the rollers and thereby the forms.

18. The combination of a carrier for carrying movable forms across or past a point of delivery of the shreds, seats upon the carrier for holding movable forms, said seats adapted to revolve and hold a single form, fingers moving with the carrier and separating the forms from each other, rollers mounted adjacent to the seats one for each form but located on a line between the seats and forms and of such diameter that each roller is adapted to engage two forms one on each adjacent seat, means for revolving the seats and the rollers and thereby the forms, and means for packing the material in the forms and for cutting it between the forms.

19. The combination of a carrier for carrying movable forms across or past a point of delivery of the shreds, seats upon the carrier for holding movable forms, said seats adapted to revolve and hold a single form, fingers moving with the carrier and separating the forms from each other, rollers mounted adjacent to the seats one for each form, but located on a line between the seats and forms and of such diameter that each roller is adapted to engage two forms one on each adjacent seat, means for revolving the seats and the rollers and thereby the forms, means for packing the material in the forms and for cutting it between the forms, and means for ejecting the forms from the carrier.

20. The combination of a carrier carrying forms that are to give shape to the biscuits, seats carried with the carrier for holding the forms, means for revolving the seats and forms, fingers moving with the carrier for separating the forms from each other, hoppers moving with the carrier for directing the material into the forms, and reciprocating packing plungers for packing the material into the forms.

21. The combination of a carrier carrying forms that are to give shape to the biscuits seats carried with the carrier for holding the forms, means for revolving the seats and forms, fingers moving with the carrier for separating the forms from each other, hoppers moving with the carrier for directing the material into the forms, reciprocating packing plungers for packing the material into the forms, and reciprocating cutting plungers for cutting the material between the forms.

22. The combination of a carrier carrying forms that are to give shape to the biscuits, seats carried with the carrier for holding the forms, means for revolving the seats and forms, fingers moving with the carrier for separating the forms from each other, hoppers moving with the carrier for directing the material into the forms, reciprocating packing plungers for packing the material into the forms, reciprocating cutting plungers for cutting the material between the forms, and devices for ejecting the filled forms from the machine.

23. The combination of a carrier carrying forms that are to give shape to the biscuits, seats carried with the carrier for holding the forms, means for revolving the seats and forms, fingers moving with the carrier for separating the forms from each other, hoppers moving with the carrier for directing the material into the forms, reciprocating packing plungers for packing the material into the forms, reciprocating cutting plungers for cutting the material between the forms, devices for ejecting the filled forms from the machine, with means for giving the carrier an intermittent motion.

24. The combination of a carrier carrying forms, that are to give shape to the biscuits, seats carried with the carrier for holding the forms, means for revolving the seats and forms, fingers moving with the carrier for separating the forms from each other, hoppers moving with the carrier for directing the material into the forms, reciprocating packing plungers for packing the material into the forms, reciprocating cutting plungers for cutting the material between the forms, devices for ejecting the filled forms from the machine, with means for giving the carrier an intermittent motion, said revolving means for the seats and forms revolving the same all the time that the forms are filling.

25. The combination of a carrier carrying forms to be filled across a source of supply of the shreds, hoppers located above the source of supply, division walls between the hoppers, and reciprocating cutting plungers composed of two members adapted to embrace the division wall on each side simultaneously and thereby strip the material from each side of the division wall.

26. The combination of a carrier carrying forms to be filled across a source of supply of the shreds, hoppers located above the source of supply, division walls between the hoppers, reciprocating cutting plungers composed of two members adapted to embrace the division wall on each simultaneously and thereby strip the material from each side of the division wall, and reciprocating packing plungers acting on the material simultaneously with the cutting.

27. The combination of a carrier carrying forms to be filled across a source of supply of the shreds, hoppers located above the source of supply division walls between the hoppers, reciprocating cutting plungers com-

posed of two members adapted to embrace the division wall on each side simultaneously and thereby strip the material from each side of the division wall, and guide blocks located on the plates of the cutting plungers whereby close registration with the division walls of the hoppers is secured.

28. The combination of a carrier carrying forms to be filled across a source of supply of the shreds, hoppers located above the source of supply division walls between the hoppers, reciprocating cutting plungers composed of two members adapted to embrace the division wall on each side simultaneously and thereby strip the material from each side of the division wall, and a stripper block for stripping the material from the plungers when the same retreat from the cutting.

29. The combination of forms to be filled, a source of supply for filling the material into the forms, a reciprocating cutting plunger for cutting the material between the forms, and a stripper for stripping the material from the cutting plunger which stripper is held normally out of action by a spring but is actuated positively at the upward limit of the plunger.

30. The combination of forms for receiving the material, a source of supply of the material, plungers for packing the material into the forms mounted in a manner to apply an elastic impact to the material, and plungers for cutting the material between the forms.

31. The combination of forms for receiving the material, a source of supply of the material, plungers for packing the material into the forms mounted in a manner to apply an elastic impact to the material, plungers for cutting the material between the forms, and hoppers for directing the material to the forms.

32. The combination of forms for receiving the material, a source of supply of the material, plungers for packing the material into the forms mounted in a manner to apply an elastic impact to the material, plungers for cutting the material between the forms, hoppers for directing the material to the forms, and means for revolving the forms.

33. The combination of forms for receiving the material, a source of supply of the material, plungers for packing the material into the forms mounted in a manner to apply an elastic impact to the material, plungers for cutting the material between the forms, hoppers for directing the material to the forms, and means for revolving the forms, said packing plungers made cylindrical and engaging the material on all sides of the form at the same time.

34. The combination of forms for receiving the shreds, a carrier for the forms, means for revolving the forms, packing plungers for packing the material in the forms, said plungers mounted to give an elastic impact to the material in the forms, said plungers made cylindrical in form, whereby they act on all sides of the material simultaneously.

35. The combination of forms for receiving the shreds, a carrier for the forms, means for revolving the forms, packing plungers for packing the material in the forms, said plungers mounted to give an elastic impact to the material in the forms, said plungers made cylindrical in form whereby they act on all sides of the material simultaneously, and reciprocating cutting devices for cutting the material between the forms.

36. The combination of forms for receiving the shreds, a carrier for the forms, means for revolving the forms, packing plungers for packing the material in the forms, said plungers mounted to give an elastic impact to the material in the forms, said plungers made cylindrical in form whereby they act on all sides of the material simultaneously, reciprocating cutting devices for cutting the material between the forms, with devices for discharging the forms from the carrier.

37. The combination of a carrier carrying forms to be filled, a source of supply of material, devices for giving the carrier an intermittent motion, devices for locking the carrier at each impulse of motion with a brake for preventing excess movement of the carrier.

38. The combination of a carrier wheel for carrying forms to be filled, a source of supply of shreds, a ratchet movement for moving the wheel, a locking device for preventing excess movement of the wheel, reciprocating plungers for packing the material in the forms, and reciprocating cutting plungers for cutting the material between the forms.

39. The combination of a carrier wheel for carrying forms to be filled, a source of supply of shreds a ratchet movement for moving the wheel, a locking device for preventing excess movement of the wheel, reciprocating plungers for packing the material in the forms, reciprocating cutting plungers for cutting the material between the forms, and a discharging device for removing the forms from the carrier.

40. The combination of a vertical shaft, a carrier for forms carried by the vertical shaft, a horizontal shaft to which is applied the source of power, a ratchet wheel on the vertical shaft and a pawl moved by the horizontal shaft for moving the ratchet and vertical shaft and carrier, and cutting plungers mounted upon the vibrating cross head.

41. The combination of a vertical shaft, [illegible]

a carrier for forms carried by the vertical shaft, a horizontal shaft to which power is applied, a ratchet wheel on the vertical shaft and a pawl moved by the horizontal shaft for moving the ratchet and vertical shaft and carrier, cutting plungers mounted upon the vibrating cross head, and means for revolving the forms carried by the carrier.

42. The combination of a vertical shaft, a carrier for forms carried by the vertical shaft, a horizontal shaft to which power is applied, a ratchet wheel on the vertical shaft and a pawl moved by the horizontal shaft for moving the ratchet and vertical shaft and carrier, cutting plungers mounted upon the vibrating cross head, and a secondary vertical shaft actuated from the horizontal shaft for revolving the forms carried by the carrier.

43. The combination of a vertical shaft, a carrier for forms carried by the vertical shaft, a power driven horizontal shaft, a ratchet wheel on the vertical shaft and a pawl moved by the horizontal shaft for moving the ratchet and vertical shaft and carrier, cutting plungers mounted upon the vibrating cross head, a secondary vertical shaft actuated from the horizontal shaft for revolving the forms carried by the carrier, and pulleys and belts driven from the secondary shaft for revolving the forms.

44. The combination of a vertical shaft, a carrier for forms carried and moved by the shaft, fingers division walls or pockets on the carrier for separating the forms, means for giving the vertical shaft and carrier an intermittent motion, means for locking the same at determined point, a source of supply for the material to be filled into the forms, and means for cutting the material between the forms.

45. The combination of a vertical shaft, a carrier for forms carried and moved by the shaft, fingers division walls or pockets on the carrier for separating the forms, means for giving the vertical shaft and carrier an intermittent motion, means for locking the same at determined points, a source of supply for the material to be filled into the forms, means for cutting the material between the forms, and means for ejecting the forms from the carrier.

46. The combination of a vertical shaft, a carrier for forms carried and moved by the shaft, fingers division walls or pockets on the carrier for separating the forms, means for giving the vertical shaft and carrier an intermittent motion, means for locking the same at determined points, a source of supply for the material to be filled into the forms, means for cutting the material between the forms and means for revolving the forms while being filled.

47. The combination of a vertical shaft, a carrier for forms carried and moved by the shaft, fingers division walls or pockets on the carrier for separating the forms, means for giving the vertical shaft and carrier an intermittent motion, means for locking the same at determined point, a source of supply for the material to be filled into the forms, means for cutting the material between the forms, means for revolving the forms while being filled, and means for ejecting the forms from the carrier.

48. The combination of a carrier for carrying movable forms a source of supply for the forms, a source of supply for the material to be filled into the carrier forms, means for revolving the forms, while receiving the material, said revolving means actuating the forms during a part only of the time that said forms are in the carrier and said revolving means composed of belts that are automatically engaged and disengaged by the movement of the carrier, with a fixed arm discharging the forms automatically by the movement of the carrier when the same arrives at a given point of its carriage.

49. The combination of a carrier wheel for forms, actuated and carried, by a vertical shaft, a horizontal driving shaft connected to drive the vertical shaft and wheel through the medium of a ratchet and pawl movement, a rocker shaft driven by the horizontal shaft for driving the ratchet and pawl movement of the vertical shaft, locking devices connected to the rocker shaft for locking and unlocking the carrier wheel as driven by the ratchet movement.

50. The combination of a carrier wheel for forms actuated and carried by a vertical shaft, a horizontal driving shaft connected to drive the vertical shaft and wheel through the medium of a ratchet and pawl movement, a rocker shaft driven by the horizontal shaft for driving the ratchet and pawl movement of the vertical shaft, locking devices connected to the rocker shaft for locking and unlocking the carrier wheel as driven by the ratchet movement, and a secondary rocker shaft driven from the horizontal shaft for actuating a reciprocating cross head carrying packing plungers adapted to engage the material in the forms carried by the carrier.

51. The combination of a horizontal carrier for forms, composed of a wheel, a vertical shaft mounted in a suitable frame for carrying the wheel, hoppers mounted upon the wheel and moving therewith, revolving seats mounted below the hoppers and carried with the wheel, and a belt mounted to engage a section of said wheel's periphery and revolve the forms by the movement of the belt, said belt engaging successively the forms as the same are brought in contact with it by the movement of the wheel.

52. The combination of a horizontal car-

rier for forms composed of a wheel a vertical shaft mounted in a suitable frame for carrying the wheel, hoppers mounted upon the wheel and moving therewith, revolving seats mounted below the hoppers and carried with the wheel a belt mounted to engage a section of said wheel's periphery and revolve the forms by the movement of the belt, said belt engaging successively the forms as the same are brought in contact with it by the movement of the wheel, and a discharge mechanism for discharging the forms from the wheel by the movement of the wheel.

53. The combination of a horizontal carrier for forms composed of a wheel, a vertical shaft mounted in a suitable frame for carrying the wheel, hoppers mounted upon the wheel and moving therewith, revolving seats mounted below the hoppers and carried with the wheel a belt mounted to engage a section of said wheel's periphery and revolve the forms by the movement of the belt, said belt engaging successively the forms as the same are brought in contact with it by the movement of the wheel, and reciprocating packing plungers packing the material out of the hoppers into the forms.

54. The combination of a horizontal carrier for forms composed of a wheel, a vertical shaft mounted in a suitable frame for carrying the wheel, hoppers mounted upon the wheel and moving therewith, revolving seats mounted below the hoppers and carried with the wheel a belt mounted to engage a section of said wheel's periphery and revolve the forms by the movement of the belt, said belt engaging successively the forms as the same are brought in contact with it by the movement of the wheel, reciprocating packing plungers packing the material out of the hoppers into the forms, and reciprocating cutting plungers for cutting the material between the forms.

55. The combination of a horizontal carrier for forms composed of a wheel, a vertical shaft mounted in a suitable frame for carrying the wheel, hoppers mounted upon the wheel and moving therewith, revolving seats mounted below the hoppers and carried with the wheel a belt mounted to engage a section of said wheel's periphery and revolve the forms by the movement of the belt, said belt engaging successively the forms as the same are brought in contact with it by the movement of the wheel, reciprocating packing plungers packing the material out of the hoppers into the forms, and reciprocating cutting plungers for cutting the material between the forms.

In witness whereof I have hereunto signed my name on this 23rd day of January, 1908.

UNITED STATES PATENT OFFICE.

WILLIAM ERASTUS WILLIAMS, OF CHICAGO, ILLINOIS.

MACHINE AND METHOD FOR MANUFACTURING SHREDDED-WHEAT CUP-BISCUITS.

991,584. Specification of Letters Patent. Patented May 9, 1911.

Application filed September 17, 1908. Serial No. 453,459.

To all whom it may concern:

Be it known that I, WILLIAM ERASTUS WILLIAMS, a citizen of the United States, residing at Chicago, county of Cook, and State of Illinois, have invented a new and useful Improvement in a Machine and Method of Manufacturing Shredded-Wheat Cup-Biscuits, of which the following is a specification.

The object of my invention is to provide a machine and method whereby the shredded wheat cup biscuits may be made more uniform in size than has been heretofore possible with the machinery and methods heretofore known.

It has been difficult by machinery to make shredded wheat into the form of a cup shaped biscuit and get all the cups or biscuits of substantially the same size and density and when the cups so vary it is impossible to bake them on a commercial scale without burning the light weight ones before the heavy ones are fully baked and this causes a serious loss.

The shreds of wheat or other suitable material come from the shredding machine in a ribbon or mat of long threads that adhere together more or less irregularly and in separating the quantity for the different cups the interlacing of the shreds draws a larger portion from the delivery mechanism at some intervals than at others, thus producing the trouble. Further it is desirable that the cup biscuits be of even density on all sides of the rim as if one side is light it will burn on that side in baking. The long shreds hang together so that it is difficult by machinery to get them arranged evenly on all sides of the cup or baking forms to insure an even density of wall for the cup. But with the machinery and method here shown I overcome all the difficulties mentioned.

Reference will be had to the accompanying drawing in which:

Figure 1, is a side elevation of the machinery. Fig. 2 is a plan view with parts omitted for clearness of illustration.

In the drawing 2 indicates a baking form for a cup shaped biscuit which is a tin cup provided with a conical central projection 3 around which on the inside of the cup the shreds are disposed and held while being baked and the baking sets the shreds in form so that when they are discharged from the tin cups they retain the cup shape. This baking cup or form is shown and described in some former applications of mine in relation to this art.

4 indicates a pair of shredding rolls which produce shreds of the prepared grain 5 delivered to the machine from hopper 6. Instead of grain this material may be of any suitable form or composition. In place of the rolls there may be used any suitable shredding or threading device.

The material is removed from the rolls by the scrapers 7 and it falls in more or less long continuous shreds onto the carrier belt 8 which delivers them continuously in a mat or ribbon 9 to a rotary cutting device 10 provided with spiral cutting blades 11 working against a stationary knife 12 which cut the shreds into short lengths which then fall upon a carrier belt 13 which carries the cut material to the cup forming machine 14. This cup forming machine or cupping machine is the subject of another application already on file. This cupping machine consists of a carrier for the tin cups or forms of any suitable construction but I prefer to use a wheel here shown in section and constructed of plates, 15, 16, 17 and 18 secured together and mounted upon an axis not shown in the drawing and the wheel or carrier carries the tin cup forms past the delivery end 19 of the carrier belt 13.

Fixed to and moving with the form carrier there are a series of hoppers 20 which direct the discharge of the material as delivered by belt 13 into the tin cups or forms. Packing plungers 21 carried on a cross head 22 actuated to reciprocate in any suitable manner are provided to pack the material as it is delivered into the forms, or cups 2. The cups or forms 2 are revolved while being filled with the shreds by means of traveling belts 29 and 30. Belt 29 comes in contact with the cup or form itself and also with a series of disks 31 upon which forms 2 rest. Disks 31 are mounted upon spindles 32 revolving in apertures in the plates of the wheel or carrier. Belt 30 revolves rollers 33 on spindles 34 carrying rollers 35 which come into contact with the cups or forms 2 and assist in revolving them while the same are being filled. Any suitable means may be employed for driving these belts and any suitable means may be employed for revolving the cups or forms 2 while being filled. The stationary plate 23 supports the bearings 24 for the roller 26 over which the car-

rier belt 13 passes at the cupping machine but any suitable means of support for these parts may be used. Belt 13 passes over roller 25 and is driven thereby and roller 25 is driven by a chain 26 from the shredding rolls. The cutting device 10 is driven by a chain 27 from one of the shredding rolls. The carrier belt 8 is driven by chain 28 from the shaft of roller 25. Any suitable means may be used to drive these several mechanisms.

The operation is as follows: The material is reduced to webs or ribbons of shreds by the rolls and these webs or ribbons are then cut into short lengths or disconnected sections by the cutting device and it is then packed into the forms and while therein baked or dried sufficiently to retain the shape assumed in the forms. The separated and as it were disconnected shreds can thus be made to fill the cups or forms in approximate uniform degree of density and yet there is a sufficient degree of interlacing of the shreds to cause the cup biscuit to hang together when it is baked.

My invention is adapted to be used with any suitable cereal product and is not limited to wheat shreds although at the present time I prefer to use the wheat shreds but do not limit my invention to wheat.

While I have described a cup shaped shredded biscuit as being made by the method and machinery described herein, the same method and machinery is exactly adapted to make a round biscuit and other suitable shapes. Therefore, I have not limited myself to cup shape in the claims hereof.

What I claim is:

1. The combination with means for forming a ribbon-like mass of approximately parallel shreds, of means for dividing the shreds into short lengths, and means for rearranging the short shreds in biscuits of suitable form and giving them a multiplicity of widely divergent directions.

2. The method of making shredded biscuits which consists in forming the material into a mat of long moist shreds, dividing the mat into short lengths, rearranging the short shreds of the sections among themselves and forming the shreds of neighboring sections into a mass of new shape, and removing the moisture from the mass.

3. The method of making shredded biscuits which consists in forming the material into long moist shreds, dividing the shreds into short lengths, re-arranging the short shreds among themselves giving them new relative directions and forming them into masses of new shape and volume, and baking the masses.

4. The combination with devices for shredding material and delivering the shreds in a continuous mat, of means for cutting the mat into short sections, biscuit forms, and means for rearranging the short shreds by relative longitudinal and other displacements, in said forms.

5. The combination with shredding devices, of means for dividing the shreds delivered thereby into short lengths, means for rearranging and combining shreds of neighboring sections into which the shreds are divided to form masses of new shape, and means for condensing the new masses during their formation.

6. The combination of, means for forming material into shreds, means for cutting the shreds into short lengths, means for placing the cut shreds in forms, means for packing the shreds in the forms, means for revolving the forms.

7. A source of supply of the shreds, a revolving cutter for cutting the shreds into short lengths as they come from the source of supply, means for depositing the shreds in forms, means for revolving the forms while the shreds are being deposited, and means for packing the shreds into the forms.

8. The combination with a source of supply for shreds, of a carrier removing a continuous mass of shreds from said source, means for dividing said mass transversely into short lengths, forms adapted to receive and re-shape masses of the short shreds, means for recombining the short shreds of the masses in said forms and readjusting them relatively by longitudinal and other movement, and means for gently compacting the shreds as they are received in the forms.

9. The method of making shredded cereal biscuits which consists in forming the material into a ribbon-like mass of approximately parallel shreds, dividing the mass transversely into segments not materially longer than the diameter of the desired biscuits, and re-arranging the shred segments in biscuits having their constituent shreds non-parallel and running in various wide-divergent directions.

In witness whereof, I have hereunto subscribed my name in the city of Chicago, on this 3rd day of September, 1908, in the presence of two subscribing witnesses.

UNITED STATES PATENT OFFICE.

WILLIAM E. WILLIAMS, OF CHICAGO, ILLINOIS.

MACHINE FOR CONVERTING FOOD MATERIALS INTO SHREDS OR FIBERS.

1,024,168. Specification of Letters Patent. Patented Apr. 23, 1912.

Application filed October 1, 1907. Serial No. 395,347.

To all whom it may concern:

Be it known that I, WILLIAM E. WILLIAMS, a citizen of the United States, residing at Chicago, in the county of Cook and State of Illinois, have invented certain new and useful Improvements in Machines for Converting Food Materials into Shreds or Fibers, of which the following is a specification, reference being had therein to the accompanying drawing.

My invention relates to machines for converting cereal grains, dough, or other suitable materials into shreds, fibers, or filaments, and the general object is to produce a filamentary product differing in character from any that have been produced by other machinery.

In the accompanying drawings, Figure 1 is a side elevation of the machine. Fig. 2 is a sectional end elevation of the same apparatus. Figs. 3, 4, 5 are sections on the lines 3—3, 4—4, 5—5, respectively, of Fig. 2. Fig. 6 is a horizontal section through a certain roll and its bearings. Fig. 7 is an enlarged sectional view showing two grooved rolls in contact. Fig. 8 is a sectional detail showing a scraper in contact with its roll.

In general terms, the apparatus consists of grooved rolls arranged to co-act in pairs, one pair above another, in the same plane, each pair receiving material from the next pair above, and the lowest pair delivering the product to a conveyer, and the apparatus including driving, feeding, guiding, roll-cooling, product-dividing, and various adjusting devices.

In the several figures, 1 represents a suitable upright frame in which are mounted, one above the other in the same plane, five pairs of hollow, circumferentially grooved rolls 2, 3, connected by gears 18 to rotate with equal circumferential speed. All the rolls 3 have upon their shafts, respectively, equal gears 19, and these are driven by equal pinions 20, one of which is mounted on a main shaft 24 driven in this instance by a power pulley 25, while the others are mounted on parallel counter shafts 21 driven from said power shaft by sprocket wheels 22 and chain bolts 23. Each roll is provided with a series of circumferential V-shaped grooves 39 (Fig. 7) a little narrower than the space between them and the grooves of each roll being opposite the ungrooved spaces on the companion roll, as shown. At each end, beyond the grooves just mentioned, the rolls are turned down to form circumferential recesses 37, and beyond these are further turned down to form cylindrical bearing portions having at their inner ends shoulders 38. These bearing portions fit in bearing blocks 4 against which the shoulders abut and which are provided at their inner ends with circumferential recesses to co-act with the recesses 37 and prevent oil from passing to the grooved portions of the rolls. The blocks 4 for the two roll shafts are independently formed and mounted in the frame, one at least being slidable, with a block between them and are connected and drawn together by bolts 31 (Fig. 4). The rolls of each pair are in close contact so that practically no material, other than such as may lie in the grooves, can pass between them, and hence when they are once properly adjusted in contact the blocks are rarely moved laterally although obviously adjustment may be readily made. The bearings are further provided with lugs 35 and bolts 36 which secure them to the frame member 34 and permit slight endwise adjustments in the manner just mentioned.

In operation the rollers may become somewhat heated, and the heat being objectionable when certain materials are used I provide for water-cooling the rolls. To that end they are each provided with an internal cavity 40 (Fig. 6) to which water is supplied by a pipe 41 connected with a thimble 42 working in the end of the roll in a gland consisting of the threaded sleeve 43, packing 44 and lock-nut 45. The water entering through the thimble passes out through a smaller axial pipe 46 leading through a suitable fitting or coupling 48 to a discharge pipe 47. Parts of the pipe 41 and part of each pipe 46, near their entrance at 49 to the pipe 47, are flexible so that adjustments or other slight movements of the rolls require no adjustment of the pipes.

The material or stock is placed in a hopper 7, above the upper rolls, whence it falls through a preferably flexible spout 8 into second hopper 9 closely fitting upon the upper rolls and having ends 17 adjustable toward and from the middle of the rolls to

vary the length of the hopper and effective length of the rolls, thereby controlling the amount of material which passes through the first set of rolls, and which should vary with varying materials. The sides 50 of the hopper (Fig. 3) are fixed to the frame and its ends are carried upon right threaded and left threaded portions of a screw 51 mounted in the frame and rotated by a chain bolt 53 passing over a sprocket wheel 52 upon the shaft 51 and a sprocket wheel 54, the adjusting power being applied by the operator.

As the material falls from each set of rolls to the next, it is guided to the middle portion of the rolls by oppositely faced converging spouts 5 and is spread along the rolls by a bar 15 fixed to a horizontal reciprocating rod 16 (Fig. 3) connected by a link 26 to an arm 27 projecting from a vertical shaft 28 which is rocked back and forth by the shaft of the roller 3 acting through a crank 32, pitman 37, and link 30 pivotally connected to an arm 29 projecting from the rock-shaft. The material thus distributed along the rolls is prevented from falling from their ends by fenders or plates 14, supported from the frame a little beyond the path of the agitating or spreading bar. As the spouts 5 need frequent cleaning, they are fixed in place by clips 56 secured to the frame by thumb-screws 57 and are thus readily removed and replaced. Any material that may adhere to any of the rolls is removed by one of several scrapers 10 fixed to arms 11 pivoted at 12 to the frame and adjusted by thumb screws 13.

Below the lower rolls are fixed parallel dividing blades or partitions 59 laterally grooved at the bottom so that they may overhang the edges of parallel conveyer belts 6 and at their upper sides having sharp knife edges to fit around the lower sides of the rolls. The material is thus divided part falling on each belt, and owing to its being compelled to adjust itself at a little distance from the edges of the belts it is practically prevented from afterward falling therefrom.

What I claim:

1. In apparatus of the class described, the combination with a pair of shredding rolls, of a second pair of shredding rolls delivering shreds, in the bight of the first pair, and means for arranging, delivered shreds across the grooves of the rolls first mentioned.

2. In a machine of the class described, the combination with pairs of co-acting shredding rolls mounted one pair above another in the same plane and one roll of each pair having circumferential grooves spanned by ungrooved portions of its companion, of a hopper above the first pair, spouts for directing shreds from each pair to the succeeding pair, and agitator arms arranged to move back and forth longitudinally above each pair of rolls below the first to distribute the shreds across the grooves.

3. The combination with a series of pairs of co-acting shredding rolls, a feeding hopper, and a receiving hopper, all mounted one above the other approximately in the same vertical plane, of a reciprocating distributing device moving above the central portion of the bight of the upper rolls, and means for limiting the distribution to a predetermined central portion of the rolls.

4. In a cereal shredding machine, the combination with parallel pairs of shredding rolls, one pair above another, of a hopper above the first pair and delivering thereto, spouts for guiding the shreds from each pair to the central portion of the next lower pair, agitators arranged to move back and forth from end to end of the effective portion of the rolls which receive shreds, and adjustable fenders near the ends, respectively of the path of each agitator.

5. In a machine of the class described, the combination with a series of sets of rolls mounted above one another, of agitators, for the different sets, respectively, a shaft extending along the different sets and actuating all of them, and a crank mounted above the axis of one set and arranged to drive the agitator shaft, substantially as shown.

6. In a machine of the class described, a combination with a series of sets of grooved rolls mounted above one another, whereby the material of one set passes to the next set, of a hopper for delivering the material to the first set, converging spouts for directing the material from one set to the other set, whereby there may be an accumulation of material at each set of rolls, longitudinally moving devices above each set for intermingling the material before it passes through and is drawn out by the rolls, and fenders limiting the displacement by said devices substantially as shown and described.

7. In a cereal shredding machine, the combination of pairs of shredding rollers one pair above another in the same plane, a hopper delivering material to be shredded to the first pair of rolls, two part converging spouts for massing the shreds received from above and delivering them to the central portion of the succeeding pair of rolls, and an arm arranged to reciprocate along the rolls between the parts of the spout, intermingling the shreds and distributing them across the grooves of the rollers.

8. In a machine of the class described, the combination with grooved rolls arranged to receive stock above, convert it into shreds or filaments, and deliver it below, and sharp edged partitions arranged to separate the product into distinct lots as it leaves the lower rolls.

9. In a machine of the class described, the combination with grooved rolls arranged to

form and deliver sheets or filaments of material, of parallel knife-edged dividing partitions fitting against the delivery side of the rolls, and a conveyer belt parallel to said partitions and having its lateral margins extending under the lower sides of the same, substantially as set forth.

In testimony whereof I affix my signature in presence of two witnesses.

UNITED STATES PATENT OFFICE.

WILLIAM ERASTUS WILLIAMS, OF CHICAGO, ILLINOIS.

MACHINE FOR MAKING SHREDDED-WHEAT BISCUITS OR SIMILAR ARTICLES.

1,062,627. Specification of Letters Patent. Patented May 27, 1913.

Application filed April 13, 1906. Serial No. 311,813.

To all whom it may concern:

Be it known that I, WILLIAM ERASTUS WILLIAMS, a citizen of the United States, residing at Chicago, in the county of Cook and State of Illinois, have invented a new and useful Improvement in Machines for Making Shredded-Wheat Biscuits or Similar Articles, of which the following is a specification.

The object of my invention is to convert shreds or filaments of wheat or other food stuffs into biscuits or cakes in a rapid, simple, cheap, and desirable way, whereby any desired degree of packing down or matting of the shreds may be secured.

Reference will be had to the accompanying drawings in which:

Figure 1 is a side elevation of the machine. Fig. 2 is a plan view. Fig. 3 is an end section on line 3—3 of Fig. 2. Fig. 4 is a longitudinal vertical sectional view showing the material in process of operation. Fig. 5 is a detail of the belt tightener.

In the drawing 2 designates the frame of the machine which is here shown as made of angle pieces of metal.

3 indicates a traveling carrier belt made of any suitable material or it may be any suitable carrier. This carrier 3 receives the shredded or filamented or other material as it comes from any suitable source of supply in a continuous uniform deposit 4. This source of supply is here shown as an additional carrier belt 5 coming from the shredding machines. The deposit 4 of the shreds passes underneath a roller 6 which pushes the deposit down to any desired thickness or hardness. The roller 6 is carried in bearings 7 carried upon a frame 8 pivoted at 9 to the frame of the machine and is adjusted downward by thumb-screws 10, and is held upward by springs 11. After passing roller 6 the deposit is crushed or matted down into a mat 12 the desired thickness for the biscuit or cracker and the mat then passes underneath a slitting roller 13 which cuts the mat into strips longitudinally. And these strips then pass underneath a cross cutting roller 14 which cuts them transversely and the biscuits or crackers are then taken up by a "peeler" and they pass off automatically on to suitable pans arranged to receive them. Underneath each cutting roller 13 and 14 there is arranged an abutting roller 15 and 16 to receive the thrust of the cutting and the carrier 3 passes between the rollers along with the material to be cut. The cutting rollers 13 and 14 are mounted in bearings mounted upon bars 18 adjustable to the frame by studs 19 and the rolls 15 and 16 are similarly mounted.

The machine is driven from any suitable source of power by a belt 20 on a wheel 21 on a shaft 22 mounted on posts of frame 2 and carrying a pinion 23 engaging a gear wheel 24 mounted on a shaft 25 which also carries a sprocket 26 driving a chain 27 driving a sprocket 28 on shaft 29 of transverse cutting roll 14. A gear 30 on shaft 29 engages a gear 31 on shaft 32 which is the shaft of roll 16 whereby abutting roll 16 is made to travel in time with its cutter roll 14. An idle gear 33 engages gear 30 and is driven thereby and it engages 34 on shaft 35 which is the shaft of slitting roll 13 whereby, slitting roll 13 is positively driven. Gear 34 engages and drives gear 36 on shaft 37 whereby roll 15 is driven. A sprocket 38 on shaft 37 drives a chain 39 which drives a sprocket 40 on shaft 41 of roller 42 over which carrier belt 3 travels and whereby it is driven. The source of supply belt 5 passes over a roller 44 on a shaft 45 driven by a belt wheel 46 driven by a belt 47 from any suitable source of power. Fenders 48 are mounted at the sides of belt or carrier 3 to direct the discharge from belt 5 upon belt 3 within definite side limits which saves waste of the material acted upon. Carrier 3 passes over a small roller 43 at its outer end which roller is mounted in bearings 49 mounted to slide longitudinally in the frame and held by springs 50 to exert an elastic stretch or take up to carrier belt 3. Springs 50 are adjusted by nuts 51 on rods 52 secured to the bearings 49. Compression roller 6 is driven by a belt wheel 53 driven by a belt 54 driven by a wheel 55 on shaft 29 of roller 14. All of the revolving parts are what are termed live rolls which insure a positive action and does not distort the material acted upon which is a desideratum.

Underneath carrier belt 3 there are provided plates or tables 59, which support the carrier underneath the compression roller and also at other points save only where the cutting rollers require apertures for their admission to contact with the carrier belt.

The cutting roller 14 is made of longitudinal slats 56 secured at their ends to disks 57, and supported at frequent intervals by intermediate disks 58 which con-

struction allows cutter blades to be used and yet produce a rigid cutter roller and one cheaply constructed.

The web or mat of material is very fragile and is also more or less sticky and cannot be cut properly by the ordinary mechanisms used in the bakers' art. The separate cutting roller arranged to act on the mat at different points insures against the mat curling up and following the cutter or from being distorted as is the case when ordinary cutting means are used.

What I claim is:

1. In apparatus of the class described, the combination with a table provided with narrow transverse slots, of an endless belt arranged to have one of its folds travel along the surface of the table over said slots, vertically adjustable rollers arranged to rotate in said slots, respectively, below the belt, cutting rollers mounted above the belt in registry with the rollers below the belt, respectively, to divide into separate masses the material passing on the belt, and means for delivering a continuous mass of shreds upon the belt.

2. In a machine of the class described the combination of a longitudinal frame supporting sections of a table or flat plates, a carrier belt moving over these tables or plate apertures in these tables or plates, cutting rollers mounted at these apertures to act on the material on the carrier, with a compression roll mounted to act upon the material of the carrier at a point where the carrier is supported by a plate or table.

In witness whereof I have hereunto subscribed my name at the city of Chicago, on this 16th day of March, 1908, in the presence of two subscribing witnesses.

WILLIAM ERASTUS WILLIAMS.

Witnesses:
R. ROPER,
JOHN T. GRANT.

UNITED STATES PATENT OFFICE.

ASHLEY V. BLACK, OF ST. LOUIS, MISSOURI, ASSIGNOR TO GRAIN PRODUCTS COMPANY, OF ST. LOUIS, MISSOURI, A CORPORATION OF DELAWARE.

FOOD PRODUCT.

1,210,589. Specification of Letters Patent. Patented Jan. 2, 1917.

No Drawing. Application filed August 13, 1916. Serial No. 115,208.

To all whom it may concern:

Be it known that I, ASHLEY V. BLACK, a citizen of the United States, residing at the city of St. Louis, State of Missouri, have invented a certain new and useful Food Product, of which the following is a specification.

This invention relates to a certain new and useful food product.

Bran, and especially wheat bran, has, as is commonly known, great laxative properties, but is, of and by itself, unpalatable and of little or no food value; but I have found that by intimately associating or mixing with the bran certain constituents of agreeable taste and of known food value, I may provide and furnish to the consuming public at relatively low cost a very palatable and nutritious food product possessing and retaining all the laxative effect or property of bran. And my present invention resides in the production and provision of such a food product having bran as one of its essential ingredients.

In Letters Patent No. 1186768, of June 13, 1916, there is described a food product comprising, as its elements, bran and an edible syrup mixed or combined with a previously cooked flour, such as cracker meal. In my present food product, however, I use and combine or mix the bran and edible syrup with what is commercially known as shredded cereal, that is to say, a cereal, such as wheat, corn, or rice, steam cooked in substantially the whole grain, then shredded, and the shreds then baked, shredded cereal being exceedingly nutritious and easily digested, and being substantially different physically from a previously cooked flour, such as cracker meal.

My present food product hence includes, as essential elements or constituents, bran, preferably wheat bran, a shredded cereal, preferably wheat, either in the form of shreds or in the form of ground shreds, and an edible syrup, these several ingredients or constituents being combined or mixed, to obtain the best results, in the proportions approximately of thirty-seven and one-half per cent. bran, twenty-five per cent. shredded cereal, and thirty-seven and one-half per cent. edible syrup.

In producing my present food product, and in providing first the edible syrup, I mix together in a suitable receptacle strained honey and a sweet syrup, such as molasses, cane syrup, maple syrup, or the like, in approximately equal parts. I then preferably heat this syrup-mixture until the same is of relatively thin consistency, so that it will pour easily. I then, also in a suitable receptacle or mechanical mixer, commingle the bran with, say, approximately half the shredded cereal, then pour into the mixer the relatively thin, hot syrup, and then thoroughly and intimately mix the syrup with the bran and shredded cereal. I then add to the mass in the mixer the remainder or other half of the shredded cereal, and then again mix the several ingredients intimately together, the syrup, in addition to contributing food value and a pleasant sweet taste to the finished product, serving also as a binder for the bran and shredded cereal, the bran being preferably in the form of flakes and the shredded cereal being, as stated, either in the form of shreds or in the form of ground shreds. The mass or mixture is now ready for toasting or baking, but, that the finished product may be conveniently handled and supplied to consumers, I first mold or otherwise form the mass into suitable individual cakes or biscuits. Accordingly, suitable relatively small or individual molds preferably of somewhat rectangular form or shape being provided and at hand, the same are respectively filled with the described thoroughly mixed and combined ingredients, the material in each mold being suitably compactly pressed therein. The several molds so filled are now reversely placed upon a suitable preferably metal toasting surface, the molds duly removed, and the several so formed cakes or biscuits with their supporting toasting surface placed within a suitable oven, under the heat of which, at approximately 300° F., the several cakes or biscuits are permitted to remain a suitable length of time, approximately thirty minutes, the several cakes or biscuits being thereby baked or toasted, thoroughly sterilized, and relatively hardened. On being removed from the oven, the several food-cakes or biscuits are suitably cooled and are then ready for consumption, my new food-cakes or biscuits being preferably packed and wrapped for shipment in suitable containers, cartons, or the like.

My new food cakes or biscuits are very pleasant to the taste, exceedingly nutritious

and nourishing, and of high laxative value and easily digested, and, further, may be manufactured and produced and supplied to consumers at relatively low cost.

Having thus described my invention, what I claim and desire to secure by Letters Patent is:

1. As a new article of manufacture, the edible biscuit or cake herein described, the same being composed only of bran, a shredded cereal, and a syrup, intimately mixed together and compactly molded into cake or biscuit form.

2. A manufactured toasted food product composed of bran, a shredded cereal, and an edible syrup.

3. A manufactured toasted food product composed of bran, shredded wheat, and an edible syrup.

4. A manufactured toasted food product composed of bran, shredded wheat, honey, and molasses.

5. A manufactured toasted food product composed of bran, shredded wheat, and an edible syrup, all intimately mixed together in the proportions approximately of thirty-seven and one-half per cent. bran, twenty-five per cent. shredded wheat, and thirty-seven and one-half per cent. edible syrup.

In testimony whereof, I have signed my name to this specification.

UNITED STATES PATENT OFFICE.

WILLIAM ERASTUS WILLIAMS, OF CHICAGO, ILLINOIS.

METHOD OF MARKING ARTICLES OF THE SHREDDED-CEREAL-BISCUIT TYPE.

1,263,009. Specification of Letters Patent. Patented Apr. 16, 1918.

Application filed February 21, 1918. Serial No. 218,482.

To all whom it may concern:

Be it known that I, WILLIAM E. WILLIAMS, a citizen of the United States, and resident of Chicago, in the county of Cook and State of Illinois, have invented certain new and useful Improvements in Methods of Marking Articles of the Shredded-Cereal-Biscuit Type, of which the following is a specification, reference being had therein to the accompanying drawing.

Heretofore it has been usual to mark articles of the shredded cereal type by inclosing them in wrappings bearing desired indicia, but when served such articles have been without distinguishing marks. It is common to mark small cakes, crackers and the like by imprinting marks directly upon the material, but practically this method is not available for shredded articles, especially since it is undesirable to disturb the shreds greatly either before or after baking.

The object of this invention is to provide a method of applying to articles of this type indicia which no one will remove or wish to remove before eating the product. This object is reached by treating the shreds lying within a well defined area of the article's surface with or by an agent which will cause them to contrast with the adjacent area, either the treated or the non-treated shreds serving as the mark. This agent may vary in character. A blast of hot air imparts to shreds upon which it is directed a toast-brown color; heat from a branding implement brought into proximity to the article will produce the same change; an air blast, hot or otherwise, may carry any suitable coating or staining matter; such matter may be applied without the aid of an air blast; or the shreds may be slightly crinkled or otherwise mechanically changed in appearance to form a mark.

In the accompanying drawings, apparatus by which the method may be carried out is shown diagrammatically, and the articles formed and marked are also shown, both apparatus and articles being illustrative of the many possible forms which may result from the use of the method.

In these drawings,

Figure 1 is a vertical section of apparatus which may be used.

Fig. 2 shows in perspective an article marked by the use of such apparatus.

Fig. 3 is a similar view suggesting a slightly different marking.

In these figures, A represents a baking chamber, B a drying chamber, C a carrier passing through both chambers, D a shredded biscuit resting on the carrier between the two chambers, E a hopper which may contain any suitable coating or staining agent such as will not interfere with edibility, and F a tube for delivering a blast of hot or cold air downwardly through the hopper's discharge opening. If the biscuit be slowly advanced directly below the discharge opening while coating or coloring or color changing matter is being delivered by the blast, it will be provided with a band G differing in color or shade from the shreds of the surrounding surface. If the amount of material discharged be small and be a powder which will adhere to the hot shreds, the shreds will become of a more or less grayish shade varying with the powder used, as shown at H. If the blast be hot and if nothing be placed in the hopper, the shreds passing under the discharge opening will be made more or less deeply brown, as suggested at I.

The direction of the mark will obviously depend upon the position of the article upon the conveyer.

It is also evident that the biscuit may be at rest while the mark is being applied or may move with the applying device. In the latter case the mark will have the contour of the nozzle or applying device, whether that be the contour of a letter of the alphabet or otherwise but when the article and the applying device do not move relatively during the application of the mark, the marking action should be intermittent or should continue, for any given area to be changed, only during a very brief interval so as to form a spot-like change in appearance rather than a long band. It is also plain that marking heat may be applied by means other than an air blast, and also obvious that the bands shown may be areas made conspicuous by changing the appearance of the shreds outside the limits of the bands instead of within those limits.

What I claim is:

1. The method of causing articles of the shredded cereal type to bear distinguishing indicia which consists in treating the shreds

in a part of the article's surface area by an agent causing the shreds in such area to contrast with those of adjacent parts of the surface area.

2. The method of marking articles of the shredded cereal type which consists in treating the surface shreds of a part of the article's surface with a blast adapted to cause the treated shreds to contrast in appearance with the non-treated shreds.

3. The method of marking shredded cereal biscuits which consists in blowing upon the shreds of a part of the article's surface adherent matter changing their appearance.

4. The method of marking shredded wheat biscuits which consists in changing the appearance of the shreds of a portion of the surface, without disturbing the shreds, while leaving adjacent portions unchanged.

In testimony whereof I hereunto affix my signature.

WILLIAM ERASTUS WILLIAMS.

Supreme Court of the United States,

OCTOBER TERM 1937.

No. 396.

KELLOGG COMPANY,
Petitioner-Appellee-Defendant,

against

NATIONAL BISCUIT COMPANY,
Respondent-Appellant-Plaintiff.

PETITION BY KELLOGG COMPANY, DEFENDANT BELOW, FOR WRIT OF CERTIORARI TO THE CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT.

TO THE HONORABLE, THE SUPREME COURT OF THE UNITED STATES:

The petition of Kellogg Company, defendant-appellee below, and herein referred to as defendant, respectfully shows:

STATEMENT OF THE CASE.

A. Preliminary.

This case has been heard twice by the Circuit Court of Appeals of the Third Circuit, with diametrically opposite results. The proceeding was in equity in the District Court of the United States for the District of Delaware, brought by National Biscuit Company, as plaintiff, against petitioner, the Kellogg Company, as defendant. It sought to restrain the Kellogg Company from manufacturing the ordinary, formerly patented shredded wheat biscuit illustrated in expired design patent No. 24,688 (R. V. 5, p. 62), and from using the term "shredded wheat" and the picture of the biscuit as applied thereto (Complaint, R. V. I, pp. 5-25).

District Judge Nields, after trial, dismissed the bill, because the forty-one patents originally granted to the plain-

tiff's predecessor for shredded wheat, the design patent on the form of the biscuit and the machinery and process for making it, having expired before the Kellogg Company began to sell its product, defendant was entitled to manufacture shredded wheat in the usual form and to display pictures of it in defendant's advertising. The District Court also held that because the name "shredded wheat" was a term applied by the patentee to the patent-expired product and was otherwise descriptive it was incapable of exclusive appropriation as a trademark (R. V. I, p. 225).

The District Court also found as a fact that the Kellogg Company had unmistakably distinguished its manufacture and that no deception of the public resulted from what defendant did. There was, therefore, no unfair competition. (R. V. I, pp. 204-227). The cartons in issue appear at V. I, pp. 205-219.

On appeal, the Circuit Court of Appeals affirmed the decree of the District Court in a *per curiam* opinion (R. V. III-A, p. 2069).

Thereafter the Court granted a rehearing, again heard full argument from new counsel for the plaintiff, indicated that counsel for the defendant need not argue at length, and thereupon did the unusual thing of handing down an elaborate opinion completely reversing its first opinion, granting all the prayers of plaintiff's bill of complaint and even going far beyond plaintiff's final or modified prayers.*

---

* On the original hearing in the Court of Appeals, the Court questioned the plaintiff's counsel concerning its power to enjoin the defendant from all competition whether fair or unfair, and plaintiff's counsel conceded that the Court had power to restrain only unfair competition; in short, defendant's right to manufacture was admitted to be indisputable. This oral concession was embodied in plaintiff's brief entitled "Appellant's Brief on Rehearing", at page 34:

> "We confidently submit that the decree of the District Court, dismissing the Bill, should be reversed and the case remanded to that court, with instructions to enter a decree for the complainant: . . .
> 2. That the defendant be enjoined from manufacturing or selling or offering for sale Whole Wheat Biscuit in substantially the form and shape of the plaintiff's biscuit, unless each such biscuit be banded or marked in such a distinctive manner as to state clearly that it is a product of the defendant and not of the plaintiff."

Defendant accepted plaintiff's concession, and did not argue the same, stating at page 5 of its brief on rehearing:

> "2. Plaintiff's belated concession of defendant's indubitable right to make the patent-expired biscuit, necessarily concedes defendant's equally indubitable right to call it by its patent-expired name."

e Court in its second decision directed the District Court enjoin the defendant perpetually from using the words redded wheat as a trade name and from offering its oduct for sale in the form and shape of plaintiff's (R. V. -A, pp. 2083-2093). The Court did this without finding new or different facts and without considering any horities which had not been before it on the earlier ument.

The first decision of the Circuit Court of Appeals, like t of the District Court, was based on the doctrine of dedi- ion of form and description to the public by patent expi- ions as expressed by *Singer* v. *June*, 163 U. S. 169. The ond decision can hardly be characterized as less than an empt to reverse the doctrine of *Singer* v. *June*, in a case in ich the plaintiff, by threats of trademark suits, drove the endant off the market in 1922, not to return until 1927. The urt's second decision held that because plaintiff thus had oyed approximately five years' exclusive occupation of market, the case had ceased to be a patent expiration case l had become the same as though no patents had ever been nted. And yet the Court, in effect, revives the expired ents and makes them perpetual. If this ruling stands, doctrine of dedication of name and form by patent- iration will have ceased to exist.

The nearest attempt at a similar result that we have n able to find was by the same Court and was frustrated this Court in *William Warner & Co.* v. *Eli Lilly & Co.*, U. S. 526. The Court of Appeals, there, instead of re- aining the undeniably unfair acts of the defendant, ght to penalize the entire public by setting up in plain- a perpetual monopoly of the right to combine cocoa l quinine. This Court granted certiorari and unani- usly reversed that attempt to use the law of trademarks a means of setting up a revolutionary system of per- ual monopolies in publicly owned rights by judicial leg- ation.

B. Statement of the Facts.

I. The Plaintiff's Claim.

1. This suit was brought in the United States District Court for the District of Delaware on the claim of National Biscuit Company, plaintiff, that its exclusively owned trademarks consisted of (a) the shape, form or appearance of the well known and formerly patented, rectangular shredded wheat biscuit, a shape and form necessarily resulting from expired machine patents, (b) of the words "shredded wheat", applied to any cereal product and (c) of the representation or pictorial description of the biscuit, and that defendant had infringed these three trademarks (a) by making a smaller and darker biscuit than plaintiff's and packed in distinctive cartons, (b) by calling its product "Kellogg's Shredded Whole Wheat Biscuit" and (c) by illustrating its biscuit on its clearly differentiated packages.

The suit also alleged that the same three acts, (a), (b) and (c) above, constituted unfair competition. No unfairness otherwise was charged. No claim was made that defendant's product, as packed and sold by defendant, had ever been passed off as plaintiff's or was capable of being passed off (Complaint, R. V. I, pp. 5-25). All biscuits of both plaintiff and defendant are sold in cartons which are so distinctly different that no confusion or passing off is possible.

II. The facts developed at the trial as found by the trial Judge (R. V. I, p. 193).

(1) Shredded wheat biscuit is made by machine. The shreds or strings are deposited in successive layers on a belt and are then cut across to form the biscuit or loaf. During the baking operation the shreds arch up and give a truss-like rigidity to the fragile biscuit. The biscuit cannot be individually marked (R. V. I, p. 221).

(2) The patents on the so-called Perky machine used by the plaintiff and its predecessor to make the shape and

form of biscuit in issue, expired years ago (R. V. I, pp. 196 and 223).

(3) Plaintiff's predecessor for many years prior and up to the year 1915 printed on all the cartons of its packaged shredded wheat the following notice:

> "Patented, September 17, 1895, October 15, 1895. This Food, the Process of Making It, The Special Machinery for Its Manufacture, are Under the Protection of The United States Government by virtue of Many Patents As Follows" (Listing 41 patents) (R. V. I, pp. 195-6).

Included among the patents listed under this notice was plaintiff's patent, No. 24,688, on the design or form of the biscuit which had been declared invalid in *Natural Food Company* v. *Henry P. Bulkley, et al.*, No. 28,530, N. Dist. of Illinois, East Div., because Perky swore falsely that the design had not been in public use or on sale for more than two years before his application for patent (R. V. I, p. 197).

Plaintiff's basic patents expired in 1912 and all of its patents had expired before defendant entered the field (R. V. I, p. 223).

(4) The machine of the expired patents produces the very form and shape of biscuit in dispute (See V. 5, pp. 12-13, Perky patent No. 532,286 and V. 5, pp. 110-119, Perky patent No. 678,127). A perpetual monopoly in the form and shape of the biscuit would unavoidably give plaintiff a similar monopoly in the machine of the expired patents in spite of the expiration of the patents, for the necessary result of the use of the machine is to produce the particular form and shape of biscuit in controversy. The shape of the biscuit is functional and the function of the machine is to produce that shape of biscuit.

(5) Defendant's proofs established that it had tried to mark or band the biscuit but that it was not practical to do so (R. V. I, p. 221). Plaintiff in effect, confessed this to be true by offering no proof of any way of marking the biscuit and by contending that defendant should

make some other shape of biscuit (R. V. 3, p. 2019, and V. I, p. 270). Defendant's proofs showed that the only known way visually to distinguish its biscuit was to make them shorter and darker than plaintiff's and enclose them in distinctive cartons. This defendant has always done (R. V. I, p. 221). As a matter of fact after defendant had marketed its small biscuit for five years, plaintiff copied the defendant's size exactly thus wiping out the size distinction which defendant had adopted (R. V. I, p. 204).

(6) The language which plaintiff claims to have exclusive right to use, that is, the words "shredded wheat", is the very language used in the specification of the Perky patents under which plaintiff's predecessor had a monopoly for seventeen years, to describe the product and process of making it. Thus

Perky patent No. 520,496, May 29, 1894:

> "the resulting product * * * in the form of films, strings, or *shreds* are deposited * * * "
> "these *shreds* * * * fall upon this roll * * *" (R. V. 5, p. 10).

Perky patent No. 532,286, January 8, 1895 (R. V. 5, p. 13):

> "* * * a food preparing machine to receive the *shredded* or thread-like product in layers."

Perky patent No. 532,697, January 15, 1895 (R. V. 5, p. 27):

> "the threads or *shreds* of the food product * * *"
> "the material to be *shredded* * * *"
> "to receive the *shredded* or filamentous discharge * * *"

Perky patent No. 533,555, February 5, 1895 (R. V. 5, p. 53):

> "one of the *shredders* in section * * *"
> "Each reducer or *shredding* device * * *"
> "adherence of the *shredded* or treated product * * *"

Perky patent No. 681,656, August 27, 1901 (R. V. 5, p. 141):

> "machines for cutting *shredded wheat* * * *"

Perky patent No. 713,795, November 18, 1902 (R. V. 5, p. 171):

> "a cracker of filamentous or *shredded wheat* or other grain * * *"

Many additional quotations from plaintiff's patents, cartons and advertisements showing the use of the words "shredded wheat" by plaintiff in a solely descriptive way appear in Appendix A, p. 27.

(7) Plaintiff's cartons (V. 1, p. 205) have always prominently displayed various registered trademarks, no infringement of which is claimed in the present litigation. Its complaint does not allege any similarity. Plaintiff's main brief on appeal stated, p. 62, that "The present case is not a patent case nor a carton case", meaning that no carton similarity was charged. The Trial Court held that defendant's cartons could not be mistaken for or passed off as Plaintiff's. Plaintiff's trademark prominently carried on its cartons from 1894 until 1915, was a representation of the mythological Goddess "Ceres", holding a sheaf of wheat in her arms. This trademark was registered May 22, 1906, No. 52,858 (V. 4, p. 193). About 1915, the "Ceres" mark was supplanted by a picture of the Niagara Falls, which is still prominently displayed on plaintiff's cartons (V. 1, p. 209). In 1905, plaintiff made its first claim to the words "shredded whole wheat" as a trademark and sought to register these words, first as a fanciful mark, and later as a descriptive term. The application was rejected and the rejection upheld on appeal. *Natural Food Co.* v. *Williams*, 30 App. D. C. 348. On November 5, 1912, plaintiff registered as its trademark the pictorial representation of its Niagara Falls factory (V. 1, p. 205), and this trademark has since constituted the most prominent feature of its cartons. This registration No. 89,071 (V. 4, p. 199), states that the factory picture trademark is used for "shredded wheat in Class No. 46, foods and ingredients of foods". Plaintiff's registration states that "No claim is made herein to the words 'The Home of Shredded Wheat' ". Plaintiff's predecessor also secured trademark registration No. 85,186 (V. 4, p.

197), on an alleged trademark showing a shredded wheat biscuit in a dish with a spoon and cream. The registration states "no claim being made to the representation of a shredded wheat biscuit," thus applying the precise description to the precise illustration and, in effect, disclaiming both.

Plaintiff's predecessor in 1926 procured registration No. 216,593 (V. 4, p. 205) for a trademark shown in the drawing as a dish containing two shredded wheat biscuits. The illustration of the two shredded biscuits is clear and undisputable. The registration states that Plaintiff "disclaims any exclusive right to the representation of the two biscuits apart from the mark shown."

Plaintiff on January 15, 1924 and again on May 25, 1926, registered the words "shredded wheat" under the Act of March 19, 1920 (V. IV, pp. 201 and 3). These registrations are statutory admissions that the words are descriptive, as the Act was enacted to permit registration of descriptive terms. These registrations are without presumption of validity.

Charles Broadway Rouss v. *Winchester*, (C. C. A. 2) 300 Fed. 706-712;
Sleight Metallic Ink Co. v. *Marks*, 52 Fed. (2) 664.

Thus plaintiff twice registered other things as its trademark and in each registration illustrated a shredded wheat biscuit, described it as a shredded wheat biscuit and disclaimed it as a trademark.

Plaintiff also disclaimed the words "shredded wheat" specifically and by descriptive usage.

Although this trademark-disclaimer-defense of the words and the design was clearly a bar to the injunction ordered, as to both form and description of the biscuit, as repeatedly held by this Court, the Circuit Court of Appeals denied rehearing without having stated its position on the question of the disclaimer on either hearing, although the defense was pressed on both hearings.

8. In 1915, Ross Biscuit Company began to make and sell a biscuit identical in size and color with plaintiff's and its right to do so was upheld by the Circuit Court of Appeals

for the 2nd Circuit in 1918. *Shredded Wheat Co.* v. *Humphrey Cornell,* 250 Fed. 960. Thereafter, the resources of the Ross Company became exhausted and it retired from the field. (R. V. I, p. 202).

9. Plaintiff's Canadian subsidiary, after this suit was filed, sued defendant's Canadian subsidiary in the Supreme Court of Ontario on the same cause of action here involved. After trial, that suit was dismissed on the ground of the patent expirations. *Canadian Shredded Wheat Co.* v. *Kellogg Co. of Canada, Ltd.,* 1936 Ontario Rep. 281. The five judges of the Court of Appeals of Ontario unanimously upheld that judgment. *Same* v. *Same,* 1936 Ont. Rep. 613.

10. Plaintiff's predecessor first warned defendant's predecessor in January 1922 not to make the patent-expired biscuit. The notice did not charge unfair acts but warned against any competition whether fair or not (R. V. I, pp. 103-08). Defendant retired from the market in 1922 and reentered in 1927. Suit was instituted in 1928 admittedly in part for advertising purposes, news releases being planted with newspapers days before the bill was filed (R. V. I, pp. 604-605).

In 1930 that suit was withdrawn without prejudice and this suit started two years later and tried, defendant believes, because, weary of ten years of harassment, defendant sued plaintiff for violation of the Sherman Anti-trust Act. *Kellogg Co.* v. *National Biscuit Co.,* 71 Fed. (2) 662.

11. After trial, the District Court dismissed the bill on the ground that the patent-expirations precluded any relief as to form, name or picture under the doctrine of *Singer* v. *June,* (supra); that the words "shredded wheat" were descriptive of the patent-expired biscuit, and had always been so used by plaintiff; that the shape of the biscuit was functional and not merely ornamental or fanciful; that relief could be based only on wrongful acts of defendant in passing its goods off as plaintiff's and that there had been no passing off; that defendant's packages were incapable of being passed off as plaintiff's; that defendant's biscuits outside of the package were distinguished in size and color from plaintiff's as far as was possible;

that further distinction of defendant's biscuit from plaintiff's other than by size and distinctive carton was impossible without destruction of defendant's undeniable right to compete; that plaintiff had failed to prove either its ownership of the three exclusive and perpetual monopolies it claimed as trademarks or any acts of unfair competition by defendant. (The opinion of the District Court is unreported and appears at R. V. I, p. 193. The findings are included in the opinion.)

IV. Plaintiff's appeal to the Circuit Court of Appeals for the Third Circuit was argued by Mr. Drury W. Cooper and ex-Judge Thomas G. Haight December 3, 1935 and the findings of fact and conclusions of law of the District Court and its decree dismissing the bill were unanimously affirmed in a *per curiam* opinion on January 16, 1936.

(The *per curiam* opinion of the Circuit Court of Appeals, composed of Circuit Judges Buffington, Davis and Thompson, is unreported and appears in R. V. III-A, p. 2069).

V. Plaintiff thereupon, on February 15, 1936, petitioned for rehearing on the ground principally that its alleged exclusive occupation of the market, from 1922 to 1937, after its patents had expired in 1912, had created exclusive and perpetual monopolies of form and of verbal and pictorial description of the biscuit, all by analogy to the ten year clause of the Trademark Act of February 20, 1905 (U. S. C. Tit. 15 Sec. 85). Plaintiff's counsel on the rehearing petition were those previously appearing in the cause. (R. V. III-A, p. 2079).

VI. The petition for rehearing was granted on May 7, 1936, and the reargument took place on October 8, 1936 (R. V. III-A, p. 2082). Hon. David A. Reed first appeared on plaintiff's brief on rehearing and, along with Judge Haight, argued the cause for plaintiff on rehearing, relying on the same authorities and facts as cited by Mr. Cooper and Judge Haight on the first hearing.

VII. On April 12, 1937, the Circuit Court of Appeals, filed its second opinion by Davis, C. J., reversing its former

opinion but not disturbing the findings of fact of the District Court except as to the conclusion that the words "shredded wheat", were descriptive, saying, strangely enough, that if the words "shredded wheat" were descriptive they *"could not have been the subject of a patent"*. (R. V. III-A, p. 2086 but see, Appendix A, pp. 27-28). The Court ordered the District Court perpetually to enjoin defendant from marketing the patent-expired biscuit, from pictorially describing it by illustration on its package, or from marketing any product under the words "shredded wheat". The second decision of the Circuit Court of Appeals revived the expired design, product, process and machinery patents as applied to shredded wheat biscuit and made them perpetual. The second opinion of the Court on rehearing is not yet reported and appears at R. V. III-A, p. 2083.

VIII. Defendant thereupon filed a petition for rehearing on May 7, 1937, and thereafter filed motions (R. V. III-A 2130 and 2145) for an injunction and for recall of the second decision on the ground that plaintiff had widely, unfairly and falsely advertized that defendant was under injunction and had otherwise unfairly exploited the Court's second opinion by publishing unfair excerpts therefrom, especially as to the phrase "The original bears this signature W. K. Kellogg" which had never been an issue in the case, was not mentioned in the complaint and is not covered by the prayers for relief or by the injunction ordered and which was off of nearly all of defendant's cartons at the time of the trial (R. V. III-A, p. 2131).

IX. The Court on July 13, 1937 denied defendant's petition for a rehearing without opinion (R. V. III-A, p. 2240), and on the same day denied its motions concerning respondent's untrue statement that defendant was under injunction and other unfair use of the decision (R. V. III-A, 2241). This denial was also without comment or condemnation of the unfair exploitation by plaintiff of a decision, with no mandate issued, with a petition for rehearing pending and other avenues of review unexplored.

The mandate below is still stayed pending this petition.

III. Reasons for Granting the Writ.

A. Preliminary.

The questions presented are whether the case involves serious and important constitutional questions and conflicts of decision involving the same or similar subject matter as between the first decision of the Circuit Court of Appeals and the last one and also as between that decision and the decisions of this Court concerning the effects of patent expirations on names and forms of patented products and machines; also as to the effect of trademark disclaimers; and as to the well established rule that perpetual monopolies of manufacture of either unpatented or patent-expired products shall not be set up under the guise of trademarks, and that patents, or monopolies, may be granted or extended only by Congress and not by the Courts and only for limited terms.

Also whether there is conflict between the last decision of the Court and the decisions of the Supreme Court and Court of Appeals of Ontario on the same subject matter and involving the same rules of law as to patent-expiration. Also as to whether there is conflict between the Second and Third Circuits, where on substantially the same facts one Court holds that defendant has a cause of action against plaintiff and the other Court holds that plaintiff has a cause of action against defendant.

Also whether there is conflict between the last decision below holding that the words shredded wheat were a true trademark and the decision of the Circuit Court of Appeals of the District of Columbia which held the exact opposite.

Also whether there is conflict between the Circuit Court of Appeals for the Second Circuit which held that the right of the Ross Biscuit Company to make and sell the patent-expired biscuit in issue was indubitable and the last decision in the Third Circuit which enjoins defendant from selling the biscuit in issue and thus, in effect, from making it.

B. Specific Reasons for Granting the Writ.

1. The last decision of the Circuit Court of Appeals of the Third Circuit holding that plaintiff may lawfully appropriate exclusively the form of (and thus the right to manufacture) the biscuit in issue is in direct conflict with the decision of the Circuit Court of Appeals for the Second Circuit in *Shredded Wheat Co.* v. *Humphrey Cornell, supra,* in which an opposite conclusion was reached. In that case, plaintiff's predecessor, The Shredded Wheat Company, sued the Humphrey Cornell Company, distributor for Ross Biscuit Company, in the District Court in Connecticut for alleged trademark infringement and unfair competition, alleged to consist of making and selling shredded wheat biscuit of the same size and shape as plaintiff's, in cartons which were incapable of being confused with plaintiff's cartons of shredded wheat biscuit. The District Court after the trial enjoined the defendant from marketing any biscuit in cartons or apart from cartons unless each biscuit was individually impressed, tagged or marked to distinguish it from plaintiff's unmarked biscuit. This corresponded to plaintiff's final prayer in the instant case. Footnote, *ante,* p. 2.

On appeal, the Circuit Court of Appeals for the Second Circuit modified the District Court's decree by holding (1) that as to biscuit that reached the final consumer in defendant's cartons, there should be no injunction, (2) that as to biscuit served apart from the carton (restaurant service), the defendant should endeavor for a period of six months to tag or impress a mark upon such biscuit and (3) that if after the six month's trial, the defendant should be unable to mark its biscuit without destruction of its right to compete, it might apply to the Court to vacate the injunction ordered. Judge Ward dissented, holding that the bill should be dismissed; that the form was functional and that the fragile biscuit could not be marked.

Even Judge Thomas in the District Court in the Humphrey Cornell case did not go so far as to enjoin

the defendant from making the biscuit at all and in perpetuity, and Ward, C. J., as aforesaid, dissented from the tentative and limited injunction ordered by the compromise reached by Judges Learned Hand and Hough of the Court of Appeals of the Second Circuit.

2. The last decision of the Circuit Court of Appeals of the Third Circuit holding that the words shredded wheat are not descriptive of the goods, were not so used by plaintiff and are capable of exclusive appropriation by plaintiff is in substantial conflict with the decision of the Court of Appeals of the District of Columbia in *Natural Food Company* v. *Williams, supra,* in which a contrary conclusion was reached on substantially the same issues and in which plaintiff acquiesced by the disclaimers aforesaid. *Ante,* p. 7.

In that case it appeared that the words shredded wheat were used originally by plaintiff's predecessor, Natural Food Company, descriptively and without claim of trademark, but after the enactment of the Trademark Act of February 20, 1905 (U. S. C. Title 15 Sec. 85) with a provision permitting registration of descriptive words used exclusively for at least ten years next preceding passage of the act, plaintiff's predecessor first associated a trademark notice with the words shredded wheat and filed an application to register them. After rejection as a fanciful name, plaintiff vainly sought registration as a descriptive mark used exclusively for ten years prior to 1905. Opposition was filed by William E. Williams on the ground of concurrent user and descriptiveness. The opposition was sustained by the tribunals of the Patent Office and by the Court of Appeals of the District of Columbia.

The Circuit Court of Appeals held that plaintiff's predecessor had not for ten years prior to 1905 exclusively used the words "shredded whole wheat" and that in fact it was open to question whether the words had ever been claimed or used as a trademark prior to the enactment of the ten year clause in 1905. It was also held that the words were clearly and solely descriptive of the product of many

shredded wheat patented machines and used in the patents as a description. *Natural Food Co.* v. *Williams, supra.*

3. The last decision of the Circuit Court of Appeals of the Third Circuit is in substantial conflict with the decision of the Second Circuit in *Kellogg Company* v. *National Biscuit Company, supra.*

In that case defendant in or about 1932 sued plaintiff for damages for alleged violation of the Sherman Anti-Trust Act, reciting facts which it claimed established a conspiracy to monopolize the manufacture of the patent-expired shredded wheat. The complaint in that action contains the affirmative allegations made in the answer filed by defendant in the instant litigation. District Judge Caffey, on motion, dismissed the complaint. On appeal the Circuit Court of Appeals for the Second Circuit reversed and held that the complaint set forth a cause of action for violation of the Sherman Act. Therefore, on substantially the same state of facts, the Circuit Court of Appeals of the Second Circuit holds for defendant and the Third Circuit holds for plaintiff. Conflict could hardly be more pronounced.

4. The last decision of the Circuit Court of Appeals of the Third Circuit is in substantial conflict with the decision of the highest court of Ontario on the identical issues in *Canadian Shredded Wheat Company, Ltd.* v. *Kellogg Company of Canada, Ltd., supra.* In that case brought after starting the instant suit, plaintiff's Canadian subsidiary sued defendant's Canadian subsidiary on the same cause of action in the Supreme Court of Ontario. Mr. Justice McTague dismissed the complaint, *Canadian Shredded Wheat Company, Ltd.* v. *Kellogg Company of Canada, Ltd., supra,* holding that plaintiff had no trademark rights in the form and verbal and pictorial description of the patent-expired biscuit.

On appeal, the five judges of the Court of Appeals of Ontario unanimously affirmed the judgment of Mr. Justice McTague. The case is now pending in the Privy Council.

The Canadian law as applied in that case is the same as the American, English and French law. Defendant's business north of the Canadian line is now held to be lawful while south it is unlawful. This is a serious and important conflict in every way. Surely defendant should be free to compete with plaintiff in a fair way in the United States as in Canada.

5. The last decision of the Court below is also, we believe, in conflict with the decision of this Court in *Singer* v. *June, supra,* regarding the effect of patent expirations upon the form and name of a patented article.

In that case it was held that after the Singer patents had expired the product covered by them and the name applied thereto could not be restricted to the sole use of the patentee. Yet in the present case the Circuit Court of Appeals for the Third Circuit has wholly disregarded this doctrine and granted a perpetual monopoly.

The Singer-June rule of irrevocable dedication of name and form by patent expiration is elementary, sound and established law and should not, we submit, be overruled, repealed or disregarded as the Court below does in its second decision.

6. The last decision of the Court below is also in conflict with the Constitution of the United States (Art. I, Sect. 8, par. 8). The Court and Congress both lack power to revive patents or to grant perpetual monopolies in the form and in the pictorial and verbal description of a product after the expiration of patents on the design or form and on the product itself, as well as the method of and machinery for its manufacture. The Court's action in reviving and perpetuating plaintiff's patent monopolies after their expiration is a virtual breach of the constitutional limitation on the powers of Congress. The Constitution, Art. I, Sec. 8, sub-par. 8, grants power to Congress to extend monopolistic privileges to inventors and authors only and for a limited time. Under this authorization Congress has seen fit to grant to inventors

in return for their public dedication of their invention monopolies for 17 years only.

7. The injunction ordered is also in conflict with the Sherman Anti-Trust Act, approved July 2, 1890, as amended. That Act makes fair competition mandatory. Here the Court below enjoins defendant from all competition, fair or otherwise.

8. The last decision of the Court below is also in substantial conflict with its own view of the law of patent-expiration as applied in *Amiesite* v. *Interstate Amiesite Co.*, 72 F. (2d) 946, and also with the decision of the Circuit Court of Appeals for the Second Circuit in *Du Pont Cellophane* v. *Waxed Products*, 85 Fed. (2) 75; Certiorari denied, 57 Sup. Ct. 194.

9. The last decision of the Court below is contrary to *Delaware & Hudson Canal Co.* v. *Clark*, 13 Wall. 311, *Standard Paint Co.* v. *Trinidad Asphalt Manufacturing Co.*, 220 U. S. 446,* and *Warner* v. *Eli Lilly*, (supra), which hold the invariable rule to be, that relief in trademark infringement and unfair competition cases alike rests upon the wrongs of the defendant in passing off its goods as plaintiff's and not upon any alleged right of a plaintiff to be protected in a name or form which under the guise of a trademark will set up monopolies in products which all are free fairly to make and sell. Here the finding is that defendant's goods have never been passed off as plaintiff's and are so distinctly marked as to be incapable of being passed off (R. V. I, 204-226, V. III-A, 2072).

10. The last decision of the Court below is also in conflict with that of this Court in *Warner* v. *Eli Lilly*, *supra*, and of the Second Circuit in *Shredded Wheat Co.* v. *Humphrey Cornell*, *supra*, and other cases, holding that a Court has power only to restrain the deceptive use of ornamental,

* Judge Davis, in the second decision below, cites this case in the Circuit Court of Appeals (163 Fed. 977). Why he does so we do not know unless he is relying on the dissenting opinion of Judge Sanborn. The majority opinion of that Court, however, overruling the dissenting opinion of Judge Sanborn, was unanimously affirmed by this Court in 220 U. S. 446.

fanciful or non-essential features of dress or appearance and not, by enjoining the use of functional or mechanical shapes, forms or essential features and descriptive names, to stop the defendant from all competition however honorable and fair.

11. The last decision below is in conflict with *Warner* v. *Eli Lilly*, (*supra*), in another respect also. The Court below, in that case, attempted by injunction to go beyond the unfair acts of the defendant and to set up a perpetual monopoly of the right to combine cocoa and quinine there involved. This Court reversed that decision and the Circuit Court of Appeals, in effect, has now apparently disregarded the admonition of this Court by setting up similar perpetual monopolies of form and shape and of pictorial and verbal descriptions of a patent-expired product.*

12. The last decision below is also in conflict with *Centaur* v. *Heinsfurter*, (C. C. A. 8) 84 Fed. 955, in which Mr. Justice Brewer held that dedication of name and form by patent-expiration under the Singer-June doctrine was perpetual and not revocable even in a case of ten years exclusive occupation of the market by the patentees after the patent had expired. The Third Circuit now holds that five years occupation of the market (accomplished by threats) revives the long dead patents and makes them perpetual.

13. The last decision below also conflicts with *Kellogg Toasted Corn Flake Co.* v. *Quaker Oats Co.*, (C. C. A. 6) 235 Fed. 657. The Court there held that even if secondary meaning for the words "Toasted Corn Flakes" pointed to this plaintiff's predecessor as maker, the Quaker Oats Company could still make the same patent-expired product and market it as "Quaker Toasted Corn Flakes" in distinc-

* It is irrelevant to argue that "shredded wheat" is not descriptive, for the picture indisputably is descriptive and that is enjoined too. In our brief (p. 35), we give instances of the use of shredded wheat in a purely descriptive way in plaintiff's patents and advertisements.

tive and fair cartons. Different "makes" of corn flakes are just as indistinguishable, when served apart from their cartons, as are shredded wheat biscuit.

14. The last decision below is also squarely in conflict with the decision of this Court in *Beckwith* v. *Commissioner of Patents*, 252 U. S. 538, and *Rahtjen's* v. *Holzapfel's*, 183 U. S. 1, holding that disclaimers embodied in trademark certificates are irrevocable.

This point was wholly disregarded by the Court although always pressed by defendant.

15. When the second decision came down, plaintiff, with all the driving force of its great advertising, publicity and sales promotion departments, sent all over the country advertisements, circulars, and news releases, with double check follow ups (R. V. III-A, p. 2130), stating that defendant was under injunction and excerpting only the statements of the second decision regarding the phrase "The original bears this signature W. K. Kellogg". That phrase was never an issue on the trial. The complaint makes no mention of it and there is no prayer for relief. The injunction ordered does not mention it. The phrase originated on defendant's corn flake cartons and was almost out of use at the time of the trial and had not been in use for several years prior to the second decision. Motions were made (R. V. III-A, p. 2130) to recall and to restrain the unfair use of the Court's decision. The Court denied the motion, thus putting its seal of approval on this inequitable proceeding. That action was in conflict with:

Peters v. *McDonald*, (C. C. A. 2nd) 61 Fed. (2nd) 1031;

Art Metal Works v. *Abraham and Straus*, 62 Fed. (2nd) 79.

16. Finally, we complain because we believe the Court below was unfair and denied due process because at both

hearings defendant's counsel were denied an opportunity fully to argue the case. This was particularly true with respect to the secondary defense of disclaimer and to defendant's conceded right to make and sell the biscuit in issue. After the Circuit Court of Appeals had granted its far reaching injunction on the second hearing, it refused defendant an opportunity to reargue the case. This, we believe, was unfair in view of the fact that the injunction granted went far beyond plaintiff's final prayers. *Ante*, p. 2, footnote.

We respectfully petition the Court to grant a writ of certiorari.

Respectfully submitted,

W. H. CRICHTON CLARKE,
EDWARD S. ROGERS,
ROBERT T. McCRACKEN,
Counsel for Defendant-Petitioner.

BRIEF IN SUPPORT OF PETITION.

1. Opinions Below.

The opinion of the District Court of the United States for the District of Delaware, filed January 11, 1935, is printed at Record V. I, p. 193, and is not officially reported.

The first opinion of the Circuit Court of Appeals for the Third Circuit, filed January 16, 1936, is printed at Record, V. III-A, p. 2069, and is not yet reported.

The second opinion of the Circuit Court of Appeals for the Third Circuit, sur rehearing, filed April 12, 1937, is printed at Record V. III-A, p. 2083, and is not yet reported.

2. Jurisdiction.

The original decision of the Circuit Court of Appeals for the Third Circuit was rendered January 16, 1936. Plaintiff respondent duly filed a petition for rehearing which was granted, and the second decision of the Circuit Court of Appeals, sur reargument, was rendered April 12, 1937. Defendant appellee thereafter duly presented its petition for rehearing, and its motion to recall the decision, and, after argument on the latter, both the petition to rehear and the motion to recall were denied July 13, 1937 (R. V. III-A, pp. 2240-2241).

The jurisdiction of this Court is invoked under Section 240(a) of the Judicial Code as amended by Act of Congress of February 13, 1925, Chapter 229, 43 Stat. 936.

3. Statement of the Case.

See petition, supra, pp. 4-11.

4. Specification of Errors Relied Upon.

The Circuit Court of Appeals, in its second decision, erred:

1. In holding that since the expiration of plaintiff's patents on shredded wheat, defendant was not entitled to

advertise or sell shredded wheat biscuits in a form and shape similar to plaintiff's, although that is the only form and shape in which said biscuits can be manufactured by the formerly patented machinery without modification.

2. In holding that plaintiff could appropriate, as trademarks, descriptive words, forms and pictures which it had specifically disclaimed as trademarks for the purpose of registering other things as its trademarks.

3. In holding that, since the expiration of plaintiff's patents on shredded wheat, defendant is not entitled to display in its advertisements pictures of shredded wheat biscuits in form and shape similar to plaintiff's, although that is the only form and shape in which said biscuits can be manufactured by the formerly patented machinery.

4. In holding, in effect, that in spite of the expiration of plaintiff's patents on shredded wheat, defendant is not entitled to use the formerly patented machinery for the purpose of manufacturing the sole product of such machinery, shredded wheat biscuits.

5. In substantially granting plaintiff a perpetual monopoly in the formerly patented machines in violation of the limitation contained in Art. 1, Sec. 8, sub-par. 8 of the Constitution which provides for the granting of such monopolies to new inventors only and for a limited time only and by Congress only, and grants no power even to Congress to revive long dead patents.

6. In holding that, since the expiration of plaintiff's patents on shredded wheat, defendant is not entitled to use the words shredded wheat to describe its product, although that is the precise language used in plaintiff's trademark registrations and patents to describe the product.

7. In holding that the words shredded wheat are not purely descriptive and that they are therefore capable of exclusive appropriation as a trademark, even after specific statutory disclaimer.

8. In holding that the words shredded wheat have acquired a secondary meaning in the minds of the public, and in further holding that they have thus become the exclusive property of the plaintiff and incapable of distinguishing and fair use by defendant.

9. In holding that the words shredded wheat, after dedication to the public by the expiration of patents pertaining thereto, and after specific statutory trademark disclaimers, may be reappropriated exclusively by plaintiff through continued user (principally because defendant was prevented by threats of litigation from competition from 1922 to 1927).

10. In holding that the words shredded wheat were capable of exclusive appropriation by plaintiff through continued user for a period of years, even in the absence of patent-dedication and trademark disclaimer.

11. In holding that defendant, who had distinguished its shredded wheat biscuits from plaintiff's in so far as possible in shape and form, and who had packed said biscuits in distinctive cartons, and who had never imitated plaintiff's carton trademarks, was guilty of trademark infringement or unfair competition.

12. In holding that the words "the original has this signature: W. K. Kellogg", a statement formerly placed on some of defendant's packages, was evidence of an intention to deceive the public and of unfair competition, especially where such phrase had never been an issue in the case, was not mentioned in the complaint or prayers for relief, and was not covered by the injunction ordered.

ARGUMENT.

By its second decision the Court below ordered the District Court to enjoin defendant perpetually

(a) from the use of shredded wheat as a tradename.
(b) from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trademark.
(c) and also ordered an accounting for damages and profits.

Injunction clause (b) does not mention making and does not mention size or color.

Defendant can make the patent expired product but it is enjoined from "advertising or offering it for sale."

As to size, the plaintiff duplicated defendant's small sized biscuit five years after defendant had put it on the market and the court below has now enjoined defendant perpetually from advertising or selling any sized biscuit large or small, whether banded, tagged, packaged or not.

Moreover, plaintiff has recently sued the Ralston Purina Company in the United States District Court for the Eastern District of Missouri (*National Biscuit Co.* v. *Ralston Purina Company*, in Equity No. 11817) for making a thumb-nail size of shredded wheat marketed as "Shredded Ralston".

In short, plaintiff has now received a perpetual monopoly against anyone ever calling or picturing any product of any size as shredded wheat or using any kind of machinery now known or formerly patented or hereafter devised for making any size of product that resembles "the form and shape" of plaintiff's biscuit. All this in perpetuity.

Plaintiff never had anything like that kind of protection even during the life of its forty-one patents.

Petitioner respectfully submits that the second decision of the Circuit Court of Appeals is not only in conflict with the applicable decisions of this Court on important questions of law relating to patent-expirations, disclaimers, trademarks and unfair competition and with recent decisions of other Circuit Courts of Appeals involving substan-

tially the same questions of law (*Kellogg Company* v. *National Biscuit Company, supra*), but is also in direct conflict with Art. 1, Sec. 8, sub-par. 8 of the Constitution which grants power to Congress to extend monopolistic privileges to inventors only and to such for a limited time only. Not even Congress is given power to revive long-dead patents and to make them perpetual. The second decision is also in conflict with decisions of other Courts in cases involving the specific trade-mark and product involved in this case.

Petitioner maintains specifically that the second decision of the Court below granting perpetual monopolies in the name, shape and form of a patent-expired article is directly in conflict with the decision of this Court in *Singer* v. *June* (*supra*), of the Circuit Court of Appeals of the Second Circuit in *Dupont Cellophane Co.* v. *Waxed Products Co.* (*supra*), and of the Circuit Court of Appeals of the Third Circuit in a decision just preceding the one here sought to be reviewed—*Amiesite Asphalt Co. of America* v. *Interstate Amiesite Co.* (*supra*).

The decision is directly in conflict with decisions of another Circuit Court of Appeals bearing upon the specific name shredded wheat in that it grants a perpetual trademark in this name by injunction, although the registration of such trademark under the Act of 1905 has been judicially denied.

The Natural Food Company v. *Williams* (*supra*);

See also

McKesson & Robbins v. *Phillips Chemical Co.*, 53 Fed. (2nd) 1011.*

Plaintiff having in its patents, advertisements and trademark applications described the product itself as "shredded wheat" and specifically disclaimed exclusive right to the words "shredded wheat" and to the representation of "a shredded wheat biscuit", its claim to the exclusive use of these words and representation is barred by such descrip-

* The *McKesson-Robbins* case, 23 Fed. (2d) 763, cited by the Court below (V. IIIA at p. 2091), was reviewed in a bill under Section 4915 of the revised statutes brought by the defeated party. The Circuit Court of Appeals for the Second Circuit (53 Fed. (2d) 342; 53 Fed. (2d) 1011) vacated the decree of the Court of Appeals of the District of Columbia and cancelled the registered marks involved.

tion and disclaimers and the decision granting such exclusive use is in conflict with applicable decisions of this Court.

Beckwith v. *Commissioner of Patents*, (*supra*);
Holzapfel's v. *Rahtjen's* (*supra*).

In the absence of any confusion as to the source of manufacture or any acts which result in passing off of the defendant's product as plaintiff's, there can be no unfair competition under such cases as:

Delaware & H. Canal Co. v. *Clark* (*supra*);
Saxlehner v. *Wagner*, 216 U. S. 375.

The decision also conflicts with the settled law that defendant may lawfully enter the competitive field at any time after the expiration of plaintiff's patents. A dedication once made cannot be recalled.

Centaur Co. v. *Heinsfurter* (C. C. A. 8), *supra.*

And the "right to individual appropriation once lost is gone forever."

Saxlehner v. *Eisner*, *supra.*

Finally, we confidently rely on the judgment of this Court in *William Warner* v. *Eli Lilly*, *supra.*

There the defendant was grossly unfair but this Court did not regard that as any ground for giving the plaintiff a perpetual monopoly of the right to combine cocoa and quinine as a remedy.

Here the defendant, Kellogg Company, was found to be scrupulously fair, yet plaintiff is given a perpetual monopoly of the form or shape and verbal and pictorial description of a patent-expired product.

Respectfully,

W. H. CRICHTON CLARKE,
EDWARD S. ROGERS,
ROBERT T. McCRACKEN,
Counsel for Defendant-Petitioner.

APPENDIX.

As to Plaintiff's use of Shredded Wheat as a descriptive term.

Paragraph III, page 23, of Plaintiff's Brief on Rehearing below started with the caption "The name 'Shredded Wheat' when first adopted by the plaintiff, was not, and never has been merely descriptive of the product * * *" (not in record).

The argument was that the word "shredded" is only properly applicable to a substance that is cut or torn into small strips and that shreds that are made by rolling or mangling as distinguished from tearing are not shreds but are something else. As a matter of English, this is not so.

I. Dictionary use.

Webster's New International Dictionary (Second Edition):

> shred n. 1. A long, narrow piece cut or torn off; a strip; as, a *shred* of ground, of toast. 2. *a* A fiber-like strip, as of cloth, peel, thread, membrane, or cloud. *b* In general, a fragment; a piece; particle. 3. *obs. a pl* parings *b* A twig, *c slang* A tailor. 4. A shard *rare.*
>
> shred v. 1. to cut; hew; lop off; prune; strip. *obs.* 2. To cut or tear into small pieces, esp. narrow and long pieces, as of cloth or leather; to tear into shreds. 3. To divide into two; to sever, as with shears.
>
> scrod, scrotum, scroll, screed and shroud are all cognate words.

In the Oxford Dictionary (1914), the following occurs:

> **shredded wheat: The grain of wheat cut by machinery into long filaments.** (Emphasis ours.)

The Century Dictionary (1910) has:

> *Shredder.* h. 1. A machine for cutting into shreds or short slivers, the stalks, leaves, and husks of ripe corn plants in making stover or shredded fodder for

cattle * * * the machine delivers the shredded product to a stacker or to a baling press. 2. **A machine for shredding whole wheat into long filaments or shreds. It consists essentially of pairs of steel rolls, one having a finely fluted face, placed above a traveling conveyor. Prepared whole wheat is fed between each pair of rolls and is torn into long threads, that fall upon the conveyor and are conveyed to cutting knives which divide them into cakes ready for baking.**" (Emphasis ours.)

II. Trademark and patent usage of shredded what was purely descriptive.

Moreover, the use of the words "shred" and "shredded" by plaintiff and its predecessors contradicts their counsel's assertion. For over forty years they have used the words "shred" and "shredded" to describe the product in their patents, now expired, under which the article was made, on the cartons containing it, and in the advertisements to the public, always in a merely descriptive sense.

To save the court the labor of referring to the voluminous exhibits, we quote the following (emphasis in each instance ours):

Trade-mark registration No. 85,186, January 30, 1912,

> "no claim being made to the representation of a **shredded-wheat** biscuit * * *." The biscuit is shown in the drawing and is thus identified as **shredded-wheat.**

Trade-mark registration No. 89,071, November 5, 1912,

> "has adopted and used the trade-mark * * * for **shredded-wheat** * * *."

Perky Patent No. 520,496, May 29, 1894, for a machine for the manufacture of food products from cereals,

> "the resulting product * * * in the form of films, strings, or **shreds** are deposited * * *."
>
> "these **shreds**, strings or films fall upon this roll * * *."
>
> "which catches such **shreds**, strings or films * * *."

Perky Patent No. 521,810, June 26, 1894, for a machine for the manufacture of food products from cereals,

"in uniformly irregular shapes of **shredded** or filamentous form * * *."

Perky Patent No. 532,286, January 8, 1895,

"to receive the **shredded** or thread-like product * * *."

Perky Patent No. 532,480, January 15, 1895, for a roll-machine for reducing cereals for food,

"to the form of long threads or **shreds** * * *."

"which disposes said threads or **shreds** lengthwise * * *."

"discharged in thread or **shred**-like form * * *."

"these **shreds** or threads * * *."

"to receive the **shreds** or threads * * *."

"disposes these continuous **shreds** * * *."

"disposition of the **shreds** or threads * * *."

Perky Patent No. 532,481, January 15, 1895, for a perforated-roll machine for reducing cereals for food,

"for reducing grain to thread-like or **shred**-like form * * *."

"in the form of threads or **shreds** * * *."

Perky Patent No. 532,697, January 15, 1895, for a roll-machine for reducing cereals for food,

"for the reduction of grain to **shredded** or thread-like form * * *."

"the threads or **shreds** of the food product * * *."

"the grain or other material to be **shredded** * * *."

"the material to be **shredded** * * *."

"to receive the **shredded** or filamentous discharge * * *."

Perky Patent No. 532,698, January 15, 1895, for a groove-roll machine for reducing cereals for food,

"for reducing grain or other articles for food to **shredded** or thread-like form * * *."

"discharged from these grooves in **shred** or thread-like form * * *."

Perky Patent No. 533,551, February 5, 1895, for a roll-machine for reducing cereals for food,

"to reduce the material to **shred**-like or filamentous form * * *."

"discharging the same in thread-like or **shred** form * * *."

Perky Patent No. 533,552, February 5, 1895, for a roll-machine for reducing cereals for food,

"for the reduction of grain to **shredded** or thread-like form * * *."

"the threads of material * * * in **shredded** or thread-like form * * *."

Perky Patent No. 533,553, February 5, 1895, for a roll-machine for reducing cereals for food,

"circumferentially grooved **shredding** roller * * *."

"to thread-like or **shredded** form, the threads or **shreds** being discharged therefrom * * *."

Perky Patent No. 533,554, February 5, 1895, for a roll-machine for preparation of cereals for food,

"in the shape of continuous fine threads or **shreds** * * *."

"discharged the threads or **shreds** of food * * *."

Perky Patent No. 533,555, February 5, 1895,

"one of the **shredders** in section * * *."

"a series of reducers or **shredders** * * *."

"Each reducer or **shredding** device * * *."

"in the form of continuous threads or **shreds** * * *."

"the discharged threads or **shreds** * * *."

"adherence of the **shredded** or threaded product * * *."

"the threads or **shreds** of material * * *."

Perky Patent No. 548,086, October 15, 1895, for bread and method of preparing same,

"their rough and porous thread-like or **shred**-like form * * *."

Perky Patent No. 571-284, November 10, 1896, for machine for reducing and preparing cereals for food,

"to thread-like or **shredded** form * * *."

"a series of reducers or **shredding**-heads * * *."

"reduced by their grooved rollers to **shred** or thread-like form * * *."

"a layer of the **shred**-like product * * *."

"a series of reducing or **shredding** heads * * *."

"the series of reducing or **shredding** heads * * *."

"in a grain **shredding** or reducing machine * * *."

"a grain **shredding** or reducing machine * * *."

"in a grain reducing or **shredding** machine * * *."

Perky Patent No. 571,285, November 10, 1896, for machine for reducing cereals,

"a small quantity of the **shredded** or filamentous product * * *."

Perky Patent No. 598,745, February 8, 1898, for roll reducing-machine for preparing food,

"the prepared grain above referred to or **shreds** of the same * * *."

"the discharge of the **shreds** or strips * * *."

Perky Patent No. 614,338, November 15, 1898, for machine for reducing cereal food products to form for use,

"several sets or gangs of **shredding** devices * * *."

"the number of **shredding**-heads in each set * * *."

"these roll-**shredders** discharge the material in the form of threads or **shreds** * * *."

"the threads or **shreds** are transferred * * *."

"the **shredding** or reducing head * * *."

"a comminuting or **shredding** effect * * *."

Perky Patent No. 618,288, January 24, 1899, for apparatus for making folded wafers,

"the reducing or **shredding** rolls * * *."

"the **shreds** or threads of the material * * *."

"to **shredded** form, the **shreds** or threads being discharged * * *."

"the threads or **shreds** are transferred * * *."

Perky Patent No. 625,696, May 23, 1899, for a machine for reducing and baking cereals in form,

"continuous layers of **shred** or thread-like form * * *."

"continuous threads or **shreds** * * *."

Perky Patent No. 667,892, February 12, 1901, for apparatus for manufacturing cereals into forms of food or bread,

"to **shred** or thread-like form, each head depositing a layer of the **shred**-like threads * * *."

Perky Patent No. 678,127, July 9, 1901, for machine for reducing food material to form and distributing same,

"reduced to **shred** or thread-like form * * *."

Perky Patent No. 678,625, July 16, 1901, for pneumatic panning or distributing machine,

"formed by **shredding** the grain * * *."

Perky Patent No. 681,656, August 27, 1901, for continuous cutting-machine,

"machines for cutting **shredded** wheat * * *."

Burbank Patent No. 684,789, October 22, 1901, for distributive depositing or panning machine,

"sections or cakes of **shredded** wheat * * *."

Perky Patent No. 713,795, November 18, 1902, for filamentous cracker,

"a cracker of filamentous or **shredded** wheat or other grain * * *."

Perky Patent No. 797,604, August 22, 1905, for machine for preparing food,

"the fibered, filamentous, or **shredded** form of the reduced grain * * *."

"which **shred** the grain * * *."

III. Plaintiff's cartons, pamphlets and advertisements use the words "shred", "shredded", "shredded wheat", in a merely descriptive sense.

Plaintiff's carton (Exhibit D228, R. 1157) reads:

"The Original Shredded Wheat. It's all in the Shreds. Shredded Wheat is made of the whole wheat and is made digestible by steam-cooking, **shredding** and baking, contains all of the elements necessary for building, nourishing and sustaining the human body."

Plaintiff's pamphlet (Exhibit D229, R. 1157) reads in part:

> "How shall we prepare the whole wheat so that its body-building elements may be digested and formed into healthy tissue, bone and brain? That question was solved by the man who invented Shredded Whole Wheat Biscuit. In making Shredded Wheat the whole wheat grains are first thoroughly cleaned, then cooked in steam, then drawn out into filmy **shreds**, then baked in ovens at a high temperature. The crispness of the **shreds** encourage thorough chewing, and that insures perfect digestion. That's the reason Shredded Wheat is such a perfect food for children. It makes sound teeth and healthy gums. They like the crisp, flavory **shreds** of the baked whole wheat, and it is so much better for them than mushy porridges."

Plaintiff's book of recipes (Exhibit D230, R. 1157) reads:

> "Only plump whole grains of choice, sun-ripened wheat go into Shredded Wheat. Nothing added, nothing taken away. All the bran, the minerals, the vitamins Nature stores in this perfect cereal food are retained in Shredded Wheat.
>
> Shredded Wheat brings you wheat in its most digestible form. The plump whole grains are steamed to break down all the starch cells, insuring quick digestibility. Then they are drawn into long, filmy **shreds**, so porous they will readily absorb more than four times their own weight in milk. Layer upon layer, the **shreds** form biscuits. Then—unsalted, unsweetened—they march into the ovens. And these tempting **shreds** of whole wheat are baked to a crisp and appetizing golden-brown."

Plaintiff wrote (Exhibit D227, R. 1157):

> "We invite you to visit The Home of Shredded Wheat, either at Niagara Falls, or at Oakland, Calif. Your trip through the bright, clean bakeries will be an interesting experience, and competent guides will show you how the plump, sun-ripened whole wheat

grain is steam-cooked, drawn into filmy, porous **shreds** and baked into crisp, nutritious Shredded Whole Wheat Biscuit. Bring your friends with you! A treat is in store for you."

Plaintiff's advertisement (Exhibit D226, R. 1156) appearing at R. 1173-74, reads:

"You Mustn't Grow Old.

Nature never intended us to grow old. Keeping the arteries soft and pliant is a matter of intelligent food selection and rational exercise. Avoid hardening of the arteries and the self-poisoning that comes from undigested foods by eating

Shredded Wheat

By our **shredding** process we have developed a food that is thoroughly and completely digested in the stomach and intestines, supplying all the lime-salts that make good teeth, also bran for keeping the colon clean and healthy. Youngsters like the tasty crispness and the nutlike flavor of the baked wheat. Nothing better for them to grow on or play on—a salt-free food—you season it to suit your own taste.

When you ask for Shredded Wheat be sure you get the **original Shredded Wheat** you have always eaten, made at Niagara Falls, N. Y. It has taken twenty-five years to perfect and develop this clean, wholesome, nutritious whole wheat food. Made in a form and size that is most convenient whether eaten as a simple 'breakfast cereal' or in combination with fruits or creamed vegetables. Imitations are never as good as the original.

If you ask for Shredded Wheat and receive a **different Shredded Wheat** from that which you have always eaten (made in Niagara Falls, N. Y.), kindly write us at the Home Office and receive a copy of our booklet, 'The Happy Way to Health.'

Made for twenty-five years by

"The Shredded Wheat Company,

Niagara Falls, N. Y."

Plaintiff's advertisement (R. 1155) reads:

> "Made at Niagara Falls. Look for the picture of Niagara Falls on the end of the carton when you buy Shredded Wheat Biscuit. **Any other shredded wheat** that may be offered you is merely a poor imitation of the **only original Shredded Wheat**, the kind your customers have always bought, the kind that stands up in the market, always clean, always pure, always the same. Made only at Niagara Falls, New York, in the cleanest, finest food factory in the world."

The following are excerpts from some of plaintiff's advertisements in evidence:

> "All body-building material in the whole wheat steam-cooked, **shredded** and baked in the finest, cleanest food factory in the world."

Shredded wheat is

> "—just whole grains of wheat steam cooked, **shredded** and baked to a crisp, golden brown, * * *."

> "It is the whole wheat and nothing but the wheat, steam-cooked, **shredded** and baked in the cleanest, finest food factory in the world."

> "Triscuit is the **shredded** wheat wafer * * *."

> "* * * whole wheat grain, steam-cooked, **shredded** and baked."

> "It is the **shredding** process that puts the 'eat' in whole wheat."

> "The crisp, flavory **shreds** of oven-baked whole wheat * * *."

> "Have you tasted our new Triscuit? * * * It is the whole wheat steam-cooked, **shredded**, pressed into a wafer and baked in electric ovens."

> "**It's all in the Shreds.**"

> "It is through the cooking and **shredding** process used in making Shredded Wheat that the whole wheat is prepared in its most digestible form."

"* * * the whole wheat made digestible by steam-cooking, **shredding** and baking."

"* * * the outer bran coat is scattered along the **shreds** in infinitesimal particles * * *."

"In making Shredded Wheat we make all these elements digestible by steam-cooking, **shredding** and baking into crisp, golden brown biscuits or 'little loaves'."

"In making Shredded Wheat Biscuit we steam-cook the grains of whole wheat, draw them into delicate, filmy **shreds**, form them into little loaves or Biscuits and bake them to a crisp, golden brown."

"* * * just pure wheat made digestible by steam-cooking, **shredding** and baking in crisp, golden brown Biscuits."

"* * * the whole wheat grains made digestible by steam-cooking, **shredding** and baking. The delicate, porous **shreds** of baked wheat * * * The **shredding** process compels into discard all broken, small and defective grains * * *."

"Try toasted Triscuit, the **shredded** wheat wafer, for luncheon * * *."

"Contains all the body-building elements of the whole wheat grain, steam-cooked, **shredded** and baked in convenient little loaves."

"Triscuit * * * is made of perfect whole grains of wheat cooked in steam, **shredded**, compressed into wafer form and baked in electric ovens."

"Shredded wheat is the whole wheat grain—steam-cooked, **shredded** and baked in convenient little loaves."

"Steam-cooked grains of whole wheat, **shredded** and baked in handy loaves * * *."

"Every biscuit is filled with the wholesomeness of whole wheat—made easy to serve and easy to eat in crisp, oven-baked **shreds**."

"* * * Crisp, flavory **shreds** of whole wheat * * *."

"All the goodness of the whole wheat grain made digestible by steam cooking, **shredding** and baking."

"It is the whole wheat steam-cooked, **shredded** and baked—nothing added, nothing taken away."

"Triscuit, the **shredded** wheat Toast."

Good Housekeeping, June, 1924:

"* * * * Triscuit * * * is the whole wheat steam-cooked, **shredded**, pressed into a wafer and baked in electric ovens."

Ladies' Home Journal, March, 1927:

"Every **shred** gives golden health."

Good Housekeeping, November, 1928:

"* * * crisp, flavory, oven baked **shreds** of whole wheat * * *."

Good Housekeeping, September, 1929:

"Those crispy **shreds** give teeth and glands their needed daily dozen."

Good Housekeeping, June, 1930:

"* * * flavory **shreds** of baked whole wheat."

"You can't **shred** anything but perfect whole grains of cooked wheat. That's the reason we have to clean the wheat so thoroughly before **shredding** it. We then cook it and draw it into light, porous **shreds** * * *."

"Such a food is **shredded** whole wheat, made of the best white wheat that grows, cleaned, cooked, drawn into light porous **shreds** and baked."

"Every detail in the process of cleaning, cooking and **shredding** wheat is open to the world * * *."

The foregoing are typical examples of statements appearing throughout the mass of plaintiff's advertising. They could be multiplied indefinitely.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1937

No.

KELLOGG COMPANY,
Petitioner,

AGAINST

NATIONAL BISCUIT COMPANY,
Respondent.

PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT.

TO THE HONORABLE THE CHIEF JUSTICE AND THE ASSOCIATE JUSTICES OF THE SUPREME COURT OF THE UNITED STATES.

Your petitioners respectfully pray that a writ of certiorari be issued to review the order (R. 3-A, p. 2285) of the Circuit Court of Appeals for the Third Circuit entered on May 5, 1938 pursuant to decision of that court (Buffington, Davis and Thompson, *J.J.*) rendered on that day

(R. 3-A, p. 2282) recalling and clarifying the mandate theretofore issued by said court pursuant to its order filed April 12, 1937 reversing the decree of the United States District Court for the District of Delaware herein. Said order of reversal also vacated and set aside the decree of said Circuit Court of Appeals of January 16, 1936 by which said court affirmed the decree of the District Court of the United States for the District of Delaware entered in the District Court on January 23, 1935 (R. 1, p. 228).

Following the order of reversal entered in the court below on April 12, 1937 and the denial of a petition and motion for reargument, petitioner filed in this Court a petition for certiorari to review said order of reversal which was denied by this Court October 25, 1937. Petitioner thereafter applied for reconsideration of its petition, which was denied by this Court November 8, 1937.

The cause now having been decided by the Circuit Court of Appeals under a decree and mandate substantially different from that heretofore sought to be reviewed in this Court, and reargument having been denied May 16, 1938 (R. 3-A, p. 2295), the petition for certiorari is renewed in order that this Court may in its discretion review the proceedings which have resulted in the decree of April 12, 1937, as modified by the decree of May 5, 1938.

Opinions Below.

The opinion of the United States District Court for the District of Delaware (R. 1, p. 193) was filed on January 11, 1935. It contains a statement of the essential facts found by the court in conformity with Equity Rule 70½ (R. 1, p. 228). It is not reported.

The per curiam opinion of the Circuit Court of Appeals affirming the final decree of the District Court (R. 3-A, p. 2069) was filed January 16, 1936, and is not reported.

The opinion of the Circuit Court of Appeals upon rehearing, reversing the judgment of the District Court

and vacating its decree affirming said judgment (R. 3-A, p. 2083) was filed April 12, 1937 and is reported in 91 F. (2d) 150.

The opinion of the Circuit Court of Appeals recalling and modifying its mandate (R. 3-A, p. 2282) was filed May 5, 1938, and is not yet reported.

Jurisdiction.

The jurisdiction to issue the writ requested is found in the provisions of Sec. 240(a) of the Judicial Code as amended by the Act of February 13, 1925 (c. 229, Sec. 1, 43 Stat. 938; 28 U. S. C. A. Sec. 347(a)).

Questions Presented.

This case involves the right of the petitioner to manufacture and sell in competition with the respondent shredded wheat biscuits, the court below having enjoined the petitioner (1) from the use of the name "Shredded Wheat" as a trade name; (2) from advertising or offering for sale its product in the form and shape of plaintiff's biscuit; and (3) from doing either.

The questions presented are:

1. Whether the respondent is entitled to the exclusive use of the trade name "Shredded Wheat" when used to describe that well-known product, or otherwise;

2. Whether the respondent is entitled to the exclusive right to sell shredded wheat biscuits in a form and shape covered by expired patents; and

3. Whether the respondent is entitled to a perpetual monopoly in the use of the descriptive term shredded wheat biscuits and in the right to manufacture and sell its biscuits in a form and shape constituting the subject matter of expired patents.

Statement.

This action was commenced in the United States District Court for the District of Delaware. It was brought by the respondent, National Biscuit Company, to restrain the petitioner from the manufacture and sale of shredded wheat biscuits and from the use of that term to describe its product, on grounds of unfair competition and trade-mark infringement. After trial the bill of complaint was dismissed by the District Court upon findings of fact incorporated in its opinion (R. 1, p. 228).

In its first opinion (R. 3-A, p. 2070) the Circuit Court of Appeals approved the full and satisfactory discussion by the trial court of all the issues involved and stated that it found no occasion to write a further opinion, but with a view to avoiding needless repetition confined itself to stating that—

> "on the expiration of plaintiff's patent No. 548,086, the exclusive right to make and sell the food product therein described ended. And on the expiration of plaintiff's design patent No. 24,688, the exclusive right to the designed biscuit also ceased."

The Court added (R. 3-A, p. 2070):

> "In that regard we agree with the Judge below, namely:
>
> 'In this case plaintiff claims in perpetuity the monopolistic right to the descriptive word "shredded" and a monopolistic right in the shape or form of the biscuit. Any right of plaintiff must be based upon the wrong of defendant. Relief must be based upon confusion or 'palming off, otherwise relief should be denied. Originally patents covered every phase of plaintiff's business. There were product, process and design patents which secured plaintiff a perfect monopoly of the business. These patents have expired and *the case falls into the class of expired patent cases* and is controlled by the Singer case'."
>
> (*Singer Mfg. Co.* v. *June Mfg. Co.*, 163 U. S. 169.)

The District Court found that up to 1915 plaintiff printed prominently upon packages containing its biscuit the following notice (R. 1, pp. 195-196):

> "September 17, 1895, Patented October 15, 1895
>
> "This Food, the process of making it and special machinery for its manufacture, are under the protection of the United States Government by virtue of many patents as follows:"

The notice was followed by a list of forty-one patents, including the design patent, which was declared invalid in 1908. With reference to this the District Court stated:

> "Instead of removing the notice of the Perky design patent from the carton or otherwise notifying the public it was no longer claiming protection under the patent, plaintiff continued for seven years thereafter to warn the public not to make the biscuit as it was under the protection of the Government by virtue of this design patent. By its professions and conduct plaintiff secured a monopoly not for fourteen years but actually for twenty years" (R. 1, p. 197).

The court below in its first opinion stated that upon the expiration of the patents under which the product had become known to the trade and consumers by the descriptive words "shredded wheat":

> "* * * the public could use the patented process both in making the patented product and in making it in the form described in the design patent, and in calling it 'shredded', provided in doing so it avoided simulating the product so as to prevent confusion and lead buyers into the belief they were buying plaintiff's product. This, in the judgment of the court below and of this court, the defendant has done in compliance with the requirements of *Singer* v. *June*, 163 U. S. 169, for the product of the defendant has at all times, in its cartons and otherwise, been marked with its own name, in words and colors (green and red) of such distinctive character, that buyers thereof knew they were getting defendant's product and were not buying that of the plaintiff. Moreover, it is clear

> that the word 'shredded' was a descriptive word, aptly describing the process to which wheat grains were subject by any one using shredding or mangling in processing wheat grains" (R. 3-A, p. 2071).

The court below added that the word "shredded" was open to all shredders of wheat provided that they so used it as not to mislead and confuse the public (R. 3-A, p. 2071).

With reference to the question of confusion, the court below expressly stated:

> "Now, that no confusion, misleading or deceit is shown in this case, is clear. In that regard we agree with the court's summary:
>
> > 'Where the name is the only name by which the article can be described and is the only name by which it was described during the existence of the patent that name becomes public property upon the expiration of the patent. Here the patented biscuit was known as Shredded Wheat or Shredded Wheat Biscuit. Upon the expiration of the patent that name became public property.'" (R. 3-A, p. 2071).

The court below also adopted with approval the finding of the District Court as follows:

> "The testimony of a hundred witnesses from all parts of the country establishes there was no passing off of defendant's biscuit for plaintiff's or deception of the public to any appreciable extent." (R. 3-A, p. 2072).

Insofar as these statements of the court below disclose facts, they adopt and approve the findings of the District Court.

After reargument the court below did not qualify or retract its approval of the findings of fact in the District Court, except that it did withdraw its conclusion that the words "shredded wheat" or "shredded wheat biscuit" were descriptive and held that whether descriptive or not they and the shape and form of the biscuit had by usage

following the expiration of the patents acquired a secondary meaning indicating manufacture by the respondent. It also changed is views regarding the design patent and because of its invalidity held that the case stood in equity as if there had been no patent (R. 3-A, p. 2088). Upon these premises the court below concluded that the respondent enjoyed the exclusive right to use this descriptive term and the characteristic form, although the District Court had found, and the court below had approved the finding, that there was no passing off or confusion in this case (R. 3-A, pp. 2071-72).

The record discloses that in 1912 respondent registered the picture of its factory as its trademark "For Shredded Wheat in Class 46, Foods and Ingredients of Foods", No. 89,071 (R. 4, p. 199). Respondent's present claim is that its trademark for shredded wheat is "Shredded Wheat". Its registration No. 89,071 states that "No claim is made herein to the words 'The home of shredded wheat' which appear above the factory picture". This is a double disclaimer of the words "shredded wheat", —first, by using the word to describe the product itself, and second, by disclaiming the words as part of the phrase "The home of shredded wheat". Respondent's predecessor also secured trademark registration No. 85,186 (R. 4, p. 197) on an alleged trademark showing one shredded wheat biscuit in a dish with a spoon and cream. The registration contains the following disclaimer: "no claim being made to the representation of a shredded wheat biscuit", applying the precise description to the precise illustration of the biscuit and, in effect, disclaiming both. Respondent's predecessor also procured registration 216,593 (R. 4, p. 205) for an alleged trademark consisting of a dish containing two of the characteristic biscuits in issue. The registration states that respondent's predecessor "disclaims any exclusive right to the representation of the two biscuits apart from the mark shown".

Comparison of respondent's carton (R. 1, p. 207) with petitioner's carton (R. 1, p. 215) shows no trademark

violation as to the bowl or plate which the District Court held the petitioner had a right to use (R. 1, p. 228).

The District Court found and the finding was not disturbed in the court below that the biscuits cannot be separately branded and marked (R. 1, p. 221).

The fact found in both courts is that there were not only design patents, but product and process patents as well, which secured to plaintiff a perfect monopoly of the business, including the form and shape which characterized the biscuit made with patented machinery (R. 1, pp. 196-197, 223; R. 3-A, p. 2070). This form and shape is inherent in the patented product and in the process of making it (R. 5, pp. 59-60) when the multiple-layer filaments are cooked in an oven (R. 1, pp. 196-197). The disclosure of these patents included machinery which could only be used in making biscuits in the form and shape in which plaintiff made and sold them (R. 5, pp. 12-13, Perky patent No. 532,286; pp. 84-85, Perky patent No. 614,338; p. 110, Perky patent No. 678,127). By virtue of these patents the respondent's predecessor in title enjoyed a complete monopoly of the form and shape which characterized the biscuit.

The Court in its second opinion referred to a legend upon some of the cartons used by the petitioner: "The original has this signature, W. K. Kellogg" (R. 3-A, p. 2092). This was not mentioned in the complaint. The answer contains a statement that the legend was used. There was no proof of the extent of its use beyond the statement in the answer, or of any confusion or deceit resulting from such use. The court below could not have considered the matter of any importance, since no injunction was directed against the use of the legend. The matter was not mentioned in the opinion of the District Court nor in the first opinion of the court below. Of course, whatever the practice may have been, it could not justify the injunction directed by the court below, which prevents all sales however fairly the goods may be represented as the goods of petitioner.

Notwithstanding the facts the court below characterized the acts of the defendant as deliberately designed to acquire by unfair competition and misstatements trade which equitably belonged to the plaintiff. The court below not only granted the respondent a perpetual monopoly in the use of the descriptive terms "shredded wheat" and "shredded wheat biscuits" but also in the form and shape in which the biscuit had been patented.

Specification of Errors Relied Upon.

We respectfully submit that the court below erred—

1. In failing to affirm the decision of the District Court dismissing the complaint, and in reversing its judgment.

2. In holding that the respondent was entitled to the exclusive right to sell biscuits in the pillow-shape form under any name, and in enjoining petitioner from advertising or selling its product in the pillow-shape form in distinctive cartons.

3. In holding that the respondent was entitled to the exclusive use of the words "shredded wheat" as applied to food products, and in enjoining petitioner from the use of the words "shredded wheat" as a trade name.

4. In holding that respondent was entitled to the exclusive trademark use of the pictorial representation of two biscuits in a dish.

5. In holding that the name shredded wheat is not descriptive.

6. In awarding costs to respondent and directing an accounting for profits and damages.

7. In directing the issue of an injunction which in effect creates a perpetual monopoly in subject matter and descriptive name dedicated to the public upon the expiration of prior patent monopolies.

8. In failing to hold that by disclaimers in trademark registrations plaintiff's predecessor abandoned all claim of exclusive right, if any there was, to the words "shredded wheat" or "shredded wheat biscuit" as a trade name and to the shape, form, design, appearance or representation of the biscuit.

9. In holding that since the expiration of the patents the pillow-shape biscuit has acquired a secondary meaning, and in holding that this fact justifies the issuance of a perpetual injunction against the manufacture and sale of such biscuits without regard to the size of the biscuits or the distinctive containers in which they are sold.

10. In failing to dismiss the complaint in view of the lack of any evidence that petitioner's goods were ever passed off as respondent's goods, and in view of the finding that the size of petitioner's biscuits and the character of the containers in which they were sold were so distinctive as to preclude any sale of petitioner's goods as the goods of the respondent.

Reasons Relied upon for Allowance of the Writ.

(1) The decision of the court below is in conflict with the decision of the Circuit Court of Appeals for the Second Circuit in *Shredded Wheat Co.* v. *Humphrey Cornell Co.*, 250 Fed. 960, in which respondent's predecessor was plaintiff.

In that case it was held that the long monopoly of the original manufacturer during the patent period created, as it was bound to create, an association in the public mind of the familiar wheat biscuit with a single, though

anonymous, maker, and that under these circumstances the manufacturer was entitled to some protection—"as much when the association be through mere appearances as when it be wrapped up in a name".[1]

In considering what protection should be extended the court held in that case that so far as appearances of the biscuit were concerned the rule was "that minor, or 'non-functional' changes in appearance may be required, so long as the substantial elements are left in the public domain", but that "where the 'secondary meaning' is bound up in elements of the appearance which cannot be changed without cutting off the defendant's substantial right to make and sell that kind of goods the plaintiff must suffer the resulting confusion".

Characterizing these well established principles, for which many authorities were cited in the opinion, the Court said:

> "Under the guise of protecting against unfair competition, we must be jealous not to create perpetual monopolies."

Applying these principles to that case which is an earlier edition of the case at bar, it was held that the defendant should be permitted to continue to sell biscuits without change of form, color or size from the characteristic biscuits sold by plaintiff. With respect to biscuits which reached the final purchaser in cartons no relief was granted because, as the court found, the defendant's cartons were so different from plaintiff's that no confusion was possible. With respect to biscuits sold out of the carton, as in hotels, restaurants, lunchrooms and boarding houses, these were required to be marked, tagged or labeled, but even as to this single requirement it was provided in the court's decree that the defendants should be

---

[1] This conclusion appears to be in conflict with the decision of Justice Brewer sitting as a Circuit Justice in *Centaur Co.* v. *Heinsfurter*, 84 Fed. 955 (C. C. A. 8).

relieved from marking, tagging or labeling such biscuits if after a fair trial this could not be done "except at an expense which would make impossible any continued competition in the business of selling biscuits outside the cartons".

In the case at bar the District Court found (R. 1, p. 221):

> "By making its biscuit substantially smaller than plaintiff's, and using individual cartons, defendant has met the requirements of the decree of the Circuit Court of Appeals for the Second Circuit in the Ross case [*i. e.* Shredded Wheat Co. *v.* Humphrey Cornell]. In this case the proof fully confirms the testimony of Andrew Ross that the biscuit itself cannot be branded or marked. With each biscuit distinctively marked by carton and by size, there can be no excuse for confusion or deception. Had the proof in this case as to marking been before the Court of Appeals in the Ross case the opinion of Judge Ward would doubtless have been the opinion of the Court."

and further predicated its decision upon the opinion of Judge Ward in the *Humphrey Cornell* case, *supra*, quoting as follows (R. 1, p. 201):

> "Moreover, I think that the form and size of the biscuit as always made by the complainant are functional, and that imitation of these features is no evidence of unfair competition. The form evidently tends to strengthen a product made out of such fragile material and the size is apparently the best fitted for use as a breakfast food on a saucer. I think the bill should be dismissed." *Shredded Wheat Co.* v. *Humphrey Cornell Co.*, 250 Fed. 960, 967.

The court below has directed that an injunction issue which will end all competition in the business of selling biscuits of the characteristic form and shape, whether in or out of cartons, however the carton or individual biscuits may be marked, and regardless of the size or color of the biscuits.

With respect to the sale of biscuits without change of form, color or size the decision of the court below is in irreconcilable conflict with the decision of the Second Circuit in the *Humphrey Cornell* case. Upon the facts in this record the petitioner was entitled to dismissal of the complaint under the ruling in that case.

(2) The decision of the court below is in conflict with the decision of the Circuit Court of Appeals for the 8th Circuit in *Centaur Co.* v. *Heinsfurter*, 84 Fed. 955 (C. C. A. 8; opinion by Circuit Justice Brewer) where the ruling in *Singer Mfg. Co.* v. *June Mfg. Co.*, 163 U. S. 169, was applied to the use of the word "Castoria". The controversy in the *Singer* case arose immediately after the expiration of the patent, but in the *Castoria* case the plaintiff continued in the exclusive manufacture of Castoria for some ten years after the expiration of its patent and contended that during the time when the right to manufacture and sell was common it acquired a trade-mark in the name. Disposing of this contention Mr. Justice Brewer said:

> "But this matter of time makes no difference. The word had become known as the name of the thing, and as such it could not be appropriated as a trade-mark. "* * * As well might a manufacturer of flour claim a trade-mark in the word 'flour', as the manufacturer of 'Castoria' the trade-mark in that name."

Thus the right to individual appropriation, once lost, is gone forever. This principle was subsequently confirmed by this Court in *Saxlehner* v. *Eisner & Mendelson Co.*, 179 U. S. 19, 36, and *Saxlehner* v. *Wagner*, 216 U. S. 375, 381.

The court below held that upon patent expiration the petitioner was free to adopt the name, but because of delay and continued use of the name by respondent the case stands just as if there had been no patent (R. 3-A, p. 2087-88).

In its application of the rule of the *Singer* case, *supra*, to the facts in the case at bar the decision of the court below is in irreconcilable conflict with the decision of the Eighth Circuit in the *Castoria* case, in that it is predicated upon an alleged reappropriation of the name "shredded wheat" after the expiration of the patents (R. 3-A, p. 2088).[2]

(3) The decision of the court below is in conflict with the decision of the Circuit Court of Appeals for the Sixth Circuit in *Kellogg Toasted Corn Flake Co.* v. *Quaker Oats Co.*, 235 Fed. 657, 667.

In that case the court held that where some dealers and other customers in toasted cornflakes understood those words alone as having a secondary meaning indicating Kellogg's products, relief only of a qualified character such as would prevent others from selling toasted cornflakes as those of Kellogg was permissible in a suit for unfair competition, and that unless the defendant was shown to have failed clearly and effectively to distinguish its product from Kellogg's no relief could be granted. Since the defendant had sold its toasted cornflakes in cartons distinctively marked, all relief was denied.

In the case at bar the court enjoined not only the use of the name which under the decision in the *Singer* case, *supra*, had come to designate the product which all could sell, but enjoined the sale of the product itself.

(4) The decision of the court below is in conflict with the decision of the Court of Appeals for the District of Columbia in *Natural Food Co.* v. *Williams*, 30 App. D. C.

---

[2] The validity of the principle applied in the *Castoria* case is not questioned by the decision in *Centaur Co.* v. *Genesh*, 33 F. (2d) 985, decided in the Western District of Pennsylvania thirty years after Justice Brewer's decision, because in the later case it was found as a fact that Castoria is not and never was the product of the expired Pitcher Patent, although in the original *Castoria* case there was a finding that it was.

348, in that it grants a perpetual trademark in this name by injunction, although the registration of such trademark under the Trademark Act of 1905 (33 Stat. 725, 15 U. S. C. A. § 85) was denied to respondent's predecessor in that case.

(5) The decision of the court below is in conflict with applicable decisions of this Court.

In *Warner & Co.* v. *Lilly & Co.*, 265 U. S. 526, chocolate was used in a medicinal preparation to give it a distinctive color and a distinctive flavor. The chocolate had no therapeutic value. The defendant was found to have been guilty of grossly unfair competition in attempting to imitate the appearance of the plaintiff's medicine so as to persuade dealers to sell its product as the plaintiff's. In dealing with this situation the Circuit Court of Appeals for the Third Circuit unconditionally enjoined defendant from using chocolate in its preparation to simulate the color of plaintiff's preparation. This Court reversed the decree, holding that the right to which the plaintiff was entitled was that of being protected against unfair competition, not of having the aid of a decree to create or support, or assist in creating or supporting, a monopoly of a preparation which everyone, including the petitioner, is free to make and vend. The court below was directed to confine its relief to the requirement of sales of the product in cartons appropriately marked to prevent confusion, deception and fraud.

This case and many others are but instances of a basic and controlling principle common to the law of trademarks and of unfair competition, declared in *Canal Co.* v. *Clark*, 13 Wall. 311, in *Standard Paint Co.* v. *Trinidad Asphalt Mfg. Co.*, 220 U. S. 446, and in many other controlling decisions, which limits the defendant's liability and the plaintiff's right to relief in such cases to indemnity for or prevention of the wrongful sale of defendant's goods as the goods of plaintiff. Nothing of the kind is

Appeal, where it will be considered in the light of the authoritative decision of the Lord Justices sitting in the Privy Council.

WHEREFORE your petitioner respectfully prays that a writ of certiorari be issued out of and under the seal of this Honorable Court directed to the United States Circuit Court of Appeals for the Third Circuit, commanding that Court to certify and to send to this Court for its review and determination on a day certain therein named a transcript of the record and proceedings herein, and that the order of said Circuit Court of Appeals for the Third Circuit reversing the decree of the District Court for the District of Delaware be reversed by this Honorable Court and that said decree of said District Court be affirmed, and that your petitioner have such other and further relief in the premises as to this Honorable Court may seem meet and just.

And your petitioner will ever pray, &c.

Dated: New York, N. Y., May 23, 1938.

THOMAS D. THACHER,
W. H. CRICHTON CLARKE,
Counsel for Petitioner.

Supreme Court of the United States,

OCTOBER TERM 1937.

No. 396.

KELLOGG COMPANY,
Petitioner-Appellee-Defendant,

against

NATIONAL BISCUIT COMPANY,
Respondent-Appellant-Plaintiff.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT.

PETITIONER'S REPLY BRIEF.

Certain material statements in Respondent's Brief in Opposition are incorrect and misleading. Petitioner craves leave to point them out and to comment thereon:—

1. Respondent states, p. 1:—"This is an action for unfair competition." The general distinction between trademark and unfair competition cases is that trademarks are considered as exclusive, property rights, whereas the remedy of unfair competition is employed to restrain a defendant from unfairly using a generic, descriptive, geographical or other word or device which he has an undisputed right to use in a fair or honorable way. The instant case is purely and exclusively a trademark case. The decree below holds in substance and effect, that plaintiff has perpetual and exclusive trademark property rights in the words "shredded wheat" and in the shape, appearance or design of the patent-expired biscuit and thus in the patent-

expired machinery and method for making it. The very wording of the decree is based upon the maintenance of trademark rights (R. V. III-A, p. 2093). The District Court is ordered "to enter a decree enjoining the defendant from the use of the name 'Shredded Wheat' as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit *in violation of its trademark.*" (Italics ours.) The Court below held that these perpetual trademark monopolies are held to arise by prescription, i. e., by continued possession of the market after the patents expired, and are not based on any alleged wrongs of the defendant. No matter how distinctively defendant marked each biscuit to establish its origin, it still would be enjoined. The case is a trademark case and the second decision below reverses the established rule that relief in trademark and unfair competition alike rests upon and must be limited to the wrongs of the defendant and cannot rest upon any alleged prescriptive rights of the plaintiff. Petition, p. 17.

2. Respondent asserts that the case "is peculiarly one that must stand on its own facts." Brief, p. 2. Respondent did not produce a single witness, man, woman or child, who testified in effect "I asked for plaintiff's product and received defendant's product thinking it was plaintiff's." The trial court held that it was impossible to mistake defendant's cartons for plaintiff's. R. V. I, pp. 204-227 and V. 3, p. 2055. This fact is patent from the cartons themselves (V. I, pp. 205-219). The District Court found that no one had been deceived by defendant; that defendant's goods had not been and could not be sold as plaintiff's. The Circuit Court of Appeals does not find that anyone was ever deceived by defendant. It mentions the phrase "The Original bears this signature. W. K. Kellogg" but does not hold that that phrase ever led any one to purchase defendant's product thinking it was plaintiff's. The phrase was never in issue or heard of on the trial and is not enjoined. It

had been long out of use at the time the Court below reversed itself. If plaintiff's case "is peculiarly one that must stand on its own facts," then plaintiff is lost, because on the facts there was no deception and without deception there can be no relief. Plaintiff's case is peculiarly one of law. Unless revolutionary and unique law can be invented to apply to the fact as found by the trial court (V. I, p. 227) that "Plaintiff is complaining, not of unfair competition but of effective competition," plaintiff's case falls here as it fell in the trial court and in the first decision of the Circuit Court of Appeals.

3. Plaintiff states at p. 3 of its Brief In Opposition that Andrew Ross, its former employee, "was enjoined." This is misleading. Judge Thomas in the *Humphrey Cornell* case, 244 Fed. 508, merely prescribed that Ross should band or tag every biscuit even when packed in distinctive cartons. The futility of this tagging requirement is clear. Any dealer who would tear off a carton in order to deceive a lunch-room or plate-customer would just as easily tear off the band or the tag. If the dealer could not easily remove the tag, what would the customer do—eat it? Judge Thomas' "injunction" thus was a futile direction, not to stop manufacturing the biscuit, but to mark, band or tag it, and this was modified on appeal (250 Fed. 960) so as not to apply to biscuit reaching the final consumer in cartons and was to be vacatable if defendant found it could not tag or band the biscuit without an impossible competitive handicap.

Such discussion of that case brings out clearly the distorted application of it which the plaintiff has attempted to impose on pages 10 and 11 of its brief. Plaintiff at that point would have the Court interpret that case as prohibiting the marketing of these biscuits unless tagged or branded. The exact opposite is the true conclusion. The Court as stated, issued no injunction against the marketing of these biscuits in cartons and decreed that if it were impracticable to brand or mark them when sold loose, there should be no injunction at all. It was for this very reason and in light

shown in this case, and the injunction which has been granted is not limited to preventing any such wrong.

Thus the decision below, in granting an injunction and directing an accounting of profits and damages, is in conflict with the applicable decisions of this Court.

The court below ignored the decisions of this Court in *Holzapfel's Co.* v. *Rahtjen's Co.*, 183 U. S. 1, 12, and *Beckwith* v. *Commissioner of Patents*, 252 U. S. 538, 545, in dealing with respondent's disclaimer of the words "shredded wheat", see p. 7, *supra*.

(6) The court below has so far departed from the accepted and usual course of judicial proceedings by ignoring the applicable and controlling principles limiting the right to relief in cases of unfair competition as to call for an exercise of this Court's power of supervision.

We do not suggest that this Court should concern itself with all departures from accepted principle in the lower courts, and thus become a court for the correction of errors, but we do most respectfully suggest that where one of the inferior courts by judicial decree is supporting and maintaining a perpetual monopoly in a standard food product long after the statutory monopoly under forty-one patents has ended, the case is one which calls for an exercise of this Court's power of supervision.

In considering the importance of the questions of law presented in this case this Court will wish to consider the decision of the Privy Council in England in *Canadian Shredded Wheat Co. Ltd.* v. *Kellogg Co. of Canada, Ltd., and another*, 55 R. P. C. 125, All English Law Reports Annotated, 1938, Vol. 1, Part 8, pp. 618-634. For the convenience of the Court we are filing with the Clerk printed copies of this decision. The case was decided on February 4, 1938, after the denial of the original petition for certiorari herein. It arose in the Canadian courts and the parties to the suit were the respective Canadian sub-

sidiaries of the parties to this suit. The questions presented were the same as the questions here involved, and in all material respects the facts were the same as those in the case at bar. The principles applied were those which we believe should be applied under the applicable decisions of this Court. The result was in direct conflict with the decision of the court below.

Concluding the judgment of the Privy Council, Lord Russell of Killowen said:

> "One further observation their Lordships desire to make. Litigation has taken place in the United States of America in which a company called National Biscuit Company sought to restrain a company called Kellogg Company from using the words 'shredded wheat'. The action was dismissed by decree of the U. S. district court for the district of Delaware, and, on appeal to the U. S. circuit court of appeals for the third circuit, the decree was affirmed. Subsequently, on reargument before the same judges, that decision was reversed, and a decree was entered:
>
> 'enjoining the defendant from the use of the name "shredded wheat" as its trade name, and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark'.
>
> Their Lordships can only (but with the greatest respect for the court) express the view that, if the facts of that case were similar in all respects to the facts of the present case, they prefer the first judgment of the circuit court of appeals to its later decision. Their Lordships are of opinion that this appeal should be dismissed, and will humbly advise His Majesty accordingly."

The judgment of Mr. Justice Bennett upon which the court below relied as reaching a conclusion different from that of the Privy Council was decided in the Chancery Division of the English High Court of Justice on December 21, 1937, in a proceeding to correct the registry of trademarks, before the decision of the Privy Council, and is now pending on appeal in the English Court of

Giving plaintiff the benefit of every possible doubt as to the meaning of this statement, it is clear that if defendant had in 1932 used the word "shredded" *in its advertising only* and only the expression "a shredded wheat product" in small letters on the side of its whole wheat carton (V. I, p. 219), and only the dish-biscuit picture, plaintiff would not then have objected to defendant making the biscuit and marketing it as "Kellogg's Whole Wheat Biscuit." (Pet., p. 2, footnote).

8. Plaintiff states, Brief in Opposition, p. 4, that "It is undisputed that . . . both name and form of the biscuit were accepted by the trade and consumers as identifying the biscuit with plaintiff." This is sharply disputed and the contrary was found as a fact by the District Court. This finding was not disturbed by the Circuit Court of Appeals. The form of the biscuit is functional and was once also patented as a design and the words shredded wheat were always used in the patents, trademark registrations and advertisements to describe the biscuit itself not to indicate its origin. Pet. Appendix, pp. 27-38. Even the Circuit Court of Appeals in its second decision below specifically finds that the name shredded wheat "has come to stand for the product itself." V3A, p. 2089.

9. Plaintiff states, Brief, p. 4, that "During that fifteen years plaintiff . . . had expended more than $17,000,000." in advertising. This figure is reached by pyramiding each years advertising upon the preceding years. Advertising investment is not like capital invested in constructing a building. The usual practice is for an advertiser to appropriate about twenty per cent of this year's receipts from sales for next year's advertising. In short the public put up this advertising appropriation. Defendant also has been a heavy advertiser in pointing out the competitive advantages of its small dark biscuit. We do not seek to belittle plaintiff's advertising figures which seem to have loomed so large in Judge Davis' mind on the sec-

ond hearing. We merely point out that the price of a product must include advertising expense or the producer will go bankrupt and in this case the public supplied the $17,000,000 which the second decision below, in effect, holds has now purchased a complete monopoly by which perpetually to oppress the public which supplied the money through its daily purchases.

10. Plaintiff's brief, p. 5, refers to a cellophane window in defendant's package. Plaintiff evidently expects defendant never to let the public know what it is making—to hide its light under a bushel—not to call the product by the only descriptive term it has ever had and to make people buy "sight unseen." The words "whole wheat biscuit" are so broadly, so generically, descriptive as to cover dozens of different kinds of crackers, biscuit or breads made of whole wheat. As to the biscuit shape, this is what may be called a hidden trademark case. The shape-trademark is enclosed in a distinctive package and cannot be seen until the package is opened unless a cellophane window is used.

11. Plaintiff on page 6, criticizes defendant for using the words shredded wheat "as a tradename." A tradename differs from a trademark in that the former is descriptive. Defendant's package states prominently first that the product inside is "*Kellogg's*" and second, that it is "shredded wheat." Why should one fact be stressed less than the other? Should the public be told on the front panel that the contents are "Kellogg's" and then have to look to the small text matter on the side panel to find out just what the contents are? (V. I, p. 219). Plaintiff, in its brief below, Pet., p. 2, footnote, conceded defendant's right to make but it has always disputed defendant's right effectively to tell the public just what it makes.

12. Plaintiff's Brief in Opposition, p. 6, characterizes the revolutionary character of the second decision below better than defendant has done by stating that the first

decision "was not in harmony with the modern doctrine of unfair competition as defined by this court in *Schechter Poultry Corporation* vs. *United States*, 295 U. S. 495.". Plaintiff, evidently realizes that none of the authorities cited by the Court below in its second decision really supports the conclusion reached. All of these "authorities" were urged on the court by plaintiff on the first hearing and the District Court was promptly affirmed. Plaintiff has now elected to defend the second decision by arguing that it is "in harmony with the modern doctrine of unfair competition." Just what that is, plaintiff does not state. Defendant sees no relevance in the *Schechter* case. What has an unconstitutional attempt by Congress to regulate the methods of removing chickens from crates in intrastate commerce in Brooklyn got to do with the reviving of long dead patents and making them perpetual as a new exercise of "equity" by the Court below?

13. Plaintiff argues, brief p. 6, that "The case is not one of public interest, but depends upon its own peculiar facts." The case patently is one of great public interest. The Court below seeks by judicial legislation to add a new kind of five year clause to the trademark statutes and to set up a revolutionary system of perpetual monopolies akin to patents. If this attempt to reverse the Singer-June doctrine of dedication of form and name by patent expiration shall succeed, the country will soon be oppressed by perpetual monopolies in every art and industry. Nothing could be much more important than that from a public standpoint.

The only "peculiar" fact cited by plaintiff as distinguishing this case is that defendant made "two retractions" and this is not true. Defendant withdrew its shredded wheat in 1922, put it out in 1927 and has never retracted it since. If defendant had retracted its product in 1930, what was there for plaintiff really to sue defendant about in 1932? Was this suit really about defendant's advertising, as plain-

tiff avers, brief pp. 4-6, or was it merely another form of plaintiff's advertising, as defendant avers? Plaintiff and its predecessor have now used the courts three times as sort of adjuncts of their advertising department, first, in 1928, when the later abandoned suit was brought, second in 1932 when this suit was started and, third, in 1937, when the Court below reversed itself. Pet., pp. 9-11-19 and R. V. IIIA, 2130-2199.

The Court below based its second decision on one fact of alleged unfairness—the "W. K. Kellogg" phrase, which came over from defendant's corn flakes cartons and was always associated with the Kellogg name. Plaintiff never complained of that phrase until after the trial was over. A mere request would have caused its removal. It was a small type relatively insignificant feature of a carton prominently marked as "Kellogg's." It never misled anyone. It had been out of use for a year or two when the second decision came down. It almost seems as though the Court below finally concluded that the litigation was really over that phrase, yet it is not even mentioned in the injunction as ordered. The complaint does not refer to it and the matter was never heard of by defendant until many months after the trial was over. The District Court does not mention it in its voluminous findings and plaintiff made no request for a finding about it at the trial.

Now plaintiff seeks to bolster the frivolous contention about the small text "W. K. Kellogg" phrase by the untrue statement that defendant made "two retractions (1922-1930)". That misstatement does not make the case itself either peculiar or even "modern". The law still is that relief in trademark and unfair competition cases alike must be based on wrongs or frauds of the defendant, not on perpetual monopolies of the plaintiff.

14. The cases cited by plaintiff on pp. 7-8 of its brief do not support the second conclusion of the Court of Appeals. The unauthorized use of unpublished news (*Associated*

Press case), unfair and false statements concerning a filter (*Motor Improvement Co.* v. *A. C. Spark Plug Co.*), use of a well known trademark to misrepresent the origin of another kind of goods (*Rolls Royce* and *Aunt Jamima* cases) are cases which have nothing to do with defendant's right to make a patent-expired product and advertise it fairly as of its own manufacture.

15. Plaintiff on page 10 of its brief states that there are "thousands and millions" of biscuit served outside of the carton. The trial Court found (V. I, p. 204) that about one biscuit in five thousand is sold apart from a carton. Both parties put out and push restaurant cartons containing two biscuit each. The injunction ordered below makes no distinction between biscuit sold in or apart from cartons. Both are banned by the injunction ordered.

16. Plaintiff seeks (brief pp. 11-12) to minimize the fact that on the facts here involved the Courts of Appeals for the Second and Third Circuits both held for defendant and then the Third Circuit reversed itself. The Sherman Anti-Trust case was dismissed without prejudice for lack of prosecution. A bill of discovery in aid thereof is now pending and defendant is now about to file a new action based upon further unfair acts of the plaintiff occurring since the first action was instituted. Defendant's Bill of Discovery in aid of its law action was filed to ascertain certain facts concerning the merging of the Shredded Wheat Company with plaintiff.

17. Plaintiff (brief pp. 14-15) cites no authorities as to defendant's disclaimer defense. It does not attempt to distinguish or avoid the *Beckwith* or *Rahtjens* cases. Pet., p. 19. Its only attempted reply is that "There is no point to the alleged disclaimers." They were made and under the law they are not revocable. They stand as a bar to the injunction ordered and they destroy the trademark claims now made by plaintiff.

18. Plaintiff states (brief p. 15) that "The use of the expression 'shred' and 'shredded' in patents and advertising is equally (as) unimportant" as the "alleged disclaimers." This characterizes both of plaintiff's statements. That is to say, the disclaimers are just as important or just as unimportant as the descriptive use of shredded wheat in plaintiff's patents, trademarks and advertisements. Both we submit are equally important and equally fatal to plaintiff's case.

19. Assignments of Error (Plaintiff's brief p. 15). These assignments were included in defendant's brief accompanying the petition. We understand they were not required, but we crave leave hereby, to add to them by averring that the Court below erred in ordering any injunction and any accounting and in reversing the trial Court, and in not adhering to its original decision affirming the order of the District Court dismissing the complaint.

20. In *Howe Scale Co.* v. *Wyckoff, Seamans & Benedict*, 198 U. S. 118, 137, Mr. Chief Justice Fuller said:

> "It is said that the use of the word 'Remington in the name 'Remington-Sholes' was unnecessary,—as if necessity were the absolute test of the right to use. But a person is not obliged to abandon the use of his name or to unreasonably restrict it. The question is whether his use is reasonable and honest, or is calculated to deceive."

In *Flagg Mfg. Co.* v. *Holway*, 178 Mass. 83, 90, Mr. Justice Holmes said:

> "Both zithers are adapted for the use of patented sheets of music, but the zithers are not patented. Under such circumstances the defendant has the same right that the plaintiff has to manufacture instruments in the present form, to imitate the arrangement of the plaintiff's strings or the shape of the body. In the absence of a patent, the freedom of the manufacturer cannot be cut down under the name of preventing unfair competition."

21. We also confidently rely upon the authority of this Court in *William Warner and Co.* v. *Ely Lilly & Co.*, 265 U. S. 526. There the defendant was grossly unfair but this Court denied the power of the Court below to deny that unfair defendant a right to combine cocoa and quinine. Here the defendant has never deceived anyone yet it is to be enjoined perpetually and immediately from making the patent-expired biscuit in issue if this petition be now denied.

It is respectfully submitted that the petition should be granted.

W. H. Crichton Clarke,
Edward S. Rogers,
Robert T. McCracken,
Counsel for Petitioner.

of this holding that defendant here proved the impracticability of marking the loose biscuit concerning which the Circuit Court in the *Humphrey Cornell* case had expressed such doubt. Pet., pp. 5-6.

A further misapplication of this case is found on page 8. Again it is said: "No other competitor (except Ross who was enjoined) has ever used that form." This reference to Ross, though obscure, refers to the same case cited as *Shredded Wheat* v. *Humphrey Cornell.*

The first "injunction" which ever completely prohibited the sale of either marked, unmarked or cartoned biscuit was the second decree ordered below. Neither Judge Thomas nor the Circuit Court of Appeals in the Second Circuit ever questioned the fact that the Ross Company's right to compete was indisputable under the patent expirations and the long line of decisions based on *Singer* v. *June,* 163 U. S. 169. Perhaps the strangest feature of this attempt in 1937 to set up a perpetual prescriptive monopoly in a patent-expired product was that the Circuit Court of Appeals in the Second Circuit in 1918 held that the right of Ross to make the identical biscuit here in issue was "indubitable" (*Shredded Wheat Co.* v. *Humphrey Cornell, supra*).

4. Respondent states (Brief In Opposition, p. 3) that Quaker Oats Company and Loose-Wiles Biscuit Company both use the "process disclosed by the (Perky) patent" to make "Muffets" and "Rippled Wheat." No record references are cited for these statements and there is nothing in the record to support them. These products are not shredded wheat but both are what is called ribbon wheat—that is the wheat is formed in ribbons rather than in separate shreds (R. 285).

5. Respondent states (brief p. 3) that defendant's operations began in 1922. The trial Court found (VI, p. 203):

> "From 1912 to 1919 defendant manufactured a shredded wheat biscuit marketed in cartons marked

> 'Kellogg's Toasted Wheat Biscuit.' From the Fall of 1921 to the Fall of 1922, defendant manufactured and sold a shredded whole wheat biscuit of small size and pillow-shape. The size was less than two-thirds the size of plaintiff's biscuit. In 1927, defendant resumed the manufacture of the small shredded wheat biscuit *and still continues to market that biscuit in cartons marked 'Kellogg's Shredded Whole Wheat Biscuit.' Since 1930, defendant also marketed this small biscuit in cartons marked 'Kellogg's Whole Wheat Biscuit.'* " (Emphasis ours).

The shredded wheat biscuit marketed by defendant from 1912 until stopped by war wheat shortage in 1918, was rectangular but flattened on top by the process of manufacture as was plaintiff's shredded wheat wafer called "Triscuit."

Even under the second theory of the Court below, namely, that prescriptive or uninterrupted possession of the market revives the long dead patents, plaintiff's case must fail on the facts as well as the law. Defendant was in the shredded wheat business from 1912 to 1918 and from 1921 to 1922 and from 1927 to date. Ross made plaintiff's identical biscuit from 1915 to 1918, and his right to do so was held to be "indubitable" in the Second Circuit as aforesaid. *Shredded Wheat Co.* v. *Humphrey, Cornell, supra.* Surely such intervening rights as well as the perpetual rights of the public to deal in a competitive market, cannot now be swept away without constitutional change.

6. Plaintiff's Brief In Opposition, p. 4, seeks to create the impression that the first suit brought by plaintiff against defendant in 1928 was discontinued because defendant "again abandoned the use of the name 'shredded wheat'." That is doubly untrue. There was no abandonment of use and after plaintiff had taken depositions (V. I, p. 203), the case became dormant until notice was received in 1930 that it was going to be dismissed for want of prosecution. The italicized quotation above from the findings in the Dis-

trict Court shows that defendant never abandoned the shredded wheat name. It continued to use the shredded wheat name and also brought out the same product as "Kelloggs Whole Wheat Biscuit."

The discontinuance of this suit as stated by respondent was distinctly "without prejudice" and by written stipulation. Such a discontinuance cannot be deemed an "abandonment" of defendant's claimed right to manufacture. Certainly if the plaintiff had conceived at that time that defendant had "abandoned" its rights, it would have insisted upon a consent or other decree on the merits. If, after notice that defendant reserved its rights by this discontinuance without prejudice, ~~defendant~~ plaintiff proceeded to spend the sums referred to in its brief it was certainly with notice of defendant's claim and at plaintiff's risk with respect thereto.

7. Plaintiff in the following paragraph on page 4 repeats the incorrect statement concerning an abandonment in 1930 by defendant of the marketing of "Kellogg's Shredded Whole Wheat Biscuit." Plaintiff states "The present suit, commenced in 1932, followed the defendant's resumption of the use of the name 'Shredded Wheat' as a tradename *in its advertising and on the ends of its cartons*" and by its use of two biscuits shown in a dish (emphasis ours). This again is doubly misleading. Defendant's marketing of "Kellogg's Shredded Wheat Biscuit" has been continuous and unbroken from 1927 to date (V. I, p. 203). There was no "resumption" because there had never been any "second abandonment," and the second suit was not brought to enjoin defendant merely from using the words shredded wheat "in its advertising and on the ends of its cartons" or by the use of the dish-biscuit picture. If that statement were true, the judgment below could not be sustained on that ground alone. A suit to restrain a mere "advertising" use or a mere small type use "on the ends" of the cartons (V. I, p. 219), would never support an in-

junction to stop all marketing of the biscuit under any name whatever or any and all use of the words "Shredded Wheat" as a tradename. The suit was brought (V. I, pp. 24-25) to prevent defendant (a) from making any biscuit like plaintiff's, (b) from calling any kind of a product "Shredded" or "Shredded Wheat" and (c) from showing a picture of the biscuit on its packages or in its advertising.

Plaintiff's statement that the present suit was brought merely to restrain defendant's use of the words "shredded wheat" in its advertising and on the ends of its cartons and to restrain the use of the picture, amounts in effect to a confession that this suit was never intended as an attempt to prevent defendant from making and marketing its biscuit as "Kellogg's Whole Wheat Biscuit." If the language does not mean that, its meaning otherwise is not clear. In short, plaintiff in effect, renews its concession of defendant's indisputable right to make the patent expired biscuit which the Court below has denied it (Pet., p. 2, footnote).

This attempt of plaintiff to lead the Court to believe that defendant had "again abandoned" the words "Shredded Wheat" in 1930, that there was thus only the almost trivial excuse of defendant's use of the word "shredded" *in its advertising only* and on the *ends of its cartons only*, and *of the dish picture only*, to justify the bringing of this suit, would make the present action trivial if not almost moot, and would certainly show that the sweeping injunction finally ordered was highly unusual to say the least.

Also the above statement tends to support defendant's charge that the present suit like the first one was brought for advertising rather than judicial purposes and that it was only tried because defendant's Anti-Trust suit (*Kellogg Co.* v. *National Biscuit Co.*, 71 Fed. (2) 662) had forced plaintiff to try this advertising suit or stand as confessing that it had brought a trivial suit for advertising purposes. (Pet. pp. 9-19).

IN THE

Supreme Court of the United States

OCTOBER TERM, 1938

NOS. 2 AND 56.

KELLOGG COMPANY,

Petitioner,

against

NATIONAL BISCUIT COMPANY,

Respondent.

BRIEF FOR PETITIONER

THOMAS D. THACHER,
W. H. CRICHTON CLARKE,
Solicitors for Petitioner.

RICHARD H. DEMUTH,
E. ENNALLS BERL,
Of Counsel.

PAGE

(5) The Record is Completely Devoid of Any Evidence of Passing Off or Deception of the Public 36

(6) Decisions Below..... 38

Specification of Errors..... 44

Summary of Argument..... 45

Argument 49

Introductory Statement..... 49

POINT I: The Record Presents a Plain Case of *Damnum Absque Injuria* and Respondent Is Entitled to No Relief..... 51

POINT II: The Manufacture and Sale by Petitioner of Shredded Wheat Biscuits in the Pillow-Shaped Form Does Not Constitute Unfair Competition... 55

A. Petitioner's use of the pillow-shaped form has caused no confusion, misleading or deceit 55

B. The pillow-shaped form is a functional and essentially useful characteristic of the biscuit, the use of which cannot be enjoined.. 57

C. Upon the expiration of respondent's design patent covering the pillow-shaped form of biscuit, of its various patents on machinery designed to produce this form of biscuit, and of its product and process patent, during the life of which that product was known to the public only in this form, the right to make and vend the pillow-shaped biscuit was dedicated to the public..... 66

PAGE

POINT III: The Use by Petitioner of the Words "Shredded Wheat" as Part of the Designating Phrase "Kellogg's Shredded Whole Wheat Biscuit" Does Not Constitute Trade-Mark Infringement or Unfair Competition 73

A. "Shredded wheat" is the descriptive, generic and only name of the article 73

B. Since "shredded wheat" is the descriptive, generic and only name of the article, no injunction may be granted against its use by the petitioner 83

C. Shredded wheat biscuits produced under respondent's patents were known to the public during the life of the patents only as shredded wheat or shredded wheat biscuits and, upon the expiration of the patents, the right to use these terms to designate the biscuits was dedicated to the public 95

POINT IV: Petitioner's Use of a Pictorial Representation of Its Biscuits on Some of Its Cartons and in Some of Its Advertisements Does Not Constitute Trade-Mark Infringement or Unfair Competition 103

POINT V: Respondent's Claim to the Exclusive Right to Make the Biscuit in the Pillow-Shaped Form, to Call It By Its Name and to Illustrate It By Pictorial Representation is Without Merit Because of Its Disclaimers of Those Very Rights in Its Trade-Mark Registrations 106

Conclusion 107

APPENDIX A: Analysis of the Objections to Each of the Irregular-Shaped Biscuits Suggested by Respondent 108

PAGE

APPENDIX B: Typical Excerpts from the Testimony Showing that Petitioner's Goods Have Not Been and Could Not be Confused with Those of Respondent 112

APPENDIX C: Analysis of Testimony Relied Upon by Respondent To Show Confusion and Passing Off.. 117

APPENDIX D: Typical Excerpts from the Testimony Showing that "Shredded Wheat" is Commonly Used and Understood as the Descriptive and Generic Name of the Article..... 121

APPENDIX E: Canadian Shredded Wheat Co., Ltd. *v.* Kellogg Company of Canada, Ltd., and Another.. 125

APPENDIX F: In the Matter of the Trade Marks Acts, 1905 to 1919 and In the Matter of Trade Mark No. 500,671, Registered in the Name of the Shredded Wheat Company, Ltd. in Class 42..... 143

IN THE

Supreme Court of the United States

OCTOBER TERM, 1938.

Nos. 2 and 56.

KELLOGG COMPANY,
Petitioner,

AGAINST

NATIONAL BISCUIT COMPANY,
Respondent.

BRIEF FOR PETITIONER.

Opinions Below.

The opinion of the United States District Court for the District of Delaware (R. 1, p. 193) was filed on January 11, 1935. It contains a statement of the essential facts found by the court in conformity with Equity Rule 70½ (R. 1, p. 228). It is not reported. The per curiam opinion of the Circuit Court of Appeals for the Third Circuit, affirming the decree of the District Court (R. 3-A, p. 2069), was filed January 16, 1936, and is not reported. The opinion of the Circuit Court of Appeals upon rehearing, vacating its decree affirming the judgment of the District Court and reversing said judgment (R. 3-A, p. 2083), was

> and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade-mark''

which trade-mark the Court described in its opinion (R. 3-A, p. 2085) as

> ''consisting of a dish containing two biscuits submerged in milk''.

To review this judgment petitioner filed a petition for certiorari in this Court, which was denied October 25, 1937, and thereafter applied for reconsideration of its petition, which was denied November 8, 1937.

Upon the issuance of the mandate, an interlocutory decree was entered and injunction issued in the words of the mandate. Thereafter question arose in the District Court as to the meaning of the words of injunction taken from the mandate (R. 3-A, pp. 2249-2250). On May 5, 1938, the Circuit Court of Appeals, on motion of respondent to recall its mandate for clarification, ordered (R. 3-A, p. 2286):

> ''That the said Mandate be clarified so as to direct the United States District Court for the District of Delaware to enter a decree, in the usual form, enjoining the defendant Kellogg Company (1) from the use of the name 'Shredded Wheat' as its trade name, (2) from advertising or offering for sale its product in the form and shape of plaintiff's biscuit, and (3) from doing either * * *.''

Thereupon petitioner filed in this Court a second petition for certiorari to review this last decree of the Circuit Court of Appeals. Coincidentally therewith, petitioner moved for leave to file out of time a second petition for rehearing of its first petition for certiorari, seeking review of the decree of the Circuit Court of Appeals entered on April 12, 1937. On May 31, 1938 this motion and both petitions for certiorari were granted.

Shredded wheat is a product composed of whole wheat which has been boiled, partially dried and then drawn out into thin shreds. The product is best known to the public in the familiar form of pillow-shaped biscuits which are used as a dry cereal food. The pillow-shaped form of the biscuits unavoidably results from the process of their manufacture, which was formerly protected by patents held by respondent and its predecessors (hereinafter referred to collectively as "respondent"), and is the only commercially practicable form in which the biscuits can be made.

The monopoly enjoyed for many years by the respondent under the protection of these patents covered the product shredded wheat, the process of its manufacture, the characteristic pillow-shaped form of the biscuits and the machinery essential for their manufacture. Respondent has always called its biscuits by their generic name, "Shredded Wheat", without any prefix or suffix indicating origin.

Petitioner's biscuits, made by the use of the patent-expired machinery and process, are in the same form as respondent's but are less than two-thirds their size (R. 1, p. 203). They are sold in distinctive cartons under the names "Kellogg's Whole Wheat Biscuit" and "Kellogg's Shredded Whole Wheat Biscuit". Reproductions of petitioner's and respondent's cartons appear in the opinion of the District Court at R. 1, pp. 205-219.

The District Court found (R. 1, pp. 204, 221, 225, 226) and the evidence abundantly establishes:

(1) That both parties sell their product only in cartons and that the cartons employed by petitioner, which are dominated by the name "Kellogg" printed in bold script, bear no resemblance to respondent's cartons and cannot be mistaken for them;

(2) That no confusion can result from the sale of petitioner's biscuits in the distinctive Kellogg cartons, that there has been no passing off of petitioner's

biscuits for respondent's, and that there has been no deception of the public;

(3) That only 2½% of petitioner's biscuits are served in restaurants, lunchrooms and hotels, that of this 2½%, 98% are served in distinctive individual cartons and that only approximately one in every 5,000 biscuits sold by the petitioner is served apart from the carton;*

(4) That petitioner's biscuits served outside the carton are distinguishable from respondent's because of their smaller size; and

(5) That "shredded wheat" is the only name by which the biscuit is known to the public and is the only name by which it was described during the existence of the patents.

Without disturbing these findings, the Circuit Court of Appeals none the less held on reargument that respondent had the exclusive right to sell the biscuit in its only commercially practicable form and to call it by the only name by which it is known. In effect, therefore, and without any proof of deception or passing off, the Circuit Court of Appeals has granted respondent a perpetual monopoly of this standard food product.

(1) Respondent's Monopoly of Shredded Wheat.

The opinion of the District Court briefly and succinctly reviews the history of the shredded wheat industry (R. 1, pp. 194-203). This review is prefaced by the following pertinent observation, amply borne out by the evidence (R. 1, p. 194):

"The case involves a brief review of events from 1894 to date—a stretch of 40 years. The early years

* The computation of one in 5,000 made by the District Court upon the percentages shown is incorrect and the correct result is one in every 2,000.

cover the period of plaintiff's patent monopoly of the manufacture and sale of shredded wheat biscuit. Throughout the subsequent years the review deals with plaintiff's efforts to perpetuate that monopoly by means of trade-marks and suits against competitors."

Henry D. Perky, of Denver, Colorado, was the founder of respondent's business. He incorporated The Cereal Machine Company in 1893 and became its president. This company operated the Cereal Restaurant in Denver, in which were sold all sorts of shredded food, including wheat, turkey, lobster, vegetables and meats (R. 1, p. 195; R. 2, pp. 984-985). Its advertisements featured shredded whole wheat bread and shredded cereal coffee (R. 1, p. 195; D. Ex. 108*). Perky's original shredding machines were located in the basement of this restaurant (R. 2, p. 981). His plan at the start, as indicated by the name "The Cereal Machine Company", was to sell small shredding machines to the public so that housewives could shred their own food (R. 1, pp. 195, 575; R. 3, p. 2011).

This plan was soon abandoned, and after an experimental period in Denver and an unsuccessful start at Worcester, Massachusetts, respondent in 1901 established itself permanently at Niagara Falls, N. Y. where a large factory was built (R. 1, 195). The business was at that time conducted by The Natural Food Company, of which Perky was president. The name of the company was changed to The Shredded Wheat Company in 1908, and its business and good-will were acquired by the respondent in 1930.

Perky was a prolific inventor, having secured over forty patents connected with the production of shredded wheat and shredded wheat biscuits between 1893 and 1905, the year of his death. The applications made by Perky for these patents consistently used the words "shreds",

* Respondent's exhibits not printed in the record will be referred to as "P. Ex." followed by the appropriate number, and petitioner's exhibits as "D. Ex."

"shredded", "shredding rolls" "shredding machines", and the like, in a purely descriptive sense to describe the patented manufacturing process and the patented product made by use of the process (R. 1, p. 196; R. 5, pp. 1-328; see p. 74, *infra*).

The basic Perky patent No. 548,086 (R. 5, p. 59) was granted on October 15, 1895. This patent discloses a process of boiling the original whole wheat berry, partially drying it and then forcing it between compression rollers, one or both of which has peripheral grooves which mash the several parts of the berry into a soft paste. This paste is then forced out by means of combs or scrapers, so as to emerge in thin filaments or shreds. The patent covered both the process and the product. It expired by limitation on October 15, 1912 (R. 1, pp. 196-197).

On September 17, 1895, Perky took out a design patent, No. 24,688, upon a biscuit shown in accompanying drawings (R. 5, pp. 62-63). The form and shape of the biscuit covered by this design patent are the form and shape of the biscuit as made by respondent from the commencement of its business to the present date. This patent would have expired by limitation on September 17, 1909, but in 1908 it was declared invalid by Judge Koblsaat on the ground that the design had been in public use for more than two years prior to the application for the patent and therefore had already been dedicated to the public. *Natural Food Co.* v. *Bulkley*, No. 28,530, N. Dist. Ill., East. Div. (P. Ex. 273).

Among the other patents secured by Perky were several covering improvements in the machinery for the production of shredded wheat biscuits, which, as shown in the patent specifications, were designed to produce the characteristic pillow-shaped shredded wheat biscuits (R. 5, pp. 12-13, Perky patent No. 532,286; p. 50, Perky patent No. 533,555; p. 66, Perky patent No. 571,284; p. 82 Perky patent No. 614,338; p. 92, Perky patent No. 667,892; p. 110, Perky patent No. 678,127; p. 122, Perky patent No. 678,625; p. 136, Perky patent No. 681,656). Indeed, respondent's chief chemist, who was formerly the produc-

tion manager of the Shredded Wheat Bakeries, admitted that respondent's machines, constructed according to the expired Perky patents, "cannot produce anything else except the pillow-shaped form of biscuit" (R. 1, p. 291).

The District Court found that *up to 1915* respondent printed prominently upon packages containing its biscuit, the following notice (R. 1, pp. 195-196):

> "September 17, 1895 PATENTED October 15, 1895
>
> THIS FOOD, the process of making it, and special machinery for its manufacture, are under the protection of the United States Government by virtue of many patents, as follows:"

This notice was followed by a list of forty-one patents, including the basic product and process patent which had expired in 1912, and the design patent which was declared invalid in 1908, and would have expired in 1909. With reference to the latter, the District Court stated (R. 1, p. 197):

> "* * * Instead of removing notice of the Perky design patent from the carton or otherwise notifying the public it was no longer claiming protection under the patent, plaintiff continued for seven years thereafter to warn the public not to make the biscuit as it was under the protection of the government by virtue of this design patent. By its professions and conduct plaintiff secured a monopoly not for fourteen years but actually for twenty years."

(2) Respondent's Persistent Use of "Shredded Wheat" As the Generic and Descriptive Name of the Biscuit.

A. Respondent's Trade-Marks.

The District Court found that for twenty years, from 1894 until 1914, respondent's trade-mark was the goddess Ceres, represented as holding a torch in one hand and a sheaf of wheat in the other (R. 1, p. 195). This "Ceres"

trade-mark appeared on both ends of respondent's carton until 1910, when it was removed from one end and supplanted by a picture of Niagara Falls (R. 1, pp. 588-589). In 1915 the goddess was entirely removed and the picture of Niagara Falls substituted (R. 1, 597).

Respondent made no claim to the words "shredded wheat" or "shredded whole wheat" as a trade-mark until 1905, when it filed an application for the registration of "Shredded Whole Wheat" as a trade-mark under the so-called ten-year clause of the newly-enacted Trade-Mark Act of 1905 (33 Stat. 725, ch. 592, 15 U. S. C. A. § 85). Filing of the application under the ten-year clause was, of course, an admission that the words were either the generic or descriptive name of the product, or both, and, as such, not entitled to protection as a technical trade-mark.* William E. Williams filed notice of opposition. The proceeding was carried through the Patent Office to the Court of Appeals of the District of Columbia. In *Natural Food Co.* v. *Williams*, 30 App. D. C. 348, that court held that the words "shredded whole wheat" accurately and aptly describe the product, that until 1905 they had been used by respondent as descriptive rather than as a trade-mark, respondent's trade-mark having been the goddess Ceres, and that they were not entitled to registration under the

* The Trade-Mark Act of 1905 provides for the registration of distinctive trade-marks, but prohibits the registration of a mark which consists "merely in words or devices which are descriptive of the goods with which they are used, or of the character or quality of such goods * * *." The ten-year clause, however, provides that the foregoing prohibition shall not "prevent the registration of any mark used by the applicant or his predecessors, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessors from whom he derived title for ten years next preceding February 20, 1905. * * *" (33 Stat. 725, ch. 592, 15 U. S. C. A. § 85).

ten-year clause because respondent had not used them exclusively for the prescribed period.

Thereafter, in 1912, respondent registered the picture of its factory as one of its trade-marks, No. 89,071 (R. 4, p. 199). This picture has appeared on the face of respondent's cartons since 1910, accompanied by the words "The Home of Shredded Wheat." Acquiescing in and acting upon the holding in *Natural Food Co.* v. *Williams* that "shredded wheat" were descriptive words and therefore not properly subject to registration, respondent, to secure the registration of the factory picture, disclaimed the descriptive words by stating "No claim is made herein to the words 'The Home of Shredded Wheat' ". Further, in describing the goods to which the trade-mark was applied, respondent stated that it had adopted the picture as a mark "for shredded wheat, in class No. 46, Foods and ingredients of foods" (R. 4, p. 199).

Respondent also secured in 1912 trade-mark registration No. 85,186 (R. 4, p. 197) on an alleged trade-mark showing one shredded wheat biscuit in a dish with a spoon and milk or cream. The application contains the following disclaimer: "no claim being made to the representation of a shredded wheat biscuit." The appearance of the article was again disclaimed in respondent's trade-mark registration No. 216,593 (R. 4, p. 205) of an alleged trade-mark consisting of a dish containing two shredded wheat biscuits in milk or cream, which states: "Applicant disclaims any exclusive right to the representation of two biscuits apart from the mark shown."

When the Trade-Mark Act of 1920 (41 Stat. 533, 15 U. S. C. A. § 121) was enacted, permitting the registration of descriptive and generic names, respondent secured two registrations of the words "shredded wheat", Nos. 178,725 and 213,456 (R. 4, pp. 201, 203). Despite the decision of the Court of Appeals in *Natural Food Co.* v. *Williams, supra,* that the words had not been employed by respondent as a trade-mark prior to 1905, and, being descriptive,

were not entitled to be so used, respondent claimed use as a trade-mark "since January 1, 1894." Registration under the 1920 Act, unlike that under the 1905 Act, creates no presumption of validity or ownership (see pp. 79-80, *infra*). Respondent's registration under this Act is, however, a formal admission that the words registered, being either descriptive or generic or both, are not subject to appropriation as a valid technical trade-mark.*

Since 1910 respondent has also used a picture of Niagara Falls, where its principal factory is located, as a trade-mark to indicate the origin of its goods, irrespective of whether they are produced at the Niagara Falls factory or elsewhere (R. 1, p. 564). This mark was extensively advertised, as a result of which respondent's product since at least 1911 has been generally known as Niagara Falls Shredded Wheat.†

B. Respondent's Cartons and Advertisements.

In its cartons and advertisements, as in its trade-mark registrations, respondent has continuously used the words "shredded wheat" and "shredded whole wheat" in their primary sense, as descriptive of and as the generic name of the biscuit it produces. The following few instances of such use are but typical of the many contained in the record.‡

Most of respondent's cartons have contained, in one form or another, the explanatory phrase: "Consists of the entire wheat grain (nothing added) made light and short

---

* See page 79, *infra*. A proceeding is now pending before the Commissioner of Patents for the cancellation of this registration but the proceeding has been stayed by stipulation pending final determination of this case.

† Respondent's former advertising manager testified to this effect (R. 1, p. 601) and his testimony is amply supported by the testimony of consumers throughout the country (see, *e. g.*, R. 2, pp. 711, 715).

‡ See P. Exs. 2-4, 87-112.

by mechanical shredding and thorough cooking" (R. 1, p. 583; P. Exs. 2-4).

Respondent's cartons have also consistently contained the phrases: "Shredded Wheat is Made of the Whole Wheat and is made digestible by steam cooking, shredding and baking" and "The crispness of its shreds promotes thorough mastication" (R. 1, p. 591).

Ever since 1907 respondent's cartons have prominently carried the phrase "It's All In The Shreds". The reason for this slogan is aptly stated by Colonel De Weese, for twenty-five years advertising manager of respondent's predecessor, The Shredded Wheat Company. He stated (R. 1, pp. 581-582):

> "The reason for the slogan 'It's All In The Shreds' was that those five words seemed to embody everything there was to say about the whole wheat; It's All In the Shreds meaning that the whole wheat grain, all the whole wheat grain was in the shreds; and then the other meaning conveyed was that the virtue of the product was in the shredding process, you see. So we meant to have those five words convey all there was to say about Shredded Wheat."

For several years, when threatened by competition in the sale of shredded wheat biscuits, respondent placed upon its cartons the words "The Original Shredded Wheat". Thus respondent recognized that it was necessary to distinguish its shredded wheat from any other shredded wheat on the market. As respondent's former advertising manager explained (R. 1, p. 597):

> "* * * The words *The Original* above Shredded Wheat were also a reaction to competition of some sort and were put on there because another shredded wheat was being made. We wanted to identify this Niagara Falls Shredded Wheat as the original one." (Italics in original.)

It should be noted that at the time of trial, respondent was still calling its product "Original Shredded Wheat" on its 36 package cartons sold to grocers (R. 3, p. 1957).

Respondent's advertisements used the words "shredded wheat" in a similarly descriptive and generic sense. A few typical examples follow:

Respondent's pamphlet (D. Ex. 229) reads in part:

> "How shall we prepare the whole wheat so that its body-building elements may be digested and formed into healthy tissue, bone and brain? That question was solved by the man who invented Shredded Whole Wheat Biscuit. In making Shredded Wheat the whole wheat grains are first thoroughly cleaned, then cooked in steam, then drawn out into filmy shreds, then baked in ovens at a high temperature. The crispness of the shreds encourages thorough chewing, and that insures perfect digestion. That's the reason Shredded Wheat is such a perfect food for children. It makes sound teeth and healthy gums. They like the crisp, flavory shreds of the baked whole wheat, and it is so much better for them than mushy porridges."

Respondent's book of recipes (D. Ex. 230) states:

> "Shredded Wheat brings you wheat in its most digestible form. The plump whole grains are steamed to break down all the starch cells, insuring quick digestibility. Then they are drawn into long, filmy shreds, so porous they will readily absorb more than four times their own weight in milk. Layer upon layer, the shreds form biscuits. Then—unsalted, unsweetened—they march into the ovens. And these tempting shreds of whole wheat are baked to a crisp and appetizing golden-brown."

One of respondent's advertisements (D. Ex. 226) suggests to the public:

> "When you ask for Shredded Wheat be sure you get the original Shredded Wheat you have always eaten, made at Niagara Falls, N. Y. • • • •
>
> If you ask for Shredded Wheat and receive a different Shredded Wheat from that which you have

always eaten (made in Niagara Falls, N. Y.), kindly write us at the Home Office and receive a copy of our booklet, 'The Happy Way to Health.'"

Another (R. 2, p. 1155) reads:

"Made at Niagara Falls. Look for the picture of Niagara Falls on the end of the carton when you buy Shredded Wheat Biscuit. Any other Shredded Wheat that may be offered you is merely a poor imitation of the only Original Shredded Wheat * * *."

Advertisements appearing in newspapers and magazines throughout the country reiterated for years on end the assertions that respondent's product was nothing but whole wheat, "steam-cooked, shredded and baked", that "it is the shredding process that puts the 'eat' in whole wheat", that the biscuits are "made easy to serve and easy to eat in crisp, oven-baked shreds" and that "It's All In The Shreds" (P. Exs. 87-112). Booklets entitled "Shreds of Life" and "Health in Every Shred" were distributed in lots of one to five million to publicize respondent's product (R. 1, p. 565). Examination of the hundreds of advertisements in evidence shows that almost all of them were designed to convey to the public the belief that the particular virtue of respondent's product lay in the shredding process and the shredded form of the product (see R. 1, p. 570).

Thus it was very largely due to respondent's own efforts that shredded wheat has become at once the descriptive, generic and only name of the article, just as condensed milk is the descriptive, generic and only name for that particular article. Respondent's former advertising manager testified (R. 1, p. 571-572):

"The effect of this continual advertising of Shredded Wheat upon the expression *shredded wheat* was to make it a sort of household word, as if you would speak of starch or potatoes, as differentiated or distinguished from proprietary foods, like Grape-Nuts, or Mello-Wheat, or any of those foods in those days. You would not expect to find any of them mentioned

filed April 12, 1937 and is reported in 91 F. (2d) 150. The opinion of the Circuit Court of Appeals, recalling and clarifying its mandate (R. 3-A, p. 2282), was filed May 5, 1938 and is reported in 96 F. (2d) 873.

Jurisdiction.

The jurisdiction of this Court has been invoked under Section 240(a) of the Judicial Code, as amended by the Act of February 13, 1925, c. 229, § 1, 43 Stat. 938 (28 U. S. C. A. § 347(a)).

The order of the Circuit Court of Appeals reversing the decree of the District Court was filed on April 12, 1937 (R. 3-A, p. 2094). Petition for a writ of certiorari to review this order was filed in this Court on September 10, 1937 and denied on October 25, 1937. Thereafter, on May 5, 1938, the order of the Circuit Court of Appeals, recalling and clarifying its mandate, was filed (R. 3-A, p. 2285). Upon consideration of a petition for a writ of certiorari to review said order and upon reconsideration of the original petition, writs of certiorari to review both orders of the Circuit Court of Appeals were granted by this Court on May 31, 1938.

Questions Presented.

This case involves the right of the petitioner to manufacture and sell in competition with the respondent, shredded wheat biscuits, the court below having enjoined the petitioner (1) from the use of the name "Shredded Wheat" as a trade-name; (2) from advertising or offering for sale its product in the form and shape of respondent's pillow-shaped biscuit; and (3) from doing either.

The questions presented are:

(1) Whether the manufacture and sale by petitioner of shredded wheat biscuits in the pillow-shaped form constitutes unfair competition;

(2) Whether the use by petitioner of the words "shredded wheat" as part of the designating phrase "Kellogg's Shredded Whole Wheat Biscuit" constitutes trade-mark infringement or unfair competition;

(3) Whether respondent is entitled to a perpetual monopoly in the name and form of shredded wheat biscuits after its patent monopoly has terminated; and

(4) Whether, if petitioner has the right to make shredded wheat biscuits in the pillow-shaped form, it has the right to illustrate its product on its cartons and in its advertisements by pictorial representation of its biscuit appearing in a dish or otherwise.

STATEMENT.

This action was commenced in the United States District Court for the District of Delaware. It was brought by respondent, a New Jersey corporation, to restrain petitioner, a Delaware corporation, from the manufacture and sale of shredded wheat biscuits in their characteristic pillow-shaped form and from the use of the words "shredded wheat" to designate its product, on grounds of unfair competition and trade-mark infringement.

After trial, the bill of complaint was dismissed by the District Court upon findings of fact incorporated in its opinion (R. 1, p. 228).

Upon appeal to the Circuit Court of Appeals for the Third Circuit, the judgment of the District Court was unanimously affirmed (R. 3-A, pp. 2069, 2093), but upon reargument the order of affirmance was vacated and the District Court was directed (R. 3-A, p. 2094):

> "to enter a decree enjoining the defendant from the use of the name 'Shredded Wheat' as its trade name

marketed in limited quantities under the name "Kellogg's Shredded Whole Wheat Biscuit". Respondent immediately asserted exclusive rights in the name "shredded wheat" and in the appearance of the biscuit (R. 1, pp. 103-105). Petitioner denied the existence of any such rights (D. Ex. 237) and continued operations for approximately a year (R. 2, p. 1048).*

In 1927 petitioner re-entered the field with the production of the small-sized shredded wheat biscuit which it sells today. This biscuit has been marketed both under the name "Kellogg's Whole Wheat Biscuit" and under the name "Kellogg's Shredded Whole Wheat Biscuit". In 1928 respondent brought suit in Connecticut against two of petitioner's dealers. After some depositions were taken respondent moved no further until the suit was ripe for dismissal for want of prosecution. In 1930 the action was discontinued by stipulation without prejudice to petitioner's rights, and petitioner continued in the manufacture and sale of its biscuit (R. 1, p. 203). Two years later, five years after petitioner had recommenced production and sale of its biscuit, without any further change in the situation, the present suit was commenced to enjoin the further conduct of this established business.

In 1934, when the petitioner introduced its biscuit into Canada through its Canadian company, suit was brought against this company by respondent's Canadian subsidiary, seeking precisely the same relief and on the same grounds as respondent seeks in the case at bar. After trial upon the merits, the action was dismissed. *Canadian Shredded Wheat Company, Ltd.* v. *Kellogg Co. of Canada, Ltd. and another*, [1936] Ont. Rep. 281. This judgment was unanimously affirmed by the Court of Appeal of Ontario in November, 1936 and by the Judicial Committee of the Privy Council in February, 1938. *Canadian Shredded*

* The statement in the second opinion of the court below that petitioner ceased producing its 1922 biscuit immediately after respondent's complaint to it (R. 3-A, p. 2085) is a clear misapprehension of the record.

Wheat Company, Ltd. v. *Kellogg Co. of Canada, Ltd. and another*, 55 R. P. C. 125, All England Law Reports Ann. 1938, Vol. 1, Part 8, pp. 618-634, affirming [1936] Ont. Rep. 613. The well-considered opinion of the Privy Council is printed as an appendix to this brief with annotations to show how precisely the controlling facts in that case are duplicated in the case at bar (see pp. 125-143, *infra*).

Two other products made with machinery covered by the Perky patents should be noted. One is "Muffets", a round cereal biscuit marketed by the Quaker Oats Company, and the other is "Rippled Wheat", made by the Loose-Wiles Biscuit Company. Neither Muffets nor Rippled Wheat is a shredded wheat product. They are both rolled ribbon products, the Perky machines being adjusted contrary to the instruction of the patents for the production of shredded wheat (R. 1, p. 285; R. 2, pp. 1079-1080, 1129). They differ from shredded wheat biscuits in textural structure and in their baking qualities; they are not comparable products from a commercial standpoint (R. 2, p. 1129). Neither Muffets nor Rippled Wheat meets the specifications of the federal government for shredded wheat, whereas both respondent's and petitioner's products do (R. 2, pp. 1079-1080).

(4) Petitioner's Methods of Competition and its Precautions to Avoid Confusion and Passing Off.

The District Court found, and the finding is fully supported by the evidence, that the petitioner is competing fairly with the respondent and has succeeded in its efforts to distinguish its product from respondent's "Shredded Wheat" (R. 1, pp. 204, 221, 225-228). As the District Court said in its opinion (R. 1, p. 227): "Plaintiff is complaining, not of unfair competition but of effective competition."

A. Petitioner's Cartons.

The District Court found (R. 1, pp. 204, 225-226) that "Defendant's cartons bear no resemblance to plaintiff's and cannot be mistaken for them."* Examination of the reproductions of both cartons, which appear in the opinion of the District Court at R. 1, pp. 205-219, supports this conclusion beyond question. The uncontradicted depositions of hundreds of witnesses from all parts of the country bear testimony that there could be and has been no confusion between them.†

The carton used by petitioner for its shredded wheat biscuit is similar in appearance to the billions of cartons in which all but one of its other cereal products have been sold;‡ it is printed in the familiar Kellogg red and green colors and in the typical Kellogg style of lettering, with the word "Kellogg's" in bold red script dominating the entire package.§ Consumers immediately recognize it as one of the Kellogg family.¶

Respondent packed 12 biscuits in its carton and printed this fact on the outside of its package. Petitioner, on the other hand, sold 15 of its smaller biscuits to the package

---

* Indeed in its main brief before the Circuit Court of Appeals, the respondent stated that this is "not a carton case" (Appellant's Brief, p. 105).

† See, *e. g.*, the testimony of respondent's own witnesses in the first of the three volumes of depositions in the record, at pp. 334, 349, 350, 357, 360, 361, 366, 372, 385, 386, 401, 404, 414, 423, 425, 427, 428, 430, 439, 445, 446, 452, 471, 482, 483, 485, 488, 492, 493, 506, 512, 514, 515, 520, 534, 613, 614, 635, 640, 642, 644, 649, 654, 656.

‡ The only exception is one bran flake packed in a brown and yellowish package for purposes of distinction (R. 2, p. 1136).

§ In addition to its distinctive coloring, lettering and wording, petitioner's carton is taller and thinner than respondent's.

¶ See, *e. g.*, R. 1, pp. 349, 350, 357, 404, 414, 427, 488, 668; R. 2, pp. 707, 875, 1259; R. 3, p. 1429.

and its cartons contained the words "15 biscuits" printed prominently in large script (R. 1, pp. 204, 211, 215). Petitioner also placed advertising matter on many of its cartons, explaining the comparative merits of its product. Moreover, petitioner tinted the inside of its carton green—a thing never before done in cereal cartons—and developed a new type of separator for packing its biscuit (R. 2, p. 1001).

Another distinctive feature of some of the Kellogg cartons was the use of a cellophane window (see, *e. g.*, P. Exs. 147, 176, 177). This window is made by cutting out a section of the front of the package and pasting a piece of cellophane over the aperture. The use of this window does not detract from the distinctive appearance of the carton as one of the Kellogg group of cereals. It has proved to be a very attractive sales feature (R. 2, pp. 1249, 1262, 1306, 1311, 1319).

Respondent has criticized the use of the cellophane window because it is placed in the front of petitioner's cartons, where the ends of the biscuit are seen, rather than at the side of the carton where a side view of the biscuits would be obtained. Display of the ends of the biscuits does not, of course, reveal the difference in length between the two biscuits. The reason for the position of the window is that the cartons are placed on the grocers' shelves with only the face pointing towards the customer. If, therefore, the cellophane window is to receive notice, it must be on the face of the package rather than on the side (R. 2, p. 1000). Since the packages containing the window are entirely dissimilar from respondent's cartons and cannot be mistaken for them, objection to the window comes to the essence of respondent's complaint, *i. e.* that petitioner is selling a competing shredded wheat biscuit as its own product and is revealing to the public what it has for sale.

The cellophane window serves another useful purpose. From 1930 until after the first decision of the Circuit

Court of Appeals, most of petitioner's biscuits were sold under the name "Kellogg's Whole Wheat Biscuit" rather than under the name "Kellogg's Shredded Whole Wheat Biscuit". The undisputed testimony of more than twenty witnesses from different sections of the country demonstrates that the words "whole wheat biscuit" could connote any one of a dozen different products; they do not signify whether the product thus designated is a cookie, a cracker or a cereal, and they furnish no indication of the form or shape of the product or whether it is composed of shredded wheat or made from pure flour (R. 1, pp. 329, 425, 451, 456, 462, 501, 511, 518, 527, 531, 544, 617, 637, 666; R. 2, pp. 709, 752, 825, 833; R. 3, pp. 1575, 1743, 1797). All of these witnesses agreed, and there was no testimony to the contrary, that a carton containing only the name "Kellogg's Whole Wheat Biscuit" would be a blind package and therefore extremely difficult to sell.

The difficulty thus encountered was obviated in part by use of the cellophane window which permits the consumers to see exactly what product is contained in the package. In even greater measure, however, the difficulty was met by placing upon the face of cartons having no such window a pictorial representation of two of petitioner's biscuits in a bowl of cream. This advertising device is very commonly employed in the sale of food products (R. 1, pp. 358, 360, 362, 371, 617, 626, 627, 668, 671; R. 2, pp. 710, 1001, 1150), and is used by the respondent itself on a large proportion of its various food cartons (R. 1, p. 626).

Comparison of the pictorial representation used by petitioner (R. 1, pp. 215, 217) with that used by respondent (R. 1, p. 207), reveals no similarity between the two illustrations which would be likely to confuse or mislead, particularly when displayed on a carton such as petitioner's which prominently carries petitioner's name as the manufacturer. The picture on petitioner's carton was designed to emphasize the fact that two of its small size biscuits

exactly fit the ordinary cereal bowl, as compared with respondent's larger biscuit which must be crumbled in order to fit such a bowl (R. 2, pp. 999-1000).

Respondent's criticism of petitioner's use of the bowl picture is significant when considered in conjunction with its other assertions. Respondent claims the right to prevent petitioner from describing its product verbally by use of the only name by which the article is known to the public and also from describing it visually by showing it to the consumer either directly through the cellophane window or indirectly through pictorial representation. It would thus prevent the petitioner from revealing the nature of its product either by name, pictorial representation or physical exhibit. In other words, respondent seeks to enjoin the sale of petitioner's competing product as a competing product, no matter how fairly sold—and this under the guise of protecting its own reputation as a manufacturer.

B. The Form of the Biscuits.

Petitioner has not only marketed its biscuit in distinctive cartons, but has employed every commercially practicable means to make its individual biscuits of distinctive appearance. That it has succeeded is readily apparent from physical examination of the two biscuits. There is no evidence that any purchaser accepted petitioner's biscuit believing that he was receiving respondent's product. To the contrary, scores of witnesses called by both parties were asked whether they could distinguish between the two products, and, without exception, their answers were all in the affirmative.*

* See, *e. g.*, R. 1, pp. 302, 391, 405, 426, 428, 431, 439, 446, 465, 467, 505, 521, 530, 554, 629-630, 635, 642, 645-646, 648, 651-652, 656, 682, 685; R. 2, pp. 706, 744, 788, 803, 819, 841, 845, 855, 862, 886, 889-890, 910, 965-966, 1037, 1181-1182, 1247, 1353, 1368-1369; R. 3, pp. 1400, 1429, 1447, 1468, 1469, 1613, 1711, 1742, 1751, 1788, 1794, 1810, 1928.

The principal point of distinction between the two biscuits lies in their size, respondent's being less than two-thirds the size of petitioner's (R. 1, p. 203). Petitioner's biscuit is rounded at the bottom and on top and is toasted on both sides, whereas respondent's biscuit has a flattened bottom and is toasted only on top (R. 2, pp. 997, 1051). Furthermore, petitioner's biscuit is made of materially finer shreds.

Respondent in effect conceded the distinctiveness of petitioner's biscuit when in June, 1932, after petitioner's biscuit had been marketed for five years, respondent began selling to the restaurant trade a shredded wheat biscuit of the same size as petitioner's, put up in individual two-biscuit cartons. This small sized biscuit was produced by respondent for the express purpose of meeting petitioner's competition (R. 4, p. 169).

Such similarity as there is between respondent's and petitioner's biscuits results from the fact that both are made of shredded wheat, are oblong in shape and are puffed in the center, giving them the characteristic pillow-shaped form. The puffing of the biscuit is caused by the baking process and is inherent in the nature of its manufacture. When the shreds of wheat emanate from the shredding rolls, they are piled upon each other in a trough and are then cut into biscuits by knives which shear or pinch together the shreds at the edges. When heat is applied during the baking process, the center of the biscuit puffs out but the edges, being pressed together, cannot puff. The pillow-shaped form of biscuit inevitably results (see *Perky* patents cited at p. 8, *supra;* R. 1, p. 291).

Petitioner experimented for two or three years in an attempt distinctively to mark its biscuits (R. 2, pp. 1122, 1139). These efforts included wrapping the biscuit with a band carrying the name Kellogg, tagging the biscuit with a Kellogg tag, and placing the biscuit in a glassine envelope. Attempt was also made to distinguish the biscuit by inserting a band of rice in its center, by painting it with a green

coloring matter, by placing red coloring matter on the bottom of the biscuit, and by branding the letter "K" on the top of the biscuit (R. 2, pp. 1122-1126, 1139-1141). None of these experiments was successful. Either the cost was commercially prohibitive or the biscuit was so weakened or deformed or its appearance so objectionable as to make it completely unmarketable (R. 2, pp. 1122-1126, 1139-1141, 1162-1163).

The conclusion reached by petitioner that there is no commercially practicable method to mark or brand the individual biscuit is in accord with the experience of The Ross Food Company in attempting to comply with the decree of the Circuit Court of Appeals in the *Humphrey Cornell* case, as outlined in the case at bar by Andrew Ross, president of The Ross Food Company (R. 3, pp. 1995-1996). As previously stated (p. 19, *supra*), the District Court found that "the proof fully confirms the testimony of Andrew Ross that the biscuit itself can not be branded or marked" and held that if the proof in this case as to marking had been before the Court of Appeals in the *Ross* case "the opinion of Judge Ward would doubtless have been the opinion of the court" (R. 1, p. 221). This finding was undisturbed in the court below.

Notwithstanding the facts found or established by the undisputed evidence that only one out of 2,000 of petitioner's biscuits reaches the ultimate consumer outside of petitioner's distinctive cartons, that petitioner's biscuit is distinctive and has not been confused with respondent's, that respondent has imitated the distinctive size of petitioner's biscuit, and that all biscuits made with the machines disclosed in the Perky patents must necessarily be in a pillow-shaped form, respondent yet insists that petitioner, if it is to engage in this business at all, should make its shredded wheat biscuits in the form of doughnuts, cones or in other irregular shapes.

The record clearly demonstrates that none of the irregular-shaped biscuits suggested by respondent would be com-

> in any book on dietetics, for instance, or in a book by a physician; but they mentioned Shredded Wheat as if it were a commonly accepted well-known name of a food. For instance, Walter Page, in his books giving his experiences during the World War, mentioned Shredded Wheat in one of them. He said that, if his shredded wheat lasted, he would get through all right. There were references like that in a great many books, where they would not think of mentioning any other proprietary article." (Italics in original.)

Publicity given to "Triscuits", a cracker produced by respondent and made of compressed shredded wheat, is equally illuminating. Respondent's advertisements tell the public that its Triscuit is "whole wheat steam-cooked, shredded, pressed into a wafer and baked"; it is described as "the shredded wheat toast", "the shredded wheat wafer" and "the shredded whole wheat cracker" (P. Exs. 87-112). Obviously respondent's use of the words "shredded wheat" to describe the composition of its cracker is totally inconsistent with its present assertion that "shredded wheat" is a non-descriptive trade-mark for its biscuit.

(3) Respondent's Efforts to Perpetuate Its Monopoly by Litigation.

The District Court found that when its patents had expired the respondent attempted to perpetuate its monopoly by means of trade-marks and suits against its competitors (R. 1, p. 194). We have already shown its trade-mark practice (pp. 9-12, *supra*), including the successful litigation of Williams establishing that respondent had no exclusive trade-mark rights in the descriptive words "shredded whole wheat".

The Ross Food Company was the first to enter the field after the expiration of the patent monopoly. The biscuits produced by this company were identical in size and appearance with those made by respondent. Its cartons were, however, entirely dissimilar in shape and color.

Printed upon the face of its package was an exact reproduction of the biscuit with the words "Ross's Whole Wheat Biscuit". No individual cartons were sold for the restaurant trade (R. 1, p. 199). Consumers in restaurants therefore had no means of distinguishing Ross's product from respondent's when served outside the carton.

Respondent brought suit charging unfair competition and seeking to enjoin Ross from making the biscuits in their characteristic form. The Circuit Court of Appeals for the Second Circuit (*Shredded Wheat Co.* v. *Humphrey Cornell Co.*, 250 Fed. 960) denied the respondent any relief with respect to biscuits reaching the ultimate purchaser in package form, on the ground that the Ross cartons, even though containing a picture of the Ross biscuit which was identical with respondent's, were so dissimilar from the respondent's cartons as to obviate any possibility that its goods could be sold for those of the respondent.

A majority of the court directed that all biscuits reaching the last purchaser outside of their cartons should be marked with some symbol impressed in their substance or have fastened upon them a tag or band stating that they were made by the defendant, but provided that (p. 967):

> "* * * the defendant at the end of six months may apply to the District Court to be relieved of the second requirement, upon showing that after a bona fide trial of all possible expedients it cannot comply with that provision, except at an expense which would make impossible any continued competition in the business of selling biscuits outside the cartons with any assurance of reasonable profit."

Judge Ward concurred in the denial of relief with respect to biscuits sold in the carton but dissented from the decision insofar as it required marking of biscuits sold to customers outside the carton. He stated (pp. 967-968):

> "The complainant's claim to be protected in any secondary meaning its goods have acquired can go no

further than its injury, and that is only so far as the public buys or is likely to buy the defendant's product supposing that it is the complainant's. The retail dealer and the purchaser of cartons are not misled. Guests in boarding houses and hotels on the American plan take what they are given. It is only a very small part of the public, namely, those who patronize lunch rooms, restaurants, or hotels on the European plan, and who order biscuit which they see on the counters, or on plates or saucers, supposing they are the complainant's, when they are really the defendant's manufacture. This seems to me an insufficient reason for giving the complainant a monopoly for all time of what apparently is the best size of this ordinary commercial article, unless the defendant and other manufacturers adopt distinguishing marks which either increase the cost of manufacture or deform and weaken the product.

Moreover, I think that the form and size of the biscuit as always made by the complainant are functional, and that imitation of these features is no evidence of unfair competition. The form evidently tends to strengthen a product made out of such fragile material and the size is apparently the best fitted for use as a breakfast food on a saucer. I think the bill should be dismissed."

In the case at bar, petitioner, in order to distinguish its product from respondent's, has sold smaller biscuits and for the restaurant trade has put up two of its smaller biscuits in individual cartons distinctively marked. The evidence to be reviewed later (pp. 26-28, *infra*) clearly establishes that it is commercially impracticable to make shredded wheat biscuits in any other than the pillow-shaped form or to distinguish them in any other manner than petitioner has done. The District Court found, and the finding was not disputed in the court below, that the biscuits cannot be separately branded or marked. In this connection the District Court said (R. 1, p. 221):

"* * * The small or individual cartons with the same distinctive markings remove all confusion in

> the lunch room, restaurant and retail service. By making its biscuit substantially smaller than plaintiff's, and using individual cartons, defendant has met the requirements of the decree of the Circuit Court of Appeals for the Second Circuit in the *Ross* case. In this case the proof fully confirms the testimony of Andrew Ross that the biscuit itself can not be branded or marked. With each biscuit distinctively marked by carton and by size, there can be no excuse for confusion or deception. Had the proof in this case as to marking been before the Court of Appeals in the *Ross* case the opinion of Judge Ward would doubtless have been the opinion of the court."

Ross' capital was exhausted by the *Humphrey Cornell* litigation and soon after the decision of the Circuit Court of Appeals his company was forced into bankruptcy (R. 3, p. 1996).

Petitioner was the next to challenge respondent's pretensions to monopoly (R. 1, p. 203). Petitioner is the largest manufacturer of cereals in the country (*id.*). Since 1905, it has spent $50,000,000. in advertising its products and the name "Kellogg's" has appeared in every advertisement; it sells approximately one and one-half billion cartons of cereal every year and the name "Kellogg's" appears prominently on each carton (*id.*). For years, therefore, as the District Court found, "Kellogg's" has been a distinctive household name, meaning a particular maker of cereal foods (*id.*).

Beginning in 1912, petitioner manufactured a shredded biscuit marketed under the name "Kellogg's Toasted Wheat Biscuit" (*id.*). This biscuit was made from a dough rather than directly from the whole wheat berries and it contained extrinsic flavoring matter (R. 2, pp. 1046-1047; R. 3, p. 1999). When use of wheat was restricted during the war, other grains were added which ruined its palatability. Its manufacture ceased in 1919 (R. 2, p. 1047).

In 1922 petitioner brought out a small shredded wheat biscuit of the same size as its present biscuit which was

mercially feasible to produce. Each of them is objectionable either because its shape would prevent proper baking or otherwise make the biscuit of inferior quality, or because the biscuit would be too costly to produce or too fragile or too irregular to admit of proper packing (R. 2, pp. 1113-1130, 1141-1148, 1162). For the convenience of the court, a detailed analysis of the objections to each of the suggested irregular-shaped biscuits is given in Appendix A hereto (pp. 108-112, *infra*).

C. Petitioner's Advertising and Sales Methods.

One who decides to trade on the good will of another does not deliberately dispel the possibility of deceiving purchasers by large expenditures for advertising or by distinctively dressing his goods. The fact is that petitioner has extensively advertised its shredded wheat biscuit (D. Exs. 129-129-E; R. 2, p. 1020). The purpose and effect of this advertising has been to identify petitioner's biscuits as its own and to emphasize their advantages over respondent's biscuits. Indeed, petitioner's whole sales policy was expressly designed to establish as quickly as possible the differences between Kellogg's shredded wheat biscuit and respondent's competing product (R. 2, pp. 997-998).

The manner in which this policy was carried out is revealed by the evidence. Petitioner's advertisements, all of which contain the Kellogg name in prominent script as well as an illustration of petitioner's distinctive carton, emphasize that Kellogg's is a "new" biscuit, that it is in a "new convenient size" so that "two just fit the cereal bowl", that it is toasted "on both top and bottom—not just on one side", making it "crisper than ever" and that there are "15 to the package instead of the usual dozen" (R. 2, pp. 1007-1013).

The attention of the Court is respectfully directed to the advertisements appearing in the first volume of the record at pages 111 to 159, which respondent introduced in evi-

dence. The newspaper advertisements are run under such headlines as "Many Features for New Shredded Biscuit—Kellogg's Whole Wheat Biscuit Sets New Standard for this Type of Cereal"; "New Shredded Biscuit More Economical—Just One of the Improvements Developed for Kellogg's Whole Wheat Biscuits", "New Shredded Biscuit Toasted on Both Sides—Extra Crispness Just One of Many Improvements Developed for Kellogg's Whole Wheat Biscuit" and "New Shredded Biscuits Offer Many Advantages". The copy proceeds to explain the various points of distinction above alluded to. Almost all of the articles end by stating: "You can identify these new biscuits by the name, Kellogg's, and the red-and-green package. Made by Kellogg in Battle Creek" (R. 1, pp. 111-137; R. 2, p. 1013).

Other types of advertisements are run under banner headlines reading "A New Taste Thrill", "Here's a New Treat", "Just compare these improved biscuit", or "Just try this new Whole Wheat Biscuit (Shredded)—Different in size * * * different in crispness * * * different in flavor!" (R. 1, pp. 138-147; R. 2, p. 1011). Typical of the reading matter is: "One of the first things to be noticed about the new improved Kellogg's Whole Wheat Biscuit is the unusually delightful flavor and crispness. The Kellogg Company uses a special process of pressure cooking. This takes in the original flavor. Every shred is thoroughly cooked and therefore easier to digest. The biscuit are then toasted a light golden brown on both top and bottom. This makes them crisper and crunchier. Economy has not been overlooked either. Instead of the usual dozen, you get fifteen biscuit to the package. Incidentally, the biscuit are new, convenient size, two just fit the cereal bowl. * * * Local grocers have this new shredded biscuit. It may be identified by the familiar red and green package. Made by Kellogg in Battle Creek" (R. 2, pp. 1012-1013).

Many other similar advertisements are contained in the record (D. Exs. 129-129-E), but the foregoing quotations

suffice to show their general tenor. The respondent has been unable to point to a single instance of fraudulent or deceptive advertising by the petitioner, and the fact is that there has been none.

The same care to distinguish its product which is apparent in petitioner's advertisements has likewise characterized its sales methods. Petitioner called as witnesses its district sales managers from various sections of the country who testified that petitioner's biscuit has been introduced in the market by the same methods as all other Kellogg products, through window and store displays, circulars, sampling, door to door canvassing and Saturday store demonstrations. In the use of all these methods, the same emphasis has been placed on the name "Kellogg's" and on the distinctive features of petitioner's biscuit as in the case of petitioner's advertisements.

For example, the most frequently used window display was a large jumbo package of Kellogg's biscuit, from which six ribbons ran out to legend cards reading (R. 3, pp. 1405-1406):

> "1. Certified for food value by Medical Arts Laboratory, Philadelphia, Pennsylvania.
>
> 2. Convenient size. Fits the bowl. Kellogg's.
>
> 3. Six vitamins: A, B, C, D, E and G are present when served with milk and cream. Kellogg's.
>
> 4. Double toasted, top and bottom.
>
> 5. Finer shreds and finer flavor.
>
> 6. You get fifteen biscuit in each carton."

Counter displays, placards and circulars contain similar copy.

Extensive sampling was undertaken, always in the distinctive individual Kellogg cartons, and a door to door canvassing campaign was conducted in several markets, housewives being offered one package of biscuits free upon the purchase of another package. In doing such can-

vassing, the meritorious points of distinction between petitioner's product and respondent's were always stressed. The same is true of the Saturday store sales when a package of "Whole Wheat Biscuit" was offered free with every purchase of three other Kellogg cereals. In addition, innumerable store demonstrations were given to point out petitioner's principal selling points—the smaller biscuit, the double toasting, the finer shred and the larger package. These and other promotional devices employed, as described in the testimony of petitioner's sales managers, make abundantly clear that no stone was left unturned to introduce petitioner's biscuit to the market as a new and distinctive product of its own manufacture (R. 2, pp. 1094-1103, 1183-1194; R. 3, pp. 1403-1416, 1531-1544, 1554-1562, 1712-1731, 1862-1880, 1953-1966).

As a result of petitioner's advertising and sales promotional campaign, petitioner's biscuit is carried by approximately 120,000 of the 300,000 retail grocery stores in the United States (R. 2, p. 1030), and there has been created a large consumer demand for its particular biscuit as distinguished from all other competing products. In many sections of the country, petitioner's biscuit greatly outsells respondent's and its sales have been particularly heavy in the newer type self-service stores, where consumers select their own merchandise from the grocery shelves (see, *e. g.*, R. 2, pp. 1290, 1309). The effect of the decree below is to prevent these consumers from receiving the distinctive product which they have manifested a desire to purchase.

D. Sale of Biscuits to the Restaurant Trade.

At the time of the *Humphrey Cornell* decision, the use of the individual two-biscuit cartons was unknown. The product was displayed in restaurants in large glass globes (R. 1, p. 454). Since that time, however, due to strenuous efforts by both respondent and petitioner, practically all restaurants and lunch rooms serve the biscuits only in

such individual cartons (R. 1, p. 611; R. 3, pp. 1413, 1558, 1713). The District Court found and the evidence demonstrates that only 2½% of petitioner's biscuits were sold to the restaurant trade, and that of this 2½%, only 2%, or one out of every 2,000 biscuits, were sold outside the carton (see note p. 6, *supra;* R. 1, pp. 204, 611; R. 2, pp. 1075, 1184, 1230, 1243; R. 3, pp. 1413, 1532, 1713, 1954).

The use of these individual cartons is advantageous for the producer because it serves as an advertisement of its goods; it is advantageous for the restaurant owner because it obviates the danger that the remaining biscuits in a large opened carton may become stale. It is advantageous to the consumer because service in the carton preserves the original sanitary condition of the biscuits and precludes the possibility of confusion or ignorance as to their source. It is only in a very few restaurants and lunch rooms and in those few hotels which have a policy against serving food in cartons, that petitioner's product ever reaches the final purchaser apart from its package (*id.*).

Due to petitioner's established policy aggressively to push the sale of its individual cartons, as well as to the distinctive size and shape of petitioner's biscuit, every commercially possible safeguard against confusion in the restaurant trade has been taken and the requirements of the *Humphrey Cornell* decision have been met.*

E. Dealer Advertising of Petitioner's Biscuit.

Petitioner's sales campaign has been supplemented by dealer advertising of its product. Petitioner makes no advertising allowance to its dealers and has no control

* Petitioner has also attempted to stress the distinctiveness of its product to the restaurant trade by use of Kellogg displays and menu slips listing its product as "Kellogg's Whole Wheat Biscuit" (R. 2, p. 1074).

over the copy which they use;* it does, however, occasionally supply them with a cut of its carton (see, *e. g.*, R. 2, p. 1193). Most of the dealer advertisements describe petitioner's product by its full name "Kellogg's Whole Wheat Biscuit" (R. 2, pp. 1016-1017; D. Exs. 134-137). Sometimes, however, the product is described in such dealer advertisements simply as "Kellogg's Shredded Wheat" (*id.*; R. 1, pp. 163-189). Such use is illuminating, since it is a clear indication that the dealer regards "shredded wheat", not as a distinctive trade-name but as the generic name of the article, like oatmeal or condensed milk.**

F. Governmental and Institutional Sales of Petitioner's Biscuit.

Petitioner has developed a substantial governmental and institutional business. This business is conducted through invitations to bid sent out by the prospective institutional purchaser, specifying the nature of the article desired; the producer or one of its wholesalers or jobbers then submits its price for the commodity. The form in which such invitations to bid generally appear is highly significant. Typical is the Department of Interior specification appearing at R. 2, p. 1042:

> "56-G-590-1072. Case of biscuits, Whole Wheat, Shredded, to meet Federal Specification No. NC-191, as described, E2H thereof. 24 12½ oz. packages and 36 12 oz. packages to type 1 or 2 carton; samples not desired. State price per pound."

It will be noted that this specification covers both Kellogg's product, which is packed 24 12½ oz. cartons to the case, and respondent's product which is packed 36 12 oz. packages to the case. When such bids are received, peti-

* R. 2, p. 1017; R. 3, pp. 1537, 1558, 1717, 1868, 1955.

** In one instance a dealer mistakenly advertised petitioner's product as "Kellogg's Shredded Wheat" with a cut of respondent's package (R. 4, p. 125). Surely petitioner is not responsible for any such stupid and obviously unintentional blunder.

tioner always fills in the name of its product "Kellogg's Whole Wheat Biscuit" (R. 2, pp. 1043, 1082). In the case of the invitation to bid quoted above, respondent filled in as the name of its product "Original Shredded Wheat" (R. 2, p. 1043).*

Sometimes the institutional specification calls for "Wheat, shredded" or "Shredded Wheat", which the specification generally requires "shall be processed with or without added flavoring, drawn into fine shreds, formed and baked in oblong biscuits of uniform size and shape" (see, *e. g.*, R. 2, pp. 1044, 1060, 1064, 1068; R. 3, pp. 1536, 1866-1867, 1964). Such bids, many of which appear in the record, are a clear recognition by the governmental and institutional authorities that the words "shredded wheat" are both the generic name of the article and descriptive of its properties. Petitioner submits bids on such specifications always giving the full name of its product and generally submitting samples contained in the distinctive Kellogg cartons (R. 2, pp. 1072-1073).**

---

* Occasionally bids are received by both respondent and petitioner the specifications of which, because of the weight of package and the number of packages to the case, apply only to the other's product. The general practice followed by both parties in such cases was to cross out that portion of the specification with which their product failed to comply and to type in the appropriate specification together with the trade-name of the product (R. 2, pp. 1085-1089).

** In one instance appearing in the record, "Shredded Wheat" was called for under specifications covering both respondent's and petitioner's product and Price Brothers, a large wholesale grocer in Philadelphia, submitted a bid without specifying which brand was to be supplied. Its bid was accepted in the form submitted, enabling it to supply either product. Petitioner's product was supplied and was accepted (R. 2, p. 1084). Respondent's criticism of this is entirely unjustified. It is obvious from the specifications of the invitation to bid that the words "shredded wheat" were used generically, in the same manner in which condensed milk might be ordered.

Kellogg's
WHOLE WHEAT
BISCUIT
DOUBLE TOASTED – A DELICIOUS
CEREAL MADE OF WHOLE WHEAT
W. K. Kellogg
NET WEIGHT
MADE BY KELLOGG IN BATTLE CREEK, MICH., U. S. A.

In not a single instance where a bid for petitioner's goods was accepted were they rejected as not being the article ordered (R. 2, pp. 1072-1073; R. 3, pp. 1537, 1716, 1960). Clearly, respondent's objection to petitioner's sales to institutions is based, not on any passing off of petitioner's goods for its own, but on the fact that petitioner has secured a large portion of the institutional shredded wheat trade of which respondent previously had a monopoly.

G. Petitioner's Use of the Phrase "The original has this signature, W. K. Kellogg".

On petitioner's corn flakes and other packages, petitioner has long used the phrase "The original has this signature, W. K. Kellogg." At the time of the trial, this legend appeared in minute type upon some of petitioner's individual two-biscuit Whole Wheat Biscuit cartons and in some of its window advertising, but not on its large fifteen-biscuit cartons which constitute 97½% of its trade. No mention of its use was made in the complaint, no proof was taken as to the extent of its use, and there is no evidence in the record that any jobber, restaurant owner or consumer ever noticed it, much less was confused or deceived by it. The legend has long since disappeared and the court below, although mentioning the phrase in its opinion on reargument, did not direct the issuance of an injunction against it. Of course, whatever the practice may have been, it could not justify the injunction directed by the court below, which prevents all sales no matter how fairly the goods may be represented as goods of petitioner.

A full size reproduction of one of the two-biscuit cartons containing the legend appears on the opposite page and is an ocular demonstration of the triviality of respondent's criticism.

(5) The Record is Completely Devoid of Any Evidence of Passing Off or Deception of the Public.

One after another, consumers, retail grocers, wholesale grocers, restaurant owners and sales managers, respondent's and petitioner's witnesses alike, testified to instant recognition from the cartons and also from the biscuits themselves when removed from the cartons that petitioner's product was not susceptible of confusion with respondent's product. These witnesses, relating their own experiences, were the actors in a dramatic demonstration that, as the District Court found (R. 1, pp. 226, 227), there was no confusion, passing off of goods or deception of custmers, or any possibility thereof. References to the testimony of some 150 of these witnesses are given in the footnote.* There is no evidence in contradiction.

A few excerpts from this testimony, typical of scores of others equally cogent, appear in Appendix B (pp. 112-116, *infra*).

An illuminating light is cast on the entire case by analysis of the proof upon which respondent relied in its brief in the court below to show unfair competition on

the part of petitioner. Some twenty-five pages of its brief are prefaced by the heading "Actual Instances of Confusion and Passing Off of Defendant's Product". Not one actual instance of passing off was shown.

The testimony of most of the witnesses upon which respondent relied* was solely to the effect that when a consumer asked for shredded wheat, he was or could be offered a package of Kellogg's Whole Wheat Biscuit, that sometimes grocers receiving an order for shredded wheat did not know whether respondent's or petitioner's product was desired, and that Kellogg's biscuit was sometimes offered to consumers as a shredded wheat product.

None of these witnesses testified that any consumer had ever received Kellogg's biscuit believing that it was respondent's and most of them expressly denied that there had been any such passing off. The testimony of the other witnesses referred to by respondent is of the same general character and is analyzed in Appendix C, pages 117-121, *infra*.

Respondent's reliance on this testimony reveals that its fundamental complaint is that when a consumer asks for shredded wheat there are now two products which will supply his demand instead of one, as was the case when respondent had its monopoly. Its complaint is not that consumers wanting respondent's product will get petitioner's thinking that it is respondent's, but that a con-

* R. 1, Sanborn, p. 358, Barrett, p. 360, Doyle, p. 367, Daggett, p. 397, Bradbury, p. 407, Goodman, p. 429, Pialet, p. 440, Greene, p. 459, Michalak, p. 496, Holmer, p. 503, Kleeman, p. 527, Leonard, p. 538, Bohnet, p. 644; R. 2, Beck, p. 699, Rickard, p. 821, Mears, p. 1194, Brun, p. 1202, Schmidt, p. 1210, Inman, p. 1231, Robbins, p. 1242, Lee, p. 1252, Fierstone, p. 1256, Creigton, p. 1302, Roselle, p. 1352, Williams, p. 1359, Inman, p. 1361, Loverin, p. 1379; R. 3, Dunmire, p. 1429, Miller, p. 1451, Molitor, p. 1486, Twentyman, p. 1507, DeWolf, p. 1515, North, p. 1524, Rush, p. 1546, Mueller, p. 1579, Lippert, p. 1582, Schwager, p. 1587, McDowell, p. 1596, Stephens, p. 1618, King, p. 1625, Harvey, p. 1669, Dietrich, p. 1677.

sumer desiring the article shredded wheat may now have his want satisfied by a product other than that made by respondent.

If a consumer asked simply for "shredded wheat", having in mind respondent's brand of shredded wheat, and were none the less offered Kellogg's biscuit, this would simply be the result of respondent's use during its long monopoly of the generic name of the article as the only name of its biscuit without qualifying prefix or suffix and would in no sense be deceptive. Undoubtedly such situations may occur so long as there is any competition in the sale of the article and so long as respondent persists in using "Shredded Wheat" as the only name of its shredded wheat product. The controlling fact in this case, however, is that petitioner has so far succeeded in distinguishing its goods from those of the respondent that, despite respondent's use of the generic name of the article as the only name of its biscuit, no consumer has ever taken petitioner's product believing that he was receiving respondent's.

The record, therefore, shows no deception of the public, but open and honest competition fairly and actively waged. Quite obviously the decree here under review does not protect respondent's good will by enjoining unfair competition. To the contrary without any justification because of any wrong of the petitioner or any privilege of the respondent, this decree perpetuates a statutory grant of monopoly in a standard food product long after the expiration of the grant and in derogation of the conditions imposed by Congress.

(6) Decisions Below.

The District Court, after fully reciting the facts and making the findings above referred to (pp. 5-6, *supra*), posed the issue raised by these facts and stated the controlling principle of law as follows (R. 1, p. 223):

> "In this case plaintiff claims in perpetuity the monopolistic right to the descriptive word 'shredded'

> and a monopolistic right in the shape or form of the biscuit. Any right of plaintiff must be based upon the wrong of defendant. Relief must be based upon confusion or palming off, otherwise relief should be denied. Originally patents covered every phase of plaintiff's business. There were product, process and design patents which secured plaintiff a perfect monopoly of the business. These patents have expired and *the case falls into the class of expired patent cases* and is controlled by the *Singer* case." * (Italics in original.)

The District Court, finding that no deception or passing off had occurred, concluded that the bill must be dismissed.

In its first opinion (R. 3-A, p. 2069), the Circuit Court of Appeals approved as "full and satisfactory" the discussion by the District Court of all the issues involved and held that "on the expiration of plaintiff's patent No. 548,086, the exclusive right to make and sell the food product therein described ended. And on the expiration of plaintiff's design patent No. 24,688, the exclusive right to the designed biscuit also ceased." The court then stated that upon the expiration of these patents, during the life of which the product had become known to the trade and consumers by the descriptive words "shredded wheat" (R. 3-A, p. 2071):

> "* * * the public could use the patented process both in making the patented product and in making it in the form described in the design patent and in calling it 'shredded', provided in doing so it avoided simulating the product so as to prevent confusion and lead buyers into the belief they were buying plaintiff's product. This, in the judgment of the court below and of this court, the defendant has done in compliance with the requirements of *Singer* v. *June*, 163 U. S. 169, for the product of the defendant has at all times, in its cartons and otherwise, been marked with its own name, in words and colors (green and red)

* *Singer Manufacturing Co.* v. *June Manufacturing Co.*, 163 U. S. 169.

> of such distinctive character, that buyers thereof knew they were getting defendant's product and were not buying that of the plaintiff. Moreover, it is clear that the word 'shredded' was a descriptive word, aptly describing the process to which wheat grains were subject by any one using shredding or mangling in processing wheat grains. * * *"

The court added that the word "shredded" was open to all shredders of wheat provided that they so used it as not to mislead and confuse the public (R. 3-A, p. 2071). With reference to the question of confusion, the court expressly stated, "Now, that no confusion, misleading or deceit is shown in this case, is clear" (*id.*).

After reargument, the court below did not qualify or retract its approval of the findings of fact of the District Court, except that it did withdraw its conclusion that the words "shredded wheat" and "shredded wheat biscuit" were descriptive. The court stated that the process of manufacture could not properly be described as shredding, since the wheat was not cut or torn into small pieces but was rather forced through grooved rollers. Based upon the premises that shredding means only tearing or cutting and that descriptive words are only such as describe the process of manufacture rather than the product itself, the court held that the words "shredded wheat" were at most suggestive.

The court also changed its views regarding the design patent and, because of its invalidity, held that the case stood in equity as if there had been no patent (R. 3-A, pp. 2088, 2092). It then held that the words "shredded wheat", whether descriptive or not, had by long usage following expiration of the patents acquired a "secondary meaning" and that respondent's advertising expenditures had made "shredded wheat" a household word and the form of its biscuit known throughout the world as its product. Because of this, the court directed that an injunction issue "In order to secure the property of the plaintiff in the name and form of its product" (R. 3-A, p. 2092).

In its opinion the court used the term "secondary meaning" in the exact converse of its normal connotation. A descriptive name is generally said to have acquired a secondary meaning when it signifies, not the article, but the maker of the article. The court below, however, found that the name shredded wheat has acquired a secondary meaning because *"it has come to stand for the article itself"* (R. 3-A, pp. 2087, 2089).*

When the case came up to the court below again upon respondent's petition for clarification of the mandate, petitioner filed a petition for rehearing of the case upon the merits. The court on May 5, 1938 denied petitioner's petition for want of jurisdiction but stated that, even if it had jurisdiction, it saw no reason why the petition should be granted. In this connection, the court stated (R. 3-A, pp. 2284-2285):

> "* * * Nothing new is presented except that in February, 1938, the British Privy Council in *Canadian Shredded Wheat Co. Ltd.* v. *Kellogg Company of Canada, Ltd.* reached, it is claimed, a different conclusion from that of this court. Even if the record in the two cases were the same, the latter decision does not persuade us that the conclusion at which we arrived was wrong. We are advised that the British High Court of Justice on a full record reached a different conclusion from that of the British Privy Council as to the registerability of 'Shredded Wheat' as a trade name under the English statute."

The decision of the British High Court of Justice, referred to by the court below, was reversed on appeal on July 28, 1938. *In the Matter of the Trade Marks. Acts, 1905 to 1919* and *In the Matter of Trade Mark No. 500,671 Registered in the Name of The Shredded Wheat Co., Ltd. in Class 42* (*Supreme Court of Judicature, Court of Appeal*). In this case, hereinafter referred to as the *"British Trade-Mark Case"*, the registration in 1929 of the words "Shredded Wheat" under the English Trade-Mark Act

* Unless otherwise indicated, all italics appearing in quotations in this brief are supplied by us.

of 1905 was held invalid on the ground that at the date of registration the name was descriptive rather than distinctive. For the convenience of the Court, the opinion is printed in an appendix to this brief (pp. 143-147, *infra*).

In considering the opinions below, this Court will wish to consider the decision of the Judicial Committee of the Privy Council in *Canadian Shredded Wheat Co., Ltd.* v. *Kellogg Company of Canada, Ltd. and another,* printed at page 125, *infra.* In that case, as has already been stated, precisely the same issues were raised as are presented in the case at bar. The Privy Council, in an opinion rendered by Lord Russell of Killowen, held that the words "shredded wheat" were both the name of the product and descriptive of that product and that they had been so used by the respondent. Although recognizing that the words had become associated with the goods of the respondent because of its long monopoly, the Privy Council held that they had not lost their primary meaning as describing and signifying the article itself, and had not acquired the secondary meaning of signifying only goods manufactured by the respondent. The court added that it would "be passing strange if they had acquired such a meaning, for it would be a meaning directly contrary to the sense in which those words had been put forward to the public by the plaintiff company in its cartons and advertisements."

With respect to respondent's allegation that petitioner's biscuits are of such shape and size that hotels and restaurants could supply them in response to the request of a consumer who, in asking for shredded wheat, desired respondent's biscuit, Lord Russell stated (p. 141, *infra*):

> "* * * Their Lordships see no reason for granting any such relief, upon the evidence given in the present case. They are not satisfied that a person asking for shredded wheat will not have his request truly satisfied if the product shredded wheat, as manufactured by Kellogg's or any other manufacturer, is supplied. Nor are they satisfied that a cus-

tomer who really desires a biscuit of the plaintiff company's manufacture will necessarily be deceived by being offered a biscuit of the same shape but perceptibly smaller. Such likelihood of deception requires to be proved, and it is noticeable that no witness was shown a Kellogg's biscuit and asked whether he would have taken that to be a biscuit of the plaintiff's company's manufacture. * * *"

The Privy Council pointed out that its decision had been reached without specific reference to the existence of patents which had expired, but added in its opinion (pp. 141-142, *infra*):

"* * * Their Lordships, however, find it difficult to conceive that a manufacturer could in such a case be held guilty of passing off, if he manufactured the goods in accordance with the expired patents, and the only similarity between the rival goods lay in the appearance of the goods so manufactured and the application to them of the name by which the patented goods had been known. It is conceivable that, in the case of a patent long ago expired, the evidence might possibly establish that the name had become distinctive of a particular manufacturer rather than descriptive of the goods, with the result that other manufacturers of the goods could be compelled to adopt some means of effectively distinguishing their goods from those of the particular manufacturer. Difficult as such a case is to prove in the case of a descriptive word, it must be additionally difficult in the case where a word is the name of goods as well as being descriptive of those goods. * * *"

Concluding the judgment of the Privy Council, Lord Russell said (p. 143, *infra*):

"One further observation their Lordships desire to make. Litigation has taken place in the United States of America in which a company called National Biscuit Company sought to restrain a company called Kellogg Company from using the words 'shredded wheat.' The action was dismissed by decree of the U. S. district court for the district of Delaware, and, on appeal to the U. S. circuit court of appeals for the third circuit, the decree was affirmed. Subse-

quently, on reargument before the same judges, that decision was reversed, and a decree was entered:

> enjoining the defendant from the use of the name 'shredded wheat' as its trade name, and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark.

Their Lordships can only (but with the greatest respect for the court) express the view that, if the facts of that case were similar in all respects to the facts of the present case, they prefer the first judgment of the circuit court of appeals to its later decision. * * *"

Specification of Errors.

We respectfully submit that the court below erred:

(1) In failing to affirm the decision of the District Court dismissing the complaint, and in reversing its judgment;

(2) In holding that respondent is entitled to the exclusive right to sell shredded wheat biscuits in the pillow-shaped form under any name, and in enjoining petitioner from advertising or selling its product in the pillow-shaped form in distinctive cartons;

(3) In holding that respondent is entitled to exclusive use of the words "shredded wheat" as applied to food products, and in enjoining petitioner from use of these words as a trade-name;

(4) In holding that respondent is entitled to the exclusive trade-mark use of a pictorial representation of two shredded wheat biscuits in a dish;

(5) In holding that the name shredded wheat is not descriptive;

(6) In awarding costs to respondent and directing an accounting for profits and damages;

(7) In directing the issuance of an injunction which in effect creates a perpetual monopoly in the sale of an article which was protected by patents long since expired

and in the use of the descriptive name of the article which was its generic designation during the patent monopoly;

(8) In failing to hold that by disclaimers in respondent's trade-mark registrations respondent abandoned all claim of exclusive right, if any there was, to the words "shredded wheat" or "shredded wheat biscuit" as a trade-name and to the shape, form, design, appearance and representation of the biscuit;

(9) In holding that since the expiration of the patents respondent acquired property rights in the pillow-shaped biscuits which justify the issuance of a perpetual injunction against the manufacture and sale of such biscuits without regard to the size of the biscuits or the distinctive containers in which they are sold; and

(10) In failing to affirm the decision of the District Court dismissing the complaint in view of the lack of any evidence that petitioner's goods were ever passed off as respondent's goods or that the public was ever deceived as to the source of such goods, and in view of the finding that the size of petitioner's biscuits and the character of the containers in which they are sold are so distinctive as to preclude any likelihood of such passing off or deception of the public.

Summary of Argument.

I. The court below in its first opinion expressly approved the finding of the District Court that no confusion, misleading or deceit is shown in this case. In directing the issuance of an injunction despite this finding, the court ignored the cardinal principle that the essence of the wrong in cases of this kind consists in the sale of the goods of one manufacturer or vendor for those of another, and that unless such palming off of goods is shown, no relief can be granted. Since the record establishes that no use was made of the pillow-shaped form or the name "shredded wheat" which led any person to

believe that in purchasing petitioner's product he was receiving respondent's product, the essential element of a cause of action is lacking.

II. Petitioner's manufacture and sale of shredded wheat biscuits in the pillow-shaped form does not constitute unfair competition. 1,999 out of 2,000 of petitioner's biscuits reach the last purchaser in petitioner's distinctive cartons which no consumer has mistaken or could mistake for those of the respondent. The few biscuits which reach the last purchaser outside the carton were completely distinguishable from respondent's because of their small size until respondent copied petitioner's size five years after it had been popularized by petitioner; even as to these few biscuits, there is no evidence of passing off or deception of the public. Respondent's case is therefore utterly lacking in the necessary factual foundation.

Moreover, the pillow-shaped form inevitably results from the process of manufacture of shredded wheat biscuits and there is no commercially practicable method to make such biscuits distinctive other than the methods adopted by the petitioner. If petitioner cannot make this form of biscuit, it must withdraw entirely from competition in the trade. The authorities are conclusive that this may not be required under the guise of protecting respondent against unfair competition. Imitation of non-functional features of an article may be enjoined if likely to lead to confusion, but the functional or essential features of a product not protected by patent are open to all to use and may not be exclusively appropriated by anyone.

Finally, under the rule established by this Court in *Singer Manufacturing Co* v. *June Manufacturing Co.*, 163 U. S. 169, upon the expiration of a patent the right to make the patented product in the form in which it became known to the public during the patent monopoly becomes dedicated to the public. Respondent had a design patent on this very form of biscuit, it had patents on machinery designed to produce this very form of biscuit, and, during

the life of its basic product and process patent, the product shredded wheat became known to the public in the form of the pillow-shaped biscuit. Upon the expiration of these patents, therefore, the right to make and vend the pillow-shaped biscuits was dedicated to the public. The effect of the contrary ruling of the court below, for all practical purposes, is to extend the life of respondent's expired patents to eternity.

III. If petitioner has the right to make the product, it has the right to call it by the only name which that product bears. Respondent has no property right in the words "shredded wheat"; petitioner may employ them with equal right so long as it does not so use them as to deceive the public into believing that its goods are those of the respondent. The record conclusively establishes that there has been no such deception of the public and no possibility of such deception. The necessary prerequisite to injunctive relief is therefore entirely wanting.

Furthermore, the record shows beyond question that the words "shredded wheat" are the descriptive, the generic and the only name for the product. Respondent has consistently used the words in a descriptive and generic sense and the public understands them to mean what the respondent has always asserted that they mean. The authorities are entirely clear that descriptive and generic names are not subject to exclusive appropriation by anyone; all competitors have a right to use such names provided only that they do what petitioner has always done, plainly indicate the source of manufacture. This rule applies with peculiar force where, as here, the descriptive and generic name has no synonym or substitute but is the only name by which the product is known to the trade and to the public. Anyone who may make an article may use the only words in the common stock of language which denote and describe that article.

Even if the record showed, as it does not, that "shredded wheat" was originally adopted as a distinctive and fanci-

ful name, the name became dedicated to the public upon the expiration of respondent's patents in 1912 under the rule in *Singer Manufacturing Co.* v. *June Manufacturing Co., supra.* The *Singer* doctrine is that any words which have become known to the public during the patent period as the identifying name of the patented product fall into the public domain upon expiration of the patent and may not thereafter be exclusively appropriated by anyone. Since "shredded wheat" was the only designation given to the biscuits during the life of respondent's patents, petitioner may now use that name as the name of its product made in accordance with the disclosures of those patents. The contrary holding of the court below permits the respondent to perpetuate its patent monopoly indefinitely by excluding others from using the only words by which the patented article is known.

IV. If petitioner has the right to make and sell the biscuit, it likewise has a right to tell the public what it is marketing by placing a pictorial representation of its biscuit on the outside of its carton. The picture on petitioner's carton does not constitute any infringement of respondent's alleged trade-marks of the picture of a dish containing one or two of its biscuits immersed in milk or cream; the pictures are totally dissimilar. Moreover, respondent does not employ the dish illustration as a trade-mark indicating the origin of its product but rather as a pictorial explanation of how its product should be used. No charge of unfair competition can be predicated upon petitioner's use of the picture since it has not caused and could not cause any purchaser to believe that petitioner's goods are the goods of the respondent.

V. Respondent's claim to the exclusive right to make the biscuit in the pillow-shaped form, to call it by its name and to illustrate it by pictorial representation, is without merit because of its disclaimers of those very rights in its trade-mark registrations. *Beckwith* v. *Commissioner of Patents,* 252 U. S. 538.

ARGUMENT.

Introductory Statement.

This action seeks to establish in the respondent the exclusive right to make shredded wheat biscuits in their only commercially practicable form and to call them by the only name by which they are known. An exclusive right in the form could only properly be predicated upon a valid and subsisting patent, and in the name only upon a valid trade-mark. Respondent's patent monopoly has long since ceased and, since "shredded wheat" is the generic and descriptive product name, it has no valid trade-mark rights therein. Whatever exclusive rights respondent may have had during the life of its patents, upon their expiration the form and generic name of the biscuit became free for all to use under the principle established by this Court in *Singer Manufacturing Co.* v. *June Manufacturing Co.*, 163 U. S. 169.

The essential element of respondent's asserted cause of action is the sale or attempted sale of petitioner's goods as the goods of respondent. This essential element is entirely lacking in this case. Respondent relies solely on alleged "equitable grounds" to preserve its former monopoly. Its contentions confuse competition with unfair competition.

Competition is rivalry between two or more producers in the sale of the same or a similar article. The reputation of and demand for the article, as such, inures to the benefit of all producers. Thus, if one manufacturer spends large sums of money advertising the excellence of a particular article, as distinguished from other articles, competing producers of that article will doubtless derive benefit therefrom. It is of the essence of competition that the

good will of the article is available to all. *Saxlehner* v. *Wagner*, 216 U. S. 375, 380.*

Unfair competition is an appropriation, not of the good will of the article, but of the good will of a particular manufacturer of the article. The essential feature of unfair competition is the sale by one producer of its goods as the goods of a rival producer.

There are no "equitable grounds" for protection of trade against competition; relief must be predicated upon the existence of unfair competition. One may establish himself in business notwithstanding the fact that he foresees that the effect of his competition will be to diminish the trade of another, perhaps to ruin him. O. W. Holmes, Jr., The Common Law, pp. 144-145. To paraphrase the language of this court in *Canal Co.* v. *Clark*, 13 Wall. 311, 328, if respondent's sales are diminished, it is because it is not the only producer of shredded wheat, and not because of any fraud of the petitioner.** Competition such as this "must be met in some other way than by a lawsuit". *P. Lorillard Co.* v. *Peper*, 86 Fed. 956, 962 (C. C. A. 8).

---

* Under this rule respondent's large expenditures in popularizing shredded wheat, to which much importance was attributed in the opinion of the court below, are not significant.

** There is no proof in the record that there has, in fact, been any diminution of respondent's sales because of petitioner's competition.

POINT I.

The Record Presents a Plain Case of *Damnum Absque Injuria* and Respondent Is Entitled to No Relief.

It is upon the assumption that the respondent has an exclusive right to sell shredded wheat biscuits in their characteristic form and under the only name by which they are known to the public that the court below predicated its decree. In reaching this result it did not reject the findings of the District Court that petitioner's biscuits are sold in cartons which cannot be mistaken for respondent's and that petitioner's biscuits are distinguishable in appearance from respondent's.

In its first opinion, the court below expressly affirmed the findings of the District Court by stating that there was no confusion, misleading or deceit shown in the case (R. 3-A, p. 2071). Upon reargument, without questioning this finding, the court below vacated its decree and in concluding its opinion baldly stated that petitioner "deliberately started out to acquire by unfair competition and misstatement the trade which equitably belonged to the plaintiff and that it is practically impossible for defendant to use the name and form of plaintiff's biscuit to designate its product without confusion, deception of the public and unfair competition with the plaintiff" (R. 3-A, p. 2093). No new facts were found in support of this contradictory conclusion. It is based, as the opinion of the court shows, (1) upon the court's erroneous conclusion of law that respondent, because of its large advertising expenditures and long monopoly after the expiration of its patents, has acquired an exclusive right to sell shredded wheat biscuits in their characteristic form and under the name by which they became known to the public; (2) upon the court's failure to apply the rules announced in *Singer Manufac-*

turing Co. v. *June Manufacturing Co.*, 163 U. S. 169; (3) upon the court's failure to appreciate the distinction between the good will of a product (which belongs to all) and the good will of a particular manufacturer thereof (which belongs to him alone); and (4) upon the court's extraordinary misconception and misapplication of the doctrine of "secondary meaning" of descriptive words. The last mentioned doctrine applies only in cases where the evidence shows that the descriptive words, in their ordinary usage, have come to signify the source of manufacture of an article rather than the article itself. Yet twice in the second opinion in this case, the court below held that the name "shredded wheat" had acquired a "secondary meaning" because "it has come to stand for the product itself" (R. 3-A, pp. 2087, 2089)—a statement of law which is opposed to all the authorities on that subject.

These errors of law, rather than any disagreement with the facts as found by the District Court, led to the above quoted conclusion of the opinion—a conclusion perhaps correct, if the statement of principles upon which it is founded is sound, but undoubtedly erroneous if the statement is unsound.

Apart from the above mentioned legal questions, all of which receive consideration in this brief, the court below ignored the cardinal principle underlying all cases of this kind. Trade-marks and trade-names are property only in a qualified sense and the owner's right is defined by the law of torts, not by the law relating to the title and ownership of property. *Beech-Nut Co.* v. *Lorillard Co.*, 273 U. S. 629, 632; *Hanover Milling Co.* v. *Metcalf*, 240 U. S. 403, 413. The owner's right is defined as no more and no less than "the right to prohibit the use of the trade-mark so far as to protect the owner's good will against the sale of another's product as his". *Prestonettes, Inc.* v. *Coty*, 264 U. S. 359, 368.

Injunctions against unfair dealing are not predicated upon any proprietary right of the plaintiff in the form, name or appearance of its product; they are predicated solely upon the right of the plaintiff to be protected in its trade against deceptive practices which may cause another's goods to be sold as its. The essence of the wrong which measures the plaintiff's right to relief consists in the sale of the goods of one manufacturer or vendor as those of another and it is only when this false representation is directly or indirectly made that the party who appeals to a court of equity can have relief. This is the doctrine of all the authorities. *Canal Co.* v. *Clark*, 13 Wall. 311, 322; *Elgin Nat'l Watch Co.* v. *Illinois Watch Co.*, 179 U. S. 665, 674; *Howe Scale Co.* v. *Wyckoff, Seamans & Benedict*, 198 U. S. 118, 140; *Standard Paint Co.* v. *Trinidad Asphalt Co.*, 220 U. S. 446, 462; *Hanover Milling Co.* v. *Metcalf*, 240 U. S. 403, 413; *Warner & Co.* v. *Lilly & Co.*, 265 U. S. 526.*

The court below did not follow these well established principles. Having adopted in its first opinion the findings of fact of the District Court, and without rejecting its own findings concerning the distinctive size of peti-

* See also: *Manufacturing Co.* v. *Trainer*, 101 U. S. 51; *Goodyear Co.* v. *Goodyear Rubber Co.*, 128 U. S. 598; *The French Republic* v. *Saratoga Vichy Spring Co.*, 191 U. S. 427; *Waterman Company* v. *Modern Pen Co.*, 235 U. S. 88; *Straus* v. *Notaseme*, 240 U. S. 179; *Prestonettes, Inc.* v. *Coty*, 264 U. S. 359; *Federal Trade Commission* v. *Klesner*, 280 U. S. 19, 27; *Reddaway* v. *Banham*, [1896] A. C. 199, 13 R. P. C. 218; *Rathbone, Sard & Co.* v. *Champion Steel Range Co.*, 189 Fed. 26 (C. C. A. 6); *Rouss, Inc.* v. *Winchester Co.*, 300 Fed. 706 (C C. A. 2), cert. den. 266 U. S. 607; *Fawcett Publications* v. *Popular Mechanics Co.*, 80 F. (2d) 194 (C. C. A. 3); *Du Pont Cellophane Co.* v. *Waxed Products Co.*, 85 F. (2d) 75, 81, cert. den. 299 U. S. 601, 82 L. ed. 1041; *Bayer* v. *United Drug Co.*, 272 Fed. 505 (S. D. N. Y.).

tioner's biscuits and their sale in distinctive cartons, the court proceeded to ignore these facts and treated the form of the biscuit as an exclusive property right wrongfully "appropriated". Similarly, having misconstrued and misapplied the doctrine of "secondary meaning" to the words "shredded wheat", it completely ignored the principle that others may nonetheless use these words to designate their product provided all confusion as to the manufacturer is avoided.

Any consideration of the evidence (see pp. 36-38, *supra*) shows that no use was made of the form or of the name which led any person to believe that in purchasing petitioner's product he was receiving respondent's product. It follows upon basic principles that, there having been no palming off of petitioner's biscuits as biscuits made by the respondent, the essential element of a cause of action is lacking. If respondent has lost trade to a vigorous competitor who has exhausted every effort to distinguish its goods from those of the respondent and has succeeded in such efforts, such loss is *damnum absque injuria* for which the law affords no remedy.

The authorities we have cited appear to control decision that upon this record, which affirmatively shows that there has been no palming off or any likelihood of palming off of petitioner's goods as the goods of respondent, there can be no relief. In the following points we consider the petitioner's right to make and sell the biscuit in its only commercially practicable form, to call it by its only proper name and to portray it by pictorial representation. Upon this consideration respondent's failure to prove any ground for relief will more clearly appear.

POINT II.

The Manufacture and Sale by Petitioner of Shredded Wheat Biscuits in the Pillow-Shaped Form Does Not Constitute Unfair Competition.

The decree below directs the issuance of an injunction absolutely prohibiting petitioner from advertising or offering for sale its biscuits in the pillow-shaped form. The injunction directed to be issued covers all sales of the biscuits, whether contained in distinctive cartons or not, and is operative irrespective of whether the size, color and composition of petitioner's biscuits simulate those of the respondent or completely differ therefrom. This sweeping injunction is not predicated upon trade-mark infringement because the article itself could not constitute a trade-mark. *Daniel* v. *Electric Hose & Rubber Co.*, 231 Fed. 827 (C. C. A. 3). Its effect, however, is to establish a monopoly differing only from a patent in that it is perpetual.

In directing the issuance of this injunction the court below, we submit, misconceived the essential nature of unfair competition as outlined in Point I, *supra*, and disregarded the fact that the pillow-shaped form is a functional characteristic of the biscuit and that it is the only form in which the biscuit became known to the public during the life of respondent's expired patents.

A. Petitioner's use of the pillow-shaped form has caused no confusion, misleading or deceit.

As the District Court found, there has been no deception of the public as to the origin of respondent's and petitioner's products and no sale of petitioner's goods as those of respondent (p. 36, *supra*). Only one out of 2,000, or .05%, of petitioner's biscuits is served to the final purchaser outside the carton; the remaining 1,999, or

99.95%, are sold only in packages distinctively marked with petitioner's name and entirely dissimilar from respondent's package (pp. 5-6, *supra*). No consumer examining petitioner's carton has thought, or could reasonably think, that he was receiving respondent's product. There has been and can be no confusion between them.

It follows that as to 1,999 out of 2,000 biscuits sold by petitioner, the fundamental prerequisite to relief in an action for unfair competition is entirely lacking. Therefore, even apart from the fact that petitioner's biscuits are distinctive because of their size, that the pillow-shaped form of biscuit is the only commercially practicable form and that the product was protected by patents which have long since expired, it is clear that the injunction against the sale of petitioner's pillow-shaped biscuits in their distinctive cartons cannot be supported and must be reversed. In this respect, the decision below is irreconcilable with *Shredded Wheat Co.* v. *Humphrey Cornell Co.*, 250 Fed. 960 (C. C. A. 2) and *Canadian Shredded Wheat Co., Ltd.* v. *Kellogg Company of Canada, Ltd. and another* (Privy Council), p. 125, *infra*.*

Similar considerations apply with respect to those few biscuits which may be sold by restaurants and lunch rooms outside the carton, because petitioner's biscuits are clearly distinguishable. As has previously been stated, scores of witnesses, respondent's and petitioner's alike, testified to the differences from which they knew at once that the smaller biscuits were not respondent's product and the record is barren of evidence that any purchaser ever

---

* See also *Postum Cereal Co.* v. *American Health Food Co.*, 119 Fed. 848 (C. C. A. 7); *Heide* v. *Wallace & Co.*, 135 Fed. 346 (C. C. A. 3); *Diamond Match Co.* v. *Saginaw Match Co.*, 142 Fed. 727 (C. C. A. 6), cert. den. 203 U. S. 589; *Coca Cola Co.* v. *Gay-Ola Co.*, 200 Fed. 720 (C. C. A. 6), cert. den. 229 U. S. 613; *Miller Rubber Co.* v. *Behrend*, 242 Fed. 515 (C. C. A. 2); *Krem-Ko Co.* v. *Miller & Sons, Inc.*, 68 F. (2d) 872 (C. C. A. 2).

received petitioner's biscuits believing them to be products of respondent (see p. 25, *supra*). Indeed, that the two products were known to purchasers to be different is demonstrated by respondent's own action in marketing a small biscuit of substantially the same size as petitioner's for the express purpose of meeting petitioner's competition in the restaurant trade, five years after petitioner had introduced its distinctively sized product to the public use (see p. 26, *supra*).

Conclusion follows that, in the absence of any passing off or likelihood thereof, no injunction applicable to either class of trade can possibly be justified.

B. The pillow-shaped form is a functional and essentially useful characteristic of the biscuit, the use of which cannot be enjoined.

The pillow-shaped form results from the puffing up of the shreds of wheat in the baking after these shreds have been panned and cut by the formerly patented apparatus (see p. 26, *supra*). The biscuits cannot be made in any other form if the machinery covered by these patents is used in accordance with the teaching of the specifications (R. 2, p. 291).

Not only is the pillow-shaped form functional in the sense that no other form can be produced with the patented machinery, but the form itself is a commercially essential feature of the product of these patents. There are several tests which any shredded wheat biscuit must meet in order to be commercially practicable. It must be in some regular shape so as to avoid any waste of material in the cutting and so as to allow packing and handling without undue breakage. It must be puffed so that during the baking process heat can be equally distributed throughout the biscuit and all the shreds thoroughly toasted. Finally, it must be open on at least two sides in order to allow proper baking and to reduce the hard undesirable edges to a minimum. See Appendix A, page 108, *infra*.

It is most desirable that it be of such size that two can fit the cereal bowl. The pillow-shaped form of biscuit is the only shape and form which meets these requirements (R. 2, pp. 1143-1144).

The form being functional, its use cannot be enjoined as unfair competition. The doctrine of all the authorities is that injunctions will lie only against the use of non-functional or decorative features of an article which have acquired a distinctive significance indicating origin with the complainant.

In all cases in which relief is sought against the sale of an article on the ground that the appearance of complainant's product has acquired a secondary meaning and that the defendant's product is confusingly similar thereto, a delicate balance must be drawn by the courts between the right of the defendant to make and vend the article in any form it chooses and the right of the plaintiff to be protected against the sale of another's product as its own. In balancing these rights, the courts have consistently adhered to the rule that "minor or 'non-functional' changes in appearance may be required so long as the substantial elements are left in the public domain", but that "where the 'secondary meaning' is bound up in elements of the appearance which cannot be changed without cutting off the defendant's substantial right to make and sell that kind of goods the plaintiff must suffer the resulting confusion." *Shredded Wheat Co.* v. *Humphrey Cornell Co.*, 250 Fed. 960, 964 (C. C. A. 2).

This principle is strikingly illustrated by the decision of this Court in *Warner & Co.* v. *Lilly & Co.*, 265 U. S. 526. The plaintiff in that case was a manufacturer of liquid quinine, flavored and colored with chocolate, which was marketed under the name "Coco-Quinine". The defendant made the same preparation with the same flavoring and coloring matter and sold it under the name "Quin-Coco". Both products were sold by druggists in bulk and the evidence indicated that the defendant had consciously

adopted the policy of inducing the druggists to pass off its product as that of the plaintiff. The Court found that the use of chocolate, which gave the two products an identical appearance, had no therapeutic value, but that it served a desirable function by acting as a suspending medium and by imparting to the preparation a quality of palatability for which there was no equally satisfactory substitute. This was considered a substantial and desirable use "which prevents it from being a mere matter of dress". No injunction was therefore granted against the use of the chocolate and relief was limited to the requirement that the defendant should state on its original packages sold to druggists that the preparation was not to be sold as Coco-Quinine or used in filling orders therefor.

The opinion of the Court on this aspect of the case is significant. It stated (pp. 531-532):

> "* * * The petitioner or anyone else is at liberty under the law to manufacture and market an exactly similar preparation containing chocolate and to notify the public that it is being done. *Saxlehner* v. *Wagner*, 216 U. S. 375, 380; *Chadwick* v. *Covell*, 151 Mass. 190. * * * If petitioner had been content to manufacture the preparation and let it make its own way in the field of open and fair competition, there would be nothing more to be said. It was not thus content, however, but availed itself of unfair means, either expressly or tacitly, to impose its preparation on the ultimate purchaser as and for the product of respondent.
>
> "Nevertheless, the right to which respondent is entitled is that of being protected against unfair competition, not of having the aid of a decree to create or support, or assist in creating or supporting, a monopoly of the sale of a preparation which everyone, including petitioner, is free to make and vend. * * *"

The decision in *Coca-Cola Co.* v. *Koke Co.*, 254 U. S. 143 is to the same effect. The defendant in that case marketed a product identical in appearance with Coca-Cola which it sold under the name "Koke". An injunction was

sought not only against use of the name but also against use of the same coloring matter employed by the plaintiff. This Court, although finding that the defendant had purposely imitated plaintiff's product in order to sell its mixture as and for plaintiff's goods, limited relief to an injunction against use of the name, stating (p. 147): "The product including the coloring matter is free to all who can make it if no extrinsic deceiving element is present." See also *Saxlehner* v. *Wagner*, 216 U. S. 375, 380.

Flagg Manufacturing Co. v. *Holway*, 178 Mass. 83, a decision by Mr. Justice Holmes rendered while he was a member of the Supreme Judicial Court of Massachusetts and cited with approval by this Court in *Saxlehner* v. *Wagner, supra*, is one of the leading cases on this subject. That was a suit to restrain the defendant from selling zithers made in imitation of the plaintiff's. The court found that the defendant had deliberately copied the plaintiff's instrument in all essential and many non-essential details. In limiting relief to the requirement that the defendant plainly mark its instruments so as to indicate unmistakably that they were made by it and not by the plaintiff, Mr. Justice Holmes said (pp. 90-91):

> "We are of opinion that the decree was wrong in principle. 'Both zithers are adapted for the use of patented sheets of music, but the zithers are not patented. Under such circumstances the defendant has the same right that the plaintiff has to manufacture instruments in the present form, to imitate the arrangement of the plaintiff's strings or the shape of the body. In the absence of a patent the freedom of manufacture cannot be cut down under the name of preventing unfair competition. *Dover Stamping Co.* v. *Fellows*, 163 Mass. 191. See *Singer Manuf. Co.* v. *June Manuf. Co.*, 163 U. S. 169. All that can be asked is that precautions shall be taken, so far as are consistent with the defendant's fundamental right to make and sell what he chooses, to prevent the deception which no doubt he desires to practise.
>
> It is true that a defendant's freedom of action with regard to some subsidiary matter of ornament or label

may be restrained, although a right of the same nature with its freedom to determine the shape of the articles which it sells. But the label or ornament is a relatively small and incidental affair, which would not exist at all, or at least would not exist in that shape but for the intent to deceive; whereas the instrument sold is made as it is, partly at least, because of a supposed or established desire of the public for instruments in that form. The defendant has the right to get the benefit of that desire even if created by the plaintiff. The only thing he has not the right to steal is the good will attaching to the plaintiff's personality, the benefit of the public's desire to have goods made by the plaintiff. Probably if there were an absolute conflict between the defendant's right as we have stated it and the plaintiff's, the defendant's would prevail. *American Waltham Watch Co.* v. *United States Watch Co.*, 173 Mass. 85, 86, 87. But the plaintiff's right can be protected sufficiently by requiring the defendant's zithers to be clearly marked so as to indicate unmistakably that they are the defendant's and not the plaintiff's goods. This is the relief which the master found to be proper, and we are of the opinion that he was right. To go further is to save the plaintiff from a competition from which it has no right to be exempt."

In *Marvel Co.* v. *Pearl*, 133 Fed. 160 (C. C. A. 2), the plaintiff, manufacturer of a syringe sold under the name "Whirling Spray", sought to enjoin the defendant from marketing an almost identical syringe under the name "Whirlspray". Although finding that the two products were so similar that the ordinary purchaser would not distinguish one from the other, the court denied relief on the ground that the form of defendant's syringe was functional. In this connection, the court remarked (pp. 161-162):

"In the absence of protection by patent, no person can monopolize or appropriate to the exclusion of others elements of mechanical construction which are essential to the successful practical operation of a manufacture, or which primarily serve to promote its

efficiency for the purpose to which it is devoted. Unfair competition is not established by proof of similarity in form, dimensions, or general appearance alone. Where such similarity consists in constructions common to or characteristic of the articles in question, and especially where it appears to result from an effort to comply with the physical requirements essential to commercial success, and not to be designed to misrepresent the origin of such articles, the doctrine of unfair competition cannot be successfully invoked to abridge the freedom of trade competition. The enforcement of such a claim would permit unfair appropriation, and deny the exercise of the right of fair competition. The case at bar is an illustration of such an attempted perversion of the doctrine of unfair trade."

Globe-Wernicke Co. v. *Fred Macey Co.*, 119 Fed. 696 (C. C. A. 6), cert. denied 194 U. S. 634, illustrates the same princi[illegible] In that case, the court refused to enjoin as unfair competition the sale by the defendant of sectional bookcases, identical in appearance with those made by the plaintiff, on the ground that no one could secure the exclusive right to manufacture an article in its most desirable or characteristic form.

The *Marvel* and *Globe-Wernicke* cases, *supra*, were relied upon in *Daniel* v. *Electric Hose & Rubber Co.*, 231 Fed. 827 (C. C. A. 3) to deny an injunction against the sale by the defendant of rubber hose with longitudinal corrugations. Such fluted hose had been protected by an expired patent and for many years subsequent to the expiration of the patent plaintiff had been the only maker of such hose. Although rubber hose could clearly be made in some other form, the court held that the corrugations were useful and functional and therefore not subject to exclusive appropriation by anyone. In this connection the court stated (pp. 833-834):

"* * * The testimony being clear that the longitudinal corrugations on the tube are useful and functional, the authorities * * * are clear that such use-

> ful features are common property, may be made by any manufacturer of such an article, and cannot be appropriated as a trade-mark. Where the article itself is one which any one of common right may make, no person by making that article for any period of time—no matter for how long—can convert that article itself into a trade-mark and thereby acquire an exclusive right to make it in perpetuity. To allow this would be to destroy the 17-year limitation of the patent system. The purpose of a trade-mark is, as its name signifies, to provide a mark for an article in which one trades. It is the evidence of the article's genuineness, but is not the article itself.'"*

See also *Rathbone, Sard & Co.* v. *Champion Steel Range Co.*, 189 Fed. 26 (C. C. A. 6), *P. Lorillard Co.* v. *Peper*, 86 Fed. 956 (C. C. A. 8), cert. denied 171 U. S. 690, *Edward Hilker Mop Co.* v. *United States Mop Co.*, 191 Fed. 613 (C. C. A. 6), *Crescent Tool Co.* v. *Kilborn & Bishop Co.*, 247 Fed. 299 (C. C. A. 2), *Maytag Co.* v. *Meadows Mfg. Co.*, 35 F. (2d) 403 (C. C. A. 7), cert. denied 281 U. S. 737, 283 U. S. 843, and *Pope Automatic Merchandising Co.* v. *M'Crum-Howell Co.*, 191 Fed. 979, 982 (C. C. A. 7), cert. denied 223 U. S. 730, in the last of which cases the court pointed out that if the plaintiff could secure, not by a patent but by an unfair trade suit, the exclusive right to manufacture an article in its most desirable form, "he would be given gratuitously a monopoly more effective than that of the unobtainable patent in the ratio of eternity to 17 years."

Clearly, the pillow-shaped form—the unadorned product of the patent-expired machinery—is not a "mere matter of dress"; it is not simply an ornamental design adopted by the respondent to distinguish its goods from those of others. To the contrary, it is an essential feature

---

* This opinion, written by Judge Buffington, affirmed the District Court decision of Judge Thompson. Both Judge Buffington and Judge Thompson ruled to the contrary in the case at bar without distinguishing or even mentioning their earlier decisions.

of any commercially marketable biscuit (R. 2, pp. 114 1144; see pp. 57-58, *supra*). Under these circumstance the authorities above cited are controlling that no abs lute injunction against use of the form can be grante since to do so would be to deprive petitioner of it substantial right to compete and to grant respondent perpetual monopoly in the sale of this product. As Judg Learned Hand pointed out in *Shredded Wheat Co.* v *Humphrey Cornell Co., supra,* "Under the guise of pro tecting against unfair competition, we must be jealous no to create perpetual monopolies" (250 Fed. at p. 964).*

Furthermore no limited form of injunction, such as that granted in the *Humphrey Cornell* case, can be justified here. As has previously been stated, the Circuit Court of Appeals for the Second Circuit in that case denied the respondent all relief with respect to biscuits reaching the last purchaser in cartons, even though the defendant's biscuits were identical in size and appearance with respondent's biscuits. The decree did require that all biscuits reaching the last purchaser outside of their cartons in restaurants and lunch rooms must bear a letter, cross or other plain symbol impressed in their substance, or have fastened upon them a wrapping, tag or band stating that they were made by the defendant, but even this limited injunction was to be lifted if, after a six months' experimental period, defendant was unable to comply with the requirement "except at an expense which would make impossible any continued competition in the business of selling biscuits outside the carton with any assurance of reasonable profit." Judge Ward, in a dissenting opinion, expressed the view that no relief at all should be granted on the ground that the evidence showed

* See also *Canal Co.* v. *Clark,* 13 Wall. 311; *Lawrence Mfg. Co.* v. *Tennessee Mfg. Co.,* 138 U. S. 537; *Brown Chemical Co.* v. *Meyer,* 139 U. S. 540; *Elgin Nat'l Watch Company* v. *Illinois Watch Company,* 179 U. S. 665; *Standard Paint Co.* v. *Trinidad Asphalt Co.,* 220 U. S. 446; *Warner & Co.* v. *Lilly & Co.,* 265 U. S. 526.

that the form was functional and that the requirement imposed by the majority was impracticable.

At the time that this decree was entered, confusion was shown to exist in the restaurant trade because of the identity of Ross' and respondent's biscuit in appearance and size and because the use of individual cartons was then unknown. Now, however, there is no confusion because petitioner has made its product in a distinctive size and because almost all restaurants and lunch rooms use petitioner's individual two-biscuit cartons. Clearly these individual cartons are just as distinctive of the origin of petitioner's product and may no more readily be removed than a paper band or tag.

The District Court found on uncontradicted testimony, and the finding was not disputed in the court below, that the individual biscuits cannot be separately branded and that they cannot be individually wrapped or tagged except at an expense making profitable competition impossible. The various unsuccessful efforts made by the petitioner and also by The Ross Food Company so to mark and wrap their biscuits are recounted in the record and have been described above (pp. 26-27, *supra*). Their experience amply justifies the statement of the District Court that "Had the proof in this case as to marking been before the Court of Appeals in the *Ross* case the opinion of Judge Ward would doubtless have been the opinion of the Court" (R. 1, p. 221).

But slight attention need be given to respondent's contention that, since all regular-shaped biscuits must necessarily be in the pillow-shaped form and since such biscuits cannot be differentiated from respondent's product by any other means than those adopted by the petitioner, petitioner should be enjoined entirely from competing in this trade unless it markets some irregular-shaped biscuit, such as a diamond-shaped biscuit, a cone-shaped biscuit or a doughnut-shaped biscuit. Thus respondent claims a perpetual monopoly in the right to manufacture a particular

type of article on the ground that the article itself, not any of its decorative or non-functional features, is a distinctive product which the public has associated with respondent's manufacture.

The commercial impracticability of making any of the suggested biscuits is established by the evidence, a detailed analysis of which appears in Appendix A hereto (pp. 108-112, *infra*). But it is enough to say that the right to make a desirable article is not abridged because there may be some other type of article which may be equally desirable. Protection of trade from unfair practices does not extend to prevention of competition in the particular type of article for which there is a supposed or established public desire, even if this desire has been created by the complainant. *Flagg Manufacturing Co.* v. *Holway, supra.*

C. Upon the expiration of respondent's design patent covering the pillow-shaped form of biscuit, of its various patents on machinery designed to produce this form of biscuit, and of its product and process patent, during the life of which that product was known to the public only in this form, the right to make and vend the pillow-shaped biscuit was dedicated to the public.

Completely apart from the considerations adverted to above, the injunction directed to be entered by the court below is, we submit, erroneous because it proceeds in the face of the established rule that, upon the termination of a patent, there passes to the public the right to make the article covered by the patent in the form in which it was made during the patent monopoly. *Singer Manufacturing Co.* v. *June Manufacturing Co.*, 163 U. S. 169; *Shredded Wheat Co.* v. *Humphrey Cornell Co., supra; Bristol Co.* v. *Graham*, 199 Fed. 412 (C. C. A. 8); *Daniel* v. *Electric Hose & Rubber Co.*, 231 Fed. 827 (C. C. A. 3); *William H. Keller, Inc.* v. *Chicago Pneumatic Tool Co.*, 298 Fed. 51 (C. C. A. 7), cert. denied 265 U. S. 593; *J. A.*

Scriven Co. v. *Morris*, 154 Fed. 914 (D. Md.), aff'd, 158 Fed. 1020 (C. C. A. 4), appeal dismissed, 223 U. S. 742.*

The decision of this Court in *Singer Manufacturing Co.* v. *June Manufacturing Co., supra,* is the leading case on this subject. The plaintiff in that case was the original manufacturer of the celebrated Singer sewing machines. The fundamental principles according to which those sewing machines were constructed had been covered by various patents owned by the plaintiff which had expired. None of the machines, however, had been patented as a whole. After the expiration of the patents, the defendant began to market a sewing machine in exact imitation of the plaintiff's, calling it an "Improved Singer". Its conduct indicated, as this Court found, that it was intentionally striving to have its product sold as that of the plaintiff. It imitated plaintiff's machine not only in functional principle but in every detail of external appearance, even including ornamentation. Because the serial number on plaintiff's machines ran into the millions, the defendant began its serial numbers with 300,000,000. It even placed a dummy screw, serving no mechanical purpose whatever, on its machines to imitate a tension screw, still covered by a subsisting patent, which was used on plaintiff's machines. Despite the purposefully deceitful conduct of the defendant, this Court denied the plaintiff relief except to the extent of requiring the defendant to put its name on its machines.

The opinion of this Court with respect to the right of the defendant to use the name "Singer" is discussed

* See also *Warren Featherbone Co.* v. *American Featherbone Co.*, 141 Fed. 513 (C. C. A. 7); *Rice-Stix Dry Goods Co.* v. *J. A. Scriven Co.*, 165 Fed. 639 (C. C. A. 8), cert. denied 212 U. S. 582; *Yale & Towne Manufacturing Co.* v. *Ford*, 203 Fed. 707 (C. C. A. 3); *National Lock Washer Co.* v. *Hobbs Mfg. Co.*, 210 Fed. 516 (D. Mass.); *The Singer Manufacturing Company* v. *Loog*, L. R. 8, App. Cases 15 (House of Lords); *The Cellular Clothing Company* v. *Maxton & Murray*, [1899] A. C. 326, 16 R. P. C. 397.

in Point III, *infra*. What is important here is the fact that, although the plaintiff had no patent on any of its machines as a whole, although the defendant purposefully imitated the appearance of plaintiff's machines, including many purely ornamental features, and although the likelihood of public deception was entirely clear, no injunction was granted because the form of defendant's product was the form in which plaintiff's product was made during the life of the patents. In this connection the Court said (p. 185):

> "It is self evident that on the expiration of a patent the monopoly created by it ceases to exist, and the right to make the thing formerly covered by the patent becomes public property. It is upon this condition that the patent is granted. It follows, as a matter of course, that on the termination of the patent there passes to the public the right to make the machine in the form in which it was constructed during the patent. We may, therefore, dismiss without further comment the complaint, as to the form in which the defendant made his machines."

Respondent's claim of exclusive right to use the pillow-shaped form cannot withstand the application of these decisions. This form was protected by a design patent, it was the form in which shredded wheat was made and known to the public during the life of the basic product and process patent, and the respondent held various other patents covering improvements in the machinery for making shredded wheat which, as shown in the patent specifications, were designed to produce only the pillow-shaped biscuits. The effect of the decree below, for all practical purposes, is to extend the life of these expired patents to eternity.

The court below declined to apply the doctrine of the *Singer* case because of the fact that in 1908, a year before its expiration, respondent's design patent No. 24,688 was held invalid by Judge Kohlsaat in *Natural Food Company*

v. *Bulkley*, No. 28,530, N. D. Ill., East. Div. (P. Ex. 273). This ruling, we submit, misconceives the fundamental principle of the *Singer* rule.

The fact is that respondent successfully asserted exclusive rights to the design of the biscuit during the entire term of the patent and for some time thereafter by printing prominently upon its packages until 1915 a notice that the biscuits were protected thereby (see p. 9, *supra*). As the District Court stated in this connection (R. 1, p. 197), "By its professions and conduct plaintiff secured a monopoly not for fourteen years but actually for twenty years."

The authorities are clear that under these circumstances respondent cannot now be heard to say that the design of its biscuit was not in fact protected by patent. *Collis Co.* v. *Consolidated Machine Tool Corporation*, 41 F. (2d) 641 (C. C. A. 8), cert. denied 282 U. S. 886; *Horlick's Food Co.* v. *Elgin Milkine Co.*, 120 Fed. 264 (C. C. A. 7).

In the *Collis* case, *supra*, the doctrine of the *Singer* case was held to be applicable to an article which the plaintiff had sold under the claim of patent protection, even though it was not clear that plaintiff's product was actually the article covered by the patent. In this connection, the court said (pp. 644-645):

> "But it is further contended that the tool as in fact manufactured by the plaintiff was not and is not the device covered by the Davis patent. It appears by the record in this case that this identical tool was for seventeen years manufactured and sold under the protection of the Davis patent. In fact, the tool itself falsely bore evidence that it was patented for at least one year subsequent to the expiration of the patent; and continuously up to the time of the commencement of this action the advertisements of the plaintiff and its predecessor indicated that it was protected by patent. The plaintiff, having enjoyed the benefits of the monopoly protected by this patent, cannot consistently now be heard to say that in fact the device manufactured and sold by it was not the

device so patented. *Sproull* v. *Pratt & Whitney Co.* (C. C.) 97 F. 807. There is an intimation in the record that the defendant's delay in commencing the manufacture of its chuck precluded it from invoking the doctrine announced in *Singer Manufacturing Company* v. *June Manufacturing Company, supra,* but it should be observed in this connection that during all this time the plaintiff and its predecessor were, through their advertisements, falsely representing that this device was protected by patent. It is not in the mouth of the plaintiff, therefore, to urge that the defendant should earlier have discovered its deception or fraud. To permit plaintiff so to do would allow it to take advantage of its own wrong."

A similar ruling was made in *Horlick's Food Co.* v. *Elgin Milkine Co., supra,* where the court stated (pp. 266-267):

"It matters not, in our judgment, that the patent may not have been in fact valid; nor that the product, —malted milk—could not in fact have been covered by the description of the patent. The point is, that appellant chose to mark its product as if it were a monopoly, thereby obtaining, measurably at least, the benefit of a monopoly; and gave to it a name, that became the generic name of the supposed monopoly. The case is thus brought, in our judgment, within the principle, if not the exact facts, of *Singer Mfg. Co.* v. *June Mfg. Co.,* 163 U. S. 169, 16 Sup. Ct. 1002, 41 L. Ed. 118, and must be ruled accordingly."

Furthermore, the *Singer* doctrine would be applicable to the case at bar even had no design patent ever existed. The rule of the *Singer* case is that upon the expiration of a patent there passes to the public the right to use not only the article as described in the specifications of the patent but also the characteristic form in which it became known to the public during the patent monopoly. This rule is the necessary result of the right of the public to the full enjoyment of the patented product since, unless

the competing article can be recognized by the public to be the same article as that protected by the patent, the right to make and vend it would be of little value. The rule is based upon the same considerations as the doctrine, discussed at pages 95-103, *infra*, that upon the expiration of a patent, the public may use the generic name by which the article was known during the patent period.

Respondent's basic patent, which expired in 1912, was upon the product shredded wheat and upon the process of its manufacture (see p. 8, *supra*). During the life of this patent, shredded wheat became known to the public in the form of the pillow-shaped shredded wheat biscuit. Upon the expiration of this basic patent, therefore, the public had a right to make and vend the pillow-shaped biscuit even though this particular form of the product was not disclosed in the specifications of the basic patent. Indeed, this was the exact situation in the *Singer* case, where, as has been pointed out, the patents extended only to the fundamental principles of the sewing machines and not to the machines as a whole.

Moreover, even apart from the design patent and the product and process patent, petitioner is clearly entitled under the *Singer* case to make and vend the pillow-shaped biscuit because some eight patents were held by respondent covering improvements in machinery for the production of shredded wheat biscuits which, as shown in the patent specifications, were designed to produce this particular form of product (see p. 8, *supra*). Clearly, upon the expiration of those patents, the machinery, as disclosed, could be employed by anyone to produce the article which that machinery was designed to produce.

Respondent seeks to avoid application of the *Singer* doctrine on the further ground that it has enjoyed the exclusive use of the form for many years since the expiration of its patents. This contention again, we submit, involves a misunderstanding of the *Singer* rule. The essence

of that rule is that the 17-year patent monopoly is granted upon the condition that at the end of that period all exclusive rights to the article cease. The patented product thereafter belongs in the public domain and no period of exclusive use can withdraw it therefrom. As this Court said in *Saxlehner* v. *Eisner & Mendelson Co.*, 179 U. S. 19, 36, "The right to individual appropriation once lost is gone forever."

The same contention now made by the respondent was made in *Daniel* v. *Electric Hose & Rubber Co.*, 231 Fed. 827 (C. C. A. 3). The reply there given by the court is, we submit, unanswerable. After stating what has been quoted above (p. 63) that "Where the article itself is one which anyone of common right may make, no person by making that article for any period of time—no matter how long—can convert that article itself into a trade-mark and thus acquire an exclusive right to make it in perpetuity", the court continued (p. 834):

> "* * * Indeed, in the last analysis the whole case of the plaintiff rests on the unwarranted assumption that, by being for some years the maker and vender of a patent-expired article, it thereby could acquire and had acquired an exclusive and perpetual right to make it. Were this the law, it would follow that if Mayall, after the expiration of his patent, had been the only maker of his hose for some years following, he could by his own act turn his patent, which the law limited to 17 years, into a perpetual patent."*

---

* As will be pointed out below (pp. 99-101, *infra*), the same principle applies to the generic name of a patent-expired article. Even though such a generic name be used exclusively by the plaintiff for a long period of years after the expiration of its patent, this will not withdraw it from the public domain. *Centaur Co.* v. *Heinfurter*, 84 Fed. 955 (C. C. A. 8); *Collis Co.* v. *Consolidated Machine Tool Corporation*, 41 F. (2d) 641 (C. C. A. 8), cert. den. 282 U. S. 896; *Saxlehner* v. *Eisner & Mendelson Co.*, *supra*.

POINT III.

The Use by Petitioner of the Words "Shredded Wheat" as Part of the Designating Phrase "Kellogg's Shredded Whole Wheat Biscuit" Does Not Constitute Trade-Mark Infringement or Unfair Competition.

The injunction directed to be issued by the court below enjoins petitioner from using "the name 'Shredded Wheat' as its trade name" (R. 3-A, p. 2286).* Just as that portion of the decree discussed in Point II grants a monopoly in the form irrespective of the name, so this portion of the decree grants a monopoly in the name irrespective of the form.

Since it is clear from the record, as previously analyzed (pp. 36-38, *supra*), that petitioner's use of the words "shredded wheat" has not induced the sale of petitioner's biscuits as respondent's goods, respondent is not entitled to an injunction against such use (see Point I, *supra*).

But even apart from this basic consideration, it is entirely clear that "shredded wheat" is a generic and descriptive product name, which, under controlling decisions of this Court, is not subject to exclusive appropriation by anyone.

A. "Shredded wheat" is the descriptive, generic and only name of the article.

The words "shredded wheat" have been used constantly and consistently as the generic and only name of the well known pillow-shaped breakfast food. Indeed, the

---

* Petitioner has designated its biscuits "Kellogg's Whole Wheat Biscuit" and "Kellogg's Shredded Whole Wheat Biscuit". It is assumed, however, that the meaning of the decree below is to enjoin petitioner from using any combination of the two words "shredded" and "wheat" as part of the identifying name of its product.

article cannot be described or differentiated from other wheat biscuits without using the words "shredded wheat" any more than condensed milk can be described or distinguished from other milk products without using the word "condensed". Under these circumstances the law is entirely clear that petitioner may use the name of the article which it produces so long as it clearly indicates that its goods thus named and described are its products and not products of the respondent.

Perhaps the most persuasive evidence that the words shredded wheat are both descriptive and generic is found in the patents of Henry D. Perky, originator of the product and founder of respondent's business, and in other patents owned by respondent. Required to describe the process of manufacture for which patent rights were sought, Perky consistently stated that the fundamental principle of his invention was the reduction of whole wheat grain to "shredded form", "shred-like form", or to "shreds" by forcing the grain through "shredding rolls", "shredding devices", "grain shredding machines" or simply "shredders". One of his inventions was stated to relate "to machines for cutting shredded wheat and other food preparations into regular and uniform sections", another to have as its objective "to provide a cracker of filamentous or shredded wheat or other grain".* Similarly,

* See the following Perky Patents: No. 520,496 (R. 5, p. 5), No. 532,286 (R. 5, p. 11), No. 532,480 (R. 5, p. 15), No. 532,481 (R. 5, p. 21), No. 532,697 (R. 5, p. 25), No. 532,698 (R. 5, p. 29), No. 533,551 (R. 5, p. 33), No. 533,552 (R. 5, p. 37), No. 533,553 (R. 5, p. 41), No. 533,554 (R. 5, p. 45), No. 533,555 (R. 5, p. 49), No. 548,086 (R. 5, p. 59), No. 571,284 (R. 5, p. 65), No. 598,745 (R. 5, p. 77), No. 614,838 (R. 5, p. 81), No. 618,288 (R. 5, p. 87), No. 667,892 (R. 5, p. 91), No. 678,127 (R. 5, p. 109), No. 678,625 (R. 5, p. 121), No. 681,656 (R. 5, p. 135), No. 718,795 (R. 5, p. 169), No. 797,604 (R. 5, p. 201). Quotations from these patents appear in the appendix to petitioner's first petition for certiorari, pp. 28-33.

in the Burbank, House and Webster patents, owned by respondent, the terms "shredded wheat" and "shredded wheat biscuit" are used generically without suggestion that they are trade-names (R. 5, pp. 161, 281-282, 309).

Thus those who invented the process and the product named the product shredded wheat or shredded wheat biscuit. Neither the shreds of wheat nor the biscuit have been known by any other name.

Respondent itself has continually used "shredded", "shredded wheat" and "shredded wheat biscuit" in a descriptive and generic sense on its cartons and in its advertising and has consistently sought to impress upon the public that the particular virtue of its biscuit results from the shredding process and that it is a shredded wheat biscuit. Thus it has repeatedly stated that its biscuit is "made light and short by mechanical shredding", that it is made digestible by "steam cooking, shredding and baking", that "the crispness of its shreds promotes thorough mastication", that "It's All In The Shreds", that its product is "The Original Shredded Wheat" and that "Any other shredded wheat * * * is merely a poor imitation of the only Original Shredded Wheat." Millions of booklets entitled "Shreds of Life" and "Health in Every Shred" have been distributed. Millions of newspaper and periodical readers have been told that respondent's biscuit is whole wheat "shredded and baked", that it is in the form of "crisp, oven-baked shreds", and that Triscuit, a compressed shredded wheat cracker marketed by respondent, is a "shredded wheat toast", "shredded wheat wafer", and a "shredded whole wheat cracker".

The foregoing and other typical excerpts from respondent's cartons and advertisements have been quoted and discussed at pages 12-16, *supra*; further repetition is unnecessary here. It suffices that the effect of all this advertising, as stated by Colonel DeWeese, respondent's former advertising manager, has been to make shredded wheat "a sort of household word, as if one would speak

of starch or potatoes as differentiated or distinguished from proprietary foods like Grape-Nuts or Mello-Wheat" (see p. 15, *supra*). Needless to say, household words like starch, potatoes or shredded wheat cannot be appropriated as a trade-mark by anyone.

On a similar record, the Privy Council in *Canadian Shredded Wheat Co., Ltd.* v. *Kellogg Co. of Canada, Ltd., and another*, p. 136, *infra*, concluded that "The plaintiff company [respondent's Canadian subsidiary] was in fact using the words shredded wheat to indicate the thing, not the manufacturer, to indicate the stuff of which the biscuits were composed, not who made them." And in the *British Trade-Mark Case* (p. 146, *infra*) the English Court of Appeal reached the same conclusion from a consideration of the cartons and advertisements of respondent's English subsidiary, which were similar to those of respondent, stating: "The carton is wholly inconsistent with the possibility of the words 'Shredded Wheat' having up to 1926 become the Respondents' trade mark and distinctive of their goods. A considerable mass of advertisements issued by the Respondents was in evidence; and so far from those advertisements indicating that prior to 1926 the words 'Shredded Wheat' were used by the Respondents as a trade mark those advertisements confirm the evidence of the carton that the Respondents used the words 'Shredded Wheat' as the name of the product." Indeed, on the appeal of that case, respondent's counsel specifically abandoned any contention that the words did not have direct reference to the character or quality of respondent's product (p. 144, *infra*).

Equally cogent evidence of the descriptive and generic nature of the name of respondent's product is furnished by respondent's trade-mark registrations. Its trade-mark registration No. 89,071 (R. 4, p. 199) on the picture of its factory states that the mark had been adopted for "shredded wheat, in class 46, Foods and ingredients of foods" and expressly disclaims the descriptive words

"The Home of Shredded Wheat". Similarly, respondent's registration No. 85,186 of an alleged trade-mark showing one shredded wheat biscuit in a dish with a spoon and milk or cream (R. 4, p. 197) contains the disclaimer: "no claim being made to the representation of a shredded wheat biscuit".

Earl T. Oakes, respondent's chief chemist and former production manager of the Shredded Wheat Bakeries, in describing the process of manufacturing the biscuits, used the words "shreds", "shredded", "shredding", "shredders", "reshredded", "re-shredding", "shredded wheat" and "shredded whole wheat" in a descriptive sense more than eighty times in some thirty-five pages of testimony (R. 1, pp. 259-294). The testimony of Edwin L. Wallace, managing director of respondent's English plant (R. 1, pp. 316-324), is to the same effect as that of Oakes in this respect.

But perhaps the ultimate test of the nature of the words as descriptive or generic is the manner in which they are used by the public. One of respondent's witnesses, a wholesale grocer, testified (R. 1, pp. 666-667, 669):

> "* * * If anybody asked me what a shredded wheat biscuit was, I would describe it as a pillow-shaped biscuit, made out of whole wheat in shredded form. When I speak of being familiar with shredded wheat, I mean that type of biscuit, a shredded whole wheat biscuit in pillow-shaped form. * * *
>
> "I know that the current name of a product like Uneeda Biscuit is soda cracker and rolled oats is oat-meal. There could not be any other name than shredded wheat biscuit or shredded wheat to describe Shredded Wheat, that product. Any other name that could be used for this whole wheat biscuit would not describe it, but shredded wheat or shredded wheat biscuit does describe it exactly.
>
> "* * * As I understand, there are two brands of shredded wheat biscuit. I wish to be understood as testifying that Kellogg is making a shredded wheat biscuit similar to the Shredded Wheat."

Witness after witness testified to the same effect. Wholesale grocers, retail grocers and consumers alike used the words shredded wheat in a generic sense, described the article as made of wheat which has been shredded, and stated that they knew of no other name for the article than shredded wheat or shredded whole wheat. References to the testimony of over one hundred of these witnesses is contained in the footnote.* For the convenience of the Court typical excerpts from this testimony, each of which could be multiplied almost indefinitely, are set forth in Appendix D, pages 121-125, *infra*.

More than a score of witnesses testified that whole wheat biscuit might be any one of several kinds of biscuit and unless it was called shredded whole wheat biscuit no one would know what it was (see p. 24, *supra*).

The same usage is found in governmental and institutional invitations for bids. These invitations to bid call for both petitioner's "Whole Wheat Biscuit" and respondent's biscuit under names such as "Shredded Wheat", "Wheat, shredded" and "Whole Wheat, Shredded"; they frequently specify that the wheat must be "drawn into fine shreds, formed and baked in oblong biscuits" (see p. 34, *supra*).

In addition to all this evidence, it should be noted that respondent in effect admitted the generic and descriptive nature of the name by its attempted registration of

* R. 1, pp. 302, 345, 351, 352, 354, 361, 370, 372, 386, 400, 403, 404, 408, 413, 415, 419, 420, 422, 425, 426; 430, 434, 436, 439, 441, 445, 449, 454, 457, 458, 462, 463, 465, 471, 473, 478, 488, 511, 518, 521, 526, 529, 530, 536, 544, 547-548, 617, 628, 631-632, 637, 646, 666, 682, 697-698; R. 2, pp. 704-705, 722, 730, 733, 740, 749-750, 788, 794, 799, 803-804, 816, 822-824, 833, 842, 851, 863, 880, 887, 894, 903, 909, 929, 962, 984-985, 1134, 1181, 1197, 1211-1212, 1216, 1226, 1231, 1238, 1241, 1245, 1249, 1259, 1263, 1264, 1273, 1275, 1292-1293, 1298, 1306, 1348, 1352, 1353, 1367; R. 3, pp. 1388, 1396-1398, 1422, 1459, 1464, 1501-1502, 1542-1543, 1615, 1618, 1656, 1741, 1754, 1760, 1796, 1802, 1816, 1881.

"Shredded Whole Wheat" as a trade-mark under the so-called ten-year clause of the Trade-Mark Act of 1905, which registration was refused in *Natural Food Co. v. Williams*, 30 App. D. C. 348 (see pp. 10-11, *supra*). This Act provides for the registration of distinctive marks no matter how long used, but prohibits the registration of non-distinctive marks unless used exclusively by the applicant or its predecessors for ten years prior to 1905. Filing of the application under the ten-year clause, therefore, was a clear admission that the words are not a technical trade-mark capable of exclusive appropriation at common law (*Thaddeus Davids & Co. v. Davids*, 233 U. S. 461, 465) but are, in the words of the statute, "descriptive of the goods with which they are used, or of the character or quality of such goods" (33 Stat. 725, ch. 592, 15 U. S. C. A. § 85).

The same is true with respect to respondent's two registrations of "Shredded Wheat" as a trade-mark under the Act of 1920 (see pp. 11-12, *supra*). This Act (41 Stat. 533, 15 U. S. C. A. § 121) provides for the registration of marks which are not capable of registration under the 1905 Act. Registration under the 1920 Act, therefore, like registration under the ten-year clause of the 1905 Act, is an admission that the words registered are not distinctive or capable of exclusive appropriation as a common law trade-mark, but are descriptive or generic or both.

It should be noted that registration under the 1920 Act, unlike that under the 1905 Act, creates no presumption of validity or ownership. The purpose of allowing registration of descriptive and generic words under the 1920 Act was to enable manufacturers to comply with legislation in foreign countries, which necessitates registration in the United States as a necessary prerequisite to foreign registration. The 1920 Act has no effect on the domestic rights of anyone. *Charles Broadway Rouss, Inc. v. Winchester Co.*, 300 Fed. 706 (C. C. A. 2), cert. den. 266 U. S.

607; *Kellogg Company* v. *National Biscuit Company*, 71 F. (2d) 662 (C. C. A. 2).

Finally, the descriptive nature of the name shredded wheat has been the subject of judicial determination. In *Natural Food Co.* v. *Williams, supra*, the Court of Appeals for the District of Columbia, refusing respondent's application for registration of "Shredded Whole Wheat" under the ten-year clause of the 1905 Act, expressly declared that these words "accurately and aptly describe an article of food" and that "they are descriptive within the meaning of the statute". The same ruling was made, on a record similar to that in the case at bar, by two Canadian courts and by the Privy Council in *Canadian Shredded Wheat Company, Ltd.* v. *The Kellogg Co. of Canada, Ltd. and another*, page 125, *infra*, and by the English Court of Appeal in the *British Trade-Mark Case*, page 143, *infra*.*

The court below, in its opinion on reargument, disregarded all of the proof, admissions and authorities adverted to above and held that, because the wheat is rolled or mashed rather than cut or torn during the process of manufacture, the name "Shredded Wheat" is not descriptive but at most merely suggestive (R. 3-A, p. 2086). This ruling is, we submit, based on the false premises that descriptive words are only such as describe the process of manufacture rather than the product itself, that the descriptiveness of words is to be tested by their strict etymological meaning rather than by the meaning established by common usage and understanding, and that "shredded" means only something which has been torn or cut.

---

* The opinions in the *Natural Food Company* and *Canadian Shredded Wheat Company* cases, as well as the opinion of the Circuit Court of Appeals for the Second Circuit in the *Humphrey Cornell* case, consistently use the words shredded wheat and shredded wheat biscuit in a generic and descriptive sense. See also *Sanitas Nut Food Co.* v. *Voigt*, 139 Fed. 551 (C. C. A. 6).

In support of its position respondent cited to the court below several dictionary references to prove that the verb "shred" means to tear or to cut into small strips. If this were a battle of lexicons we could refer to the Century and Oxford dictionaries as defining the word "shredded" by describing the product shredded wheat. See also Webster's International Dictionary. But this case does not turn upon etymological accuracy but rather upon the primary descriptive sense in which the words used are understood by the public. *Computing Scale Co.* v. *Standard Computing Scale Co.*, 118 Fed. 965, 969 (C. C. A. 6); *Brooten* v. *Oregon Kelp Ore Products Co.*, 24 F. (2d) 496, 497 (C. C. A. 9); *Pennsylvania Salt Manuf'g Co.* v. *Myers*, 79 Fed. 87, 89-90 (E. D. Mo.); *Parsons Bros. & Co.* v. *John Gillespie & Co.*, 15 R. P. C. 57, 61 (Privy Council). "A word means what people understand it to say and there is an end of it." *Coty* v. *LeBlume Import Co.*, 292 Fed. 264, 266 (S. D. N. Y.).

The significant fact, therefore, is that the respondent has consistently described its process as shredding and its product as shredded and the public has come to understand that the biscuits are made of shredded wheat. Of the multitude of witnesses who were asked to state their conception of the nature of respondent's product, all but one testified that they considered it to be a biscuit consisting of wheat which had been shredded.* For purposes of this case, therefore, the process of manufacturing the biscuits must be taken to be a shredding process. *Kellogg Toasted Corn Flake Co.* v. *Quaker Oats Co.*, 235 Fed. 657, 660 (C. C. A. 6); *Franklin Knitting Mills, Inc.* v. *Fashionit Sweater Mills, Inc.*, 297 Fed. 247, 248 (S. D. N. Y.), aff'd without opinion, 4 F. (2d) 1018 (C. C. A. 2).

---

* The only exception was James F. Bell (R. 2, pp. 949-950), president of one of petitioner's large competitors, who testified that he would call the biscuit a vermicelli-formed wheat product rather than a shredded wheat product.

The court below was clearly in error in holding that descriptive words are only those which describe the process of manufacture and not those which describe the product itself. The language of the Trade-Mark Act of 1905 is directly contrary to this ruling. That statute forbids registration of words which "are descriptive of the goods with which they are used, or of the character or quality of such goods" (33 Stat. 725, 15 U. S. C. A., § 85). Innumerable words have been held to be descriptive which aptly describe the product but which have no reference to the process of its manufacture. See, *e. g., Standard Paint Co.* v. *Trinidad Asphalt Co.*, 220 U. S. 446 ("Ruberoid"); *Beckwith* v. *Commissioner of Patents*, 252 U. S. 538 ("Moistair Heating System"); *Computing Scale Co.* v. *Standard Computing Scale Co., supra* ("Computing"); *Marvel Co.* v. *Pearl*, 133 Fed. 160 (C. C. A. 2) ("Whirling Spray"); *McKesson & Robbins, Inc.* v. *Phillips Chemical Co.*, 53 F. (2d) 342, 1011 (C. C. A. 2) ("milk of magnesia"). In *Parsons Bros. & Co.* v. *John Gillespie & Co., supra*, "Flaked Oatmeal" was held to be descriptive of oatmeal in the form of flakes, though made by a process of rolling or crushing. And in *Coty* v. *LeBlume Import Co., supra*, the word "Origan" was held to be descriptive of a perfume having the scent known by that name, even though containing no origan.

There can be no dispute that shredded wheat is made of shreds of wheat and is accurately and aptly described as shredded wheat. This has been the assertion of respondent for over forty years and is the universal understanding of the public.

The court below in holding that the term "shredded wheat" is not descriptive relied in part upon the registration of the term under the trade-mark laws of various states and foreign countries (R 3-A, p. 2087). Mere registration under state laws has no evidentiary significance because in none of the states is there any such

procedure as that followed by the Patent Office to examine the character and validity of the trade-mark itself.* Wherever there has been responsible consideration and determination of the question the term has been held to be descriptive and generic. *Natural Food Co.* v. *Williams*, 30 App. D. C. 348; *Canadian Shredded Wheat Co., Ltd.* v. *The Kellogg Co. of Canada, Ltd. and another*, p. 125, *infra*; *British Trade-Mark Case*, p. 143, *infra*.

B. Since "shredded wheat" is the descriptive, generic and only name of the article, no injunction may be granted against its use by the petitioner.

A trade-mark is "a distinctive mark of authenticity, through which the products of particular manufacturers * * * may be distinguished from those of others. It may consist in any symbols or in any form of words, but as its office is to point out distinctively the origin or ownership of the articles to which it is affixed, it follows that no sign or form of words can be appropriated as a valid trade mark, which from the nature of the fact conveyed by its primary meaning, others may employ with equal truth, and with equal right, for the same purpose." *Elgin Nat'l Watch Co.* v. *Illinois Watch Co.*, 179 U. S. 665, 673. See also *Canal Co.* v. *Clark*, 13 Wall. 311, 323-324; *Manufacturing Co.* v. *Trainer*, 101 U. S. 51, 53-54; *Lawrence Manufacturing Co.* v. *Tennessee Manufacturing Co.*, 138 U. S. 537, 546; *Brown Chemical Co.* v. *Meyer*, 139 U. S. 540, 542; *Standard Paint Co.* v. *Trinidad Asphalt Co.*, 220 U. S. 446, 453; *Beckwith* v. *Commissioner of Patents*, 252 U. S. 538, 543-544; *Warner & Co.* v. *Lilly & Co.*, 265 U. S. 526, 531.

It follows that respondent's claim of trade-mark infringement is entirely without merit. The claim of exclusive right to use the product name is equally without foundation in the law of unfair competition. A descriptive

* *Derenberg, Trade-Mark Protection and Unfair Trading*, p. 477.

or generic name is entitled to protection in an unfair competition case if, and only if, (1) it has acquired a "secondary meaning", *i. e.*, it has come to signify the source of manufacture of an article rather than the article itself, and (2) it has been so used by the defendant as to cause passing off or as to create a likelihood thereof. Moreover, even if these factors be established, no absolute injunction will be granted but protection will be limited to requiring the defendant to do what petitioner has always done, namely to mark its goods so as to show that they are made by it and not by the complainant. *Canal Co.* v. *Clark*, 13 Wall. 311; *Manufacturing Co.* v. *Trainer*, 101 U. S. 51; *Goodyear Co.* v. *Goodyear Rubber Co.*, 128 U. S. 598; *Lawrence Mfg. Co.* v. *Tennessee Mfg. Co.*, 138 U. S. 537; *Brown Chemical Co.* v. *Meyer*, 139 U. S. 540; *Elgin Nat'l Watch Co.* v. *Illinois Watch Co.*, 179 U. S. 665; *Howe Scale Co.* v. *Wyckoff, Seamans & Benedict*, 198 U. S. 118; *Herring-Hall-Marvin Safe Co.* v. *Hall's Safe Co.*, 208 U. S. 554; *Saxlehner* v. *Wagner*, 216 U. S. 375; *Standard Paint Co.* v. *Trinidad Asphalt Co.*, 220 U. S. 446; *Waterman Co.* v. *Modern Pen Co.*, 235 U. S. 88; *Hanover Milling Co.* v. *Metcalf*, 240 U. S. 403; *Beckwith* v. *Commissioner of Patents*, 252 U. S. 538; *Warner & Co.* v. *Lilly & Co.*, 265 U. S. 526; *Du Pont Cellophane Co.* v. *Waxed Products Co.*, 85 F. (2d) 75 (C. C. A. 2), cert. den. 299 U. S. 601, 82 L. ed. 1041; *Reddaway* v. *Banham*, [1896] A. C. 199, 13 R. P. C. 218; *Parsons Bros. and Co.* v. *John Gillespie and Co.*, 15 R. P. C. 57; *The Cellular Clothing Co.* v. *Maxton & Murray*, [1899] A. C. 326, 16 R. P. C. 397.*

---

* See also *Computing Scale Co.* v. *Standard Computing Scale Co.*, 118 Fed. 965 (C. C. A. 6); *Hygienic Fleeced Underwear Co.* v. *Way*, 137 Fed. 592 (C. C. A. 3); *Brooten* v. *Oregon Kelp Ore Products Co.*, 24 F. (2d) 496 (C. C. A. 9); *Fawcett Publications* v. *Popular Mechanics Co.*, 80 F. (2d) 194 (C. C. A. 3); *Standard Oilshares* v. *Standard Oil Group*, 17 Del. Ch. 113, 150 Atl. 174.

The record in this case falls far short of establishing that "shredded wheat" has acquired a secondary meaning.* The doctrine of secondary meaning was first established in *Reddaway* v. *Banham, supra,* the famous "Camel-hair Belting" case. The plaintiff in that case used the word "Camel-hair" as the trade-name for its belting, which was in fact made of camel's hair but was not known by the public to be so made. The proof established that the words "did not mean in the market belting made of a particular material, but belting made by a particular manufacturer." Because the name had thus acquired a secondary meaning to the exclusion of its primary meaning, use of the name by the defendant, without distinguishing words showing the source of manufacture, would inevitably lead consumers to believe that defendant's goods were of plaintiff's make. An injunction was therefore granted, not absolutely forbidding use of the words, but restraining the defendant from using them "in such a manner as to deceive purchasers into the belief that they were purchasing belting of plaintiff's manufacture, and from thereby passing off their goods as the plaintiff's." The opinion of the House of Lords is well summarized in the words of the Lord Chancellor: "For myself, I believe the principle of law may be very plainly stated, and that is that nobody has any right to represent his goods as the goods of somebody else."**

The finding of the court below that the name "shredded wheat" has acquired a secondary meaning because "it has come to stand for the article itself" (R. 3-A, pp. 2087,

---

* Upon a similar record, the Privy Council so held in *Canadian Shredded Wheat Co., Ltd.* v. *Kellogg Co. of Canada and another,* pp. 133-140, *infra.* See also *British Trade-Mark Case,* pp. 146-147, *infra.*

** The distinction between the case at bar and *Reddaway* v. *Banham* is clearly presented in the opinion of the Privy Council in *Canadian Shredded Wheat Co., Ltd.* v. *Kellogg Company of Canada and another,* at pp. 140-141, *infra.*

2089) reveals an extraordinary misconception. The fact is that it has always stood for the article itself and in no sense as indicating its source. It is purely a product name and cannot serve as a mark indicating manufacture by respondent. The proof in this case, as analyzed above (pp. 74-78, *supra*), shows that, although during respondent's former monopoly shredded wheat was generally known as respondent's product so long as it was the only manufacturer, these words were always used as the only name of the product and retained their primary meaning as the only product name. As the Privy Council stated in the *Canadian Shredded Wheat Company* case (p. 139, *infra*), it would "be passing strange if they had acquired such a [secondary] meaning, for it would be a meaning directly contrary to the sense in which those words had been put forward to the public by the plaintiff company in its cartons and advertisements."*

Secondary meaning is not established by mere proof that during respondent's monopoly shredded wheat was used by consumers to denote its biscuit, because there was then no other shredded wheat product to which those words could apply. This is made entirely clear

* In the *British Trade-Mark Case* (p. 146, *infra*) the court stated: "The new evidence brought before this Court thus makes it, in our judgment, reasonably clear that up to 1926 the words 'Shredded Wheat' were not used by the Respondents as distinctive of their goods but were used by the Respondents as the name of the product. It was not suggested that the product made according to Perky's patents was ever known by any name but that of 'Shredded Wheat' and since 'Shredded Wheat' was thus used as the name of the product clear evidence would be required to establish that a secondary distinctive meaning had been acquired by the word. Furthermore it is not easy to see how such a distinctive meaning could have come into being unless there were rival producers of the same article in the market. There was no evidence that any such rivals were in the market, at all events to any substantial extent, before the 5th March, 1929."

in the leading case of *The Cellular Clothing Company* v. *Maxton & Murray, supra,* where a similar situation was involved. During the course of his opinion in the House of Lords, Lord Davey made the following statement, which has since been repeatedly quoted (16 R. P. C. at 409, 410):

> "The other observation which occurs to me is this, that where a man produces, or invents if you please, a new article, and attaches a descriptive name to it, a name which, as the article has not been produced before, has of course not been used in connection with the article, and secures for himself either the legal monopoly or a monopoly in fact of the sale of that article for a certain time, the evidence of persons who come forward and say that the name in question suggests to their minds and is associated by them with the Plaintiffs' goods alone, is of a very slender character, for this very simple reason because the Plaintiff was the only maker of the goods during the time that his monopoly lasted, and therefore there was nothing to compare with it, and anybody who wanted the goods had no shop to go to, and no merchant or manufacturer to resort to except the Plaintiff. Of course, my Lords, that is a matter of express decision in the case of a Patent. If a man invents a new article and protects it by a Patent, then, during the term of the Patent, he has of course a legal monopoly, but when the Patent expires all the world may make the article, and if they may make the article they may say that they are making the article, and for that purpose use the name which the Patentee has attached to it during the time when he had the legal monopoly of the manufacture. But, my Lords, the same thing in principle must apply where a man has not taken out a Patent, as in the present case, but has a virtual monopoly because other manufacturers, although they are entitled to do so, have not in fact commenced to make the article. He brings the article before the world, he gives it a name descriptive of the article—all the world may make the article, and all the world may tell the public what article it is they make, and for that purpose they may *prima facie* use the name by which the article is known in the market."

See also *Parsons Bros. & Co.* v. *John Gillespie & Co.*, 15 R. P. C. 57 (Privy Council); *Kellogg Toasted Corn Flake Co.* v. *Quaker Oats Co.*, 235 Fed. 657 (C. C. A. 6); *Fels* v. *Christopher Thomas & Brothers, Ltd.*, 21 R. P. C. 85; *S. Chivers & Sons* v. *S. Chivers & Co., Ltd.*, 17 R. P. C. 420.

But even if secondary meaning were established, respondent would be entitled to no relief unless it were also shown that petitioner had so used the words as to cause purchasers to believe that its product was of respondent's manufacture, and then only to the extent of requiring petitioner to mark its goods so as clearly to indicate that it is the manufacturer. See authorities cited at page 84, *supra*. The record shows (pp. 22-25, 36, *supra*) that the petitioner has always marketed its biscuit under its own distinctive name and in its own distinctive cartons, and that no purchaser seeing its cartons or its product has been or could be deceived as to their origin.* Irrespective of "secondary meaning", therefore, respondent's case is utterly lacking in factual foundation.

The basic rule is well stated in *Saxlehner* v. *Wagner*, 216 U. S. 375. In that case the plaintiff, who sold mineral water under the name "Hunyadi Janos", sought to enjoin the defendant from marketing a non-mineral water, similar in taste, under the name "W. T. Wagner's Sons Artificial Hunyadi Janos". This Court, holding that the name "Hunyadi" was the generic name of natural water of a

* The criterion of deception is, of course, whether ordinary attention by the purchaser would enable him at once to distinguish the products. *McLean* v. *Fleming*, 96 U. S. 245; *Howe Scale Co.* v. *Wyckoff, Seamans & Benedict*, 198 U. S. 118; *Columbia Mills Company* v. *Alcorn*, 150 U. S. 460. Deception of the indifferent or careless, even if it were shown, would be immaterial. *P. Lorillard Co.* v. *Peper*, 86 Fed. 956 (C. C. A. 8), cert. den. 171 U. S. 690; *Postum Cereal Co.* v. *American Health Food Co.*, 119 Fed. 848 (C. C. A. 7); *Jamieson & Co.* v. *Jamieson*, 15 R. P. C. 169.

certain type coming from Hungary, refused relief. Mr. Justice Holmes stated (216 U. S. at pp. 380-381):

> "We see no reason for disturbing the finding of the courts below that there was no unfair competition and no fraud. The real intent of the plaintiff's bill, it seems to us, is to extend the monopoly of such trade-mark or trade name as she may have to a monopoly of her type of bitter water, by preventing manufacturers from telling the public in a way that will be understood what they are copying and trying to sell. But the plaintiff has no patent for the water, and the defendants have a right to reproduce it as nearly as they can. They have a right to tell the public what they are doing and to get whatever share they can in the popularity of the water by advertising that they are trying to make the same article and think that they succeed. If they do not convey, but, on the contrary, exclude the notion that they are selling the plaintiff's goods, it is a strong proposition that when the article has a well-known name they have not the right to explain by that name what they imitate. By doing so they are not trying to get the good will of the name, but the good will of the goods. See *Flagg Manufacturing Co.* v. *Holway*, 178 Massachusetts, 83, 91; *Chadwick* v. *Covell*, 151 Massachusetts, 190, 191. Although the application is different, the principle seems to be similar to the rule that when a patent has expired descriptive words or even an arbitrary or personal name by which it has become known may be used if sufficient precautions are taken to prevent the public from being deceived. See *Singer Manufacturing Co.* v. *June Manufacturing Co.*, 163 U. S. 169."

Similarly in *Standard Paint Co.* v. *Trinidad Asphalt Co.*, 220 U. S. 446, the plaintiff, manufacturer of a roofing material sold under the name of "Ruberoid", sought an injunction against the sale by defendant of a similar roofing material under the name "Rubbero". This Court held that "Ruberoid" was a descriptive word and therefore not subject to appropriation as a technical trademark, stating: "A public right in rubberoid and a private

monopoly of rubberoid cannot coexist." (220 U. S. at p. 453). With respect to the unfair competition aspect of the case, it was pointed out that the color, design and general appearance of the labels and markings on the packages used by the defendant were so different from those used by the plaintiff as to preclude any likelihood of passing off. Relief was therefore denied, the Court saying (pp. 461-462):

> "• • • The only imitation by the Asphalt Company of the roofing of the Paint Company is that which exists in the use of the word 'rubbero,' and this only by its asserted resemblance to the word 'ruberoid.' To preclude its use because of such resemb' ce would be to give to the word 'ruberoid' the fu effect of a trade-mark, while denying its validity as such. It is true that the manufacturer of particular goods is entitled to protection of the reputation they have acquired against unfair dealing, whether there be a technical trade-mark or not, but the essence of such a wrong consists in the sale of the goods of one manufacturer or vendor for those of another. *Elgin National Watch Co.* v. *Illinois Watch Co., supra.* Such a wrong is not established against the Asphalt Company. It does not use the word 'rubbero' in such a way as to amount to a fraud on the public."

The many authorities cited at page 84, *supra*, are all to the same effect.

The *Canadian Shredded Wheat Company* case (p. 125, *infra*) is precisely analogous to the case at bar. In principle so also are *Kellogg Toasted Corn Flake Co.* v. *Quaker Oats Co.*, 235 Fed. 657 (C. C. A. 6) and *Parsons Bros. & Co.* v. *John Gillespie & Co.*, 15 R. P. C. 57 (Privy Council). In the first of these cases, the plaintiff, manufacturer of "Kellogg's Toasted Corn Flakes", sought to enjoin the defendant from marketing a similar article under the name "Quaker Toasted Corn Flakes". The cartons employed by the defendant were strikingly different in appearance from those of the plaintiff. In an exhaustive opinion, in which most of the questions here involved were considered, the court held that the words were descriptive and therefore not sub-

ject to exclusive appropriation by the plaintiff, and that, since the defendant had sold its goods in distinctive packages, no injunction of a limited nature could be granted. The same ruling was made by the Privy Council in the *Parsons Bros.* case with respect to "Flaked Oatmeal".

The underlying conception of all these cases is that if the first producer in the field could acquire an exclusive right to the descriptive and generic name of the article by adopting it as the trade-name of his product, he could frequently monopolize the trade in that article. Competition must often be crippled if competitors have not the right to tell the public precisely what article they are marketing. This principle was forcefully stated by this Court in *Canal Co.* v. *Clark*, 13 Wall. 311, 323-324, in a passage which has since been reiterated in many cases:

> "• • • No one can claim protection for the exclusive use of a trade-mark or trade-name which would practically give him a monopoly in the sale of any goods other than those produced or made by himself. If he could, the public would be injured rather than protected, for competition would be destroyed. Nor can a generic name, or a name merely descriptive of an article of trade, of its qualities, ingredients, or characteristics, be employed as a trade-mark and the exclusive use of it be entitled to legal protection. As was said in the well-considered case of *The Amoskeag Manufacturing Company* v. *Spear*, 2 Sandford's Supreme Court, 599, 'the owner of an original trade-mark has an undoubted right to be protected in the exclusive use of all the marks, forms, or symbols, that were appropriated as designating the true origin or ownership of the article or fabric to which they are affixed; but he has no right to the exclusive use of any words, letters, figures, or symbols, which have no relation to the origin or ownership of the goods, but are only meant to indicate their names or quality. He has no right to appropriate a sign or a symbol, which, from the nature of the fact it is used to signify, others may employ with equal truth, and therefore have an equal right to employ for the same purpose.' "

See also *Goodyear Co.* v. *Goodyear Rubber Co.*, 128 U. S. 598; *Lawrence Manufacturing Co.* v. *Tennessee Manufacturing Co.*, 138 U. S. 537; *Brown Chemical Co.* v. *Meyer*, 139 U. S. 540; *Elgin Nat'l Watch Co.* v. *Illinois Watch Co.*, 179 U. S. 665; *Standard Paint Co.* v. *Trinidad Asphalt Co.*, 220 U. S. 446; *Warner & Co.* v. *Lilly & Co.*, 265 U. S. 526.

The doctrine of the *Canal Co.* case applies with peculiar force in the case at bar where the name is the only name of the product and is essential to any adequate description of it.

Some of the lower federal courts and some English courts have, in a few exceptional cases, granted an absolute injunction against use by the defendant of a descriptive or geographical name which had acquired a secondary meaning indicating manufacture by the plaintiff. *Wotherspoon* v. *Currie*, [1872] L. R. 5, H. L. 508 ("Glenfield" as applied to starch made at Glenfield); *Thompson* v. *Montgomery*, 41 Ch. Div. 35, 8 R. P. C. 361 ("Stone" as applied to ale made at Stone); *Photoplay Publishing Co.* v. *LaVerne Publishing Co.*, 269 Fed. 730 (C. C. A. 3) ("Photoplay" as applied to a movie magazine);* *Barton* v. *The Rex Oil Co.*, 29 F. (2d) 474 (C. C. A. 3) ("Dyanshine" as applied to shoe polish);* *Scandinavia Belting Co.* v. *Asbestos & Rubber Works*, 257 Fed. 937 (C. C. A. 2) ("Scandinavia" as applied to

*In *Fawcett Publications* v. *Popular Mechanics Co.*, 80 F. (2d) 194 (C. C. A. 3), doubt was thrown on the decisions in *Photoplay Publishing Co.* v. *LaVerne Publishing Co.* and *Barton* v. *The Rex Oil Co.* by the very court which decided them. The court stated (p. 197): "It may be that the decrees went too far in absolutely enjoining the use of the descriptive words in the Photoplay and Dyanshine Cases for the reason that being descriptive words they could not be exclusively appropriated." Despite this fact, the *Dyanshine* decision was relied upon by this same court in its opinion on reargument in the case at bar (R. 3-A, p. 2069).

brake linings made in the United States); *Trappey* v. *McIlhenny Co.*, 281 Fed. 23 (C. C. A. 5) ("tabasco" as applied to pepper sauce). In all of these cases the proof showed (1) that the defendant had a fraudulent intent, (2) that the defendant's goods had been purchased as and for those of the plaintiff, (3) that deception of the public could only be prevented by an absolute injunction and (4) that the geographical or descriptive significance of the name enjoined was either incidental or commercially unnecessary, *i. e.*, that other words were available which were equally descriptive of the article as the words enjoined.*

For example, in *Wotherspoon* v. *Currie, supra,* the plaintiff sold a well known product under the name "Glenfield Starch". The defendant used the same name for starch made by him at Glenfield. It clearly appeared that defendant was attempting to trade upon the good will of the plaintiff and had selected Glenfield as the place of manufacture and as a trade-name for the sole purpose of consummating the fraud. Glenfield was a place with sixty inhabitants, not even large enough to constitute a village. The House of Lords, finding that the name as applied to starch had no real geographical connotation but signified only the goods of the plaintiff, granted an absolute injunction against use of the name. But compare *Clark, Son & Morland, Ltd.'s Trade Mark,* 1938, Vol. 2, All England Law Rep. Ann. 377. See also *Thompson* v. *Montgomery, supra, and Scandinavia Belting Co.* v. *Asbestos & Rubber Works, supra.*

* Moreover, none of these cases involved the name of a patent-expired article except the *Scandanavia* case and there the name, which the court held had not become generic during the life of the expired patent, had been used exclusively by the plaintiff for more than ten years after the expiration of the patent and prior to 1905 and was therefore properly registered under the ten-year clause of the Trade-Mark Act of 1905.

In *Barton* v. *The Rex Oil Co., supra,* a decision subsequently criticized by the very court which rendered it,* the manufacturer of a shoe polish known as "Dyanshine" sought to enjoin the defendant from using the words "Dye and Shine" as the name of its shoe polish. At the first hearing of the case, relief was limited to a requirement that defendant state that its product was not the product made by the plaintiff. On rehearing, however, it was established that this form of relief was ineffective to prevent passing off, and an absolute injunction against use of the words as a trade-name was granted. See also *Photoplay Publishing Co.* v. *LaVerne Publishing Co., supra.*

The significant fact about all of these cases is that the words enjoined were not in any sense commercially indispensable to free and fair competition in the article to which they were applied. Their adoption by the defendant in each case was for the purpose of trading on the plaintiff's reputation and in each case the court believed that consummation of the fraud could not be prevented except by an absolute injunction.

These decisions obviously have no application to a generic and descriptive name which is commercially indispensable if the public is to be told what the article is and what it is made of. No case has been cited or found in which an absolute injunction against the use of such a name has been granted. The authorities are unanimous that no such relief can be afforded.**

Under all of the authorities, therefore, petitioner, having the right to make the article, likewise has the right to use the only words in the English language which denote and describe the article.

C. Shredded wheat biscuits produced under respondent's patents were known to the public during the life of the patents only as shredded wheat or shredded wheat biscuits and, upon the expiration of the patents, the right to use these terms to designate the biscuits was dedicated to the public.

The doctrine that no generic name may be exclusively appropriated as a trade-mark applies with peculiar force to a name which, during the life of an expired patent, became the generic designation of the patented product. Ever since the decision of this Court in *Singer Manufacturing Co.* v. *June Manufacturing Co.*, 163 U. S. 169, it has been established law that, upon the expiration of a patent, there passes to the public the right not only to make the patented article as it was made during the patent period, but also to apply thereto the name by which it then became known, provided only that the name be accompanied by indicia signifying the source of manufacture. *Holzapfel's Co.* v. *Rahtjen's Co.*, 183 U. S. 1; *Merriam Co.* v. *Syndicate Publishing Co.*; 237 U. S. 618; *The Singer Manufacturing Company* v. *Loog*, L. R. 8,

See also *Singer Manufacturing Co.* v. *June Manufacturing Co.*, 163 U. S. 169 and the other cases cited in the succeeding section of this brief, in which the same rule is applied to the name of a patent-expired product which became generic during the patent monopoly.

App. Cases 15 (House of Lords); *Linoleum Manufacturing Co.* v. *Nairn*, 7 Ch. Div. 834; *Yale & Towne Manufacturing Co.* v. *Ford*, 203 Fed. 707 (C. C. A. 3).*

In the *Singer* case, the facts of which have been analyzed at page 67, *supra*, this Court stated the controlling principle as follows (pp. 185-186):

> "* * * It equally follows from the cessation of the monopoly and the falling of the patented device into the domain of things public, that along with the public ownership of the device there must also necessarily pass to the public the generic designation of the thing which has arisen during the monopoly, in consequence of the designation having been acquiesced in by the owner, either tacitly, by accepting the benefits of the monopoly, or expressly by his having so connected the name with the machine as to lend countenance to the resulting dedication. To say otherwise would be to hold that although the public had acquired the device covered by the patent, yet the owner of the patent or the manufacturer of the patented thing had retained the designated name which was essentially necessary to vest the public with the full enjoyment of that which had become theirs by the disappearance of the monopoly. In other words, that the patentee or manufacturer could take the benefit and advantage of the patent upon the condition that at its termination the monopoly should cease, and yet when the end was reached disregard the public dedication and practically perpetuate indefinitely an exclusive right.
>
> "The public having the right on the expiration of the patent to make the patented article and to use its

S. 886; *Amiesite Asphalt Co.* v. *Interstate Asphalt Co.*, 72 F. (2d) 946 (C. C. A. 3); *Du Pont Cellophane Co.* v. *Waxed Products Co.*, 85 F. (2d) 75 (C. C. A. 2), cert. den. 299 U. S. 601, 82 L. ed. 1041; *Leclanche Battery Co.* v. *Western Electric Co.*, 23 Fed. 276 (S. D. N. Y.).

> generic name, to restrict this use, either by preventing its being placed upon the articles when manufactured, or by using it in advertisements or circulars, would be to admit the right and at the same time destroy it. It follows, then, that the right to use the name in every form passes to the public with the dedication resulting from the expiration of the patent."

This principle, as this Court pointed out in its exhaustive opinion, is universally recognized by the American, English and French authorities.

Broadly the *Singer* case is but another application of the underlying principle that generic names of articles which all may sell cannot be exclusively appropriated. It simply applies this doctrine to names which, though distinctive when first adopted, become known as the name of a patented product during the patent monopoly.

This is well illustrated by *Linoleum Manufacturing Co.* v. *Nairn, supra,* cited with approval by this Court in the *Singer* case. There the plaintiff had patented a new type of floor covering which it called "Linoleum" during the patent period. The court held that after the expiration of the patent everyone had the right to use this name since the article could not be otherwise designated. In this connection the court said (pp. 836-837):

> "* * * It appears that the Defendants are now minded to make, as it is admitted they may make, that substance. I want to know what they are to call it. That is a question I have asked, but I have received no answer; and for this simple reason, that no answer could be given, except that they must invent a new name. I do not take that to be the law. I think that if *'Linoleum'* means a substance which may be made by the Defendants, the Defendants may sell it by the name which that substance bears.
>
> "* * * In my opinion, it would be extremely difficult for a person who has been by right of some monopoly the sole manufacturer of a new article, and has given a new name to the new article, meaning that new article and nothing more, to claim that

the name is to be attributed to his manufacture alone after his competitors are at liberty to make the same article. It is admitted that no such case has occurred, and I believe it could not occur; because until some other person is making the same article, and is at liberty to call it by the same name, there can be no right acquired by the exclusive use of a name as shewing that the manufacture of one person is indicated by it and not the manufacture of another."

A similar ruling was made by this Court in *Holzapfel's Co.* v. *Rahtjen's Co., supra.* In that case, the plaintiff sold a particular type of ship paint, formerly protected by an English patent, under the name "Rahtjen's Composition", and sought to enjoin the defendant from using those words as part of a trade-name for its similar product. In denying relief, this Court said (pp. 9-10):

"* * * This way of designating the composition was employed by Rahtjen in Germany for his own sales, and Suter, Hartmann & Co. simply copied his method of describing the same. How else could this article thereafter be described? When the right to make it became public, how else could it be sold than by the name used to describe it? And when a person having the right to make it described the composition by its name and said it was manufactured by him, and said it so plainly that no one seeing the label could fail to see that the package on which it was placed was Rahtjen's composition manufactured by Holzapfel & Co., or Holzapfel's Composition Company (Limited), how can it be held that there was any infringement of a trade-mark by employing the only terms possible to describe the article the manufacture of which was open to all? Of necessity when the right to manufacture became public the right to use the only word descriptive of the article manufactured became public also.

"* * * If any one had desired to use this paint and had called for it in the market, he would necessarily have been compelled to describe it as 'Rahtjen's Composition,' as there was no other name for the

> article, and though in England while the patent lasted no one but the patentee or his licensees could manufacture the article, yet the description would still have been 'Rahtjen's Composition;' but when the patent expired the exclusive right to manufacture the article expired with it, while the name which described it became, under the facts of this case, necessarily one of description and did not designate the manufacturers. There was no other name for the article, and in order to obtain it a person would have to describe it by the words 'Rahtjen's Composition.' The words thus became public property descriptive of the article, and the right to manufacture it was open to all by the expiration of the English patent."

The court below recognized that, at the time of the expiration of respondent's patents in 1912, any competitor would have had a right to use "shredded wheat" as the name of its product, but held that this right was lost because of respondent's exclusive use of the words for more than ten years thereafter. This holding, we submit, reveals a complete misconception of the *Singer* doctrine.

The basic principle of the *Singer* case, as above stated, is that no one can monopolize the name of an article which all are free to make. At the expiration of respondent's patents in 1912, the words "shredded wheat" were clearly the name of the article which then became dedicated to the public. There has been no usage since that date which has changed their meaning. The formerly patented product is not known or adequately described by any other name today. Just as no period of exclusive sale of the article after the expiration of a patent can deprive the public of its right to manufacture and sell the formerly patented product, so no period of exclusive use of a product name can deprive the public of its right to call the article by its product name.

The ruling of the court below in this respect is directly contrary to the decision of the Circuit Court of Appeals for the Eighth Circuit in *Centaur Co.* v. *Heinsfurter*, 84

Fed. 955. There the plaintiff owned a patent on a medical preparation known as "Castoria" and continued in the exclusive manufacture of the product for ten years after the patent expired. The court nevertheless denied an injunction against the use of the word "Castoria" as applied to the defendant's product which was made in accordance with the disclosure of the expired patent. The court, through Mr. Justice Brewer, stated (p. 958):

> "But this matter of time makes no difference. The word had become known as the name of the thing, and as such it could not be appropriated as a trade-mark. * * * As well might a manufacturer of flour claim a trade-mark in the word 'flour', as the manufacturer of 'Castoria' a trade-mark in that name."*

See also *Collis Co.* v. *Consolidated Machine Tool Corporation*, 41 F. (2d) 641 (C. C. A. 8), cert. denied 282 U. S. 886.

The court below, referring to the ten-year clause of the Trade-Mark Act of 1905, permitting the registration of generic and descriptive names used exclusively for ten years prior to the passage of the Act, held that this provision is merely declaratory "of the equitable doctrine that the exclusive use of a trade-mark by a person for ten years after the expiration of the patent entitles him to the exclusive use of it thereafter" (R. 3-A, pp. 2091-2092). No cases were cited which support any such proposition. The trade-marks in *Scandinavia Belting Co.* v. *Asbestos & Rubber Works*, 257 Fed. 937 (C. C. A. 2) and *McKesson & Robbins* v. *Chas. Phillips Chemical Co.*, 23 F. (2d) 763

* The validity of the principle applied in the *Castoria* case is not questioned by the decision in *Centaur Co.* v. *Genesh*, 33 F. (2d) 985, decided in the Western District of Pennsylvania thirty years after Mr. Justice Brewer's decision, because in the later case it was found as a fact that Castoria is not and never was the product of the expired Pitcher Patent, although in the original *Castoria* case there was a finding that it was.

(App. D. C.)* were both registered under the Act of 1905 and held to be entitled to such registration under the express provisions of the Act because of exclusive use during ten years prior to the enactment of the statute. The ten-year clause, in contrast with most of the provisions of the federal statutes relating to trade-marks, is in derogation of the principle of the common law that no generic or descriptive term may be employed as a trade-mark, and there is no support to be found in any of the authorities for the ruling that this clause is merely declaratory of any principle in law or in equity which can make effective through exclusive usage for any period of time a trade-mark invalid in its inception because of its descriptive and generic character. The right to individual appropriation of the name once lost is gone forever. This is so regardless of patent expiration. *Saxlehner* v. *Eisner & Mendelson Co.*, 179 U. S. 19, 36. It follows that the *Centaur* and *Collis* cases, dealing with the effect of patent expiration and holding the rule to be contrary to that stated by the court below, are correct. The ten year clause, being expressly limited in its application to marks exclusively used during the period from 1895 to 1905, cannot be extended by judicial construction to include cases clearly not within its terms.**

Scant attention need be paid to the contention that because the words "shredded wheat" were applied to the

* In this case, registration of the words "milk of magnesia" under the ten-year clause of the 1905 Act was allowed. The registration was subsequently cancelled, however, on the ground that the registrant had not been the exclusive user of the words during the ten-year period. *McKesson & Robbins, Inc.* v. *Chas. Phillips Chemical Co.*, 53 F. (2d) 342, 1011 (C. C. A. 2), cert. den. 285 U. S. 552.

** Registration of "Shredded Whole Wheat" under the 1905 Act was refused because the words had not been used exclusively as a trade-mark but only as descriptive of the biscuit during the statutory period. *Natural Food Co.* v. *Williams*, 30 App. D. C. 348. See pp. 10-11, *supra*.

biscuits before the patents were secured, the *Singer* rule does not control this case. Surely respondent is not entitled now to a monopoly of the national market in this product because Perky for a year or two prior to the issuance of his patents sold shredded wheat biscuits (not even under the trade-name "Shredded Wheat") in a small restaurant in Denver. The decision of this Court in *Holzapfel's Co. v. Rahtjen's Co., supra,* determines this point. The *Singer* rule was there applied to the words "Rahtjen's Composition" even though that name had been used in connection with the paint before the English patent had been secured. See also *Bayer* v. *United Drug Co.*, 272 Fed. 505 (S. D. N. Y.). *Batcheller* v. *Thompson*, 93 Fed. 660 (C. C. A. 2) and *President Suspender Co.* v. *MacWilliams*, 238 Fed. 159 (C. C. A. 2), upon which respondent relies, were simply cases where the name, rather than the patent, gave value to the article. Neither name involved in those cases had become known to the public during the patent period as the identifying and generic name of the patented article. These cases are, of course, inapplicable to the facts of the case at bar; even the court below recognized that at the expiration of respondent's patents, "shredded wheat" was the generic name of the article which everyone was then free to use.*

The *Singer* doctrine, as applied to the case at bar, creates no new rights in the petitioner; it simply reinforces what would otherwise be entirely clear, that the petitioner, having the right to manufacture and sell shredded wheat biscuits, has the right to say that it is doing so and for that purpose to use as the name of its

---

* Moreover, although the Denver sales may have occurred prior to the issuance of Perky's basic product and process patent and his design patent in 1895, application for the basic patent was made in 1894 (R. 5, p. 89) and Perky had secured a patent as early as 1893 (application for which was filed in 1892) which covered the basic principles for the production of shredded wheat (R. 5, p. 3; see also R. 5, p. 9).

product the name of the article which it is producing. The opinion of Lord Chancellor Selborne in *The Singer Manufacturing Company* v. *Loog*, L. R. 8, App. Cases 15 (House of Lords), the English edition of *Singer Manufacturing Co.* v. *June Manufacturing Co.*, well summarizes the applicable legal principle (p. 27):

> "* * * The reputation acquired by machines of a particular form or construction is one thing; the reputation of the plaintiffs, as manufacturers, is another. If the defendant has no right, under colour of the former, to invade the latter, neither have the plaintiffs any right under colour of the latter, to claim (in effect) a monopoly of the former. If the defendant has (and it is not denied that he has) a right to make and sell, in competition with the plaintiffs, articles similar in form and construction to those made and sold by the plaintiffs, he must also have a right to say that he does so, and to employ for that purpose the terminology common in his trade, provided always that he does this in a fair, distinct, and unequivocal way."

POINT IV.

Petitioner's Use of a Pictorial Representation of Its Biscuits on Some of Its Cartons and in Some of Its Advertisements Does Not Constitute Trade-Mark Infringement or Unfair Competition.

In its bill of complaint, respondent prayed for an injunction against the use on some of petitioner's Whole Wheat Biscuit cartons and in some of its advertisements of a pictorial representation of two of petitioner's small size biscuits in a dish of milk (R. 1, p. 25). Although this prayer was not granted by the court below, that court in its opinion on respondent's petition to recall and clarify the mandate stated that it had intended to provide for such an injunction, and added: "Its use on a carton or in adver-

tising matter, when the defendant is not permitted to use the word 'Shredded Wheat' as a trade name or to advertise or sell biscuits in the pillow-shape form, would manifestly be so improper and so likely to mislead that we will assume that the appellee will not use it'' (R. 3-A, p. 2285).

If petitioner has no right to make and sell shredded wheat biscuits in the pillow-shaped form, it obviously has no right to place on its cartons a picture of a pillow-shaped biscuit; if, however, it has a right to make the biscuits, it seems entirely clear that it can tell the public what it is making, not only by describing its product verbally through use of the words shredded wheat, but also by describing it visually through pictorial representation.

The illustration used by petitioner obviously is not an infringement of respondent's alleged trade-mark No. 216,593 (R. 4, p. 205), consisting of a picture of a dish containing two of respondent's biscuits immersed in milk or cream. Respondent's application for the registration of this alleged trade-mark disclaimed any exclusive right to the representation of the biscuits ''apart from the mark shown on the drawing'' (R. 4, p. 205). Comparison of the illustration used by respondent (R. 1, p. 207) with that used by petitioner (R. 1, p. 217) shows no violation as to the bowl or plate which the District Court held petitioner had a right to use (R. 1, p. 228). The disclaimer preserves to all others the right truthfully to represent the biscuits by pictorial illustration except in such manner as to confuse or deceive purchasers. *Beckwith* v. *Commissioner of Patents*, 252 U. S. 538. Petitioner's illustration is distinguishable from respondent's illustration and no deception or confusion is possible because it is used only as part of the decoration upon petitioner's highly distinctive cartons and in its advertisements in association with its name as manufacturer.

Moreover, the dish picture has been employed by respondent, not as a distinctive trade-mark to indicate origin, but simply as a pictorial description of its product.

For example, respondent's former advertising manager testified that in 1908 the picture theretofore used of a dish containing only one biscuit was changed to the present two-biscuit illustration in order to induce people to eat two biscuits instead of one and thereby to double consumption (R. 1, p. 570; see also R. 1, p. 324). Similarly, in some years during the strawberry season, the biscuit has appeared in the picture in a dish with strawberries and cream; during other seasons it has been shown with bananas, prunes and various other stewed fruits (P. Exs. 87-112). This is obviously not trade-mark use; trade-marks do not alternate with the seasons. Illustrations similarly used as a pictorial description of the product were held not entitled to trade-mark protection in *Bristol Co.* v. *Graham,* 199 Fed. 412 (C. C. A. 8), *In re Scholl Manufacturing Co., Inc.,* 267 Fed. 348 (App. D. C.) and *Rit Products Corporation* v. *Park & Tilford,* 55 F. (2d) 436 (Cust. and Pat. App.).

Petitioner's illustration appears only on the distinctive Kellogg cartons and in advertisements which prominently display the Kellogg name. Therefore, unless it is unfair competition for Kellogg to sell shredded wheat biscuits at all, it cannot be unfair competition for Kellogg to reveal pictorially that it is doing so. *Shredded Wheat Co.* v. *Humphrey Cornell Co.;* 250 Fed. 960 (C. C. A. 2); *Bristol Co.* v. *Graham,* 199 Fed. 412 (C. C. A. 8); *Van Kannel Revolving Door Co.* v. *American Revolving Door Co.,* 215 Fed. 582 (C. C. A. 7).

In *Shredded Wheat Co.* v. *Humphrey Cornell Co.,* discussed at pages 17-18, *supra,* the defendant sold shredded wheat biscuits in distinctive cartons containing an illustration of its biscuit, which was identical in size and appearance with the respondent's biscuit. The Circuit Court of Appeals for the Second Circuit denied the respondent all relief with respect to the carton trade, holding that the distinctiveness of the defendant's package precluded any possibility of passing off. Similarly, in *Van Kannel Revolving Door Co.* v. *American Re-*

volving Door Co., supra, the Circuit Court of Appeals for the Seventh Circuit dismissed a bill of complaint seeking to enjoin the defendant from using a cut of a revolving door, similar to one shown in the plaintiff's catalogue, concluding that "Inasmuch as defendant may now make the door, it may illustrate it in its advertisements" (p. 584). See also *Bristol Co.* v. *Graham, supra.*

POINT V.

Respondent's Claim to the Exclusive Right to Make the Biscuit in the Pillow-Shaped Form, to Call It By Its Name and to Illustrate It By Pictorial Representation is Without Merit Because of Its Disclaimers of Those Very Rights in Its Trade-Mark Registrations.

As has been pointed out above (p. 11), respondent in three trade-mark registrations expressly disclaimed any exclusive rights in the appearance of the piflow-shaped biscuit and in the descriptive words shredded wheat. Yet this suit seeks, and the decree of the court below conveys, precisely the trade-mark protection which respondent thus disclaimed.

This Court in *Beckwith* v. *Commissioner of Patents,* 252 U. S. 538, declared that such disclaimers cannot thus be repudiated. In that case a mark consisting of a fanciful design employed in connection with the descriptive words "Moistair Heating System" was registered under the Trade-Mark Act of 1905 and the descriptive words were disclaimed. In the course of its opinion, this Court stated (pp. 545, 546):

> "It seems obvious that no one could be deceived as to the scope of such a mark, and that the registrant would be precluded by his disclaimer from setting up in the future any exclusive right to the disclaimed part of it. * * *

> "A disclaimer on the part of applicant that no claim is made to the use of the words 'Moistair Heating System' apart from the mark as shown in the drawing and as described, would preserve to all others the right to use these words in the future to truthfully describe a like property or result of another system, provided only that they be not used in a trade-mark which so nearly resembles that of the petitioner 'as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers' when applied 'to merchandise of the same descriptive properties'."

Holzapfel's Co. v. *Rahtjen's Co.*, 183 U. S. 1, is to the same effect.*

Since respondent has for many years had trade-mark protection only because of its disclaimer of any exclusive right to the name and appearance of its product, it is now precluded from claiming that which it has formally and deliberately renounced in order to secure such protection.

Conclusion.

We respectfully submit that the orders of April 12, 1937 and May 5, 1938 entered by the Circuit Court of Appeals for the Third Circuit should be reversed.

Respectfully submitted,

THOMAS D. THACHER,
W. H. CRICHTON CLARKE,
Solicitors for Petitioner.

RICHARD H. DEMUTH,
E. ENNALLS BERL,
Of Counsel.

Appendix A.

Analysis of the Objections to Each of the Irregular-Shaped Biscuits Suggested by Respondent.

Respondent introduced in evidence six biscuits in different irregular shapes which it contended were just as commercially practicable for defendant to manufacture and sell as the pillow-shaped biscuit. These irregular-shaped biscuits were marked as Plaintiff's Exhibits 240 to 245, inclusive, and photographs of them, subsequently introduced in evidence, were correspondingly marked as Plaintiff's Exhibits 240-A to 245-A (R. 4, pp. 111-121). The process by which each such biscuit was made was described by respondent's witness Oakes (R. 1, pp. 270-276).

The record conclusively establishes that it is not commercially practicable to make any of these irregular-shaped biscuits (R. 2, pp. 1113-1115, 1131, 1142-1144, 1162). A detailed analysis of the objections to each appears below at pages 110-112). Before making this detailed analysis, however, some of the objections common to several or all of the irregular-shaped biscuits will be discussed.

(1) *Wastage.* In cutting shredded wheat into oblong biscuits, there is no normal waste of the product (R. 2, p. 1118). The wheat emanates from the shredding rolls in long shreds which are piled on top of one another and are then subdivided into the size biscuit desired; all of the wheat is used. If, on the other hand, an irregular-shaped biscuit is made, not all of the shreds can be used; there is necessarily a great deal of scrap, amounting in the case of at least one of the suggested biscuits to as much as 50% (R. 2, pp. 1118, 1142, 1143).

So far as petitioner is concerned, this scrap is entirely wasted; Kellogg does not reprocess its scrap but sells it for wet feed for animals (R. 2, pp. 1115, 1141-1142). Reprocessing has been tried but it has not proved satisfactory because it makes the shreds harder and more doughy and makes them lose the identity of the bran (R. 2, pp. 1115-1117; R. 3, p. 2037). A biscuit made of reprocessed scrap was introduced in evidence as Defendant's Exhibit 198; it was shown to be heavier and harder than the regular

biscuit and, although placed in the oven for twice the normal time, was less well baked because the heat could not penetrate it as well (R. 2, p. 1117; R. 3, pp. 2037-2038).

Moreover, if the scrap resulting from the manufacture of an irregular-shaped biscuit were reprocessed, a large portion of the reprocessed shreds would inevitably become scrap again when the next batch of biscuits was cut. Every biscuit, therefore, would contain shreds which were reprocessed not only once but two, three or four times. The shreds, of course, would become progressively worse with each reprocessing (R. 2, pp. 1119, 1142) and the expense of manufacturing the biscuit would be enormously increased (R. 2, pp. 1142, 1147).

The manufacture of any biscuit, the shape of which results in any appreciable amount of wastage, is, therefore, impracticable. Either the scrap must be sold as animal feed, thereby increasing the cost of manufacturing the biscuit by the cost of the wasted material, or it must be reprocessed, thereby making the biscuit of inferior quality and likewise increasing its cost by the cost of the requisite extra processing.

(2) *Heat Penetration.* In order properly to bake a shredded wheat biscuit its composition must be such that the heat from the ovens can penetrate it fully. The pillow-shaped biscuit is so composed, since it is open at both ends and puffs during the baking process. This puffing is essential to the distribution of the heat (R. 2, p. 1114). A biscuit, such as each of the irregular-shaped biscuits suggested by respondent, which is not open at any of its edges and therefore cannot puff as does the pillow-shaped biscuit, cannot be properly baked (R. 2, pp. 1114-1115).

(3) *Hard Edges.* Any shredded wheat biscuit necessarily has hard edges or rims where the knives pinch the shreds together; these hard edges are objectionable, not only because they do not allow proper heat penetration, but also because they are not as tender or palatable as is the remainder of the biscuit (R. 2, pp. 1113-1114, 1130). These hard portions are reduced to a minimum in the pillow-shaped form of biscuit because only the sides are sheared together, the ends remaining open. Each of the irregular-

shaped biscuits suggested by respondent, on the other hand, has hard rims on all sides, making them highly undesirable from a commercial standpoint (*id.*).

(4) *Packing and Breakage.* Shredded wheat biscuits are fragile and therefore must be packed largely by hand (R. 1, pp. 268, 277-278; R. 2 p. 1142). The pillow-shaped biscuit lends itself readily to packing, and, when packed, it is held on all four sides and is thus protected against breakage (R. 2, pp. 1143-1144). The irregular-shaped biscuits, on the other hand, would be far more difficult to place in a carton and would tend to create considerable spoilage in the packing process (R. 2, pp. 1130-1131, 1142-1143). Moreover, there would be space between the biscuits in the carton which would require expensive and objectionable stuffing and which would increase the breakage in shipment (*id.*). The added expense thus caused would make profitable competition virtually impossible. Use of irregular-shaped cartons would not obviate the difficulty since excessive breakage would still occur, and, in any event, such cartons would be entirely unmarketable (R. 2; p. 1178).

The two major tests for determining the commercial practicability of any biscuit are, of course, the cost of production and the edibility of the biscuit. The following detailed analysis of the particular objections to each of the suggested irregular shapes demonstrates that none of them meets these tests.

Diamond-Shaped Biscuit
(Plaintiff's Exhibits 240 and 240-A)

In the manufacture of this biscuit there would be a 50% wastage (R. 2, pp. 1118, 1142). The biscuit has four sharp hard edges, which is commercially objectionable in and of itself and which prevents the proper puffing essential for the distribution of heat (R. 2, p. 1114). If packed in a rectangular carton, there would be empty spaces between the biscuits which would cause tremendous breakage and would require objectionable stuffing (R. 2, pp. 1130, 1141, 1142). Breakage would be particularly great because the corners of the biscuit are excessively fragile (R. 2, pp. 1130, 1141). Moreover, the manufacture of this biscuit

would be extremely difficult, if not impossible, because of the necessity of fitting knives diagonally across the cutter chain (*id.*).

Triangular or Cone-Shaped Biscuit
(Plaintiff's Exhibits 241 and 241-A)

Although this biscuit can be made without wastage with a hand mold, it is not a practical biscuit from the standpoint of commercial manufacture (R. 2, p. 1127). It has sharp hard edges which are objectionable of themselves and which do not allow proper puffing and heat penetration (R. 2, pp. 1113-1114). The labor cost of packing this biscuit would be double that of packing the pillow-shaped biscuit (R. 2, p. 1142). There would also be undue breakage in handling the biscuit because of its fragile end (R. 2, p. 1142-1143).

Doughnut-Shaped Biscuit
(Plaintiff's Exhibits 242 and 242-A)

The manufacture of this biscuit would cause wastage of approximately 38% (R. 2, p. 1142). Its entire outer and inner rim is a sharp, hard and objectionable edge, not allowing the proper heat penetration (R. 2, p. 1114). This biscuit would be difficult to pack and, since only the edges of the biscuit would touch the package, there would be excessive breakage (R. 2, p. 1142).

Large Round-Shaped Biscuit and Small Round-Shaped Biscuit
(Plaintiff's Exhibits 243, 243-A, 244 and 244-A)

In the manufacture of both of these biscuits there would be a wastage of approximately 27% (R. 2, p. 1143). They both have the same objections as the doughnut-shaped biscuit, *i. e.*, hard outer edges, lack of proper heat penetration, difficulty in packing and excessive breakage (R. 2, pp. 1115, 1143).

Round Molded Biscuit
(Plaintiff's Exhibits 245 and 245-A)

This biscuit has the same objections as the two other round biscuits above discussed, except that, being made in a mold, there would be less wastage (R. 2, p. 1119). However, this type of biscuit would not be practicable to

make as it would require continual starting and stopping of the machinery in filling the mold (R. 2, p. 1143). This would, of course, make economical production impossible. This biscuit could not be made on the Perky machinery, used by both respondent and petitioner, which provides for continuous operation with a continually moving cutter chain (R. 2, p. 1143).

Appendix B.

TYPICAL EXCERPTS FROM THE TESTIMONY SHOWING THAT PETITIONER'S GOODS HAVE NOT BEEN AND COULD NOT BE CONFUSED WITH THOSE OF RESPONDENT.

References to the testimony of some 150 witnesses called by both parties to the effect that petitioner's cartons and its biscuit are entirely distinctive and have not been and could not be confused with those of the respondent are given at page 36, *supra*. In order that the Court may appreciate the full force of this testimony without resort to the record, we call attention to the following few excerpts as typical of scores of others equally cogent.

Respondent's witness, Howard Duane, a consumer, testified (R. 1, p. 302):

> "I saw immediately that the biscuit handed to me in this carton was not the biscuit I had been getting. I noticed the size was shorter than the Shredded Wheat Biscuit. I knew it was not the biscuit made by National Biscuit Company or the Shredded Wheat Company. * * *
>
> "The product that I consumed at the station was not Shredded Wheat. I knew it was not Shredded Wheat. It was wheat that was shredded, but I knew it was not the product of the Shredded Wheat Company."

Irma Colliflower, another consumer witness called by the respondent, stated (R. 1, p. 428):

> "* * * I had seen Kellogg's product on the shelves in stores and knew immediately that I was not being given the original Shredded Wheat as the

carton did not contain a picture of the Falls nor was it marked 'Home of the Shredded Wheat.' I understood right away that she was giving me a product made by Kellogg Company."

Similarly, George John Borneman, a grocer called by the respondent, stated (R. 1, p. 446):

"* * * I immediately recognized a difference in the biscuit, first in the package and then in the size and taste of the biscuit."

Respondent's witness, Theodore Keenan, a consumer, testified (R. 1, p. 452):

"I had never seen the Kellogg small package but had seen the Niagara Falls package and knew instantly that I was not getting the Niagara Falls product when the girl at Kresge's handed me the package."

Likewise Allan H. Fagan, a consumer testifying for the respondent, said (R. 1, p. 635):

"* * * As soon as the little package was handed to me, I knew right away it was not Niagara Falls Shredded Wheat, by the box. When I took the biscuit out of the carton I noticed it was a small biscuit."

John F. B. McCrum, another of respondent's consumer witnesses, stated (R. 1, p. 656):

"I saw the package he took down from the shelf, that it was a Kellogg package, when he put it on the counter. I recognized then right away it was a Kellogg package. * * * I knew right away, when I looked at it, that it was not the package the grocer was handing down to me. * * *

"* * * Looking at the contents of Defendant's Exhibit 6, I really could not tell you whether that looks like Shredded Wheat. It does not look like the National Biscuit Shredded Wheat."

Respondent's witness, Adele MacDuffie, gave testimony to the same effect. She stated (R. 2, p. 789):

"As soon as the clerks at these stores brought out the Kellogg packages, I knew right away it was not

the National Biscuit package; and I said right away, 'This is not Shredded Wheat.' By that I meant that it was not the National Biscuit Company's Shredded Wheat. I did recognize it, however, as Kellogg's Shredded Wheat."

The testimony of William C. Ruch, another of respondent's consumer witnesses, is similar. Mr. Ruch stated (R. 2, pp. 803-804):

"• • • As soon as I saw Kellogg's, I recognized right away that it was a different size shredded wheat and it was not what I wanted. • • •

"If my wife had bought the Kellogg's shredded wheat without telling me anything about it and had put some of them into a plate and served me in the dining room, I would have seen right away that I was getting a different shredded wheat than I had had."

Sidney A. Nelson, a retail grocer testifying for respondent, stated (R. 2, p. 845):

"Taking the resemblance between these two biscuits, surely, if I and most of my customers saw the two packages side by side, we would have no doubt that they are different products of different companies. • • •

"If two of Kellogg's Whole Wheat Biscuit were put in a plain dish and set on the table in front of the average householder or person who uses these cereals, they would know at once that they had gotton something different than Shredded Wheat. They would immediately notice it was a different product."

Mrs. W. A. Mahaffey, another of respondent's consumer witnesses, gave similar testimony (R. 2, p. 889):

"• • • My husband is the one who eats the cereals at our home, mostly. I served him Kellogg's biscuit. He did not think he was getting the same biscuit. He wanted to know why I did not get the other kind of biscuit. He always does that when I get a different kind of biscuit than Shredded Wheat. He always sees the difference right away. • • • The first time Kellogg's biscuit was handed to me in

the store, I recognized right away that it was not the National Biscuit package, because it is in a different box, and a different size."

Typical of the testimony given by wholesale grocers is that of David H. Bergey (R. 2, p. 1364):

"• • • There is no confusion in our house in ordering those two brands. They are separate and distinct, listed that way, and sold that way. We have never had instances where one was returned to us with the statement they wanted the other kind. I am familiar with both packages. I do not think the Kellogg package has any similarity to the Niagara Falls package."

Retail grocers testified to the same effect. Typical is the statement of Nat C. Reis, who said (R. 3, p. 1615):

"We have no confusion in this store between those two products. They call for them by brand name. Kellogg's Whole Wheat Biscuit is shredded whole wheat—that is, a shredded wheat biscuit, smaller than the other, with more in a package. I know of no way to describe it, other than to call it shredded whole wheat biscuit. I do not believe you could call it anything else. You could not mix up the dress of the packages. The Kellogg biscuit is in the same dress as the rest of the Kellogg line. There could be no confusion between that and the Niagara package at all."

John A. DeMallie, likewise a retail grocer, stated (R. 3, p. 1522):

"I have never practiced substitution in regard to the Kellogg Product. I do not see how it could be substituted for the Niagara Falls Shredded Wheat, because there is so much difference in the package. I do not believe you could substitute it, even to a child."

Another retail grocer, Cresson A. Medlin, also testified to the complete absence of confusion between respondent's and petitioner's biscuits (R. 3, p. 1737):

"I never, that I remember, had any mixup or confusion between the two products, when I was carrying

both. I never had any customer send back one and say she wanted the other one as far as I recall. The customers differentiated between the two. They would just ask for Kellogg's, and that was all there was to it."

To the same effect is the testimony of David D. Kay (R. 3, p. 1753):

"• • • It is pretty hard to mix them today, because there is so much difference between the two products, it is hard work to get them confused. I know of no instance of confusion, because you get a large biscuit of shredded wheat. On Kellogg's, you have a different kind of end, package, product inside, different shape and size, and everything else. I cannot see any chance of confusion."

Mrs. Mary E. Keene, a consumer witness for the respondent, stated (R. 3, p. 1788):

"• • • When I first saw Kellogg's biscuit, I did not by any means think it was the same biscuit I had been using. I remember the difference in size. Kellogg's biscuit fits my dishes better. We have had several people at home remark on the niceness of the biscuit and how they liked it, comparing it with shredded wheat biscuit."

The situation is well summed up in the testimony of Edwin A. Wurster, a wholesale grocer, who said (R. 3, p. 1792):

"• • • If a customer asks for shredded wheat and the retailer hands them the Kellogg package like Plaintiff's Exhibit 161, unwrapped, it might be an attempt at substitution on the part of the retailer, but it would be a very foolish attempt, because a person would have to be blind. If I go in a store and ask for shredded wheat, meaning the Niagara package, if they handed me the Kellogg package, I could see it was not the same in shape, appearance or color."

Appendix C.

ANALYSIS OF TESTIMONY RELIED UPON BY RESPONDENT TO SHOW CONFUSION AND PASSING OFF.

As stated above (p. 37, *supra*), respondent's attempt in its brief in the court below to prove that there had been "Actual Instances of Confusion and Passing Off" failed to reveal any actual case where such passing off had occurred.

We have already shown (p. 37, *supra*) that most of the witnesses upon whose testimony respondent relied stated only that when a consumer asked for shredded wheat, he was or could be offered a package of "Kellogg's Whole Wheat Biscuit", that sometimes grocers receiving an order for shredded wheat did not know whether respondent's or petitioner's product was meant, and that Kellogg's biscuit was sometimes offered to consumers as a shredded wheat product.

Of all the other witnesses whose testimony was referred to, eleven, all of whom were called by respondent, merely expressed the viewpoint that they considered it unfair for petitioner to put out a biscuit in competition with respondent after respondent had built up the shredded wheat trade by years of advertising and sales effort.* Examination of the testimony of five others fails to reveal any evidence that in any way indicates confusion, deception or passing off;** indeed, one of these five testified that she was a consumer of Kellogg's Whole Wheat Biscuit and had never purchased or eaten respondent's product (R. 2, p. 1286).

Mrs. Grace Darling, a consumer, stated merely that as she was walking up the aisle of a market, a clerk held out a package of Kellogg's biscuit, that she saw the picture on the package but did not stop to examine the carton

* R. 1, Hamilton, p. 355, Miller, p. 434, Orr, p. 450, Miller, p. 462, Leighton, p. 476, Planz, p. 498, Warren, p. 519, Gotwalt, pp. 525-526, Watkins, p. 546, Evans, p. 648; R. 2, Nelson, p. 839.

** R. 2, Maude, p. 1216, Condon, p. 1286, Florian, p. 1309; R. 3, Young, p. 1465, Denison. p. 1496.

and did not see the Kellogg name. She simply told the clerk to send the carton to her house. Her son opened the package before Mrs. Darling returned home and immediately knew that the biscuit was different from respondent's product to which he had always been accustomed (R. 1, p. 396).

Edward E. Sweet, a consumer, testified that, while reading his newspaper in a restaurant, he was served with petitioner's product in response to an order for shredded wheat. Without looking at it, he removed one of the biscuits from the carton. As soon as he tasted the biscuit, he knew it was not respondent's product. Looking at the carton for the first time then, he saw immediately that it was a Kellogg package and, when he examined the biscuit, noticed that it was shorter than the biscuit to which he had been accustomed (R. 1, p. 325).

Henry Adrian, retail grocer, testified that it would be hard to differentiate respondent's and petitioner's biscuits outside of the package; he had recognized, however, that petitioner's biscuit was smaller and crisper. He knew of no passing off, and in the only instance when he produced Kellogg's package in response to a request for shredded wheat, the customer stated that she wanted the other brand. He further testified: "I do not think one glancing at Exhibit 14 would be led to believe it was the Niagara Falls Shredded Wheat; because, if they did not have Niagara Falls on, they would know it was not the shredded wheat they had always been buying. Maybe they would know it was a biscuit of the same kind" (R. 1, pp. 384-387).

Elmer R. Jones, retail grocer, testified that Kellogg's Whole Wheat Biscuit was never sold as respondent's product and that a distinctive demand had been built up for it because of its size and the number of biscuits in the package (R. 1, pp. 538-539). He said that petitioner's biscuit had been easier to sell because of the popularity of respondent's biscuit, and that there was a possibility that a customer seeing petitioner's package with the dish picture might be led to think it was respondent's product. He gave no testimony that any such instance had ever occurred (R. 1, pp. 539-540, 543).

George Schapansky, a consumer, told a conflicting story. Having first testified that he was frequently served biscuits in restaurants outside of the carton and that he could not tell whether they were respondent's or petitioner's product (R. 2, p. 716), he then said that, with one exception, all the biscuits served to him without the carton were respondent's long biscuit. The exception was an instance when he saw petitioner's individual carton before the waitress threw it away and recognized it as a Kellogg package (R. 2, 716, 725). He also testified that when he examined petitioner's package in a self-service grocery store, he recognized it as a different product from respondent's (R. 2, pp. 717-718). This witness, who was a grocery clerk for a year, did not know that Kellogg's packages are all predominantly green and red, and did not recognize any family relationship between the Kellogg Whole Wheat Biscuit package and the Kellogg Corn Flake package (R. 2, p. 723).

Mrs. Jessie M. Fatjo, a consumer (R. 741-746), testified that she went into a store, asked for shredded wheat and was given a package of Kellogg's Whole Wheat Biscuit. She was in a hurry and just glanced at the package without seeing the name on it. It struck her as not quite familiar, however, so she asked whether it were shredded wheat and was told it was. As soon as she started home and really looked at the package, she saw it was not respondent's product. She ate a few of the Kellogg biscuits and noticed their small size. She testified that she could tell respondent's and petitioner's product apart outside the carton.

George J. Born, a retail grocer, testified only that his customers wanting shredded wheat biscuits were "confused" because they did not know whether to take respondent's or petitioner's brand (R. 2, 750). Customers asking merely for shredded wheat were always given respondent's brand (R. 2, p. 754). The witness testified to no confusion or possibility of confusion between the two brands.

William G. Eastman, a grocer (R. 2, p. 756), was confused by a dealer advertisement of "SHREDDED WHEAT—Kellogg's" because he didn't read far enough to see the word "Kellogg's." The witness testified to no case of customer confusion between the two products.

W. D. Van Ardsdale, a retail grocer, testified to an instance when a customer sent her twelve year old son for a package of shredded wheat, desiring respondent's brand thereof, and he picked out a package of Kellogg's without stopping to read it. When he took it home, his mother immediately recognized that it was petitioner's brand and sent her son back to change it (R. 2, p. 762).

Sidney W. Rodda, one of respondent's district sales managers, merely testified that the sale of petitioner's biscuit has been aided by the popularity of respondent's biscuit (R. 2, p. 820). He also said: "I believe the Kellogg Company has used all the ordinary and best known, most effective methods of introducing a new product to the consuming public through the retail trade, referring to Kellogg's Whole Wheat Biscuit. There is no indication in the stores that the Kellogg Company was trying to conceal the fact that it was in the market with a whole wheat biscuit" (R. 2, p. 815). The witness did not testify to any confusion or passing off or any likelihood thereof.

R. L. Waugh, a grocer, testified that in a few instances customers had picked up petitioner's package without looking at the name, thinking it was respondent's product, and that he would have to correct them (R. 2, pp. 849-50). He further stated that he believed that respondent's carton had "never registered itself on the memory of the general public in any way" and that consumers who opened petitioner's package would discover the difference in the biscuits and know that they were not respondent's product (pp. 854-855).

Henry L. Dingee, a grocer, stated that he believed there was a possibility of confusion between respondent's and petitioner's packages—and then conceded that the Kellogg Whole Wheat Biscuit package was as distinctive as any other Kellogg package and that anyone who might confuse it with respondent's package might "also pick up a package of Kellogg's Corn Flakes and think they were getting a package of Shredded Wheat" (R. 2, pp. 862, 872-873).

Howard P. Burke, a consumer, testified that in response to an order for shredded wheat in a restaurant he was brought a box of petitioner's biscuit. He asked the waitress

whether it was shredded wheat and she told him that it was. He then told the waitress that the box bore the name "Kellogg's Whole Wheat Biscuit" and the waitress replied that it was the same thing as shredded wheat (R. 2, p. 884). He further testified to having received petitioner's product in individual cartons on previous occasions and that he remembered the name "Kellogg's" because it was prominent on the package (R. 2, p. 886). Mr. Burke also stated that he had several times received shredded wheat in a restaurant outside of the carton but could not say whether what he had received was respondent's or petitioner's product (R. 2, pp. 887-888).

Paul W. Siebert, a grocer, testified only that a customer of his believed that some packages of Kellogg's biscuit which were sold from a wagon, contained respondent's product until she looked at the packages in his store, when she at once saw the difference between the two cartons. He further stated that petitioner's package could never be put out for respondent's (R. 2, p. 893).

Julius D. Frank (R. 3, p. 1485) testified that there was, in general, no confusion in his store between the two brands but that sometimes foreigners did not know which shredded wheat they wanted, Kellogg's or respondent's.

Appendix D.

TYPICAL EXCERPTS FROM THE TESTIMONY SHOWING THAT "SHREDDED WHEAT" IS COMMONLY USED AND UNDERSTOOD AS THE DESCRIPTIVE AND GENERIC NAME OF THE ARTICLE.

The witnesses called by both parties consistently used the words shredded wheat in a generic sense, described the article as made of wheat which has been shredded, and stated that they knew of no other name for the article than shredded wheat or shredded whole wheat. References to the testimony of over 100 of these witnesses is given at page 78, *supra*. Typical excerpts from the testimony follow.

Respondent's witness Alfred F. Braun, testified (R. 1, p. 415):

> "I understand 'shredded wheat' to be a wheat product made into biscuit form and shredded. I

recognized that Kellogg's Whole Wheat biscuit was a shredded biscuit the first time I saw it. I know of no other way of describing this product and have never heard any other name applied to it."

William P. Fisher, one of respondent's consumer witnesses, stated (R. 1, p. 463):

"* * * When the biscuit was served in the bowl I had no doubt about it being a shredded wheat biscuit product, that is, a wheat shredded into shreds and put into biscuit form."

Charles Berman, a retail grocer called by respondent, said (R. 1, p. 617):

"* * * I do not know any other name for Shredded Wheat, except Shredded Wheat. If anybody asked me what a Post Toasty was, I would say it was a corn flake. If anybody asked me what shredded wheat was, shredded wheat is the only name for it I know."

Similarly, respondent's witness Alexander Aitken testified (R. 1, p. 637):

"* * * Whole Wheat Biscuit might be one of six or eight different kinds of products, a flat biscuit, a pillow-shaped biscuit, or a rosette-shaped biscuit, to me. If, however, the package carried the name Kellogg's Shredded Wheat Biscuit, I would expect to find shredded wheat. I would know it was shredded wheat; meaning, by that, a pillow-shaped biscuit made out of wheat in shredded form."

George J. Born, another of respondent's grocer witnesses, stated (R. 2, pp. 749-750):

"* * * Shredded Wheat has no other current name, as far as I know, than the words Shredded Wheat. Uneeda Biscuit is a soda cracker; but I do not know any other name for shredded wheat or shredded wheat biscuit than the words Shredded Wheat or Shredded Wheat Biscuit. I should say Shredded Wheat is only Shredded Wheat. * * *

"If a manufacturer made that product, I do not know any other name that would describe it than the words shredded wheat or shredded wheat biscuit. I would not know what else he would call it. * * * I could not suggest any other name by which it could be described. I would not know any other name than shredded wheat biscuit."

Mrs. R. E. Anderson, a consumer called by respondent, gave the following typical testimony (R. 2, p. 794):

"When I looked through the cellophane window in this package, I saw it was shredded wheat. In other words, I did not think for a minute that it was corn flakes or oatmeal or anything of that sort. I knew that it was the cereal I know as shredded wheat."

Similarly, Clarence E. Lierley stated (R. 2, p. 799):

"I would say that corn flakes, oatmeal, and shredded wheat are all different types or kinds of dry cereals. Oatmeal is somewhat of a moist cereal, but corn flakes, wheat flakes, and shredded wheat are different kinds or types of cereal foods. Shredded wheat means to me a certain kind of cereal food."

P. F. McCarthy, a retail grocer testifying on behalf of respondent, said (R. 2, p. 833):

"If I want to describe the product itself, it is Shredded Wheat. Shredded Whole Wheat Biscuit is the only name that would describe it, I think. I presume it is correct to say that Whole Wheat Biscuit is not as descriptive a name as Shredded Whole Wheat Biscuit. Whole Wheat Biscuit does not say that it is not shredded. There might be ten or fifteen kinds of biscuit that would be all whole wheat biscuits. The other is shredded. * * * *

"Looking at these products of Kellogg and the National, they are both advertised as whole wheat; they are both shredded; they are both biscuits."

Respondent's witness Henry F. Steen, a consumer, stated (R. 2, p. 929):

"If somebody asked me to describe the National Biscuit Company Shredded Wheat, I would state that

it was a biscuit that was made of shredded wheat, properly manufactured, through toasting or baking, or whatever their process is, put into the form of a biscuit, and sold. In my definition, I have said it was made of wheat shredded, which is shredded wheat, that it is made out of whole wheat, and it is made into a pillow-shaped biscuit. If you say boiling down my description, that it is a shredded whole wheat biscuit, I would say that that is an exact description of this National Biscuit Shredded Wheat."

John E. Lurie, a retail grocer, stated (R. 3, p. 1464):

"* * * I would still describe the Whole Wheat Biscuit which was formerly sold as Shredded Wheat, as shredded wheat today. I really could not think of anything else to call it when Mr. Clarke asked me that. It is a whole wheat biscuit which is shredded, so that is what it is. It is hard for me to tell you exactly what I mean by shredded. I take for granted that it is shredded, because it is like shredded coconut, cut up in long, fine parts. When I speak of a thing being shredded, I mean it is cut up. I never went to Niagara Falls and saw them make it. I do not know how the so-called shreds are made.

"Assuming it is true that the wheat berry is pressed between rollers and caused to come out in a long string, that is a definition of shredded. It is not cut up; it is pressed, if you assume that to be true. That is my idea of shredding."

The situation is well summarized in the following testimony of Edwin A. Wurster, a wholesale grocer (R. 3, pp. 1795-1797):

"Shredded whole wheat biscuit might be anything that was made of whole wheat and shredded and held together in some particular form that held it together. It might not be that particular style. To me it would be always shredded whole wheat biscuit, no matter who made it. I cannot think of anything else to call it that would describe it as well as that. That is a description of the product, and that is the thing to call it. It has always been called whole wheat biscuit. The fact that it has been descriptive would

not alter, I think. It is always shredded whole wheat biscuit. I think that is all it was. If you should ask me what Uneeda Biscuit was, I would probably say it was a soda cracker. That is so. The trade name would be Uneeda Biscuit, and the descriptive name would be soda-cracker. If someone were to ask me what the trade name and what the descriptive name of shredded wheat was, I would say it would be just shredded whole wheat biscuit. The only descriptive name I know for it is shredded wheat or shredded whole wheat biscuit. It cannot be anything else.

"If anybody asked me what a *Kodak* was, I would say it was the trade name of the Eastman Kodak Company meaning a *camera,* the latter word being the descriptive name that anybody could call it by. I do not, however, know any other descriptive name that can be used to tell about shredded wheat, except shredded wheat, or shredded whole wheat biscuit, any other name you could call it."

Appendix E.

CANADIAN SHREDDED WHEAT CO., LTD. *v.* KELLOGG COMPANY OF CANADA, LTD., AND ANOTHER.

LORD RUSSELL OF KILLOWEN: The circumstances which have given rise to this litigation are exceptional, and must be stated in some detail. On May 27, 1896, one Henry D. Perky obtained a grant of Canadian letters patent (No. 52,428) covering a new product which he had invented, and a process and machine by means of which the new product was prepared or produced.* According to the patent, wheat is taken in berry form, and, after being thoroughly washed, is boiled for about an hour. It is then dried for some hours. The berries are then passed between compression rollers, one or both of which is or are provided with a series of fine circumferential grooves, whereby the berries are mashed, and their outer bran coats, gluten layers and

* Respondent's corresponding American patent, No. 548,086, appears at R. 5, p. 59, and is described at p. 8, *supra.*

starchy interior portions are thoroughly incorporated together and forced into the grooves, whence the resultant food is discharged by means of a comb "in light porous and tender threads or filaments into a pan or other receptacle, or upon a moving receiver whereby they may be disposed in layers." The specification then proceeds as follows:

> The food as discharged from the rolls is ready for use without further cooking, or it can be shaped for baking in various ways.
>
> The food presented is a purely cereal product, and all the parts of the berry are given to the consumer in attractive form. No chemical change is set up therein by the use of ferments or other foreign ingredients, and the percentage of water in the food is much less than in ordinary bread.
>
> The article as produced is a food or bread composed of superposed or massed layers or deposits of comparatively dry, externally rough, porous, sinuous threads or filaments of cooked whole wheat, containing intermixed the bran, starch and gluten of the entire berry, and which is absolutely free from leavening or raising material or other products.

The apparatus for carrying out the process is then described, and finally the product, the process and the apparatus are severally claimed, the claim for the invented product being thus phrased:

> A food or bread composed of superposed or massed layers or deposits of comparatively dry, externally rough, porous, sinuous threads or filaments of cooked whole wheat containing intermixed the bran, starch and gluten of the entire berry and which is free from leavening or raising material or other products.

It will be seen that the invented product is the food as discharged from the rollers, which may be either collected in a receptacle, or formed into layers by means of a moving receiver, and which may be used in its then condition, or may be further cooked by being baked in shapes.

On Aug. 13, 1901, Perky obtained a grant of Canadian letters patent (No. 72,695) for improvements in and relating to machines for making biscuits and other articles. This patent covered the machine which was used by the

plaintiff for the production of biscuit shapes, composed of the new product (the subject of patent No. 52,428) which issued from the rollers on to a travelling band.* The new product was called, and was known by the name of, shredded wheat. Although the process covered by patent No. 52,428 may be strictly a mashing rather than a shredding process, the product in fact presents every appearance of having been shredded, and it is to be observed that the patentee in his patent No. 72,695 himself refers to the process as "shredding the grain."** There can be no manner of doubt that the name shredded wheat very aptly describes the new product. The new product was first marketed in Canada in the year 1898 by a company which was registered in the United States of America, and which had its factory in that country. It continued to be imported from the United States into Canada and sold there to some extent for some six or seven years. In the year 1904, the plaintiff company was incorporated under the laws of the Province of Ontario. It acquired the goodwill of the business in Canada of the company which was at that time importing the product into Canada and selling it there. It built a factory for its manufacture on the Canadian side of Niagara Falls, and in 1905 commenced, and has ever since continued, to manufacture the product in Canada, and to sell it there. The product was sold in two forms, the one a biscuit, which consisted of the shredded wheat produced by the process and apparatus protected by patent No. 52,428, after it had been panned and cut for baking by the apparatus protected by patent No. 72,695, and baked, the other a biscuit made of the same material cut in a flattened and compressed form, which the plaintiff company sold under the name "triscuit." The trade in triscuits was small, but the plaintiff company's trade in the other biscuit undoubtedly developed large proportions.

The patent No. 52,428 expired in 1914. Down to that time no one had sold or could sell the product known as shredded wheat in Canada except the plaintiff company

* The machine covered by Canadian patent No. 72,695 was protected in the United States by the various patents referred to at p. 8, *supra*.

** See same language in respondent's American patents cited at p. 74, *supra*.

and its predecessors in title. In other words, for some 17 or 18 years the plaintiff company and its predecessors had enjoyed the monopoly of selling the patented product in Canada. Upon the expiry of the patent, anyone in Canada could make it. The patent No. 72,695 expired in 1919. The plaintiff company's monopoly thereunder then ceased, and any manufacturer of the product in Canada could use the apparatus covered by that patent, for the purpose of panning and cutting the product for baking. Any one would be entitled to sell in Canada as shredded wheat, or as shredded wheat biscuits, the articles so produced, provided that in so doing he did not (i) infringe some other person's trade mark, or (ii) pass off the goods as being the manufacture of some other person.

In 1912 the plaintiff company had registered in Canada as a trade mark "to be applied to the sale of shredded cereal biscuit," a picture of a shredded wheat biscuit in a dish or bowl, with a spoon resting in the bowl.* The biscuit as depicted shows the shape, resembling somewhat a little pillow or roll, which the biscuit apparently necessarily assumed after the article, which resulted from the product having been panned and cut by the apparatus under patent No. 72,695, had been baked. For some years after the expiry of the two patents, the plaintiff company continued in fact to enjoy its monopoly in Canada. No rival manufacturers appeared upon the scene. In 1924 a strange event happened. The United States Company (the Natural Food Company), which had in 1904 sold the goodwill of its Canadian business to the plaintiff company, had changed its name to the Shredded Wheat Co. In Mar., 1924, it applied to have registered as its trade mark in Canada in respect of biscuits or cracker the words "shredded wheat," alleging (amongst other things) that from Jan. 1, 1894, to date it had adopted and used the said trade mark by applying it to cartons containing the biscuits, that no other person had used the mark in Canada in connection with the sale of goods, and that it had had a factory at Niagara Falls, Ontario, for a great number of years.** Here was a pretty con-

* Respondent's corresponding American trade-mark registration No. 85,186 appears at R. 4, p. 197 and is discussed at p. 11, *supra*.

** Respondent's corresponding American trade-mark registration No. 178,725 appears at R. 4, p. 201 and is discussed at p. 11, *supra*.

fusion of ideas and entities. However, the words "shredded wheat" were in fact registered in the Trade Mark Register at Ottawa as the trade mark of the Shredded Wheat Company, to be applied to the sale of biscuits or crackers, and the words remained so registered for more than three years. The registration, however, was cancelled in Sept., 1927. On Mar. 20, 1928, the words "shredded wheat" were registered as the plaintiff company's trade mark to be applied to the sale of biscuits and crackers, and on Apr. 3, 1929, the same words were registered as its trade mark to be applied to the sale of cereal foods cooked or prepared for consumption.*

In 1934, the Kellogg Co. of Canada, Ltd., the first defendant to the action (hereinafter called Kellogg's), began to sell in Canada biscuits made of shredded wheat. Among their customers was a retail grocer, one Solomon Bassin (the second defendant to the action), who in turn resold some of the said biscuits to his retail customers. The plaintiff company immediately issued the writ in these proceedings, and obtained an undertaking (without prejudice) which had the effect of stopping the alleged wrongful sales until the trial or other final disposition of the action.

The biscuits sold in Canada by the defendants were made by the same, or substantially the same, process as that by which the plaintiff company's biscuits are made. In other words, the patented processes were used, and the patented product was thereby produced. The biscuit manufactured by Kellogg's, though of the same pillow or sausage-roll shape, was some 25 per cent. shorter in length. It would seem from the evidence that the rounded pillow shape is the result of puffing-up in the baking of the product, after it has been panned and cut by the apparatus protected by patent No. 72,695. The length and width would be determined by the width of the stream of the product and the spacing of the cutters. Kellogg's sold their shredded wheat biscuits in cartons, each containing 15 biscuits packed in 5 layers of 3 biscuits each, the layers being separated by a corrugated separator or pad. The carton contained on each of its four sides, and also on the top and bottom, the words "Kellogg's

* Respondent's corresponding American trade-mark registration No. 213,456 appears at R. 4. p. 203 and is discussed at p. 11, *supra*.

Shredded Whole Wheat Biscuit." On the top and bottom appeared the words "Made in U. S. A." On the two broad sides appeared the words "W. K. Kellogg" and "Kellogg Company, Battle Creek, Michigan." The cartons made it plain for all the world to see that the contents of the cartons were biscuits composed of shredded wheat, manufactured by a U. S. A. company called the Kellogg Company. No passing off by means of get-up of the cartons is alleged, or could be alleged, by the plaintiff company. Indeed, Kellogg's carton was in all respects quite different in get-up and appearance from the cartons in use by the plaintiff company. Apart from a question of passing off by reason of the form or shape of Kellogg's biscuit, the plaintiff company's claims to relief are two, and are both founded upon the use by Kellogg's of the two words "shredded wheat."

In the first place, the plaintiff company claims an injunction to restrain the defendants from infringing the registered trade marks consisting of the words "shredded wheat," by the use of the words "shredded wheat," or "shredded whole wheat" or "shredded whole wheat biscuit" or any words only colourably differing therefrom. As to this claim, their Lordships at this stage content themselves with observing that, if the plaintiff company's said trade marks are valid trademarks, there can, in their opinion, be no doubt that the defendants, by selling biscuits as shredded whole wheat biscuits, do infringe those marks. If the plaintiff company succeeds on the first claim, no injunction in respect of alleged passing off by the use of the words "shredded wheat" would be required, but, in the event of the trade marks being held invalid, the plaintiff company asks for an injunction to restrain the defendants from (putting it shortly), by the use of the same words or any words only colourably differing therefrom, passing off Kellogg's biscuits as the plaintiff company's biscuits. Their Lordships proceed to deal with these alternative claims, each of which, as will be seen, involves a consideration of the question of the aptness or capability of the words "shredded wheat" to distinguish the product or article manufactured by the plaintiff company from a similar product or article manufactured by anyone else, or their aptness or capability of indicating that goods to which they are applied are the exclusive manufacture of the plaintiff company.

The plaintiff company's first trade mark was not registered until 1928, when application was made to register the words "shredded wheat" to be applied to the sale of biscuits and crackers. For years down to 1912 the plaintiff company had been the sole manufacturer of biscuits composed of a patented product to which had been given the name shredded wheat, a name, as their Lordships think, completely descriptive of the patented product. There can be little doubt that, had the plaintiff company, when the patent expired, attempted to register the words "shredded wheat" as a trade mark for the sale of biscuits and crackers, the application would have met with short shrift. It would be attempting, by registering the name of the patented product, to prolong the patent monopoly, and this may not be done. Had the plaintiff company, during the currency of the patent, applied to the product manufactured by it a distinctive trade mark duly registered, it could have effectively secured for itself a means by which, when the patent expired, the shredded wheat which it manufactured would be distinguished from the shredded wheat manufactured by others, if and when anyone chose to avail himself of the right then open to the public of manufacturing shredded wheat. This the plaintiff company failed to do, except for the registration in 1912 of the bowl-and-spoon trade mark before referred to, and its user to the extent which hereinafter appears. The language used by LINDLEY, L.J., in *Re Palmer's Trade Mark* (1), at p. 521, may properly be quoted in this connection:

> I do not mean to say that a manufacturer of a patented article cannot have a trade-mark not descriptive of the patented article so as to be entitled to the exclusive use of that mark after the patent has expired; for instance, if he impressed on the patented articles a griffin, or some other device; but if his only trade-mark is a word or set of words descriptive of the patented article of which he is the only maker, it appears to me to be impossible for him ever to make out as a matter of fact that this mark denotes him as the maker as distinguished from other makers.

The plaintiff company, however, claims that, in the interval between the expiry of the patent in 1912 and the

(1) 24 Ch. D. 504; 43 Digest 179; 50 L. T. 30.

registration of the trade mark in 1928, no one else (with one possible exception) had manufactured the patented product, and that the words had in fact become distinctive of its manufacture, and were properly registrable as its trade mark accordingly. The trade marks here in question were registered under the Trade Mark and Design Act (R.S.C., 1927, c. 201). Sect. 5 (1) defines what for the purposes of the Act shall be considered and known as trade marks, in the following terms.

> 5. All marks, names, labels, brands, packages or other business devices, which are adopted for use by any person in his trade, business, occupation or calling, for the purpose of distinguishing any manufacture, product or article of any description manufactured, produced, compounded, packed or offered for sale by him, applied in any manner whatever either, to such manufacture, product or article, or to any package, parcel, case, box or other vessel or receptacle of any description whatsoever containing the same, shall, for the purposes of this Act, be considered and known as trade marks.

By sect. 13 it is provided that, after registration, the proprietor "shall have the exclusive right to use the trade mark to designate articles manufactured or sold by him." By sect. 11, however, registration may be refused "if the so-called trade mark does not contain the essentials necessary to constitute a trade mark properly speaking." The effect of this provision is that a word which is merely descriptive of the character and quality of the goods in connection with which it is used is not registrable under the Act as a trade mark: *Standard Ideal Co.* v. *Standard Sanitary Co.* (2) and *Channell, Ltd.* v. *Rombough* (3). It is, however, clear that such a descriptive word may possibly have acquired a secondary meaning and have come to mean or to indicate that the goods in connection with which it is used are the goods of a particular manufacturer; in other words that the word in question has in its secondary meaning become indicative of origin: *Re Crosfield (J.) & Sons,*

(2) [1911] A. C. 78; 43 Digest 136; [1911] A. C. 259; 80 L. S. P. C. 87; 103 L. T. 440; 27 R. P. C. 789.

(3) [1925] 1 D. L. R. 233; 43 Digest 137.

Ltd. (4). The onus on the person who attempts to establish this secondary meaning, however, is a heavy one. If, in addition to being descriptive of the goods in connection with which it is used, it is in fact the name of the product of which these goods are composed, then it would seem to their Lordships that a state of affairs exists which makes it extremely difficult that the word should ever become indicative of origin, so as to render it capable of registration as a trade mark. The difficulty may sometimes be overcome in a case where the alleged trade mark is in fact a description of the goods, but is not recognised by the trade or the public as being such, and is taken by them as being a fancy name, *e. g.*, where a chemical description, not generally known to the public, has been adopted, or where an unusual substance unknown to the public is being used in the manufacture. Where the words are purely descriptive, and in common use, it is even more difficult to conceive a case in which they could acquire a secondary meaning.

It is, however, contended that in the present case such extreme difficulty has been surmounted, and that the evidence has established the fact that the words "shredded wheat" have acquired a secondary meaning, and, when applied to biscuits, mean shredded wheat biscuits manufactured by the plaintiff company, and by no one else. Their Lordships therefore proceed to consider the evidence, calling attention, however, to the fact that the oral evidence was in point of time not specifically directed to the date when the trade mark was registered, but referred to the time at which each particular witness was speaking, and was therefore more strictly relevant to the general question of passing off.

In the first place, it is of primary importance to see how the plaintiff company used the words "shredded wheat," *i. e.*, to see whether it used them as a trade name or common law trade mark for the purpose of indicating the origin of the goods, or merely descriptively. It was said in argument that the way in which the plaintiff company used the words was irrelevant. Their Lordships do not agree with this contention. In endeavouring to ascertain what it is that indicates who is the manufacturer of goods, great weight

(4) [1910] 1 Ch. 130; 43 Digest 153; 79 L. J. Ch. 211; 101 L. T. 587; 26 R. P. C. 837.

must necessarily be attached to the steps which the manufacturer takes to indicate origin. Indeed, the foundation of the relief granted in the well-known case of *Reddaway* v. *Banham* (5), to which further reference must be made hereafter, was that the words there in question had been used by the plaintiff as a trade mark. There was no question in that case of a registered trade mark, but the plaintiff had used the words as a common law trade mark. As LORD HERSCHELL phrased it, at p. 214: "he has chosen to employ it as his trade mark." The opinions of LORD SHAND and LORD DAVEY in *Cellular Clothing Co.* v. *Maxton & Murray* (6) attach the same importance to the user of the word in question by the person who is claiming that a descriptive word has acquired a secondary meaning as indicating exclusively his goods. LORD SHAND said, at p. 338:

> I am of opinion that the word is purely descriptive, and was so used by the appellants.

LORD DAVEY relied on the appellants' advertisements as showing that they used the word as descriptive of the goods, and not as indicating their origin. Further, in *Burberrys* v. *Cording (J.C.) & Co., Ltd.* (7), PARKER, J., said that, in absence of evidence of intention to deceive (and there is none such here), the inference of probability of deception must depend on the circumstances of each particular case, including the nature of the word or name the use of which is sought to be restrained. He adds the following observations most pertinent to the present case, at p. 987:

> It is important for this purpose to consider whether the word or name is *prima facie* in the nature of a fancy word or name, or whether it is *prima facie* descriptive of the article in respect of which it is used. It is also important for the same purpose to consider its history, the nature of its use by the person who seeks the injunction, and the extent to which it is or has been used by others.

---

(6) [1899] A. C. 326; 43 Digest 276; 68 L. J. P. C. 72; 80 L. T. 809; 16 R. P. C. 397.

(7) 100 L. T. 985; 43 Digest 304; 26 R. P. C. 693.

Before and up to 1928 the plaintiff company's shredded wheat biscuits were sold in cartons, each containing 12 biscuits. On the top and bottom of each carton appeared the words "shredded whole wheat." On one of the broad sides there was a large picture of a factory, across the top front of which were the words "The Canadian Shredded Wheat Company, Ltd." Above it were printed the words (in large capitals) "shredded wheat," and (in smaller capitals) "made in Canada." Below it were printed the words "The Shredded Wheat Factory, Niagara Falls, Ontario." On the other broad side there were printed at the top in large capitals the words "shredded wheat," and underneath, in smaller type and parallel columns, a series of statements as to the merits of shredded wheat, and directions—such as:

> The crispness of its shreds promote thorough mastication, which is the first process in digestion. Heat the biscuit in the oven to restore crispness; then pour hot or cold milk over it, adding a little cream. Salt or sweeten to taste.

Below occur the following words, in capitals, and in separate lines as shown by hyphens:

> Heat the biscuit in oven to restore crispness—As made for 25 years—The Canadian Shredded Wheat Co., Ltd.—Niagara Falls, Ont.:—Canada.

There is also a reference to a company in London, England, as being the European distributors. Occupying one of the narrower sides is found a picture of Niagara Falls, and on the picture appeared the words "The Home of Shredded Wheat, Niagara Falls, Ontario." On the other narrower side are found the words "the original shredded wheat," and, immediately underneath, the picture of a bowl containing one of the biscuits and a spoon resting in the bowl, with the words "trade mark." In addition, further below are found the words, "Twelve (12) biscuits," and, in quotation marks, "it's all in the shreds."*

A consideration of this carton, which was the form in which the biscuits were, at the relevant times, being sold

---

* Respondent's corresponding American cartons are described at pp. 12-13, *supra*, and many of them are in evidence as Plaintiff's Exhibits 2-4.

throughout Canada, makes it clear, in their Lordships' view, that the plaintiff company was in no way using the words shredded wheat as indicative of the origin of the goods contained in the carton, but was using them only as descriptive of those goods. The indications of origin are the trade mark in association with the factory at Niagara Falls, and the name of the company, all of which are prominently displayed. By that carton the plaintiff company was telling the public as plainly as it could that shredded wheat need not necessarily be of its manufacture, but that it was the person who was the original manufacturer of the product known as shredded wheat. The plaintiff company was in fact using the words shredded wheat to indicate the thing, not the manufacturer, to indicate the stuff of which the biscuits were composed, not who made them.

An examination of such advertisements as have been put in evidence leads to the same conclusion. Exhibit No. 24 contains photostatic copies of ten advertisements which appeared in issues of *The Globe* newspaper of Toronto, during the years 1908, 1910, and 1913—at times, that is to say, while the patents were still in force. Three, which appeared in 1908, contain no indication of the manufacturer. They praise "shredded wheat." They recommend a biscuit for breakfast and a biscuit for luncheon, the article in each case being described as made of shredded wheat. One, which appeared in 1910, advertises "shredded wheat biscuits," urges people to try shredded wheat for breakfast, and acquire the shredded-wheat habit. This advertisement displays prominently the name of the plaintiff company, with the words added, "Niagara Falls, Ont." The remaining six all appeared in 1913. They all (except one) contain prominently the name and address of the plaintiff company, and in addition the picture of the bowl with a biscuit inside, and a spoon resting in the bowl. The bowl is steaming, and there is no reference to a registered trade mark. The exception is an advertisement of triscuit, which is described as "the shredded whole wheat wafer." In none of these is there any user of the words "shredded wheat" as indicative of the manufacturer of the biscuit or triscuit. The words are used merely as describing the substance of which the biscuit and triscuit are composed. Exhibit No. 40 contains a series of advertisements which

appeared in *The Globe* between May 1, 1913, and Apr. 30, 1915. Down to the end of 1914, the advertisements of the biscuits all contain prominently the plaintiff company's name and address, a picture of the bowl, biscuit and spoon, and the words "shredded wheat," to describe the stuff of which the biscuit is made. In 1915, the name of the plaintiff company drops out of the advertisements, but the picture of the bowl, etc., continues, and in addition the following words occur, "Made at Niagara Falls, Ontario." In these advertisements also the words "shredded wheat" are used merely as describing what is the composition of the biscuits and triscuits. They invariably state it thus: "Shredded wheat is made in two forms, biscuit and triscuit."* Other advertising-matter was put in evidence, viz., a collection of advertisements in the United States by the United States company which was manufacturing shredded wheat at Niagara Falls, N. Y. These advertisements become admissible and relevant only by reason of the evidence given by Mr. Edwin Wallace. Mr. Wallace had been with the U. S. A. company at Niagara Falls, N. Y., from June, 1901, until about 1904 or 1905, when he became superintendent of the plaintiff company, a post which he held until 1924. Mr. Wallace was asked to look at Exhibit 10 and to state whether that was the way in which, during his association with the plaintiff company, the product had been advertised and described, and he replied: "This is the advertising which has been carried on for many years." In these advertisements also the words "shredded wheat" are used descriptively, and not as indicating the exclusive manufacture of any person. As an instance, the public is warned:

> Look for the picture of Niagara Falls on the carton when you buy shredded wheat biscuit. Any other shredded wheat that may be offered you is merely a poor imitation of the only original shredded wheat.**

---

* Respondent's corresponding American advertising is described at pp. 14-16, *supra*, and many examples, containing almost precisely the same material alluded to by the Privy Council, are in evidence as Plaintiff's Exhibits 87-112.

** See p. 15, *supra*.

Again:

> When you ask for shredded wheat be sure you get the original shredded wheat you have always eaten, made at Niagara Falls, N. Y.*

In the face of the use by the plaintiff company of the words "shredded wheat" as appearing on the carton and in the advertisements, it would appear to their Lordships difficult to believe that the words "shredded wheat" could have acquired a secondary meaning indicating goods exclusively manufactured by the plaintiff company. It is, however, claimed by the plaintiff company that the oral evidence establishes the fact. This necessitates a consideration of that evidence.

Three classes of witnesses (some 27 individuals) were examined on commission, viz., consumers, retail grocers, and wholesale grocers. They came from every province of Canada with the exception of Ontario and Quebec, but a formal admission was made on behalf of the defendants that similar witnesses from those provinces would, if examined on commission, testify to the same effect. It may thus be taken that the evidence, such as it is, covers the whole Dominion. Without analysing it in detail, it may be stated that, in their Lordships' opinion, it falls far short of establishing that in 1928, or indeed at any time, the words "shredded wheat" had acquired a secondary meaning which meant that the goods to which they were applied were the manufacture of the plaintiff company and of no one else. The questions (couched often in a leading form) and the answers given are full of ambiguity. It must be remembered that "shredded wheat" was not only the name given by the inventor to a new product which could be baked into a biscuit, but was also descriptive of the product as to both its composition and its appearance. It must also be remembered that for a lengthy period the plaintiff company enjoyed a legal monopoly of making and selling in Canada the product shredded wheat baked into biscuits, and that, with the negligible exception of some shredded wheat biscuits called muffets, the plaintiff company continued to be the sole maker of the product, baked or otherwise. In these circumstances, it was inevitable that the words "shredded wheat" and shredded wheat biscuits should become asso-

* See p. 14, *supra*.

ciated in Canada with the goods of the plaintiff company, since many members of the public would get to know that the product shredded wheat was in fact the plaintiff company's product.

This, however, is far from establishing the required meaning of distinctiveness, which must carry with it the feature that the goods distinguished are the goods manufactured by a particular person, and by no other. A word, or words, to be really distinctive of a person's goods, must, generally speaking, be incapable of application to the goods of anyone else. It is on this point that the evidence breaks down. It is full of ambiguities. One is left in doubt as to whether a witness, in speaking of shredded wheat, refers to the baked biscuit or to the material of which it is composed, and the answers of many are inconsistent with the witness really believing that the words "shredded wheat" necessarily indicate goods manufactured by the plaintiff company exclusively, and by no one else. It is sufficient to say that it fails to show that the words "shredded wheat," which were both the name of and descriptive of, Perky's invented product, ever acquired the secondary meaning of being distinctive of goods manufactured exclusively by the plaintiff company. It would, in their opinion, be passing strange if they had acquired such a meaning, for it would be a meaning directly contrary to the sense in which those words had been put forward to the public by the plaintiff company in its cartons and advertisements. The circumstances existing in the present case, and the extreme difficulty of the plaintiff company succeeding in establishing the desired secondary meaning, are exactly those which are described by LORD DAVEY in the well-known case of *Cellular Clothing Co.* v. *Maxton & Murray* (6), at pp. 343, 344, which passage has been aptly cited by MCTAGUE, J., in his judgment in the present case.

It was contended that MCTAGUE, J., had found the facts upon the issue of distinctiveness in favour of the plaintiff company, but their Lordships are unable so to read his judgment. Had he done so, he must, they think, have granted relief against infringement of trade marks. He states that the general effect of the evidence is that the words "shredded wheat" means to the witnesses the goods

(6) [1899] A. C. 326; 43 Digest 276; 68 L. J. P. C. 72; 80 L. T. 809; 16 R. P. C. 397.

of the plaintiff company. In view of the monopoly enjoyed under the patent, and the monopoly subsequently in fact enjoyed, the words must necessarily be identified with the plaintiff company's goods; but, in view of those exceptional circumstances, the judge holds that the requisite secondary meaning of exclusive distinctiveness has not been established. To quote his words:

> On the branch of the issue having to do with infringement of the trade mark, the conclusion must be that the words whose use is complained of are common words, merely descriptive, and have not acquired a secondary meaning in such manner as to give the plaintiff the relief sought.

Their Lordships agree with this finding, which also had the approval of the Court of Appeal.

In the result, their Lordships agree with both the Ontario courts in holding that the registrations of the plaintiff company's trade marks "shredded wheat" were invalid, and that, so far as the action is based on infringement of trade marks, it fails.

The same result must, they think, ensue in regard to passing off, so far as the alleged passing off is based on the use of the words "shredded wheat." Once it is established that these words are both the name of a product and descriptive of that product, the difficulty of establishing a passing off merely by the use of those words in relation to the product is extreme. The case mainly relied upon by the plaintiff company was *Reddaway* v. *Banham* (5) already referred to. In that case, the use of words which in fact described the belting there in question, and which in a sense could be said to be its name, was restrained, on the ground of passing off. The facts in that case were exceptional and peculiar, and have no real relation to the facts of the present case. For years different manufacturers of belting had made belting consisting of a yarn which was in fact principally composed of camel hair, but which was not known to contain in fact camel hair. Each manufacturer had given the distinctive name of some animal to his belting; e.g., yak, buffalo, llama, crocodile, etc. The plaintiff had identified his with the camel, and everyone concerned was under the

(5) [1896] A. C. 199; 43 Digest 277; 65 L. J. Q. B. 381; 74 L. T. 289; 13 R. P. C. 218.

impression that the plaintiff's name camel-hair belting was a fancy name, and in no way descriptive. The defendants Banham began in 1891 to make belting made of yarn like the plaintiff's, and gave it the name of the plaintiff's belting, camel-hair belting. Upon the facts of that case, a jury found, and no wonder, that the words (though descriptive in fact of the goods) meant the plaintiff's belting, as distinct from the belting of other manufacturers. The decision is one easily to be accounted for on the special facts, namely, that owing to the general but mistaken belief that camel-hair was a fancy name, the requisite secondary meaning had in fact been acquired. The plaintiff company's action must, in their Lordships' opinion, fail, so far as it is based on the use of the words "shredded wheat," with the result that, as against the defendant Bassin, the action was properly dismissed.

The plaintiff company, however, claims as against Kellogg's a passing-off injunction based upon the allegation that Kellogg's biscuits are of such shape and size that hotel-keepers and restaurant-keepers could, if so minded, supply them in response to the request of a customer who, in asking for shredded wheat, desired to be supplied with biscuits of the plaintiff company's manufacture. Their Lordships see no reason for granting any such relief, upon the evidence given in the present case. They are not satisfied that a person asking for shredded wheat will not have his request truly satisfied if the product shredded wheat, as manufactured by Kelloggs or any other manufacturer, is supplied. Nor are they satisfied that a customer who really desires a biscuit of the plaintiff company's manufacture will necessarily be deceived by being offered a biscuit of the same shape but perceptibly smaller. Such likelihood of deception requires to be proved, and it is noticeable that no witness was shown a Kellogg's biscuit and asked whether he would have taken that to be a biscuit of the plaintiff's company's manufacture. The plaintiff company has not, in their Lordships' opinion, made out a case in these proceedings which would justify the granting of a passing-off injunction based solely on the form of the biscuit.

Some further observations their Lordships think it desirable to make. Their decision has been reached without basing it specifically upon the existence of patents which have expired. Their Lordships, however, find it

difficult to conceive that a manufacturer could in such a case be held guilty of passing off, if he manufactured the goods in accordance with the expired patents, and the only similarity between the rival goods lay in the appearance of the goods so manufactured and the application to them of the name by which the patented goods had been known. It is conceivable that, in the case of a patent long ago expired, the evidence might possibly establish that the name had become distinctive of a particular manufacturer rather than descriptive of the goods, with the result that other manufacturers of the goods could be compelled to adopt some means of effectively distinguishing their goods from those of the particular manufacturer. Difficult as such a case is to prove in the case of a descriptive word, it must be additionally difficult in the case where a word is the name of goods as well as being descriptive of those goods. The case of *William Edge & Sons, Ltd.* v. *William Niccolls & Sons, Ltd.* (8) was peculiar, in that the goods there in question which were offered for sale were pieces of washing-blue, while the special form of stick which the defendants were restrained from associating with their pieces of washing-blue was in effect part of the get-up of the plaintiff's goods. In *Boake (A.), Roberts & Co., Ltd.* v. *Wayland (W. A.), & Co., Re Boake (A.), Roberts & Co., Ltd.'s, Trade Marks* (9), while the name of the patented article was "Kalium Meta Sulphite," or, more technically "Meta Sulphite of Potassium," the letters or initials K.M.S. were proved to distinguish in the brewing trade the Kalium Meta Sulphite, or Meta Sulphite of Potassium, manufactured by the plaintiffs, from the same article of other persons who were making it and calling it by various other names. The defendant was restrained from applying the letters or initials K.M.S. to his goods. In the case of *Edison Storage Battery Co.* v. *Britannia Batteries, Ltd.* (10), the distinctiveness was proved by admissions made by the defendants themselves, but for which, as BENNETT, J., pointed out, the plaintiffs would have had difficulty in satisfying the court that descriptive words had become distinctive Moreover, the plaintiffs' task in that case was clearly ren-

(8) [1911] A. C. 693; 43 Digest 312; 80 L. J. Ch. 744; 105 L. T. 459.

(9) 26 R. P. C. 251; 43 Digest 227.

(10) 48 R. P. C. 350; Digest Supp.

dered less difficult by the fact that the words there in question included the actual name of the inventor. Each of these cases presented some peculiar feature which brought the necessary proof within the range of possibility.

One further observation their Lordships desire to make. Litigation has taken place in the United States of America in which a company called National Biscuit Company sought to restrain a company called Kellogg Company from using the words "shredded wheat." The action was dismissed by decree of the U. S. district court for the district of Delaware, and, on appeal to the U. S. circuit court of appeals for the third circuit, the decree was affirmed. Subsequently, on reargument before the same Judges, that decision was reversed, and a decree was entered:

> enjoining the defendant from the use of the name "shredded wheat" as its trade name, and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade mark.

Their Lordships can only (but with the greatest respect for the court) express the view that, if the facts of that case were similar in all respects to the facts of the present case, they prefer the first judgment of the circuit court of appeals to its later decision. Their Lordships are of opinion that this appeal should be dismissed, and will humbly advise His Majesty accordingly. The appellants must pay the costs of the appeal.

Appeal dismissed with costs.

Appendix F.

IN THE MATTER OF THE TRADE MARKS ACTS, 1905 TO 1919

AND

IN THE MATTER OF TRADE MARK NO. 500,671, REGISTERED IN THE NAME OF THE SHREDDED WHEAT COMPANY, LTD. IN CLASS 42.

LORD JUSTICE CLAUSON: This is an appeal from an Order of Mr. Justice Bennett of the 21st December, 1937, dismissing an application to the Court by the Kellogg Company of Great Britain Ltd. under Section 35 of the Trade Marks Act 1905 for an Order expunging from the Register

of Trade Marks a trade mark belonging to the Respondents, the Shredded Wheat Co. Ltd., consisting of the words "Shredded Wheat" registered on evidence of distinctiveness under Section 9 sub-section (5) of the Act on the 5th March, 1929. The application was grounded on the allegation that the mark at the date of registration was wholly descriptive and not adapted to distinguish the goods of the Respondents from those of other persons.

It appears that in October, 1895, one Perky obtained Letters Patent for a process of mashing wheat in berry form so as to produce an article presenting the appearance of being composed of a mass of cereal filaments or shreds. From 1896 until 1908, baked packets of this product in the shape of small "pillows" were made in the U. S. A. or Canada and imported into and sold in this country by a firm of Ingersoll & Melhuish under the name of "Shredded Wheat". The Respondent Company was formed in 1908 and took over this business of Ingersoll & Melhuish and continued the import and sale. In 1926 the Respondent Company erected a factory at Welwyn Garden City and thenceforward manufactured their "pillows" there and sold them in this country. The trade mark "Shredded Wheat" was, as already stated, registered on the 5th March, 1929. Throughout the "pillows" have been sold in this country in cartons each containing 12 "pillows".

The learned Judge quite correctly directed himself to the consideration of the question of fact whether on the evidence it appeared to the satisfaction of the Court that at the date of registration the mark was distinctive within the meaning given to that word by Section 9 of the Act, *i. e.* "adapted to distinguish the goods" of the Respondents "from those of other persons". Before the learned Judge it appears to have been suggested that the words "Shredded Wheat" had no direct reference to the character or quality of the goods and could have been registered under Section 9 sub-section (4). The learned Judge's judgment proceeds, however, on the footing that the words have direct reference to the character or quality of the goods, and the suggestion to the contrary was specifically abandoned in this Court by Counsel for the Respondents.

On the evidence the learned Judge held the following propositions to be established (i) that a wholesaler asked

to supply Shredded Wheat supplies as a matter of course the articles made by the Respondents and orders them as a matter of course from the Respondents, and to the wholesaler "Shredded Wheat" means the pillow-shaped article made by the Respondents and nothing else; (ii) that the retailer when he needs supplies of the Respondents' articles places with his wholesaler an order for "Shredded Wheat" and expects, on such an order, to get the Respondents' articles, and when he is asked for "Shredded Wheat" he supplies the Respondents' articles; (iii) the consumers when they ask for "Shredded Wheat" desire to get the Respondents' articles and nothing else.

We see no reason to differ from these findings of fact as to the attitude of mind at the present time of wholesalers, retailers and customers in-so-far as they sum up the effect of the oral evidence before the learned Judge; but these findings do not, in our judgment, of themselves lead to the conclusion that at the date of the registration in 1929 the mark "Shredded Wheat" was distinctive of the Respondents' goods. The learned Judge concluded upon those facts that although the words "Shredded Wheat" had reference to the character of the Respondents' goods it had in fact become distinctive of them; and on a fair reading of his judgment he must, we conceive, be held to have found that this distinctiveness had in fact come into existence by the 5th March, 1929, the date of registration. It is unfortunate that there was no evidence before the learned Judge as to the carton in which "Shredded Wheat" was sold in this country before 1926. The Applicants enquired of the Respondents' manager as to that carton but did not succeed in obtaining its production. Such a carton has, however, since been forthcoming and, by leave of this Court, was proved in evidence before it, and the facts as to the cartons used thus became available for the information of this Court.

It appears that up to the date in or about 1926, when the Respondents' factory at Welwyn Garden City came into operation the goods were sold exclusively in cartons imported from Canada. One such carton was proved before us. From a study of that carton it appears (i) that the trade mark as appearing on the carton under which the respondents sold their goods in this country, was a trade mark registered in Canada, though not in this coun-

try, consisting of a representation of two "pillows" of Shredded Wheat displayed on a dish with a spoon; and (ii) that on a careful reading of the letterpress on the carton it is clear that the words "Shredded Wheat" are used, in contradistinction to what is described thereon as the trade mark, as the name of the product. The carton is wholly inconsistent with the possibility of the words "Shredded Wheat" having up to 1926 become the Respondents' trade mark and distinctive of their goods. A considerable mass of advertisements issued by the Respondents was in evidence; and so far from those advertisements indicating that prior to 1926 the words "Shredded Wheat" were used by the Respondents as a trade mark those advertisements confirm the evidence of the carton that the Respondents used the words "Shredded Wheat" as the name of the product, and sought to teach the public to identify their goods by the trade mark of the dish with a spoon and two "pillows" of the product, that mark being their registered Canadian trade mark.

The new evidence brought before this Court thus makes it, in our judgment, reasonably clear that up to 1926 the words "Shredded Wheat" were not used by the Respondents as distinctive of their goods but were used by the Respondents as the name of the product. It was not suggested that the product made according to Perky's patents was ever known by any name but that of "Shredded Wheat" and since "Shredded Wheat" was thus used as the name of the product clear evidence would be required to establish that a secondary distinctive meaning had been acquired by the word. Furthermore it is not easy to see how such a distinctive meaning could have come into being unless there were rival producers of the same article in the market. There was no evidence that any such rivals were in the market, at all events to any substantial extent, before the 5th March, 1929.

The evidence is not clear as to the exact form of carton used by the Respondents from 1926 to 1929. There is no doubt that the carton used during that period contained a picture of and referred to the Welwyn factory. It would seem that during that period the dish with two "pillows" in it appeared on the carton but it is not clear whether the spoon appeared in the dish or whether, if it did, the design of spoon, pillows and dish was described as a trade mark. We cannot satisfy ourselves that there

is any evidence to show that between 1926 and 1929 there was any change in the position, or that by the end of that period the words "Shredded Wheat" had acquired a secondary meaning as distinctive of the Respondents' goods, which they clearly did not possess at the beginning of that period. The oral evidence as to the present attitude of mind of wholesalers, retailers and customers which the learned Judge treated as satisfactory evidence of distinctiveness becomes, in the light of the facts to which we have referred, of very slight weight; indeed, it merely shows that during the period since 1929 the registration of the words "Shredded Wheat" as the Respondents' trade mark has operated to preserve for them a complete monopoly in the use of the words "Shredded Wheat" and, as would appear from the evidence, an almost complete monopoly in the sale of the product, made according to the long expired patent, which was known by the name of, and at all events until 1926 was called by the Respondents themselves by the name of Shredded Wheat.

For these reasons, as the evidence now stands, we are unable to hold that the Respondents have established that at the date of registration on the 5th March, 1929, the words "Shredded Wheat" were adapted to distinguish their goods from those of other persons. The Order of the learned Judge will be reversed, and the mark will be expunged, and the Respondents will be ordered to pay the costs here and below.

Supreme Court of the United States

OCTOBER TERM, 1937

KELLOGG COMPANY,
Petitioner,
Defendant,

AGAINST

NATIONAL BISCUIT COMPANY,
Respondent,
Plaintiff.

No. 396.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT.

BRIEF IN OPPOSITION.

Statement of the Case.

The recital of facts in petitioner's petition and brief is incomplete and in several respects incorrect. The pertinent facts are as follows:*

This is an action for *unfair competition* involving, as often occurs in such cases, related questions of trade

* (For convenience the respondent will in this statement of facts be referred to as the plaintiff and the petitioner as the defendant).

mark and trade name infringement. *It is peculiarly one that must stand upon its own facts.*

About the year 1893, Henry D. Perky put to commercial use a new process for a form of bread manufactured out of whole wheat.* The process consisted in boiling wheat and passing, under pressure, the softened wheat berry between rolls, one of which contained grooves. This caused the wheat to be extruded in the form of long filaments or threads, which were later cut and baked in the form of a pillow-shaped biscuit, and were sold by Perky in Denver as early as 1893, under the fanciful and *then entirely novel name* of "Shredded Wheat" or "Shredded Wheat Biscuit.†

A year or two later, Perky applied for and obtained a patent, No. 548,086, dated October 15, 1895, covering the process of boiling the wheat and crushing and spinning it out in threads with the rolls; but the patent did not extend to the *completed* "Shredded Wheat" biscuit. The process produced the long filaments or threads which the inventor said were then ready for use as food without further cooking, "or it can be shaped for baking in various ways".‡

On September 17, 1895, design patent No. 24,688 was issued to Perky, covering a biscuit of the familiar "Shredded Wheat" form; but the design patent (which would have expired in 1909) was held invalid in 1908 by Judge Kohlsaat in the Northern District of Illinois, Eastern Division, upon the ground that the design had been in use by Perky for more than two years prior to application for the patent.§

In 1912, the process patent expired, and the right to make the long filaments or threads of boiled wheat disclosed in the patent became public property. There

---

* R. 195

† R. 959, 971, 980.

§ R. 2020. The decision is unreported.

were also patents upon various machines for operating the process and upon mechanism incident to the manufacture and baking; and these, too, expired at the same time or soon after.

In 1915, a former employee of the Shredded Wheat Company (predecessor of plaintiff) started to market a whole wheat biscuit in exactly the same form and shape as the Perky biscuit, but was enjoined by the District Court of Connecticut upon the ground that the *form or shape* had acquired a secondary meaning connected with plaintiff's predecessor (*Shredded Wheat Co.* vs. *Humphrey-Cornell Co.*, 244 Fed. 508). That injunction was retained in modified form by the Circuit Court of Appeals for the Second Circuit (250 Fed. 960). The defendant in that case, however, did *not* attempt to use the name "Shredded Wheat" contenting himself with calling the biscuit "Whole Wheat," which is the true generic name.

The process disclosed by the patent has been used for many years since the expiration of the Perky patent by one competitor of the plaintiff, the Quaker Oats Company; but the latter *shapes* its product for baking in a manner totally unlike the familiar "Shredded Wheat" biscuit and calls it "Muffets".* Also, another competitor, the Loose Wiles Biscuit Company, has availed itself of the Perky process patent and produces still another *form* of biscuit, which it calls "Rippled Wheat" (*ibid*).

The Kellogg Company, defendant here, in 1922, *ten years* after the expiration of the patent, commenced the manufacture of a whole wheat biscuit resembling plaintiff's biscuit and called it "Shredded Wheat", but *desisted* in the same year, upon objection by plaintiff's predecessor.† Five years later, in 1927, and *fifteen years* after the expiration of the patent, the defendant again

---

* R. 285.

† R. 103, plaintiff's Exhibit 7; interrogatories Nos. 12 and 13, R. p. 67.

began the manufacture of biscuits the *same* as plaintiff's under the name "Shredded Whole Wheat Biscuit".

The plaintiff's predecessor promptly brought suit for a injunction against the defendant and a dealer, in the District Court for Connecticut, seeking substantially the same relief as is sought in this suit. In 1930, and while that suit was pending, the defendant *again abandoned* the use of the name "Shredded Wheat" as part of its product name and commenced to designate its product on its cartons as "Kellogg's Whole Wheat Biscuit"; and, thereupon, the Connecticut suit was dismissed without prejudice.*

The present suit, commenced in 1932, followed the defendant's resumption of the use of the name "Shredded Wheat" as a *trade name* in its advertising and on the end of its cartons, and its appropriation on the face of its cartons of the plaintiff's registered trade mark, consisting of two biscuit in a dish,† and other deceptive devices to be hereinafter referred to.

Thus, for fifteen years after the expiration of the Perky patent, with the exception of the Ross Company, which in 1915, was enjoined, no one sought to use the process disclosed by the Perky patent to make a biscuit of the *form and shape* of plaintiff's; and *no one at all sought to use the name "Shredded Wheat"* except defendant for a short time in 1922, as before stated. All competitors except the defendant, have respected the plaintiff's right in the *name* and, with the exception aforesaid, in the *shape* of the biscuit. During that period of fifteen years, plaintiff and its predecessors expended more than $17,000,000 in connecting the *name* and particular *shape* of the biscuit with themselves, and thus identifying it as their product. It is undisputed that, at the time of defendant's entry into the competition complained of, both name and form of the biscuit were accepted by the trade and by

* See Plaintiff's Exhibit 251, Record volume 4, p. 127.

† R. Vol. I, pp. 217, 219.

consumers as identifying the product with plaintiff and its predecessors.

Thus it will be seen that the defendant alone of all competitors found it necessary to take from the plaintiff both its *name* and the *form* and *appearance* of its product. In its effort to trade on plaintiff's good-will, it did even more than that; it appropriated and placed on its packages the plaintiff's before-mentioned 2-biscuit-in-dish trade-mark. Defendant also utilized in the cartons in which it dispensed its product a cellophane window, which exhibited the ends of the biscuit so that anyone looking through such a window could not possibly distinguish the defendant's biscuit from that which had characterized the "Shredded Wheat" of plaintiff and its predecessors for approximately 40 years. Still worse, as pointed out by the court below, it placed on its cartons the words *"The original has this signature; W. K. Kellogg"*. The court below found that the defendant's object from this latter fact, coupled with the others, was as follows:

> "There could have been but one object for doing this, and that was by unfair competition and untruthful statements, to deceive the public and secure the trade which in equity and good conscience belonged to the plaintiff",*

In 1922, when defendant made its first brief attempt to use the name "Shredded Wheat" from which it promptly desisted upon objection by plaintiff, the latter had spent more than $6,700,000 since the expiration of the patent in connecting the name and appearance of the product with itself. This sum was fortified by the previous expenditure during the life of the patent of approximately the same amount.

From 1922 to 1927, when the defendant again began manufacture, the plaintiff spent the enormous sum of $8,800,000 to the same purpose. During the two years

* R. Vol. III a, p. 2092. Officially reported 91 Fed. (2) 150.

immediately following the defendant's second abandonment of "Shredded Wheat" and its adoption of the name "Whole Wheat Biscuit" the plaintiff spent more than $2,500,000.

It should be observed that the defendant, while it lays stress on the fact that it claims the expression "Shredded Wheat" to be descriptive, uses it not in a *descriptive* sense but only as a *trade name.*

The District Court for Delaware dismissed the complaint principally upon the ground that upon the expiration of the patents the right to make the biscuit and to call it by its name passed to the public under the doctrine of *Singer Manufacturing Co.* vs. *June Manufacturing Co.*, 163 U. S. 169. The Circuit Court of Appeals, after the first hearing, affirmed the judgment of the District Court in a *per curiam* opinion. A rehearing was asked for on the ground that the decision of the Court was not in harmony with the modern doctrine of unfair competition as defined by this Court in *Schechter Poultry Corp.* vs. *United States*, 295 U. S. 495. The rehearing was granted and the case was again fully argued by both sides. The Court unanimously reversed itself.

ARGUMENT.

I.

The Case is Not One of Public Interest, But Depends Upon its Own Peculiar Facts.

From the foregoing statement of facts it should be apparent that the petitioner, *alone* among all competitors of the respondent, finds it necessary to copy the *name* and *form* from the respondent. Not only has it done this, but by *two retractions* (1922 and 1930) it has led the respondent to expend greater and greater sums of money in creating good will for itself inseparably connected with the form of the product and the name.

The facts of the case bring it squarely within the modern doctrine of unfair competition which has been markedly extended by this Court and other courts of this country so as to protect merchants and businessmen against the more subtle forms of unfair business dealing to which modern business conditions and lack of business ethics seem continuously to give birth. In the *Schechter* case, *supra*, at page 532 this Court referring to the doctrine of unfair competition, said:

> "In recent years, its scope has been extended. It has been held to apply to misappropriation as well as misrepresentation, to the selling of another's goods as one's own—*to misappropriation of what equitably belongs to a competitor.*"*

The following are other cases illustrative of the doctrine just quoted:

In *International News Service* vs. *Associated Press*, 248 U. S. 215, unauthorized use of news releases obtained by the Associated Press was enjoined as unfair although the act was not "passing off" as that term had previously been understood.

In *Motor Improvement, Inc.* vs. *A. C. Spark Plug Co.*, 80 Fed. (2nd) 385 (C. C. A. 6th), the defendant was enjoined from representing its filter as being the same as one which had been adjudged to infringe the plaintiff's patent, although it was not in fact the same.

In *Wall* vs. *Rolls Royce of America, Inc.*, 4 Fed. (2nd) 333, the Circuit Court of Appeals for the Second Circuit enjoined the use of the name "Rolls Royce" by a defendant who used it in connection with *radio tubes*, although the plaintiff had used the name only in connection with *automobiles*.

In *Aunt Jemima Mills Co.* vs. *Rigney & Co.*, 247 Fed. 407 (C. C. A. 3rd, cert. denied 245 U. S. 672), the Court enjoined the use upon *syrup* of a trade name previously

---

* When italics are used in quotations it will be understood that the emphasis is ours unless otherwise noted.

used for many years on *pancake flour*, on the ground that the defendant would be enabled to get the benefit of the complainant's reputation and advertisement.

In the case at bar, the Circuit Court of Appeals affirmatively found that the petitioner by various means which in the aggregate, at least, were found to be unfair and inequitable, had sought to appropriate the plaintiff's good will. This finding of the Circuit Court of Appeals is amply supported in the record, the most important facts being set forth in the statement of the case *supra*. Defendant's entire course of conduct deprives it of any standing in a court of equity.

Thus it used the name "Shredded Wheat" when other competitors of respondent did not find it necessary to do so. It used the *form* and *shape* of the biscuit which has characterized respondent's product for over forty years, although no other competitor (except Ross who was enjoined) has ever used that form. It put on its cartons and in its advertising display (in the latter in large letters) "The original has this signature W. K. Kellogg". When it dropped the word "shredded" from the product name in 1930 and called its product "Whole Wheat Biscuit", it appropriated the plaintiff's trade mark of two biscuit in a dish and featured it on its cartons. Later it cut a window in its packages so that the ends of the biscuit would show in exactly the same form as plaintiff's.

It recognized respondent's rights in 1922 and desisted from the use of the name and form. It recognized them again in 1930 when it withdrew the word "Shredded" from its product name. During these intervals, as pointed out, the respondent expended vast sums of money in cementing with the public its great good will in this wholesome and popular food product. Petitioner now asserts that by adding the name "Kellogg" to the words "Shredded Wheat" the wrong is neutralized, notwithstanding that this Court said long ago that that "is an aggravation and not a justification" (*Menendez* vs. *Holt*, 128 U. S. 514, 521).

Surely such conduct amply justifies the relief to which the Circuit Court of Appeals found the respondent entitled.

II.

The Decision of the Circuit Court of Appeals Is Not In Conflict With Any Decision of This Court or of any Circuit Court of Appeals.

(a) There is no conflict with the decision in *Singer* vs. *June*, 163 U. S. 169. This Court, in *Singer* vs. *June* recognized and enforced upon the defendant the doctrine of unfair competition. There were no such acts of unfair competition, *except those which were enjoined*, in the *Singer* case as in the case at bar. In that case, there was no delay of 15 years or, indeed, any material delay in adopting the name, and there were no *retractions*, as there were in the case at bar, for *substantial* periods of time, of the use of the name, during which time vast sums of money were expended by the original user of the name in building a good-will and in connecting the name with its product. The fact that all competitors of plaintiff except the defendant have found it unnecessary, in order to utilize the process and market the product thereof, to employ the *name* and the *shape* which has characterized plaintiff's biscuit for many years, shows that it was not necessary for the defendant, in order to adequately use the patent, to also employ the name and the form by which the product of the patent had been marketed before the expiration of the patent.

Moreover in the case at bar the product was a food which, by its excellent and nutritious qualities had become widely known and consumed. The name "Shredded Wheat" and the pillow-shaped form of biscuit were synonymous with the healthful product which the plaintiff and its predecessors had made and sold for 40 years. An inferior product put out by an unscrupulous competitor under the name "Shredded Wheat" could easily be harmful to the public and destroy plaintiff's good-will.

The Court below correctly found that the equitable considerations arising from the *peculiar* circumstances of *this* case required the protection which it granted. The District Court felt that the requirements of *Singer* vs. *June* were met by the carton in which defendant packed its product, but the Circuit Court of Appeals disagreed with this conclusion especially in view of the thousands and millions of biscuit which are served to customers by hotels, restaurants, etc., *outside of the carton.**

(b) The decision of the Court below is in complete harmony with the decision of the Circuit Court of Appeals for the Second Circuit in *Shredded Wheat Co.* vs. *Humphrey-Cornell Co.*, 250 Fed. 960. In that case respondent's predecessor brought suit in Connecticut against a distributor of the Ross Company, which less than three years after the expiration of the patent started to manufacture a biscuit exactly like respondent's but which it did not, however, call "Shredded Wheat". Judge Thomas in the District Court enjoined the sale of all biscuit like respondent's unless banded or marked. The Circuit Court of Appeals modified and affirmed this judgment holding that the marking or banding should apply only to biscuit reaching the consumer without the distinguishing package.† Ross claimed it to be impossible to place a distinguishing mark required by the Court on the biscuit.‡ The defendant in the case at bar made a similar claim and introduced evidence to support it.§ The court below, therefore, did

---

* See for example, R. pp. 501, 520, 527, 549, 554, 652, 714, 724, 731, 742, 784, 791, 798, 838, 845, 884.

† As pointed out (*supra*, p. 5), the Circuit Court of Appeals in the case at bar found that the defendant's *particular* package does not sufficiently distinguished the origin of the respetive products.

‡ R. Vol. III, pp. 1995-6.

§ R. Vol. II, p. 1122 *et seq.*

exactly as the Circuit Court of Appeals for the Second Circuit did; it forbade the defendant from making a biscuit resembling in shape and appearance that of the plaintiff, *which was the only adequate relief which it could give the plaintiff, in view of the defendant's insistence that a banding or marking of each biscuit was impractical.* This imposes no hardship upon the defendant that has not been overcome by all other competitors who have undertaken to make use of the process of the expired patent. "Muffets," made by Quaker Oats, has a distinguishing shape, and so does "Rippled Wheat," made by the Loose Wiles Company. As already pointed out, *supra*, page 2, the process patent does not produce a biscuit of any defined form but only the long filaments of wheat which may then be "shaped for baking in various ways."

(c) The decision of the Circuit Court of Appeals is not in conflict with the decision of the Court of Appeals of the District of Columbia in *Natural Food Co.* vs. *Williams*, 30 Appeals D. C. 348 decided in 1908. That case did not involve unfair competition or inequitable conduct. It involved a purely technical trade mark registration question which, upon purely technical grounds, was decided adversely to the predecessors of the present respondent.

(d) The decision of the Circuit Court of Appeals in no respect conflicts with the decision of the Circuit Court of Appeals for the Second Circuit in *Kellogg Company* vs. *National Biscuit Company*, 71 Fed. (2nd) 662. That was an action for treble damages under the Sherman Act for attempt to monopolize. The complaint was dismissed by the District Court upon demurrer. This action was reversed by the Circuit Court of Appeals which held that, the averments of the complaint which alleged an unlawful attempt to monopolize and restrain interstate commerce were sufficient "to withstand demurrer". The Kellogg Company, plaintiff in that case, has not yet

succeeded in filing an amended complaint and indeed apparently attaches no importance to the case as it permitted it to be dismissed for want of prosecution on June 18th, 1937. If anything were lacking to show the complete want of merit in the present petition, the absurd claim of conflict with that decision should be sufficient.

(e) The decision of the Circuit Court of Appeals is not in conflict with the decision in *Centaur Co.* vs. *Heinsfurter,* 84 Fed. 955, decided in 1898. There was in that case no evidence of any misconduct or unfair competition by the defendants. That fact alone distinguishes it clearly from the present case.

(f) The decision in this case is not in conflict with *Warner & Co.* vs. *Eli Lilly & Co.,* 265 U. S. 526. On the contrary, the decision in that case is illustrative of the relief to which the respondent here is entitled. That case involved the names "Coco-Quinine" and "Quin-Coco", both applied to a liquid preparation of quinine in combination with chocolate. The Circuit Court of Appeals had enjoined the defendant from using chocolate in the manufacture of the preparation and from continuing the use of the name. This Court, recognizing the right to manufacture this unpatented combination, nevertheless found the defendant guilty of fraudulent conduct and said (P. 532):

> "The use (of the name) dissociated from the fraud is entirely lawful, and it is against the fraud that the injuction lies. But respondent being entitled to relief, *it is entitled to effective relief;* and any doubt in respect of the extent thereof must be resolved in its favor as the innocent producer and against the petitioner which has shown by its conduct that it is not to be trusted."

In the case at bar, the Court has found that the petitioner was guilty of fraud and attempted to appropriate the respondent's good will. The relief which it granted was

intended to be *effective relief* and, under the circumstances of this case, no relief less than that granted *could* be *effective*.

(g) The decision of the Ontario Court in *Canadian Shredded Wheat Company, Ltd.*, vs. *Kellogg Company of Canada, Ltd.*, was rendered on November 30, 1936, before the decision of the Circuit Court of Appeals granting the injunction against petitioner's unfair practices. The decision of the Circuit Court of Appeals was rendered on April 12, 1937. An appeal has been taken in the *Ontario* Case to the Privy Council in London, but the case has not yet been argued.

(h) The suggestion of conflict with the Constitution as a reason for granting the petition is unusual, but there is no constitutional question involved and none was urged or decided in the lower courts. Since the expiration of the patent the respondent never has had and never has claimed a monopoly. This is proven by the fact that it already has two strong competitors in the manufacture of the Perky product who have not found it necessary in enjoying the fruits of the expired patent to attempt to appropriate also the plaintiff's good will. The expiration of a patent does not carry with it the patentee's good will and other intangibles. The petitioner's difficulty here is that it seeks to appropriate the latter and that is the gist of this case.

III.

The name "Shredded Wheat", when first adopted by the Plaintiff, was not, and never has been, merely descriptive of the product.

The Circuit Court of Appeals found that the expression "Shredded Wheat" was not descriptive of the process or of the product but was at most suggestive.* This finding is amply supported by the record in this case. As appears from the statement of facts *supra*, the wheat berries are crushed, not torn, and are extruded from the rolls in the form of long threads. They are not "shredded" within any accepted definition of that word.† As the Circuit Court of Appeals so aptly pointed out, it would be as logical to call steel rails "shredded steel" or copper wire "shredded copper".‡

But the point is unimportant in this case because the petitioner does not use or wish to use the words in a descriptive sense but in a trade mark sense in order more readily to appropriate the tremendous good will which years of advertising and expenditure of vast sums of money have created for the respondent. Moreover, we do not assume that this Court will wish to devote its time in deciding the question of *fact* as to whether the court below was right or wrong in concluding that the word was not descriptive but, at the best, merely suggestive.

There is no point in the alleged disclaimers. The disclaimer in the pictorial trade mark of the words "The Home of Shredded Wheat" cannot be construed on any rational basis as a disclaimer of the *trade name* "Shredded Wheat" when the latter has been asserted as such a trade name continuously for 40 years. It will be borne in mind

---

* R. Vol. III a, 2086.

† See for example Century Dictionary 1906, Webster's International Dictionary 1900.

‡ R. Vol. III a, 2086.

that the words "Shredded Wheat" were registered under the Act of 1920* and in 27 states and many foreign countries.† The same applies to the other incidents referred to by defendant in which the words "Shredded Wheat" appeared only incidentally.

The use of the expression "shred" and "shredded" in patents and advertising is equally unimportant. If the term was not descriptive of either the process or the product, it was not made so by later referring to the product as "shredded". But, as we have pointed out, it will not avail the petitioner here because it does not use the word in a descriptive sense.

IV.

The assignments of error are insufficient.

It should be noted that petitioner does not assign as error the order of the Circuit Court of Appeals or any part thereof. He does not assign as error the direction to the District Court to issue an injunction, nor does he specify as error the order for an accounting. His specifications of error go to the *reasons* of the court below, but not to the action which it took.

Conclusion.

It is respectfully submitted that the petition should be denied.

Dated, September 27, 1937.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1938.

Nos. 2 and 56.

KELLOGG COMPANY,
Petitioner,

AGAINST

NATIONAL BISCUIT COMPANY,
Respondent.

BRIEF FOR RESPONDENT

Abstract of the Proceedings

This case comes to this Court upon writs of certiorari to the Circuit Court of Appeals for the Third Circuit to review the action of that Court in reversing a judgment of the District Court for the District of Delaware which dismissed the plaintiff's bill of complaint; and also to review the further action of the Circuit Court of Appeals in clarifying its mandate to the District Court.

The action was commenced in June 1932 by the filing of a bill of complaint alleging unfair competition by the defendant. The District Court dismissed the bill on January 23rd, 1935 (R. vol. I, p. 228) with a written opinion not officially reported but found in the Record, page 193

On appeal by the plaintiff the Circuit Court of Appeals first affirmed the District Court with a *per curiam* opinion on January 16th, 1936. This opinion is not reported but is printed in the Record, volume III-a at page 2069.

A rehearing was granted and the case reargued at the October Term, 1936. On April 12th, 1937 the Circuit Court of Appeals made an order recalling its first opinion and reversing the judgment of the District Court and directing an injunction to issue (R. vol., III-a, p. 2094). The Court's opinion on reargument is reported 91 F. (2d) 150 and is also found in the Record, volume III-a, page 2083. A petition by the defendant for a writ of certiorari was denied by this Court on October 25th, 1937 (302 U. S. 733) and a reconsideration of said petition was denied on November 8th, 1937 (302 U. S. 777).

A motion by the defendant to stay the writ of injunction was denied by this Court December 6th, 1937 (302 U. S. 654).

The mandate of the Circuit Court of Appeals issued to the District Court on December 8th, 1937, and the District Court entered its interlocutory decree in the exact words of the mandate on January 5th, 1938 (R. vol. III-a, p. 2252), and a writ of injunction pursuant thereto was issued on January 7th, 1938 (*ibid* 2254).

On March 4th, 1938 the plaintiff petitioned the Circuit Court of Appeals to recall its mandate for the purpose of clarification (*ibid* 2248), which motion was granted, and the Circuit Court of Appeals on May 5th, 1938 entered an order recalling and clarifying its mandate (*ibid* 2285), accompanied by a written opinion (*ibid* 2282) reported in 96 F. (2d) 873.*

---

* No point is made in petitioner's brief concerning the propriety of the action of the Circuit Court of Appeals in clarifying its mandate, and we assume that the second writ of certiorari was granted out of abundance of caution in order to have the entire record before the court. The application for clarification was made necessary by the petitioner's claiming in the District Court a construction of the mandate which entirely emasculated the injunction ordered by the Court of Appeals. (See *post*, p. 17).

The defendant thereafter petitioned this Court for a stay pending a further application for certiorari which was granted by this Court May 23rd, 1938 (303 U. S.); and on May 31st, 1938 this Court granted the defendant's application for reconsideration of its first application for certiorari, granted the application for the writ of certiorari, and granted a second application for a writ of certiorari to review the action of the Circuit Court of Appeals of May 5th, 1938 (303 U. S.).

Statement of the Case

This is an action for injunction against unfair competition. It is brought by the makers of the famous breakfast food "Shredded Wheat" to protect the good will which has attached to the article and to its name over a period of more than forty years, against the inroads of a competitor who is engaged in a systematic effort to appropriate the good will of the respondent.

The Circuit Court of Appeals found that the intention of the defendant, manifested by its conduct, is "to deceive the public and secure the trade which in equity and good conscience belonged to the plaintiff" (R. vol. III-a, 2092). This finding, as we shall demonstrate, is amply supported by the evidence.

The petitioner asserts that it may use the name and shape of the respondent's product because of the expiration of certain patents. It alleges that respondent seeks a "monopoly". But the fact is that the respondent has no "monopoly", and claims none (see *post*, p. 36).

"Shredded Wheat" is a whole wheat biscuit which has come to be known throughout the civilized world for its purity and cleanliness. What gives value to the trade name "Shredded Wheat" is the fact that throughout all the years the product has been made uniformly from specially selected wheat by a process carefully worked out and rigidly adhered to in order to prevent deviation

in quality. Thus a product which was once a laughing stock and the subject of quips and jokes (R. vol. III, p. 1658) has, by its sheer excellence and the uniform care always used in its preparation, become one of the standard articles of food in the United States and other parts of the world. The record shows that the product today is found in the homes of many millions of families in the United States. "Shredded Wheat" is a homely product, unattractive in its appearance, and its general acceptance by the public is due solely to its intrinsic merit—to the fact that the public has learned that it is a good food.

The process of treating wheat as employed in the production of "Shredded Wheat" was once the subject of United States patents, as was the machinery for making it. Those patents expired many years ago. During the decades that followed, the respondent spent many millions of dollars in building up a good will for its product and in teaching the public to be familiar with the trade name that denoted it. To claim now that it should have no equitable protection for that good will is to ignore entirely the basis in equity upon which this suit is founded and upon which protection is afforded to manufacturers and to merchants against the inroads of competitors who seek to reap where they have not sown. That this is true of the petitioner in this case is amply demonstrated by its conduct as disclosed in this record.

The public has a real interest in this matter. If petitioner is free to use the trade name "Shredded Wheat", then every other manufacturer may do the same. Nothing in this record would warrant us in asserting that the petitioner's product is inferior in quality, but it is self-evident that there would be many manufacturers who would not use the highest quality of white winter wheat, at extra cost, as does the respondent, and who would not use the same expensive precautions to assure purity and cleanliness of their product. The whole success of "Shredded Wheat" has been due to this scrupulous care in its manufacture.

The actual issue in this case is not, as contended for by petitioner, whether respondent is seeking a perpetual "monopoly" in a patent-expired product or whether the expression "Shredded Wheat" is descriptive and open to appropriation by anyone; but, as pointed out at the outset of this brief, the real question and the only one is whether the petitioner by its inequitable and fraudulent conduct has been guilty of "misappropriation of what equitably belongs to a competitor". *Schechter Poultry Corporation* vs. *United States*, 295 U. S. 495, at page 532. It is not the respondent alone who is entitled to protection in such a case, but the consuming public as well, which has learned through many years of constant excellence in service to expect a certain product when called for by a certain name. The respondent is entitled to continue to render to the public the service which the public has learned to expect.

Keeping in mind this simple question, we proceed to point out what the evidence in this case discloses.

1. The History of Shredded Wheat.

"Shredded Wheat" was first produced in 1893 by Henry D. Perky (R. vol. I, p. 195). It was put forth as a new method of making bread out of whole wheat. In the specifications for the patent granted to him on October 15th, 1895 (R. vol. IV, p. 207) the object of the invention is described as follows:

> "An object of the invention is the production of an article of food or bread, consisting of externally-rough porous threads or filaments of wheat or similar grain, having the outer nutrition bran and gluten of the entire berry visibly mingled with the interior starchy portion thereof and adapted by their composition of entire grain-berries and their rough and porous thread-like or shred-like form to constitute, without other shortening or aeration, bread of especially light and wholesome character.

> "A further object of the invention consists in the novel art or method of preparing the grain or berry and reducing it to form without taking from the grain any of the beneficial qualities provided by nature and presenting the same in convenient form for service as a superior article of food without the aid of experts or skilled labor now required to produce palatable bread."

The practice adopted by the inventor to attain his object consisted in first cleaning the wheat in berry form and then boiling it until cooked without destroying its form. The wheat was then allowed to dry for some hours during which it was agitated or stirred until enough of the moisture was thrown off to give consistency to the substance of the berrics. They were then passed between steel rolls at high pressure, one of which had a plane surface and the other a grooved surface. The result was a complete crushing and intermingling of the various component parts of the wheat berry and their extrusion from the rolls in long filaments or threads of wheat. Perky's patent stated that *"the food as discharged from the rolls is ready for use without further cooking, or it can be shaped for baking in various ways"* (R. vol. IV, p. 207).

In practice Perky and his successors, including the respondent, as well as various competitors of the respondent, have all used a series of rolls which deposit the filaments upon a moving belt (or in some cases upon a revolving spindle). Up to this point in the process everyone has been, since the expiration of the patents, and is today free to use Perky's methods. The respondent asserts no right to any protection against such use.

It is important to note that the process just referred to does not produce "Shredded Wheat" biscuit.

After a sufficient number of filaments have been collected upon the moving belt,* or spindle, various manufacturers of the product cut the mass into different shapes prepara-

* See for example the illustration, R. vol. IV, p. 87.

tory to the final process of baking. Perky and his successors, including the respondent, have *always* used the familiar pillow form of the biscuit. Other competitors, such as The Quaker Oats Company and The Loose-Wiles Biscuit Company, have adopted other forms readily distinguishable from the respondent's pillow shape, as will be more fully shown hereafter. In all cases the custom has been to take the biscuit thus formed and to bake it until most of its moisture is expelled, after which by a further drying process the biscuit is rendered practically bone-dry and is ready for the market.

Perky began the sale of "Shredded Wheat" in Denver about 1893. The industry had an humble beginning and as the product became known it was the butt of ridicule wherever introduced (R. vol. III, p. 1658). Nevertheless by 1901 sufficient capital had been raised to erect a plant at Niagara Falls, which is still in use. The growth of the business is graphically shown in respondent's Exhibit 150 (R. vol. IV, p. 51) where appear the sales year by year. Voluminous exhibits, showing the annual expenditures, classified as to the nature of the advertising, will be found in the record, vol. IV, pp. 11 to 52; and the deposition of Truman A. DeWeese (R. vol. I, pp. 558 *et seq.*) portrays graphically the advertising methods used. To the time of bringing this suit more than thirty-five million dollars was thus expended and the sales increased from 37,172 cases in 1896 to a peak of 2,521,751 cases in 1928.* By the year 1922 over 45,000,000 cases had been sold, containing in all nearly twenty billion biscuits.

This astonishing growth was due not alone to the large amount of money spent in advertising, but to the great care and skill exercised by the respondent and its predecessors in the selection of materials and the painstaking attention to processing. Only Number One white winter wheat is used. It is all carefully graded and inspected by a United States Inspector. The respondent maintains a

* Each case contains 36 cartons, each carton 12 biscuits.

wheat research bureau and has financed State agricultural colleges in the development of the highest type of white wheat for the purpose of use in this product (R. vol. I, 259-260).*

The company which began operations in 1901 was a New York corporation known as "Natural Food Company". In 1908 its name was changed to "The Shredded Wheat Company", and it continued to operate as such until the year 1930 when the properties and good will of the business were sold to the present respondent, National Biscuit Company.** The product has been called by the manufacturer "Shredded Whole Wheat Biscuit", "Shredded Wheat Biscuit" and "Shredded Wheat", but the last name is the one which has been accepted by the public. Millions of Americans use it at their breakfast tables. It is safe to say that there is not a restaurant, café or dining car in the United States in which a call for "Shredded Wheat" will not quickly produce respondent's biscuit—except insofar as petitioner by its conduct about to be narrated, has succeeded in raiding the good will of the respondent by adopting the name and form for an imitation biscuit.

2. The Conduct of Various Competitors.

Perky's patent to which we have referred expired in 1912 and all of the patents covering the machinery and various other forms for shaping the product expired soon after. Since that time there have been at least four competing manufacturers who have undertaken to market whole wheat processed according to the disclosure of the patent; namely, the Ross Biscuit Company in 1915, the

---

* Immediately following the reference just given will be found a detailed description of the process employed and the great care used to produce a product of uniform excellence.

** The use of the words "petitioner" and "respondent" herein will be understood, unless otherwise stated, to include the respective predecessors of the parties.

Quaker Oats Company since 1923, the petitioner Kellogg Company for a short period in 1922 and again since 1927, and the Loose-Wiles Biscuit Company since 1932.

The Ross Biscuit Company, organized by three former employees of The Shredded Wheat Company, in 1915 started marketing a product in exact facsimile of respondent's "Shredded Wheat" biscuit under the name "Ross's Whole Wheat Biscuit". Suit was brought against a distributor of this product in the District Court for Connecticut and an injunction was issued against sales of the biscuit in the form and shape of respondent's biscuit. Judge Thomas held that the appearance of the biscuit had *then* acquired secondary significance distinctive of the plaintiff's manufacture (244 Fed. 508). This judgment was affirmed with modification by the Circuit Court of Appeals for the Second Circuit (250 Fed. 960). It should be noted that Ross did not appropriate the name "Shredded Wheat" but only the shape of the biscuit. A photograph of Ross' carton will be found at page 124 of this brief.

The Quaker Oats Company makes use of the process disclosed by Perky in his patent but has found it unnecessary to appropriate either the name "Shredded Wheat" or the shape of the biscuit. It makes a round biscuit and calls it "Muffets". It is manufactured and sold in substantial volume in competition with "Shredded Wheat". A photograph of the "Muffets" carton will be found at page 125 of this brief.

The Loose-Wiles Biscuit Company manufactures a biscuit according to the disclosure of the patent, but in a shape totally different from that of the respondent's. It calls its product "Rippled Wheat", and sells it in competition with "Shredded Wheat". A photograph of the "Rippled Wheat" carton will be found at page 126 of this brief.

The statement on page 21 of petitioner's brief that "neither Muffets nor Rippled Wheat is a shredded wheat

product'' is incorrect. The contrary is established by the testimony of Doctor Oakes (R. vol. I, pp. 285-287) and by a reading of the patents themselves. The specifications of the patents show that the rolls by which the threads of the processed wheat are extruded, are pressed together under several thousand pounds of pressure. The amount of pressure is determined by the adjustment of set screws provided for that purpose. The pressure is so great that no particle of a wheat berry escapes being pressed into one of the grooves and thus becoming a string. If, however, the pressure of the set screws is relaxed so that the rolls are not in such heavy contact, the product coming from the rolls is more like a ribbon or lace, as specified in the very first patent covering the machine comprising the rolls (R. vol. V, p. 3) in which the inventor says, referring to the rolls:

> ''The grain * * * is fed in any convenient manner between the rolls B and B′ at O by which it is compressed into the grooves on roll B from which the product *in the form of threads, lace, or ribbons, or sheets, etc.*, (the form of which depending on the contact or proximity of rolls B and B′) is removed by scraper D.''

3. The Conduct of the Petitioner.

About the time the Perky patent expired in 1912, the petitioner began the manufacture of a whole wheat biscuit which it called ''Kellogg's Toasted Wheat Biscuit''. A photograph of its carton will be found at page 118 of this brief. Although the petitioner continued the manufacture of this biscuit for years it was unable to make much headway against ''Shredded Wheat'' and in 1919 gave up its manufacture entirely. Meanwhile respondent's business had grown greatly. Its product was increasingly welcomed by the public. From 889,000 cases in 1912, its sales had increased to 2,035,000 cases in 1922. The petitioner prides itself on being ''the largest manufacturer of cereals in the country''

and it must have regarded this growing competitor with apprehension, as also it longed to share in the trade which respondent had built up. Thereupon, in striking contrast to its own earlier conduct and to the conduct of the other competitors, the petitioner in 1922 started what now appears to have been a studied and deliberate raid on the good will of The Shredded Wheat Company. In January 1922 it began to market a biscuit in a form almost exactly imitative of the familiar pillow-shape of respondent's biscuit, except only that it is slightly shorter.* It named this biscuit "Kellogg's Shredded Whole Wheat Biscuit". In large red letters it stated on the carton "The Original has this Signature W. K. Kellogg" (see photograph at page 119 of this brief). It was notified by The Shredded Wheat Company to desist, and in October 1922 petitioner ceased manufacturing the imitation biscuit (R. vol. I, p. 67).

For five years the petitioner waited, without further effort to compete with "Shredded Wheat". Meanwhile respondent increased its advertising efforts, expending in those years more than $8,800,000, and its business grew to 2,477,000 cases in 1927. In that year petitioner resumed the manufacture of the imitative biscuit under the same name, and declined to recognize any rights in the respondent to protection from this unfair competition. A suit was thereupon brought by The Shredded Wheat Company in the District of Connecticut in 1928 and testimony was taken by way of deposition. Faced with this suit, the petitioner in 1930 abandoned its use of

* How much shorter is the subject of rather wild guesses by the District Court, by the petitioner and by the British Court of Appeals. The District Court says at R. vol. I, p. 203 that petitioner's biscuit is "less than two-thirds" the size of respondent's; the petitioner's brief (page 26) now repeats this statement, and the British Court says (petitioner's brief, page 129) it was "some 25 per cent shorter". As a matter of fact, it is just 17 per cent shorter. In width and thickness it is the same.

the words "Shredded Wheat" and began the use of the name "Kellogg's Whole Wheat Biscuit", a name to which the respondent had and can have no objection. In view of this the Connecticut suit was discontinued without prejudice (Ex. 251, R. vol. IV, p. 127).

No sooner, however, had petitioner given up the use of respondent's trade name than the petitioner put on the face of its package an imitation of respondent's registered trade mark, consisting of two biscuit in a bowl of milk (R. vol. IV, p. 205). Reproductions of this carton will be found in the opinion of the District Court (R. vol. I, p. 215); in the interrogatories (R. vol. I, pp. 138-154, 155); and in this brief (*infra*, p. 122). Not content with this misrepresentation, it placed upon the ends of the same carton the words "A Shredded Wheat Product" and "Shredded Wheat in its Most Delicious Form" (R. vol. I, p. 219).

Almost simultaneously the petitioner adopted a carton for its biscuit which contained a cellophane window so placed as to display to the purchaser the *ends* of the biscuit (identical in width and thickness with respondent's), thus completing the deceptive simulation of the respondent's biscuit. A photograph of this carton appears at page 123 of this brief.

On many thousands of packages it placed in a prominent position the expression "The Original has this Signature W. K. Kellogg", thus representing, as the Circuit Court of Appeals found, that *its* product was the original, and by implication that the respondent's was an imitation. (One of these cartons is pictured at R. vol. IV, p. 1).

The petitioner asserts that although it has copied respondent's trade name and the shape of respondent's biscuit, and although it has used the other devices above described, there has in fact been no deception of the public, that there has been and can be no confusion between the products and that there is a complete absence of any passing off or of the likelihood thereof. *The evidence to the contrary is overwhelming.* As we shall show more

fully hereafter (page 24 *et seq.*), and as the Court will readily see by a mere glance at the testimony of numerous witnesses for both parties appearing in Appendices B (p. 72, *infra*) and D (p. 93, *infra*), confusion and passing off are not only possible, but have been abundantly proven.

In 1932 it began its third invasion of respondent's good will. Completely ignoring the assurance of fairness implicit in its abandonment of the use of respondent's trade name in 1930, petitioner, in the early part of 1932, launched an advertising campaign in which it flooded the country with announcements of an imitation biscuit which in bold type it called "Shredded Biscuit" and "Shredded Wheat Biscuit" (See Interrogatories No. 82 and No. 83 and the related Exhibits, R. vol. I, pp. 92-101, 111 *et seq.*).

The present action was thereupon brought in the District Court of Delaware in June of 1932.

The Decisions Appealed From

1. The Decision on Rehearing.

In its first opinion, delivered *per curiam* in January 1936, the Circuit Court of Appeals affirmed the District Court's holding that the name "Shredded Wheat" was descriptive and that upon the expiration of the process patent No. 548,086 the name passed into the public domain and remained there and became public property.

A rehearing was asked for on the ground that the decision of the Court was not in harmony with the modern doctrine of unfair competition as defined by this Court in *Schechter Poultry Corp.* vs. *United States*, 295 U. S. 495, at p. 532 (see *infra*, p. 33). This decision had not been called to the Court's attention at the first hearing. The rehearing was granted.

Upon rehearing, the Court reconsidered its earlier opinion, and held that although the petitioner might have been free to use the name "Shredded Wheat" and the form of the biscuit under proper restrictions, had it done so

within a reasonable time after the expiration of the Perky patents, it was no longer free to do so after the respondent and other competitors had stood by for fifteen years,* and allowed the petitioner "at great expense to make 'Shredded Wheat' a household word and the form of its biscuit known throughout the world as its own product" (R. vol. III-a, p. 2087).

The Circuit Court of Appeals found that during that fifteen year period respondent and its predecessors spent more than $17,000,000 in advertising and built up a large business and a very valuable good-will. It also found that:

> "It is undisputed that at the time defendant adopted the name 'Shredded Wheat', and the trade mark of the plaintiff to designate its product, the trade and consumers generally had come to regard the name and trade mark as identifying plaintiff's biscuit" (R. vol. III-a, p. 2086; 91 F. (2d) 150, 152).**

The Circuit Court of Appeals then proceeded to find that the term "Shredded Wheat" was not purely descriptive of the respondent's product; and after reviewing the nature of the process by which the wheat is spun into long filaments, it held that the name is at most only suggestive and, therefore, capable of constituting a valid trade mark under the authorities cited by the Court (see R. vol. III-a, pp. 2086 *et seq.*; 91 F. (2d) at p. 153).

The Court then called attention to the fact that other competitors, *including the petitioner*, sold the product

---

* Petitioner did use the name "Shredded Wheat" for a very short period some ten years after the Perky patents had expired, but abandoned this use at the demand of the respondent. (See this brief, p. 11, *supra*.) In 1915 the Ross Company imitated the form of respondent's biscuit, but did not use the name. It was enjoined (see *supra*, p. 9).

** The trade mark referred to is the so-called dish trade mark showing two biscuits, which was imitated by the petitioner at the time it elected to call its product "Kellogg's Whole Wheat Biscuit" (R. vol. IV, p. 205).

manufactured pursuant to the process patent under distinctive names. It then said:

> "But this did not enable the defendant to get the property which the plaintiff had built up in the name of 'Shredded Wheat', and so it abandoned its effort to sell its product as 'Kellogg's Whole Wheat Biscuit'" (R. vol. III-a, pp. 2087-2088).
>
> "The adoption by anyone of the name and form of an article under which a competitor has been selling it carries with it the presumption that he expects to derive benefit from this adoption and intends to mislead the public with probability of success" (*ibid*, p. 2088).

The Court then recognized the most important feature of this case, namely, that it is a case of unfair competition in which the petitioner is charged with intentional fraudulent conduct and not a mere case of patent or trade mark infringement, to be dealt with upon rigid technical considerations.

Then, referring to the case of *Barton vs. Rex-Oil Co.*, 29 F. (2d) 474 (C. C. A. 3, 1928), in which the same Court, speaking through Judge Woolley, had dealt with the word "Dyanshine", the Court said:

> "We held that the defendant was guilty of unfair competition and enjoined it 'from using the words "dye and shine" in any way, form, arrangement, or manner of spelling as the name, or as resembling a name, of its product, leaving it free, of course, to use these words merely and exclusively in describing the qualities and characteristics of the product.' *This the defendant in the case at bar is free to do, but may not, as it has been doing, use the words 'Shredded Wheat' as a trade-name of its product*" (*ibid.*, pp. 2089-2090).*

The italicized portion of the above quotation is a complete answer to the claim of the petitioner in this case

* Unless otherwise stated, all italics in this brief are supplied by us.

that it is forbidden from describing its product. The petitioner does not wish to use the words as part of the description of its product, but boldly as a *trade mark*.

Dealing with the form and shape of "Shredded Wheat" biscuit, which the petitioner also appropriated, the Court applied the same rule as it had with respect to the name, holding that a former design patent, held invalid in 1908, would not permit the petitioner to appropriate the form and appearance of the biscuit which had characterized it for forty years, saying:

> "The case stands as it would have stood if there had been no patent and the plaintiff had started with a new and unpatented product in 1912, calling it by the trade-name of 'Shredded Wheat' which it had sold in a particular form and for fifteen years had spent $17,000,000 in advertising it and had built up an invaluable good-will in the name which it had exclusively used" (*ibid.*, p. 2092).

One more act of unfair competition is cited in the Court's opinion, namely, the placing by the petitioner on many of its packages the words "The Original has this Signature W. K. Kellogg". This the Court found was an intentional misrepresentation that the *petitioner's* was the original product and respondent's an imitation. The Court said:

> "There could have been but one object for doing this, and that was, by unfair competition and untruthful statements, to deceive the public and secure the trade which in equity and good conscience belonged to the plaintiff. This equity will prevent by injunction" (*ibid.*, p. 2092).

The closing paragraph of the Court's opinion is as follows:

> "In view of the fact that 'Shredded Wheat' is the plaintiff's trade-name, that defendant deliberately started out to acquire by unfair competition and misstatements the trade which equitably belonged to the plaintiff, and that it is practically impossible for

the defendant to use the name and form of plaintiff's biscuit to designate its product without confusion, deception of the public, and unfair competition with the plaintiff, a decree will be entered vacating our former decree and reversing the decree of the District Court with directions to the court to enter a decree enjoining the defendant *from the use of the name 'Shredded Wheat' as its trade-name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trademark;* and with further directions to order an accounting for damages and profits" (*ibid.*, 2093).

2. The Opinion Clarifying the Mandate.

The italicized portion of the above quotation was contained in the mandate of the Circuit Court of Appeals to the District Court and was retained by the District Court in its interlocutory decree and in the writ of injunction, without the addition of any other than formal words.

In its petition for rehearing and in all of its applications to this Court during the October 1937 Term, the petitioner insisted that the injunction directed by the Circuit Court of Appeals, and issued by the District Court, forbade it from using the term "Shredded Wheat" as its trade name, from making the biscuit in the form and shape of respondent's, or from using the dish trade mark. After the mandate had come down, petitioner for the first time adopted the view that the decree was conjunctive and forbade it only from doing the three things *concurrently;* and that it might continue to make the biscuit in the same form as the respondent's biscuit and even to call it "Shredded Wheat", provided it did not use the dish trade mark. The District Court appearing to have some doubt on this point, the respondent found it necessary to ask the Circuit Court of Appeals to recall and clarify its mandate in order to remove all doubt (R. vol. III-a, p. 2248). This application was presented at length to the Circuit Court of Appeals and resulted in the

opinion of May 5th, 1938 (R. vol. III-a, p. 2282; 96 F. (2d) 873) in which the circumstances are fully recited. The Court said:

> "We thought that, when our opinion was read as a whole, we had made it perfectly clear that what we intended to enjoin was the use of the name 'Shredded Wheat' as a trade-name and the advertising and selling of biscuits in the pillow-shape form, irrespective of whether the two-biscuit-in-a-dish trade-mark were employed in connection with either the use of the name or the sale or advertising of the biscuit in the pillow-shape form. This was the construction which the appellee placed on the opinion and order of April 12, 1937, in its petition for rehearing to this court and appellant says that it placed the same construction upon them in its various petitions to the Supreme Court. It so admitted before this court at the hearing to recall the mandate. Appellee in those petitions doubtless placed upon the mandate what it believed to be its proper construction and its changed view adopted after the mandate of this court had issued was apparently due to the exigencies of its position rather than to any real belief that the opinion of this court left any doubt as to what was meant. The language at the end of the opinion and in the order and mandate is poorly phrased. We intended to enjoin the use of the words 'Shredded Wheat' as a trade-name, the advertising and sale of biscuits in the pillow-shape form, and the use of the two-biscuit-in-a-dish trade-mark, separately or together."

Counter-Statement of Question Involved

Is petitioner's whole course of conduct in competition with respondent so unconscionable and unfair as to warrant a court of equity in granting the relief that the court below gave?

ARGUMENT

I

The Petitioner's Competition is Unfair and Calls for Equitable Relief

The behavior of the petitioner, of the respondent and of the other competitors in the industry since the expiration of the patents in 1912, must be considered as a whole if a true picture of the competitive situation is to be obtained. To treat the case piecemeal, as the petitioner has done in its brief, is to obscure the whole history of the matter and to prevent the Court from understanding the vivid contrast between the unconscionable and unfair behavior of the petitioner and the wholly fair behavior of the other competitors in this industry, who likewise have used the expired Perky patents to make competing whole wheat biscuits.

Let us take then the situation that obtained in 1912, when Perky's machinery and process became open to use by all the world. This respondent has never at any time since then claimed any right to exercise a "monopoly" in the manufacture or sale of these whole wheat biscuits. It asserts no right except that enjoyed by every member of the public, to wit: to be protected against unfair competition. There has been practically constant competition in the manufacture of such whole wheat biscuits since 1912 and of this respondent makes no complaint except in the isolated case of the petitioner's efforts to compete unfairly.

Beginning in 1912 the petitioner began to manufacture and sell a product which it called "Kellogg's Toasted Wheat Biscuit" (R. vol. II, p. 1046 *et seq.*). The process of manufacture differed from Perky's process only in that the wheat was reduced to a dough and flavored before being passed through the Perky rolls (R. vol. II, pp. 1046, 1048).

The product was forced out from the rolls in thread-like form, collected upon a moving belt and cut into biscuit form in the manner that had been used by Perky, and it was baked and dried in the manner that Perky had followed. The result was a biscuit which entered directly into competition with "Shredded Wheat". The carton in which it was sold and which contains a picture of this biscuit appears hereafter at page 118 of this brief.

Of this competition, in which the petitioner used a different name and a distinguishing form of biscuit, this respondent could reasonably have made no complaint and in fact did make no complaint.

Seven years of competition between these products then ensued. The respondent's "Shredded Wheat" continued to grow in popularity, thanks first to the unvaried maintenance of its quality, purity and cleanliness and thanks second to the diligence with which it was advertised by the respondent. During these seven years respondent spent in advertising "Shredded Wheat" upwards of $5,000,000 (R. vol. IV, p. 51). Its sales of "Shredded Wheat" increased from 889,623 cases in 1912 to 1,790,830 cases in 1919.* In 1919 the petitioner voluntarily abandoned its production of "Kellogg's Toasted Wheat Biscuits" (R. vol. II, p. 1048).

Meanwhile in 1915 another competitor had appeared. One Ross, a former employee of The Shredded Wheat Company, commenced to make "Ross's Whole Wheat Biscuit". While Ross apparently did not dare to imitate the respondent's trade name for the biscuit, he nevertheless made a biscuit which was in form an exact imitation of "Shredded Wheat". A photograph of his carton appears hereafter at page 124 of this brief and in this photograph the biscuit itself is shown. Immediately suit was brought against Ross and his Connecticut distributor by The Shredded Wheat Company and he was enjoined by the District Court of Connecticut from making a biscuit of

* Each case contains 36 cartons—each carton 12 biscuits.

the same shape as "Shredded Wheat" unless each biscuit be banded or otherwise distinguished from respondent's "Shredded Wheat". *Shredded Wheat Co.* vs. *Humphrey-Cornell Co.*, 244 Fed. 508 (D. Conn., 1917). In this matter the District Court found that both the name "Shredded Wheat" and the form of the biscuit had acquired secondary significance. After appeal had been taken to the Circuit Court of Appeals, and the order of the District Court, had been modified and affirmed, 250 Fed. 960 (C. C. A. 2, 1918), the District Court entered its order on the mandate (R. vol. IV, p. 57). In that order is embodied the finding (*ibid*, p. 59), "That the said form, shape, size and color of the said biscuit *have come through long and exclusive use and advertisement, to have the meaning and significance only of the product and biscuit of the complainant*". The only respect in which the Circuit Court of Appeals modified the injunction originally issued by the District Court was to require banding or distinguishing marks only upon those biscuits which reached the ultimate consumer outside the cartons. Shortly after this decision Ross' company came into financial difficulties and abandoned its effort to compete in this product.

From 1919 until January 1922 the Kellogg Company made no effort to re-enter the field. Meanwhile during 1920 and 1921 the respondent continued its extensive advertising. In those two years it expended upwards of $1,500,000 in advertising and its sales rose from 1,790,830 cases in 1919 to 1,949,310 in 1921. In January 1922 the Kellogg Company resumed unrestrained competition and announced the forthcoming production of "Kellogg's Shredded Whole Wheat Biscuit"—a biscuit of the identical pillow shape form of "Shredded Wheat". This biscuit, like the one now being made, is, on close examination, found to be exactly 83 per cent of the length of the true "Shredded Wheat" biscuit. But in the record it is shown that in a multitude of cases petitioner's present biscuit has been mistaken for "Shredded Wheat" by the ultimate consumer (See Appendix B, pp. 72, 77, *infra*). As if

to aggravate the offense, petitioner placed upon the carton in large letters the words "The Original Has This Signature W. K. Kellogg". A photograph of the carton of January 1922 appears hereafter at page 119 of this brief. The record is replete with evidence that the use of this phrase operated to deceive both retailers and consumers, for it has been shown that many grocers assured their customers that the Kellogg biscuit was the original and inferentially that the respondent's biscuit was but an imitation (see the numerous extracts quoted in Appendix B, p. 72, *infra*). At once The Shredded Wheat Company took action and demanded that this unfair competition be stopped (R. vol. I, p. 103). Apparently conscious that the use of respondent's trade name and the imitation of the form of respondent's biscuit were indefensible, the petitioner in October of the same year ceased to make and sell the offending biscuit (R. vol. I, p. 67).

After petitioner discontinued the production of its imitation "Shredded Wheat" biscuit in October, 1922, it again remained out this field until the year 1927. Meanwhile the respon t's business had continued to increase and from a production of 2,035,922 cases in 1922 had grown to 2,477,262 cases in 1927. It had spent in advertising during this period upwards of $8,800,000.

In 1927 the Kellogg Company could boast that it was the largest manufacturer of breakfast cereals in this country (R. vol. I, p. 203). The field occupied by "Shredded Wheat" must have been tempting and the growth of the respondent's business disquieting, for in 1927 the petitioner made its third attack upon this field. Its earlier "Kellogg's Toasted Wheat Biscuit" had failed in competition. Its 1922 invasion of the trade name and of the shape, and its claim that its biscuit was the original, had been abandoned upon demand of The Shredded Wheat Company. But in 1927 it started again to produce a biscuit in the pillow shape form and to give it the name of "Kellogg's Shredded Whole Wheat Biscuit". A photograph of the carton used at this time appears at page 121, *infra*.

In 1928 The Shredded Wheat Company brought suit to restrain this fresh outburst of unfair competition, commencing an action in the United States District Court for the District of Connecticut against the Kellogg Company and certain of its distributors. After some depositions had been taken in this action, but before trial, the Kellogg Company in 1930 again surrendered and indicated its intention thereafter to call its product "Kellogg's Whole Wheat Biscuit". Thereupon the action in Connecticut was discontinued without prejudice (R. vol. IV, p. 127).

But petitioner's retreat was grudging. It did for a time discontinue the use of the words "Shredded Wheat" on the face of its cartons, but it adopted several other expedients to confuse:

It continued the use of the pillow shape form, only slightly shorter than the true "Shredded Wheat";

It imitated the respondent's registered trade-mark of two "Shredded Wheat" biscuits with cream in a dish (Compare the reproduction of the trade-mark, R. vol. IV, p. 205, and the manner in which it is used on respondent's current carton, R. vol. I, p. 207, with the photograph of petitioner's carton, p. 122, *infra*);

It placed a cellophane window in the front of its carton which showed only the ends of its biscuits and thereby rendered confusion inevitable between them and the true "Shredded Wheat" (See the photograph, p. 123, *infra*);

It used the phrases "A Shredded Wheat Product" and "Shredded Wheat in its Most Delicious Form" upon the ends of its carton (See R. vol. I, p. 219);

It revived again the false assertion used in 1922 that "The Original Has This Signature W. K. Kellogg" (See R. vol. IV, p. 1).

In an effort to show that this claim of being the original biscuit is "trivial", the petitioner prints opposite page 35 of its brief a supposed reproduction of one of its two-biscuit cartons in which the phrase is in type almost too tiny to be legible, wholly ignoring the fact that it was proved that the cartons of this size which were in use in 1932 carried the legend in substantially larger and perfectly legible type (R. vol. IV, p. 1). We have already called attention to the testimony quoted in our Appendix B, page 72, to the effect that the result of the use of these devices was a general deception of the trade and of the consumers as to which biscuit was the original and which the imitation.

Despite all these handicaps, "Shredded Wheat" continued to prosper, probably because during the depression the respondent continued its active advertising campaign, spending upwards of $2,500,000 during 1930 and 1931. In 1932 the Kellogg Company for the third time attempted to pirate the trade name, and in spite of its withdrawal of 1930, the company and its dealers came out with an advertising campaign in hundreds of newspapers throughout the country (R. vol. I, pp. 92 to 100) in which it paraded first its "Shredded Biscuit" (*ibid*, pp. 111 *et seq.*) and then "Shredded Wheat Biscuit" (*ibid*, pp. 176 *et seq.*).

Thereupon the present action was brought.

1. Petitioner's Conduct Has Led Inevitably to Confusion and Passing Off.

The petitioner's brief contains (p. 55 *et seq.*) the surprising statements that "There has been no deception of the public as to the origin of the respondent's and petitioner's products"; that "There has been and can be no confusion between them" and that there is "an absence of any passing off or likelihood thereof". These statements are gravely in error. The record abounds with evidence of confusion and passing off, *despite the difference in the*

cartons, upon which petitioner so heavily relies. A large number of instances are collected in Appendix B, page 72, *infra.*

Confusion and passing off are especially likely when the biscuit of petitioner is served to a consumer outside the carton, in a dish or bowl, as it frequently is in restaurants, cafés or hotels, and as it almost always is in private homes or boarding houses. Petitioner seeks to minimize this important fact by asserting that only two per cent. of those of its biscuits which are sold in restaurants, etc., are served to the customer outside individual cartons, so that "only approximately one in 5,000 biscuits sold by petitioner is served apart from the carton". (See petitioner's brief, p. 6. The same statement is repeated in various forms at pp. 32, 46 and 55-56). This assertion is based upon a finding of the District Judge to that effect (R. vol. I, p. 204).

The importance of this finding is manifest. *And yet the finding is wholly unsupported by the evidence.* In the first place, the District Judge's calculation is incorrect on its face. As is admitted in the petitioner's brief (footnote, p. 6), the premise that only two per cent. of the restaurant sales are made outside the carton, leads to the conclusion that approximately one in 2,000 (not 5,000) of petitioner's total sales is so made. But secondly, the premise itself is quite lacking in any substantial foundation in the evidence.* The testimony is, in fact, to the contrary. Many of the witnesses who were called in this case either by the petitioner or the respondent testified to the manner in which they served or received petitioner's biscuits in seventy-five different public eating places throughout the country. In *nineteen* of these seventy-five places the biscuits were served *without* the carton. The testimony of these wit-

* Judge Nields apparently took the figures, as well as the miscalculation, from the petitioner's answer to respondent's Interrogatory No. 33 (R. vol. I, p. 73). The "estimate" contained in this answer in turn has no foundation other than the unsupported guess of a single witness (R. vol. II, p. 1075).

nesses is presented in tabular form in Appendix C, p. 87, *infra*.

In other words, *over twenty-five per cent.* of them served the biscuits apart from any carton; and the evidence shows that *many of the consumers were confused* as to the origin of the biscuits that were served to them (Appendix B, pp. 81, 83). If the same percentage of uncovered biscuits were served throughout the nation, as appears to have been served by or to the many witnesses who testified in this case, then about 270,000,000 of respondent's biscuits are annually served to the ultimate consumer apart from their carton. Assuming further that each customer receives two biscuits, there is opportunity for about 135,000,000 deceptive substitutions of petitioner's biscuit. But even if Judge Nields' guess were taken to be correct and the proportion stated *by the petitioner* were to be applied to the respondent's sales in the year 1928 of 2,500,000 cases,* the resultant computation would show that not less than 540,000 of respondent's biscuits were in that year served without production of the carton.

The record shows conclusively that not only were intending purchasers of respondent's product often unable to tell whether they were getting what they desired, when supplied with petitioner's biscuit, but that in many instances actual falsehoods were used to reassure them.

Thus doubting customers were told variously that the Kellogg Company had sold out to the National Biscuit Company; that the Kellogg Company had purchased the Shredded Wheat Company and was putting out the biscuit in the package tendered; that the Kellogg biscuit was Shredded Wheat, made at Niagara Falls; that it was National Biscuit Shredded Wheat; that it was the original Shredded Wheat; and that Kellogg was the first to manufacture Shredded Wheat. Quotations from the testimony on this score appears in Appendix B at pages 72-76, *infra*. Although this testimony presents a graphic picture

* The figures of petitioner's sales are not in evidence.

of misrepresentation and unfairness, to the petitioner it is merely "open and honest competition fairly and actively waged".

The record also contains many other instances of passing off. We have collected some of the testimony on the subject in Appendix B, page 72, *infra*, at pages 76-77. On each occasion the customer had ordered Shredded Wheat, expecting to receive respondent's biscuit, but was supplied with petitioner's Whole Wheat Biscuit. It is interesting to note that at times the customers' doubts were allayed by having the dish picture on the carton called to their attention (*ibid*, at pp. 76, 78, 79), or by an assurance that the package was the original Shredded Wheat (*ibid*, at pp. 73-75), or that sometimes it came marked one way and sometimes another way (*ibid*, at p. 76).

In the matter of confusion there is considerable proof that customers selected or accepted petitioner's carton in the belief they were getting that of the respondent, only to discover the substitition when paying for the goods, or after they had left the store or had arrived home. At times the mistake was occasioned by the customer's noticing on the carton the familiar picture of two biscuits in a dish; at other times it was due to his catching sight of the biscuit ends through the cellophane window in the package. Testimony on this score is printed in Appendix B, page 72, *infra*, at pages 77-80.

Petitioner's assertion that no consumer has ever taken petitioner's product believing he was receiving respondent's is completely disproved by the statements of many witnesses. We need only point to testimony like that of Mrs. Grace Darling (R. vol. I, pp. 393, 394), who first discovered the substitution on the day following her purchase; of George Schapansky, who in one instance was unaware that he had the wrong carton until he came to pay for it (R. vol. I, pp. 717, 718), and, in another, until after he had left the store (R. vol. I, pp. 722, 723); and of Mrs. Jessie Fatjo, who had driven away from the store before she

learned of the substitution (R. vol. I, p. 745). Other witnesses who at the time of purchase believed they had received respondent's goods are Mrs. Caroline Cavalier (R. vol. I, p. 612); Mrs. Florida McCabe (R. vol. I, pp. 366, 367); Samuel A. Leonard (R. vol. I, p. 640); and Mrs. Dorothy McFarland (R. vol. I, p. 783). The testimony of all of the witnesses mentioned is contained in Appendix B, page 72 *infra*.

Numerous restaurant patrons were shown to have been served with petitioner's biscuit after ordering Shredded Wheat, and without the substitution having been excused or even mentioned. Frequently the patron was unable to tell whose product was being placed before him, the biscuit having been removed from the carton before being served. Typical examples will be found in Appendix B, page 72, *infra*, at pages 81-83.

The record also abounds with the opinions of dealers and others that petitioner's biscuit can be passed off on unwary customers as respondent's Shredded Wheat, especially when served without the carton. Representative examples of such opinion evidence have been set forth at pages 84 *et seq.* of Appendix B. In view of the proofs of actual substitution and passing off, the correctness of the opinions quoted has been fully confirmed.

The petitioner has remarked upon the large number of witnesses who testified that they had no difficulty in distinguishing between the two biscuits. It is worth noting that considerably more than a majority of these witnesses were grocers, employees of food firms or persons otherwise connected with the marketing of foodstuffs, and hence thoroughly familiar with the products of the various manufacturers. As to such persons being deceived, Judge Lacombe aptly remarked in *National Biscuit Co.* v. *Baker*, 95 Fed. 135 (S. D. N. Y., 1899), "No one expects that they will be". Where the charge is of simulation resulting in deception and confusion, the fact that dealers are not

deceived, is immaterial. As this Court said in *Warner & Co.* vs. *Eli Lilly & Co.*, 265 U. S. 526, 530,

> "That no deception was practiced on the retail dealers, and that they knew exactly what they were getting is of no consequence. The wrong was in designedly enabling the dealers to palm off the preparation as that of the respondent."

To the same effect is *Federal Trade Commission* vs. *Winsted Co.*, 258 U. S. 483, 493, 494.

Moreover, proof that one purchaser *was* deceived far outweighs proof that a dozen others were *not*. The fact is, as the evidence demonstrates, that customers all over the country are having petitioner's biscuit put off on them when they suppose they are getting respondent's.

In addition, it is the deception, not only of *old* customers, but of possible *future* customers as well, that equity seeks to prevent. This has been well expressed by Judge Learned Hand in *Lambert Pharmacal Co.* vs. *Bolton Chemical Corp.*, 219 Fed. 325, 326 (S. D. N. Y. 1915):

> "There is always a fringe of possible customers, next year's for instance, with whom such opportunities are not to be disregarded, people who have heard vaguely the old name or seen it in advertisements and who fail to carry it with accuracy in their memory. Among these confusion is eminently possible, and that possibility, if not a remote speculation, is quite enough."

2. Others Have Had No Difficulty in Competing Fairly.

We cannot reiterate too frequently the statement that we seek no "monopoly" in the manufacture or sale of whole wheat biscuit made in accordance with the Perky patents. Nor do we or can we object to the petitioner's use of a fair *description* (as distinguished from a trade name) of the nature of its product. We do, however, object to a competitor's use of our name; to his imitation

of our trade mark, showing two biscuits in a dish; and to his imitation of the characteristic shape of our product.

That other competitors do manufacture and sell whole wheat biscuit produced in accordance with the Perky patents, that they have no difficulty in finding a distinctive name and shape for their product, and that they are not hampered in fair competition, is demonstrated by the conduct of the Quaker Oats Company and of the Loose-Wiles Biscuit Company. The Quaker Oats Company uses the Perky process and the Perky machines and produces a whole wheat biscuit to which it gives the trade name of "Muffets". In form "Muffets" bears no resemblance to "Shredded Wheat". Perky had pointed out in his patent application that instead of extruding the threads of wheat upon a belt they might be drawn upon a revolving spindle and some of his expired patents had shown the machinery for the operation of his process in this fashion (R. vol. V, p. 3). In this same patent Perky had likewise pointed out that as the pressure upon the rolls was increased or diminished, the out-pouring stream of wheat might appear "in the form of threads, lace or ribbons or sheets, &c." (*ibid*). A photograph of the "Muffets" carton which contains a picture of the biscuit appears hereafter at page 125 of this brief. It thus appears that an aggressive and intelligent competitor such as the Quaker Oats Company has found no necessity for using the respondent's trade name or for imitating the shape of its biscuit, while at the same time enjoying the teaching of the Perky patents and the use of Perky's formerly patented machinery.

"Muffets" is still being made in large quantities and is being sold by the Quaker Oats Company in active competition with "Shredded Wheat" at the present time.

The Loose-Wiles Biscuit Company, another competitor of the respondent and of the petitioner, manufactures a competing biscuit produced according to the Perky process and on the machinery which Perky had once patented. Compared with the fairness of the competition

of the Loose-Wiles Company, the actions of the petitioner furnish a background which is dark indeed. The Loose-Wiles Company found no need to copy the trade name of "Shredded Wheat" in introducing its Perky process whole wheat biscuit, nor did it find any necessity for claiming that its biscuit was the original, nor did it find it necessary to adopt the form in which "Shredded Wheat" has always been made. It called its product "Rippled Wheat". It assembled the threads of wheat into a form easily distinguishable from "Shredded Wheat". Its carton, containing a picture of the product, is reproduced in color at page 126 of this brief.

At page 21 of its brief, petitioner states that "neither Muffets nor Rippled Wheat is a shredded wheat product". We have already shown (pp. 9-10, *supra*) that this statement is in error. Conscious of the contrast between the competition of "Muffets" and "Rippled Wheat" and the competition of the Kellogg biscuit, the petitioner seeks to brush this aside in a single short paragraph of its brief. But it is one of the factors of the case that will not down in any fair appraisal of petitioner's behavior.

The recent actions of the petitioner, when contrasted with its behavior during the early years of its competition, and when contrasted particularly with the consistent fairness of the Quaker Oats Company and of the Loose-Wiles Company, speak more loudly than words of the unfairness of its conduct. But if conclusive proof were wanted of the unfairness of its competition, we can ask no better evidence than the testimony of the president of still another competitor. At Record vol. II, page 950, Mr. James F. Bell, president of General Mills, Inc., a large producer of cereal foods, was asked how far in his judgment it was necessary for a fair competitor to invade the trade name and the established form of "Shredded Wheat." He answered:

> "I would say that, if it was a shredded wheat biscuit, it would either be made by the National Biscuit Com-

pany or its predecessor company, or it would be an imitation. If it were genuine whole wheat biscuit put through a shredding machine, I would not say it was a shredded wheat biscuit. Shredded wheat, as I have already testified, is a product of the National Biscuit Company or its predecessors. I identified that in three ways: as a name, a product and a shape. Apparently, they have erected in the minds of the public this product in the most desirable ways of coverage that I can conceive of, being in the cereal business, because they have a three-way coverage, as far as the public mind is concerned: name, product, and form. No one else has any right, in my opinion, to use either the name or the shape. I think those rights would be exclusive. They have promoted all those three phases over a long period of time; and they have so identified them in the public mind that I think it would not be fair if they did not have proper protection in all three of them. By that I mean the complete exclusion of anyone else, in the name, shape, or form of the biscuit. That would not be a complete monopoly, in my opinion. As long as the patents have run out, if you made other products of wheat, assuming the right existed on the expiration of the patents to use this vermicelli form of product, it could be put into other shapes."

Mr. Bell's statement is obviously a statement against interest, for nothing could be more advantageous to his company than the free privilege of using respondent's established trade name and long recognized form.

Fairness or unfairness of competition in most cases has had to be developed argumentatively. This case is unusual, if not unique, in having the two extremes illustrated over a long period of years by the actual conduct of the different factors in the industry.

3. The Authorities Support Respondent's Right to Relief.

In modern times, the doctrine of unfair competition has been markedly extended, so as to protect merchants and business men against the more subtle forms of unfair busi-

ness dealing to which modern business conditions and lack of business ethics seem continuously to give birth. In *Schechter Poultry Corporation* vs. *United States*, 295 U. S. 495 at page 532, Chief Justice Hughes, referring to the doctrine, said:

> "*In recent years, its scope has been extended.* It has been held to apply to *misappropriation* as well as misrepresentation, to the selling of another's goods as one's own—to *misappropriation of what equitably belongs to a competitor.*"

This extension was applied by this Court in *International News Service* vs. *Associated Press*, 248 U. S. 215, where unauthorized use of news releases obtained by the industry of the Associated Press was enjoined as unfair practice, although the act was not "passing off", as the term has been understood in the law of unfair competition.

A similar ruling, based upon the *International News* case, *supra*, is found in *Motor Improvements, Inc.* vs. *A. C. Spark Plug Co.*, 80 F. (2d) 385 (C. C. A. 6, 1936), in which injunctive relief was given to prevent the defendant from representing its filter as being the same as one which had been adjudged to infringe the plaintiff's patent. The Court there recognized that *passing off* is not the sole test of unfair competition and said (p. 386):

> "That it will enjoin the bringing about of the same wrongful results by *other* means or practices is exemplified in *International News Service* vs. *Associated Press*" (*supra*).

In *Wall* vs. *Rolls-Royce of America, Inc.*, 4 F. (2d) 333, (C. C. A. 3, 1925), the Court, in dealing with a defendant who used the name Rolls Royce (the name given by plaintiff to its automobiles) in connection with radio tubes, *two as widely different articles as can well be imagined*, said (p. 334):

> "Indeed, from the standpoint of commercial integrity, fair business, and trade equity, we feel the court

below, sitting in equity, was justified in preventing the defendant from veiling his business under the name of 'Rolls-Royce', for he had, and could have had, but one object in view, namely, to commercially use as his own a commercial asset that belonged to others, the continued use and abstraction of which is so fraught with such possibilities of irremediable injury, that the only way to remedy it is to stop it at the start."

In *Aunt Jemima Mills Co.* vs. *Rigney & Co.*, 247 Fed. 407 (C. C. A. 2, 1917), the Circuit Court of Appeals reached a similar conclusion with respect to a trade mark sought to be used upon *syrup* and identical with one used for many years on *pancake* flour. In answer to the contention that *no one could be confused between the two articles,* the court said (p. 410):

"Obviously the public, or a large part of it, seeing this trade-mark on a syrup, would conclude that it was made by the complainant. Perhaps they might not do so, if it were used for flatirons. In this way the complainant's reputation is put in the hands of the defendants. *It will enable them to get the benefit of the complainant's reputation and advertisement. These, we think are property rights which should be protected in equity.*"

In *Yale Electric Corporation* vs. *Robertson,* 26 F. (2d) 972 (C. C. A. 2, 1928), Judge Learned Hand recognizes the rule as follows (at p. 974):

"However, it has of recent years been recognized that a merchant may have a sufficient economic interest in the use of his mark outside the field of his own exploitation to justify interposition by a court. His mark is his authentic seal; by it he vouches for the goods which bear it; it carries his name for good or ill. If another uses it, he borrows the owner's reputation, whose quality no longer lies within his own control. This is an injury, even though the borrower does not tarnish it, or divert any sales by its use; for a reputation, like a face, is the symbol of its possessor

and creator, and another can use it only as a mask. And so it has come to be recognized that, unless the borrower's use is so foreign to the owner's as to insure against any identification of the two, it is unlawful."

If, as we confidently believe, the Court must be of the opinion, not only that unfair competition by the petitioner has been clearly established, but that the law on that subject as it has been expanded by this Court requires relief from the peculiarly subtle type of unfair competition here found, it remains to consider, first, the justification proffered by the petitioner—for the petitioner's brief is essentially one of confession and avoidance—and secondly, the nature and extent of the relief to which the respondent is entitled.

II

Petitioner's Excuses for its Conduct are Untenable.

In essence, petitioner bases its claim to a right to use the name "Shredded Wheat", and to copy respondent's pillow shape, upon the assertion that, since all of the Perky patents have expired, the doctrine of *Singer* vs. *June** and of the cases which follow it, confers that right upon all the world.

We do not question the doctrine of any of those cases. We think that it is clear, however, that the facts in the present case furnish no basis for the application of that doctrine.

Petitioner's argument is founded largely upon four erroneous assertions: (1) that the decree of the Court below will confer a "monopoly" upon the respondent; (2) that the trade name "Shredded Wheat" is the only name which petitioner can apply to its product; (3) that the form and appearance of the biscuit as made by the

* *Singer Manufacturing Co.* vs. *June Manufacturing Co.*, 163 U. S. 169.

respondent for more than forty years is the only practical form in which it can be made; and (4) that no confusion between the petitioner's product and that of the respondent has been shown or is possible.

Each of these premises is erroneous, as will be found upon reading the portions of the evidence to which we shall refer. With the demolition of these premises, petitioner's case falls.

1. Respondent Seeks No "Monopoly" and the Decision of the Court Below Does Not and Cannot Give it One.

In its brief the petitioner asserts repeatedly that the decision of the Circuit Court of Appeals vests in the respondent a perpetual "monopoly" of the patented process and of the generic name by which the product is called.

"Monopoly" has a sinister sound in American ears. If use of the word is warranted at all, it must inevitably arouse distrust and suspicion against him who is charged with seeking to monopolize. We cannot too strongly assert nor too often reiterate that respondent has no "monopoly" and seeks no "monopoly". Nor could it get a "monopoly" if it tried. When the Perky patents expired in 1912 their disclosures lay in the public domain, free for every one to use to the same extent as if they had never been patented. This respondent at that time occupied no privileged position. It had the same rights, but no greater rights, than any other citizen of the nation. It had a right to follow the Perky process and to be protected against unfair competition in its endeavors; but every other person had exactly the same right. For another competitor to use respondent's trade name of "Shredded Wheat" is unfair; but similarly it would be unfair for a competitor to use petitioner's trade name of "Kellogg's", or Quaker Oats' trade name of "Muffets", or Loose-Wiles' trade name of "Rippled Wheat". None of these can be said in truth to constitute "monopoly". The reckless use of such a term merely serves to becloud and obscure the issue.

2. "Shredded Wheat" is neither the only name nor the generic name of the product.

Petitioner, sometimes by implication, sometimes by assertion, claims that respondent's trade name "Shredded Wheat" is but the generic term denoting a biscuit of the kind in which we are competing; and points to the fact that "Shredded Wheat" is found in some recently published dictionaries. It would have the Court believe that following the doctrine of the *"Linoleum"*[*] and *"Singer vs. June"* cases these words must necessarily be used to designate the patented product, since there is no other name for it.

The occurrence of this expression in dictionaries is but a recognition of the respondent's success in publicizing its product. For nearly half a century the respondent and its predecessors have done their utmost to make the trade name of "Shredded Wheat" a household word. They have done more than this, however. They have succeeded in teaching the public to know that "Shredded Wheat" denotes not only a wholesome breakfast cereal, *but also the respondent as its maker.* The evidence that the name has acquired secondary significance is overwhelming. Some typical extracts will be found in Appendix A (p. 61, *infra*) and in Appendix D (p. 93, *infra*).

The petitioner's real complaint is that this enormous outlay and this persistent effort have been successful. It might as well complain that "Kodak" has become a part of the world's vocabulary through the efforts of the Eastman Kodak Company, or that "Vaseline" has forced its way into the dictionary because the producers of that particular type of petroleum jelly have advertised it persistently for sixty years. *Chesebrough Mfg. Co.* vs. *Old Gold Chem. Co.*, 70 F. (2d) 383 (C. C. A. 6, 1934).

---

[*] *Linoleum Mfg. Co.* v. *Nairn*, 7 Ch. Div. 834.

The petitioner claims that, like "Linoleum", there is no other name than "shredded wheat" by which the patented product can be called, and that therefore the name as well as the product lie free in the public domain. But that this is not so is shown not only by the conduct of every competitor of the respondent, including the petitioner, but also by the testimony of many of petitioner's own witnesses.

Ross in 1915, without urging by respondent, called his product "Ross's Whole Wheat Biscuit"; the Quaker Oats Company calls its product a whole wheat biscuit, and gives it the fanciful name of "Muffets"; the Loose-Wiles Biscuit Company calls its product a whole wheat biscuit and sells it under the fanciful name of "Rippled Wheat". Petitioner itself in 1912 called its competing product "Kellogg's Toasted Wheat Biscuit" at a time when no pressure was exerted upon it by respondent to influence its adoption of that name for its Perky process breakfast food. Again in 1930, after suit had been brought to restrain its appropriation of the respondent's trade name, the petitioner found no difficulty in reverting to the generally recognized generic name to produce the title, "Kellogg's Whole Wheat Biscuit".

It is clear from the testimony that "shredded wheat" is not the generic name, and certainly is not the only name, by which a product produced in accordance with the Perky patents is or can be called. The truth is that the generic name of the product in its biscuit form is "whole wheat biscuit". Among many other statements which may be found throughout the Record, witness the following by petitioner's own witnesses:

> "I should say our consumers recognize there are two brands of whole wheat on the market, because some will call for Shredded Wheat and some for Kellogg's Whole Wheat. The people that have used shredded wheat have shifted from shredded wheat to Kellogg's Whole Wheat Biscuit, * * *"
>
> D. D. Kay, R. vol. III, p. 1751.

"If a customer calls for shredded wheat, we give her shredded wheat. If she calls for Kellogg's Whole Wheat Biscuit, we give her Kellogg's Whole Wheat Biscuit. If a customer said she wanted Kellogg's shredded wheat, I would say that Kellogg's is not shredded wheat but is Whole Wheat Biscuit."

Isadore Cohen, R. vol. III, p. 1860.

"When a consumer asks for Kellogg's product, they generally ask for it as Kellogg's Whole Wheat Biscuit. The other product is known as shredded wheat. If a customer asks me for shredded wheat, she gets the Niagara Shredded wheat. If she asks for whole wheat, she gets Kellogg's Whole Wheat. If she would ask for Kellogg's shredded wheat, I would have to ask her if she wanted Kellogg's Whole Wheat or shredded wheat, because there is a difference there."

W. P. Welton, R. vol. III, p. 1645.

"I do not think we handle any whole wheat biscuit except this Kellogg biscuit."

R. J. Morrison, R. vol. III, p. 1833.

"I do not think the entry of the Kellogg Company into the whole wheat biscuit line has decreased the general volume of demand for that sort of product in any way. The increased sale of dry cereals in contrast to those which have to be cooked, has been very marked. There are so many different brands on the market, it is hard to say whether this type of biscuit has definitely increased or not. I am inclined to think it has. Much has been said about the advantages of whole wheat as a proper food, in national talks on health. I think that has helped the entire business.

"Since the first introduction of the product, the Kellogg Company has, I think, succeeded in impressing that new whole wheat biscuit on our type of customer, teaching them to ask for it."

P. W. Witherell, R. vol. III, p. 1762.

"The majority of my customers, when they want whole wheat, ask me for Kellogg's biscuits. A few ask for Shredded Wheat."

George Miller, R. vol. III, p. 1452.

We need not take the time of the Court in quibbling about the dictionary definition of the word "shred", although accurate English seems to prevent our use of that word to denote an article which is not torn into fragments but is extruded from a pair of rolls. Perky treated wheat as the rolling mill treats a steel bar or a copper rod, yet no one would dream of calling a steel bar "shredded steel" or a copper rod "shredded copper", as the Court below observed.

We are handicapped by our familiarity with "Shredded Wheat". We get a better realization of the fanciful quality of the phrase if we will try to project ourselves back to 1893 when Perky first used it to characterize the strange looking cereal which he was trying to sell. It is true that Perky, whose life from 1893 until his death in 1905 was occupied wholly with his new industry and who thought and dreamed of nothing but "Shredded Wheat" and the machinery by which it was produced, came to speak of it in some of his patent applications and in his advertising as if the whole world knew the article that he had in mind by those terms. But it is no more than natural that his mind should have worked in that fashion. The fact still remains that, unlike the classic "Linoleum", this was not the only term by which the product could be described and the usage of the various competitors after 1912 is the best evidence of that fact.

3. The Pillow Shape is Neither Functional Nor is it the Only or Best Shape for the Product.

At page 46 of petitioner's brief it is claimed that the pillow shaped form of biscuit "inevitably results" from the Perky process of manufacture; and at pages 8-9 it is asserted, "Indeed respondent's chief chemist, who was formerly the production manager of The Shredded Wheat Bakeries, admitted that respondent's machines constructed according to the expired Perky patents 'cannot produce anything else except the pillow-shaped form of biscuit' ".

In this petitioner is in error. The truth is that the testimony of Oakes, found in the eleven words quoted, referred to machines of improved construction, as they were then being used at respondent's Niagara Falls plant, not to what could or could not be made with machines constructed as shown in the Perky patents. This is clear in the record (R. vol. I, pp. 289-291). Moreover, Oakes showed that many different forms of biscuit could be made on the Perky machines. His testimony on this was, "as many as you can think of, I should say" (R. vol. I, p. 270), and this without changing the machine except for substituting one form of cutter for another. He produced various forms of biscuit which were exhibited in the lower court. Photographs of them will be found in R. vol. IV, pp. 111 to 121.

In respect to the Perky patents referred to on page 8 of petitioner's brief, it is true that in several of them cutters are shown which can be used to make the pillow shaped form of biscuit, but there are no *claims* in these patents upon pillow shaped forms or upon any of the many forms in which the filaments may be arranged. Cutters may be conformed to cut any shape desired. Any form of cutter might have been illustrated. For instance the now expired patent to Anderson No. 1,334,249 (R. vol. V, p. 232), illustrates cutters to cut *round* biscuit, for use with Perky apparatus. The Williams patent No. 991,584 (R. vol. V, p. 490), also expired, illustrates a rotary cutter that may be used in such an apparatus to cut a band of filaments or threads into *diagonal* biscuits.

Where, as here, the shape of the article is not functional, its imitation will be restrained: *Rushmore* vs. *Badger Brass Mfg. Co.*, 198 Fed. 379 (C. C. A. 2, 1912). The applicable principles cannot be better stated than they were in *Enterprise Mfg. Co. of Pennsylvania* vs. *Landers, Frary & Clark*, 124 Fed. 923; 926, 928 (D. Conn., 1903; affirmed, 131 Fed. 240, C. C. A. 2, 1904):

> "The plaintiff claims no monopoly in the manufacture and sale of coffee mills. The world at large and its

products are open to the defendant. It can ransack the universe, and, avoiding possible patents, put together and market what it will in the way of coffee mills, with this one exception, it shall not so arrange its materials and so dress its goods as to produce and market a coffee mill which will be liable to be mistaken for the mills upon which, by long and persistent effort, the plaintiff has been enabled to obtain a distinctive reputation" (p. 926).

* * * * * *

"When the first glance of the eye fixes the idea of origin firmly upon the mind, a minor detail must in the ordinary case pass unnoticed. By dint of comparison and constant repetition in the quiet of the courtroom, such a detail may grow distinct and exceedingly luminous, but in the crowded store, in the rush and hurly-burly of everyday business life, it would fade into nothingness when opposed to the general attractiveness of the entire structure. That the defendant puts into the hands of the retailer or jobber the means of deceiving, whether with or without intention, is too obvious to deserve further discussion" (p. 928).

But the conclusive answer to this claim of the petitioner is that the other competitors of respondent have had no difficulty in using the Perky process and Perky machines to make biscuits of a form wholly different from "Shredded Wheat". Nor did petitioner itself find any such difficulty during the years from 1912 to 1919, while it was manufacturing "Kellogg's Toasted Wheat Biscuit."

4. The Effect of Petitioner's Delay in Trying to Appropriate the Name and Form.

The conscience of the Chancellor can not fail to be touched by the fact that the respondent in the best of good faith has poured out its funds year after year in a consistent effort to make its trade name a household word, identifying the product with its manufacturer. In all, more than $17,000,000 was thus expended between the

expiration of the patents and the year 1927, when petitioner made its first serious effort to use the trade name "Shredded Wheat". The Chancellor must remember too that throughout that period of fifteen years no competitor challenged the respondent's property right in this trade name, with the exception of the petitioner's abortive effort for a few months in the year 1922. The fact that petitioner, the largest producer of breakfast cereals in the country, stood by throughout that entire period and allowed the respondent to spend these vast sums in building up a good will for "Shredded Wheat", would of itself make a court of equity slow to hand over a part of that good will to a competitor who has spent neither money nor effort to create it. As Judge Davis said, speaking for the Court below:

> "When a person, after the expiration of a patent, has spent such enormous amounts of money during a period of fifteen years to create a valuable property right in the name and form of his product, equity today will not permit another to apply the name and form of the merchandise to his product and thus appropriate it to his own use and advantage and to the injury of the one who has created the good-will" R. vol. III-a, p. 2088; 91 F. (2d) 150, 153).

That rights in a trade name otherwise invalid may be acquired by user over a period of years was recognized by Congress when it added the so-called ten-year proviso to Section 5 of the Trade Mark Act of 1905.* In *Thaddeus Davids Co.* vs. *Davids*, 233 U. S. 461, this Court speaking through Mr. Justice Hughes said (at pp. 468, 470):

> "Marks of this sort, *notwithstanding the general prohibition*, were made registrable when the applicant or his predecessors had used them, actually and exclusively, as trade-marks for the described period."
>
> * * * * * * *

---

* Copy of Section 5 of the Trade Mark Act of 1905, containing the so-called ten-year clause in italics, will be found in Appendix II, *post*, p. 100.

> "Their exclusive use as trade-marks for the stated period was deemed in the judgment of Congress a sufficient assurance that they had acquired a secondary meaning as the designation of the origin or ownership of the merchandise to which they were affixed."

Some recognition of the equities arising from a situation such as this is found in the decision of the Circuit Court of Appeals for the Second Circuit in *Scandinavia Belting Co.* vs. *Asbestos & Rubber Works*, 257 Fed. 937 (C. C. A. 2, 1919), in which it was contended by the defendant that the trade mark "Scandinavia", in addition to being invalid because geographical, had become public property upon the expiration of the patent covering the product to which the trade mark had been applied during the life of the patent. In dealing with this contention the Circuit Court of Appeals said (at p. 960):

> "But there is another and conclusive reason why this claim that the name 'Scandinavia' became open to the public on the expiration of the patent is of no avail to the defendant, for if it were to be conceded that the doctrine of the *Singer* case originally applied the evidence shows *that the public did not avail itself of the right*, and that now because of the registration of the trade-mark under the ten years' clause it is *not at liberty to violate the plaintiff's exclusive right.*"

A similar ruling is found in *McKesson & Robbins* vs. *Charles H. Phillips Chemical Co.*, 23 F. (2d) 763 (Ct. App. D C., 1927), in which the Court of Appeals for the District of Columbia, dealing with the trade mark "Milk of Magnesia" said (at p. 764):

> "*Where the public fails to avail itself* of the right to manufacture the patented article and *use the name by which it was designated*, and 10 years' exclusive use of the mark intervenes prior to the Trade-Mark Act of 1905, the party using the mark is entitled to registration under the 10-year clause of the Act."

Both the above cases held that the ten-year clause applies to cases otherwise within the doctrine of *Singer* vs. *June*, although none of the clauses specified in Section 5 of the Trade Mark Act of 1905 covers the cases coming within that doctrine. Thus these decisions have extended the ten-year clause of the statute beyond its terms and the only justification for so doing is that the clause was in effect declaratory of a public policy, or that equitable considerations growing out of the exclusive use of a given trade mark by one person for a period of ten years or more after the expiration of a patent entitle that user to protection against its use as a trade mark or a trade name thereafter.

Moreover, there is a well settled rule of law which precludes the petitioner, under the circumstances of this case, from asserting that it has an absolute *legal right* to use the words "Shredded Wheat". The holding in *Singer* vs. *June* that the generic name of a patented article falls into the public domain upon the expiration of the patent, rests upon an *implied dedication*. It is a well settled rule of law that a non-statutory dedication to the public must, in order to be effective, *be accepted;* and, where no time for acceptance is expressed in the dedication, the acceptance must be *within a reasonable time*. (See 18 *C. J.* p. 72, sec. 67; p. 74, sec. 70, and cases there cited). The courts, in formulating rules pertaining to patents, have applied the rules pertaining to real estate and other property in analogous situations. *Cf. Edison Electric Light Co.* vs. *Peninsular Light, Power & Heat Co.*, 101 Fed. 831 (C. C. A. 6, 1900); *Indiana Mfg. Co.* vs. *Nichols & Shepard Co.*, 190 Fed. 579, 584 (Circ. Ct., D. Mich. 1910); *Co:ptograph Co.* vs. *Bur oughs Adding Machine Co.*, 183 Fed. 321, 325 (C. C. A. 7, 1910).

Certainly it could not conceivably be held that there had been an acceptance within a reasonable time here, when neither the petitioner nor anyone else had attempted to use the words for 15 years, during all of which time respondent had used them exclusively as an indication of the source of the product.

In the present case the respondent had the unchallenged use of the words "Shredded Wheat" as its trade name for fifteen years after the expiration of the Perky patent (with the exception of a short period in 1922 during which the petitioner started to use the term but abandoned it upon demand). We therefore earnestly submit that in view of the extension of the doctrine of unfair competition by this Court to meet modern commercial conditions, to which we have already referred, the respondent is clearly entitled to the protection of a court of equity in its use of the name "Shredded Wheat" as a trade name. This was exactly what the Circuit Court of Appeals determined in this case.

5. "Shredded Wheat" is a Valid Trade Mark.

The foregoing considerations show that as a matter of fair trade, the petitioner should not be allowed to designate its product "Shredded Wheat". Respondent submits that the same result must be reached on a further ground, to wit: "Shredded Wheat" is a valid common law trade mark for respondent's whole wheat biscuit. It was so used by Perky beginning in 1893, nearly half a century ago.

This use began long before any Perky patents were applied for and more than two years before any issued (R. vol. I, pp. 959, 971, 980). The record is clear that it has been used continuously as a trade mark since 1905. The patents did not give it genesis: *Batcheller* vs. *Thomson,* 93 Fed. 660 (C. C. A. 2, 1899); *President Suspender Co.* vs. *McWilliam,* 238 Fed. 159, 163 (C. C. A. 2, 1916).

Petitioner contends that the words are truly descriptive rather than suggestive as the Court below held. An answer to this contention will be found on page 40, *supra.*

Petitioner attempts to make the point (Brief, pp. 11 and 106) that respondent *disclaimed* the words "Shredded Wheat" as a trade-mark by reason of statements in certain registrations of othe trade-marks. Neither of the lower Courts has paid any attention to this argument.

The facts are plain enough: at R. vol. IV, p. 197, appears a registration of a picture of a dish with a spoon, milk and a biscuit in it. The disclaimer means only that respondent does not claim the biscuit alone but, in that particular mark, only in conjunction with the spoon and the milk.

Similarly, at R. vol. IV, p. 199, is a registration of a picture of the factory, accompanied by the statement,

> "no claim is made *herein* to the words 'The Home of Shredded Wheat'."—

which merely signified that that mark, like the preceding one, was claimed irrespective of the text.

The third was similar to the first in every way (R. vol. IV, p. 205). A disk with two biscuit was shown, and it was said that *that* mark did not include the representation of two biscuit "*apart* from the mark shown in the drawing".

There was no disclaimer of rights to either "Shredded Wheat" or the form of the biscuit; but the effect was to claim the marks shown, whether or not the other indicia were present.

Respondent at all times material to the issue has had registrations of "Shredded Wheat" as its trade-mark in most of the states (R. vol. I, p. 315). It has also, since 1921, had registrations thereof in the United States Patent Office (R. vol. IV, p. 179).

The two cases cited by petitioner do not support its point of law (Brief, pp. 106-7).

In *Beckwith* v. *Commissioner of Patents*, 252 U. S. 538, the case was on appeal from the District Court of Appeals, which had affirmed a decision of the Patent Office that certain descriptive words should be canceled from the face of an arbitrary mark before it could be registered. This Court reversed and held that they should *not* be eliminated, but the mark should be registered with them on it; the Court noting that the "disclaimer" of the words *apart from the mark* was enough.

In *Holzapfel's Co.* v. *Rahtjen's Co.*, 183 U. S. 1, 11, the Court noted that there had been an explicit "disclaimer on the part of the applicants *of the right to the exclusive use of*" the words "Rahtjen's Patent Composition" in the only registration before the Court. These words, it was said, were improper because there was no patent.* The case was decided upon the point that the plaintiff had not shown an exclusive right to the name "Rahtjen's Composition".

III

Singer vs. *June* Recognizes That Respondent Must be Protected from Unfair Competition by Imitation of the Name and Form of its Biscuit.

In every case of this nature the defendant invariably relies most heavily upon the decision of this Court in *Singer* vs. *June*, 163 U. S. 169. We hope that it will be understood that we do not in any way question the soundness of the doctrine enunciated in that case. In fact, the respondent relies upon the rule there laid down and reiterated in *Warner & Co.* vs. *Eli Lilly & Co.*, 265 U. S. 526. In *Singer* vs. *June*, this Court found that Singer was the generic name of the formerly patented article, and the Court followed the *Linoleum** case by holding that the defendant was free to use that name, since there was no other word aptly descriptive of the article. Here, upon the undisputed facts, the Court below has found the exact contrary, and the long history of the whole wheat biscuit industry shows that fair competitors never have found it necessary to use this trade name to describe their competitive products. Such being the case, it will be seen that the facts here are wholly different from those in *Singer* vs. *June*.

---

* *Linoleum Mfg. Co.* vs. *Nairn*, 7 Ch. Div. 834.

It must be noted too that the decree of this Court in *Singer* vs. *June* required the marking of each article so that the ultimate consumer or purchaser would be advised that it was the product, not of the complainant, but of the defendant. In this case the undisputed fact is, as proved by the petitioner itself, that the article which reaches the ultimate consumer is incapable of branding, marking or banding, the expense being such as to make these distinguishing marks commercially impracticable.

In considering the applicability of *Singer* vs. *June*, we must always be mindful of the fact that the June Company commenced the manufacture of its competitive product almost as soon as the patent had expired, whereas in the present case a long period intervened after the expiration of the patent, during which the trade as a whole showed by its course of conduct that use of the words "Shredded Wheat" was not necessary to designate the product of the patent.

Not only do we rely upon the fundamental principles enunciated in *Singer* vs. *June*, but we believe that the language of Mr. Justice White in that case states vividly the situation in which a former patentee finds himself at the expiration of his patent. He said (at p. 187):

> "To say that a person who has manufactured machines under a patented monopoly can acquire no good will, by the excellence of his work, or the development of his business, during the patent, would be to seriously ignore rights of private property, and would be against public policy, since it would deprive the one enjoying the patent of all incentive to make a machine of a good quality, because at its termination all the reputation or good will resulting from meritorious work would be subject to appropriation by every one."

It is precisely this point upon which we insist, for it seems to us manifest that the petitioner in 1932 was endeavoring to appropriate the good will which the respon-

dent had built up during the life of the patent and during the twenty years that followed its expiration. Surely in a court of equity such effort must fail. We can have no doubt that if the record before this Court in *Singer* vs. *June* had resembled the record now before it, the conclusion would have favored the plaintiff in that action without qualification.

In the recent case of *Nu-Enamel Corporation* vs. *Armstrong Paint and Varnish Works*, 81 F. (2d) 1 (C. C. A. 7, 1935), Judge Evans in the Circuit Court of Appeals for the Seventh Circuit, used language that is most pertinent to the present situation. He said (at p. 3):

> "The manufacturer or merchant who holds or who once held a patent monopoly which has expired is entitled to protection against unfair methods of trade just as any other manufacturer. * * * *In considering an unfair trade method case, we must dismiss as of no bearing the fact that the party seeking relief previously held a valid or an invalid patent* * * * He is in a court of equity as one who is honestly engaged in commerce and seeking protection against another who is, by methods which are unfair, passing off its goods for those of another. He merely asks the court to stop a business competitor from unfair trade practices. *We confuse the issue when we color appellant's right to relief by the Government grant of monopoly and assume that the right to relief ceases, or is lessened, when the grant expires.*"

1. The Evidence Shows That the Name and Form of Respondent's Biscuit Have Acquired Secondary Significance.

If, as we believe, the words "Shredded Wheat" are not the only name for the product, but constitute the trade name of the respondent, entitled to protection as was found by the Circuit Court of Appeals, the use of which by a competitor would constitute unfair competition, then we are not concerned to inquire whether the words have acquired a secondary significance, denoting the respondent as the manufacturer of the product.

But if the Court should be persuaded by the petitioner that "Shredded Wheat" is the generic term of the product, then the petitioner is impaled upon the other horn of the dilemma, for the record is replete with evidence that the words throughout the years have acquired a secondary significance denoting the respondent as the manufacturer of the product. This was found by the District Court in 1915 in the *Humphrey-Cornell* case.* If secondary significance existed in 1915, we may be sure that it is even more certain to exist today.

Both respondent and petitioner took depositions of grocers and other dealers and of consumers of "Shredded Wheat" in many of the principal cities of the United States. In all more than 300 witnesses testified by deposition on the subjects of secondary significance and confusion.

This testimony establishes beyond peradventure that the name "Shredded Wheat" and the appearance of the biscuit have both become so well known throughout the forty and more years during which they have been before the public as to have acquired a definite meaning distinctive of the respondent and its predecessors as the source. Indeed, as early as 1915 Judge Thomas of the Connecticut District Court found that at that time both name and shape had become distinctive of the respondent's product (244 Fed. 508), which finding was not disturbed by the Circuit Court of Appeals and was incorporated in the judgment entered upon the mandate of that Court (Plff's. Ex. 237, R. vol. IV, pp. 58-59).

Whether or not the words were once descriptive and hence could not have been registered thus becomes unimportant in view of the overwhelming proof by dealers and consumers, testifying both on behalf of the respondent and of the petitioner, that "Shredded Wheat" to the buying public and to the trade connotes respondent's product.

---

* *Shredded Wheat Co.* vs. *Humphrey-Cornell Co.*, 244 Fed. 508 (D. Conn., 1917) 518-519, affirmed, 250 Fed. 960 (C. C. A. 2, 1918).

The proofs are that when grocers or other retailers order respondent's product from wholesale grocery houses, they customarily call for "Shredded Wheat", without further designation; and that this is sufficient to indicate to the dealer that they are ordering respondent's goods and not those of petitioner. Likewise, when housewives and other consumers ask their grocer or restaurant proprietor for "Shredded Wheat", the latter knows respondent's product is intended, and he fills the order accordingly, unless he happens to have on hand only petitioner's goods, in which case, some boldly substitute petitioner's package without explanation. There is ample proof by food merchants, both wholesale and retail, that to the trade "Shredded Wheat" signifies a product of respondent's manufacture, and has all the significance of a trade name. Numerous examples of the foregoing character are collected in Appendix A, p. 61 *infra*. Compare also the quotations assembled in Appendix D, p. 93, *infra*.

The same authorities testified convincingly to the fact that in the minds of the purchasing public the name "Shredded Wheat" refers to a wheat biscuit produced by respondent or by its predecessor. Indeed, some retail dealers refused to concede that petitioner manufactures "Shredded Wheat", but gave as their opinion that it is made by respondent alone, and that petitioner's biscuit is an imitation (see, *e. g.*, the testimony of the witnesses Leighton, pp. 63-4; Born, p. 65; Dingee, pp. 65-6; Siebert, p. 66; Steen, pp. 66-67; Collected in Appendix A, *infra*, p. 61).

Moreover, the testimony belies petitioner's assertion that the term "Shredded Wheat" was used by consumers to denote respondent's biscuit only so long as respondent was the sole producer. The Quaker Oats Company and the Loose-Wiles Company have been marketing a whole wheat biscuit for years. Likewise the petitioner, Kellogg Company, has been manufacturing a whole wheat biscuit

almost continuously since 1912. Proof as to the secondary significance of "Shredded Wheat" was not limited to the period before 1912—or even before 1923. It not only covered the whole period of respondent's manufacture, after as well as before the advent of rival producers, but there is specific evidence that the public's association of the name with respondent as the source of manufacture has continued, notwithstanding the petitioner has entered the same field and has adopted the identical name.

All of the proofs which we have summarized above were before the Court below and form the basis for its statement (R. vol. III-a, p. 2086):

> "It is undisputed that at the time defendant adopted the name 'Shredded Wheat', and the trade mark of the plaintiff to designate its product, the trade and consumers generally had come to regard the name and trade mark as identifying the plaintiff's biscuit."

This is an unequivocal finding of fact, based upon clear proof, in the face of which it is idle for petitioner to argue that secondary meaning has not been established.

The evidence of secondary significance in the record now before the Court is so clear that we do not understand the petitioner seriously to argue that secondary significance has not been proved. In addition to statements such as those collected in Appendix A, the Court should note how dozens of petitioner's own witnesses unconsciously used the term "Shredded Wheat" to denote the product of respondent's manufacture. Their testimony is given in Appendix D, page 93 of this brief. Confronted with this mass of evidence, petitioner falls back on the statement on page 94 of its brief that secondary significance has justified an injunction against the use of a trade name only in cases where "the words enjoined were not in any sense commercially indispensible to free and fair competition". The petitioner evidently forgets that no competitor has found this trade name "commercially indispensible" excepting only the petitioner itself, and then only for a

small part of the period during which it has been competing.

The net result of the testimony as to secondary significance is to demonstrate a situation with respect to the name "Shredded Wheat" which is identical with that of the name "Coca-Cola", as described by Mr. Justice Holmes in *Coca-Cola Co.* vs. *Koke Co. of America*, 254 U. S. 143, 146:

> "• • • The name now characterizes a beverage to be had at almost any soda fountain. It means a single thing coming from a single source, and well known to the community. It hardly would be too much to say that the drink characterizes the name as much as the name the drink. In other words Coca-Cola probably means to most persons the plaintiff's familiar product to be had everywhere rather than a compound of particular substances. Although the fact did not appear in United States v. Coca-Cola Co., 241 U. S. 265, 289, we see no reason to doubt that, as we have said, it has acquired a secondary meaning in which perhaps the product is more emphasized than the producer but to which the producer is entitled."

IV

The Canadian and British Decisions

Emphasis is placed by the petitioner in its brief upon the fact that in the case arising in Canada between subsidiaries of the parties here, the Privy Council in London rendered a decision adverse to the registration under the trade mark statute of Canada; and also that the Court of Appeals in England has recently reversed a judgment of the High Court of Justice in an application by the British subsidiary of petitioner to strike from the Registry the trade mark "Shredded Wheat", previously registered by the respondent under the British Trade Mark Law. Both the controlling law and the facts proven in those two cases are wholly unlike the law and the facts now under consideration by this Court in the case at bar.

If the facts were the same and if the controlling statutes were the same, we freely concede that the judgments of those courts would be entitled to the utmost respect, but that is not the case.

The Canadian case reached the Judicial Committee of the Privy Council upon a record quite different from that in the case at bar. Specifically, only a single sale of the Kellogg biscuit was proved to have been made in Canada. There was no evidence of actual confusion or passing off. The question involved was the correctness of the action of the Registrar in placing the trade mark "Shredded Wheat" upon the Registry in 1928 and 1929. The correctness of that action hung upon the peculiar wording of the Canadian statute, and the decision of the Privy Council goes no further than to hold that the evidence which the Canadian Shredded Wheat Company was able to produce fell short of establishing that at the time of registration the words (which the Privy Council thought to be indicative of the character and quality of the product) had *at that time* acquired secondary significance *in Canada*.

Moreover, the judgment of Lord Russell, speaking for the Privy Council, recognizes the rules of law for which we contend in this case: namely, first, that even a descriptive word may acquire secondary meaning and come to mean that the goods in connection with which it is used are the goods of a particular manufacturer, and secondly, that even in the case of an expired patent it is possible for evidence to establish that the name has become distinctive of a particular manufacturer rather than merely descriptive of the goods. The ruling of the Privy Council was simply that the evidence adduced in that case did not meet this requirement.

The case arising in England was one brought by the English subsidiary of the petitioner here to "correct the Register" by striking from it the trade mark "Shredded Wheat", registered in 1929 by the British subsidiary of the respondent. After a trial of the issues raised by that application, which consumed twelve days of the time of

Mr. Justice Bennett in the High Court of Justice, he ruled as follows:

> "There is not a shred of evidence to support the argument that the words meant or were understood by anyone to mean that the article to which they were applied was an article made in accordance with Perky's specification. To my mind the evidence afforded by a consideration of the advertisements put out by the Respondents, in which the words 'Shredded Wheat' have always been the most prominent feature, and of the cartons and the wording upon them, and in particular of the use thereon of the words 'Shredded Wheat' is conclusive that the words 'Shredded Wheat' have, since the beginning of 1926, been used by the Respondents for the purpose of indicating that the biscuits in connection with which the words have been used were manufactured by the Respondents at their Welwyn Garden City factory" (p. 109, *infra*).
>
> * * * * * *
>
> "In fact the evidence in my judgment establishes that Shredded Wheat is as much a household word as Bovril or Oxo or Hovis. Every trader knows it to mean the Respondents' biscuits, and in every household in which they are eaten the biscuits are known as Shredded Wheat, and known by that name as being of the Respondents' manufacture" (p. 114, *infra*).
>
> * * * * * *
>
> "I was also satisfied that if there were today to be put on the market similar goods made by another manufacturer which might be called Shredded Wheat passing off would not be merely possible but probable, particularly in hotels and boarding houses, where the customer never sees the carton or package from which the biscuit offered to him has been taken.
>
> "For these reasons I hold that the mark was properly put upon the register and that the motion to expunge it fails" (p. 115, *infra*).

An appeal was taken from this decision and the Court of Appeals, brushing aside as of minor importance the clear and unequivocal findings of fact just recited, reversed

the judgment of Justice Bennett upon a purely technical construction of a technical English trade mark statute, and based its decision largely upon language printed on a carton in use prior to the year 1926.

An appeal has been taken to the House of Lords, seeking reversal of the judgment of the Court of Appeals and the reinstatement of that of Justice Bennett.

For the convenience of the Court a copy of Justice Bennett's decision is appended to this brief in Appendix F, *post* page 102.

V

Respondent is Entitled to Effective Relief

Having now established, as we confidently believe, that the conduct of the petitioner, in the light of the broad doctrine of unfair competition now prevailing—a doctrine which would be better denominated as the doctrine of unfair trade—calls for equitable relief, it follows necessarily that the respondent is entitled to effective relief. This Court, speaking through Mr. Justice Sutherland in *Warner & Co.* vs. *Eli Lilly & Co.*, 265 U. S. 526 at page 532, says:

> "But respondent being entitled to relief, is entitled to effective relief; and any doubt in respect of the extent thereof must be resolved in its favor as the innocent producer and against the petitioner, which has shown by its conduct that it is not to be trusted."

The only effective relief, that is, relief which will for all time put an end to and prevent the possibility of confusion of the public as to the origin of the respective parties' products, is that prescribed in the decision appealed from. With respect to the name, it will be noted that the opinion of the Circuit Court of Appeals refers to the case of *Barton* vs. *Rex Oil Co.*, 29 F. (2d) 474 (C. C. A. 3, 1928), decided by that Court. The proof of secondary significance and of confusion in that case was held to be so

cogent as to require an injunction against the use of the descriptive "Dye-and-Shine" as a part of a product name "as distinguished from their use in describing it". So in the case at bar, the Circuit Court of Appeals held that while the petitioner is free to use them *to describe the qualities and characteristics of its product*, it may not use the words "Shredded Wheat" as its trade name.

The petitioner in 1930 undertook to call its product "Kellogg's Whole Wheat Biscuit"—prefacing the generic name of the product with its own trade-name. It now asserts that it cannot succeed commercially unless it calls its product by the respondent's name. It says this although three other competitors, two of which are still in business, have not found it necessary to do so. Obviously the petitioner wishes to call its product "Shredded Wheat" because by doing so it can sell more of it. Hence, respondent cannot be protected unless the injunction against the use of the words as part of the trade name be sustained.*

The same is true as to the form of the biscuit. We have already pointed out both in the argument and in Appendix B of this brief that the petitioner's biscuit served upon a call for "Shredded Wheat" has resulted in confusion and passing off. Even as early as 1915, in the *Humphrey-Cornell* case** the Court could find that the appearance of the respondent's biscuit had acquired secondary significance as meaning only the biscuit made by the respondent (R. vol. IV, p. 59); and this finding was not only retained in the modified mandate (*ibid*) but was expressly and emphatically recognized by Judge Learned Hand in his opinion written for the Circuit Court of Appeals in the same case (250 Fed. 960).

---

* For petitioner to use the words "Shredded Wheat", succeeded by its name "Kellogg's", would be "...n aggravation and not a justification". *Menendez* vs. *Holt*, 128 U. S. 514, 521; *Jacobs* vs. *Beecham*, 221 U. S. 263, 272.

** *Shredded Wheat Co.* vs. *Humphrey-Cornell Co.*, 244 Fed. 508.

It is true that the relief ultimately granted in that case was limited to the marking of such biscuits as reached the ultimate consumer outside the package, but a little reflection will show the futility and ineffectiveness of such an injunction, for the manufacturer is wholly unable to determine, when biscuits are being packed, which ones will be delivered without the package. Moreover, the petitioner in this case, with the aid of Andrew Ross, the real defendant in the *Humphrey-Cornell* case (R. vol. III, p. 1996) as well as with the testimony of its own technical employees (R. vol. II, p. 1122), has established and asserts that the biscuits cannot be individually branded. In the face of such assertion the portion of the judgment appealed from, which enjoins the petitioner from making its biscuit in the form and shape of the respondent's biscuit, was inevitable; for not otherwise could effective relief be granted.

A court of equity is a practical court—its genesis was in affording suitors practical relief where the rigid law courts denied it. We have heretofore shown that the petitioner can fully enjoy all rights which passed to it and the public upon the expiry of the patent without any necessity for destroying respondent's good will. It is the protection of that good will which the respondent now seeks.

VI

The Public Has a Real Interest in This Case

It is obvious that if the petitioner has the right to make an imitation of "Shredded Wheat", using the pillow shape form and using the words "Shredded Wheat" as part of the name of its product, then every other citizen of the United States has a similar right. There is nothing in this record that would warrant us in charging that the petitioner's standards of purity and cleanliness are not high, nor is there any evidence that petitioner does not.

use the same expensive quality of wheat as is used by the respondent. It is, however, self-evident that all manufacturers will not be so scrupulous in the maintenance of these high standards. Certainly not all persons would be willing to pay the premium which must be paid to secure Number One grade white winter wheat, such as has been used by the respondent throughout the manufacture of "Shredded Wheat", nor would all persons use the same expensive precautions to insure cleanliness in manufacture and absolute purity of product.

Today the nation knows that respondent's "Shredded Wheat" is wholesome, clean and pure. It is in the public interest that these high standards be preserved and that a call for "Shredded Wheat" in any town in the country will always produce a product of such high quality. It surely is not in the public interest to open the door to substitution of products which may be of inferior quality. Even if the equities between petitioner and respondent were evenly balanced, this factor of the public interest should shift the balance so as to require an affirmance of the decree of the Court below.

We confidently submit that the decree of the Circuit Court of Appeals does no more than simple justice. We respectfully ask that it be affirmed *in toto*.

Respectfully submitted,

DAVID A. REED,
Solicitor for Respondent.

CHARLES A. VILAS,
THOMAS G. HAIGHT,
DRURY W. COOPER,
of Counsel.

Appendix A

Specimens of Testimony Showing Secondary Significance.

(See also Appendix D, *infra*, p. 93).

HARRY J. HELMERS, a wholesale grocer of Cincinnati, Ohio, and a witness for *petitioner*, said on cross-examination (R. 1567):

> "When our customers ask for shredded wheat, we know what they want and give them what they want, because we do not classify Kellogg's Whole Wheat Biscuit as shredded wheat. I just feel like either one of them is a name. I imagine shredded wheat would be a trade name; of course, the same as Whole Wheat Biscuit. *Shredded wheat has been a sort of household word so many years it is associated with this biscuit now made by the National Biscuit Company, in the minds of the public.* That is the reason. When an order is taken, if you want to call it a biscuit, all right; *but, if they say Shredded Wheat, that is all is said on the order. One case shredded wheat is the way the salesmen order it. It is not necessary to say National or Niagara Falls; it is just shredded wheat. I believe that has been so as long as I can remember in the business.*"

He was corroborated by CHARLES T. WARD, president of Francis H. Leggett & Company, an old and well-known wholesale grocery house of New York, who stated (R. pp. 684, 685):

> "The term Shredded Wheat means to me a proprietary item of some sort, or brand, owned by the Shredded Wheat Company formerly, I think, and now by the National Biscuit Company.
>
> By the term 'proprietary article' I mean to convey some item that is owned individually by somebody.
>
> * * * * * * *
>
> *In my opinion as a merchant, I do not think there is any question in my mind about the fact that the advertising and the sales of Shredded Wheat, as I know it, resulted in identifying Shredded Wheat as a proprietary article.*"

The witness EDWARD E. SWEET, at one time connected with the *petitioner* corporation as a salesman and having had great experience in the sales departments of large food corporations for a period of twenty years or more, testified as follows (R. 332):

> "I certainly have had an education in cereals that would probably permit me to be more critical than the ordinary consumer. For that reason, I am probably very critical of the cereals and the comparisons that I make when I select them and eat them. When I find a biscuit like that in Plaintiff's Exhibit 1, I can not think of anything but Shredded Wheat. *When I think of Shredded Wheat the thought I get is concerned entirely with the product, manufactured by the National Biscuit Company at Niagara Falls.*"

WILLIAM A. HANNIGAN, President of J. D. Sissler Company of Wilmington, Delaware, and in the wholesale grocery business for twenty-seven years, testified (R. 295):

> "During all the twenty-seven years we have handled a product known as Shredded Wheat. Originally we knew of Shredded Wheat as being made at Niagara Falls.
>
> Plaintiff's Exhibit 1, which you hand me is the package that I referred to a moment ago as Shredded Wheat. When we ordered or desired that product from the manufacturer we ordered so many cases of Shredded Wheat. Shredded Wheat I think it commonly went as. It was known to the trade as Shredded Wheat. *The product was ordered from us by the retailer as Shredded Wheat. That term indicated to me, one of the members of the trade, the source or origin of that product.*"

HARRY W. FRAZIER, for thirty-nine years a retail grocer at Wilmington, testified (R. 298):

> "I know what Shredded Wheat is from the selling of it. The package marked 'Plaintiff's Exhibit 1' is the package we sell as Shredded Wheat. I cannot say exactly how long I have known Shredded Wheat, but I venture to say 30 or 35 years.

When we ordered the product in the carton similar to Plaintiff's Exhibit 1, we ordered Shredded Wheat and when customers asked for Shredded Wheat we supplied Plaintiff's Exhibit 1—this package of Shredded Wheat."

The witness HAMILTON, a Boston Grocer, testified (R. 353):

"When a customer says shredded wheat, it means a package like Plaintiff's Exhibit 1. When a customer orders it, that is the package I supply her. Many of my customers order by telephone. They order this product as Shredded Wheat. When we get such an order, we supply this shredded wheat; have never supplied any other."

JOHN A. ORR, a grocer of long experience in Pittsburgh, Pennsylvania, testified (R. 448):

"Shredded Wheat to me means a national product which we are selling to the public every day and it means but one article. The purchasing public come in and ask for it and we give them Shredded Wheat, which is what they want. It has a positively established reputation and a lot of good will attached to it."

HARRY C. ROHN, of Cleveland (R. 473), complained because he had had the Kellogg product served outside of the package in a bowl upon a request for Shredded Wheat. On *recross-examination* he said:

"RXQ. 67. Mr. Rohn, if you went into a restaurant from now on and wanted to get this large biscuit, would it not occur to you to ask for the Niagara Falls Shredded Wheat?

A. Well, I do not know. With me, shredded wheat is Shredded Wheat."

FRED LEIGHTON, of Cleveland, said (R. 478):

"RXQ. 95. Mr. Leighton, it is true, is it not, that you, as a grocer, now know that there are two distinct brands of shredded wheat on the market; one made by the Kellogg Company at Battle Creek,

and the other made by the National Biscuit Company at Niagara Falls?

A. No, I know only one. There is only one Shredded Wheat."

HARRY E. SCHLOESSER, a grocer, of Chicago, said (R. 511):

"I think that what Frigidaire* has come to mean to electric refrigerators, Shredded Wheat has come to mean to products of that type—just as a Kodak applies to cameras and Kellogg is a special name for Corn Flakes."

ELMER R. JONES, a retail grocer of Washington, D. C., testified (R. 537):

"From my experience I would say that the name 'shredded wheat' has acquired a reputation among the purchasing public. When the purchasing public ask for Shredded Wheat, they know what they are asking for. How they know is probably not for me to say. It might be probably through advertising purposes, the same as they would ask for a certain brand of canned goods, like the Del Monte brand. They have probably tried or seen it through the advertisements, or it might be a by-word on their tongue, like when anybody asks for a cracker, they would ask for a package of Uneedas."

MICHAEL WEINSTOCK, a wholesale grocer of New York City, testified (R. 663):

"In the trade, the expression 'Shredded Wheat' has the significance of a trade name, as to a particular product of particular origin. The way I understand it, it is an item that has been named as Shredded Wheat, and the name has been registered."

GEORGE J. BORN of San Francisco, a retail grocer of thirty-one years experience, says (R. 748):

"From my experience in grocery merchandising and dealings with the public, as to whether this expression Shredded Wheat has any particular associa-

* Frigidaire is a General Motors trade name for its electric refrigerator.

tion or meaning in the minds of the general public, I think that, in most people's minds, there is only one Shredded Wheat. Nothing else will take its place. It is like Palmolive Soap or Dutch Cleanser that we sell. Those names refer to particular makes of soap and cleanser. I regard Shredded Wheat as a trade name. I guess I mean by that; if people ask for Shredded Wheat, they want Shredded Wheat only."

And again on recross-examination he says (R. 751):

"If it was put direct to me, I think I would explain that Shredded Wheat was the only Shredded Wheat. I would not use the expression that Kellogg's was another make of shredded wheat. I would not even say that shredded wheat or shredded wheat biscuit were being made by two manufacturers: one at Niagara Falls and the other at Battle Creek. I would simply tell the customer that, as far as I know, there is only one kind of Shredded Wheat on the market, the Niagara Falls product."

R. L. Waugh, operating a self-service store in Los Angeles, says (R. 850):

"Q. What have you to say about the expression Shredded Wheat? Has it acquired any definite meaning in the minds of the public, in your opinion?

"A. Well, the word Shredded Wheat is a household word, and it really—referring, always, to the original Shredded Wheat.

"Q. 49. When you call it a household word, do you mean by that that it has become attached to that particular product in the minds of the public?

"A. Absolutely.

"Q. 50. Do you believe that to be the case?

"A. I do.

"Q. 51. From your thirty years' experience?

"A. Yes sir."

Henry L. Dingee, operating a service store in Fort Worth, Texas, said (R. 861):

"In my opinion, there is only one Shredded Wheat. When a customer comes in and asks for Shredded Wheat, that is the first think I think of, the only

thing. To me, just Shredded Wheat is the name of a product, like saying the Cadillac made by General Motors. I think Shredded Wheat is made by this Uneeda* Biscuit Company, or whatever you want to call it. * * * I regard it as a proprietary name, a trade name."

PAUL W. SIEBERT, a retail grocer for some twenty years in Dallas, Texas, stated (R. 896):

"If the Kellogg Company puts on the side of the package this little phrase which I did not notice before, in which it is called a shredded wheat product, I think it is a lie, in this way, because it is not a shredded wheat product, in my opinion; because a shredded wheat product would mean a product from this particular company, in my estimation. Shredded Wheat means a biscuit made by the Shredded Wheat Company."

HENRY F. STEEN, for many years connected with the plaintiff company and later in the grocery business at Kansas City, Missouri, testified (R. 921):

"I would say that it is fair to say, in my opinion, at least, that the term shredded wheat is entirely connected with the Niagara Falls product. I would regard it as a trade name and as the descriptive name of the original Shredded Wheat Biscuit."

and on cross-examination he said (R. 927):

"If I were asked whether Kellogg was manufacturing a shredded whole wheat biscuit, I believe I would say no, that they are just manufacturing an imitation of it. It is nothing else but an imitation of the original Shredded Wheat Biscuit."

He set forth on redirect-examination after a long and searching cross-examination (R. 929):

"The gist of the discussion is that I have known the original Shredded Wheat, the old name, as Shredded Wheat, for many, many years; that it

*"Uneeda" is a well known trade-mark of respondent for crackers.

has acquired a reputation with the public, and that the expression shredded wheat is attached to the National product in the minds of the public. That is why I say that the Kellogg product is an imitation of it."

PAUL R. WATKINS, a grocer of Washington, D. C., said (R. 547):

"I do not think they (petitioner) have the right to call that shredded wheat. That is not shredded wheat. That is the National Biscuit Company's Shredded Wheat. That is what I think about it. I think they have a trade name, Shredded Wheat; and I do not think there should be another biscuit made that looks anything like it."

Miss BESS EVANS, a demonstrator, stated (R. 648):

"*It is my experience and observation that, when people call for or desire Shredded Wheat, they desire the product of a particular concern.* When a person gets used to a product and it has been used for years and years, if they put something like it on the market, it is an imitation. You know it does not come up to the original product."

H. B. RICKARD, a retail grocer of Los Angeles, testified (R. 822):

"We receive occasional telephone orders for Shredded Wheat and we supply Shredded Wheat. I know the Kellogg's Whole Wheat Biscuit. We carry that. When a customer asks for Shredded Wheat Biscuit, I have never supplied the Kellogg's biscuit, unless they specially ask for Kellogg's. We always send them Shredded Wheat".

MAXINE REYNOLDS, a consumer of Dallas, Texas, testified (R. 902):

"When I ask for it, I ask for Shredded Wheat. I have in mind definitely that I expect to receive Shredded Wheat Biscuit, which is known as Shredded Wheat and is put out by the National Biscuit Company. I have never called it a National Biscuit product; but I have always taken for granted that it was their product, in asking for it. Shredded Wheat means that particular product to me."

LESTER S. GUTHRIE, in the farm machinery business at Kansas City, Missouri, said (R. 936):

> "I have had occasion to purchase Shredded Wheat. I ask for Shredded Wheat and I have in mind that I would like to get the Niagara Falls brand of Shredded Wheat; but I often get the Kellogg brand of Whole Wheat, lately."

Mrs. JESSIE M. FATJO, of San Francisco, California, explained (R. 742):

> "The expression Shredded Wheat represents to me the National Biscuit Shredded Wheat, which we have for breakfast."

Mrs. EMILY HERRON, a housewife of Cleveland, Ohio, said (R. 464):

> "When I ask for a package of shredded wheat I expect to get the product made at Niagara Falls and which I have seen made."

HAROLD O. YORKE, of Detroit, a customer, stated (R. 483):

> "Shredded Wheat conveys to me a biscuit made at Niagara Falls."

LOUIS RICHARD SCHMIDT of Washington, D. C. stated (R. 532):

> "If I go into a store and ask for shredded wheat I expect to receive shredded wheat biscuit; I mean the product that is made at Niagara Falls."

Mrs. DOROTHY MCFARLAND, housewife of Los Angeles, testified (R. 783):

> "When I buy it at a service store, I ask for Shredded Wheat and I expect to get the National Biscuit Company's Shredded Wheat."

ELBERT KIRKLAND, a retail grocer at San Francisco, said (R. 770):

> "If anybody speaks of Shredded Wheat, I do not associate it with anything else but Uneeda. I do not believe the customers do either, from the way they

buy. When the purchasing public speak of Shredded Wheat, they think of Uneeda. By the word Uneeda they mean the Shredded Wheat made by the National Biscuit Company."

Horart W. Mears, purchasing agent of Matson Navigation Company in San Francisco, testifying for *petitioner*, said, in speaking of plaintiff's Exhibit 1 (R. 1197):

"I have known that all my life. *If Shredded Wheat is mentioned, that famous Shredded Wheat Biscuit is called up in my mind.* There is no question about it."

Joseph G. Cohen, a wholesale grocer of San Francisco, also testifying for *petitioner*, said (R. 1200):

"*I would say that, even when Kellogg's was known as Kellogg's Shredded Whole Wheat, if an order came in for Shredded Wheat, the National Biscuit Company's product would be sent out on the order. That has been so before and after the Kellogg people got into this line with the biscuit.*"

L. P. Schmidt, operating a chain of grocery stores in San Francisco, and a witness for *petitioner*, said on cross-examination (R. 1212):

"I have been familiar with Shredded Wheat for a great many years, nearly as long as I can remember. It has always been known as Shredded Wheat and always looked the same as it looked today, a small-sized pillow-shaped biscuit. When I started to describe the Kellogg biscuit, in answer to Mr. Clarke's question, I started to say it was a shredded wheat biscuit. That was the first thing that came into my mind. *If my customers ask for shredded wheat I give them Shredded Wheat, the product sold by the National Biscuit Company. I would not offer such a customer Kellogg's Whole Wheat Biscuit. I would consider that substitution.*"

Carl Dunac, operating a restaurant in San Francisco, said (R. 1235):

"When I speak of shredded wheat, I have in mind that shredded wheat there, Plaintiff's Exhibit No. 1, one of these pillow-shaped biscuits. That is what I mean by shredded wheat."

JOSEPH L. MOULTON, a wholesale grocer, of Detroit, Michigan, *called by petitioner*, testified on cross-examination (R. 1487-8):

> "Having been in the grocery business since 1906 I knew shredded wheat almost from the start. I have handled a lot of it. Before National took it over, we handled it very extensively all the time. *It was a very well-known product, and, if anyone asked for shredded wheat, there was never any doubt that they meant shredded wheat, like Plaintiff's Exhibit 1.* I would say that it is fair to say that shredded wheat, during the first twenty-seven years of this century, became a household word known throughout the country.
>
> "XQ. 45. My question now is: You find that the Kellogg Whole Wheat finds ready substitute for shredded wheat; do you not?
>
> "A. Yes, that furnishes a substitute."

And again (R. 1488):

> "*I have not told them this is shredded wheat made by the Kellogg Company. We could not get by with that.*"

MILTON A. GALLUP, Minneapolis representative of Griggs, Cooper Company, wholesale grocers, testifying for the *petitioner*, said on cross-examination (R. 1885):

> "XQ. 71. It has never occurred to you, probably, Mr. Gallup, that the expression *shredded wheat* has acquired a proprietary or trade-mark meaning, as designating the product that the Shredded Wheat Company had made for so many years, has it?
>
> A. *Yes, I think it has. That is what I say. We still call it shredded wheat biscuit, and, when they call for shredded wheat biscuit, we sell it for that.*
>
> THE WITNESS: *We sell it as the trade name designating the National's shredded wheat biscuit*, because that is the only way it is listed. The other we call Whole Wheat Biscuit, although I very quickly say it is shredded wheat when I am asked."

Harry L. Snyder, a grocer of Pittsburgh, Pennsylvania, testifying for *petitioner*, said on cross-examination (R. 851):

> "People have called for that product, throughout my entire experience, by the name shredded wheat, as far as I can remember. I never knew it to be called for by any other name. *I would think it is a name very familiar to the public, and I would suppose it has always meant this product made at Niagara Falls.* I know of no reason why it would not. It might be possible some people would not know it was made there. *It means that product to the public, however, and it still means it.*"

The extracts herein quoted are by no means the whole estimony as to secondary significance. They are merely lustrative of the substance of proof given by scores of ersons who testified in the case.

Appendix B

Evidence of Substitution, Passing-Off and Confusion.

1. Instances of Substitution Accompanied by False Representations.

Testimony of EDWARD E. SWEET (R. 325, 326):

I ordered a shredded wheat from the menu in the Providence Biltmore Hotel in their lunch room.

Yes, at the Providence Biltmore Hotel, in their lunch room; and a small package, such as might indicate that it was an individual package—or at least two biscuits were exposed during delivery of the food; and, because I was dividing my attention between the package and a newspaper, I just automatically removed one of the biscuits, as I always do when I receive an individual package, and started to eat it. Eating two or three portions convinced me that there was some sort of change in the biscuit, so I paused in my reading long enough to examine the package more closely; and I discovered that it was not shredded wheat, but that it was a product known as Kellogg's Whole Wheat Biscuit. • • • I called the waitress and, if my memory serves me right, I said to her: "This is not shredded wheat."

And she said: "What is it?"

And I said,—if I remember correctly, "This is Kellogg's Whole Wheat Biscuit."

"Well," she said, "*they have sold out to the National Biscuit Company.*"

W. A. DOYLE testified (R. 388):

Mr. Kenney and I were at breakfast in Doukas Cafe, Keene, New Hampshire. We ordered shredded wheat. A gentleman who I think was the proprietor brought a serving of Kellogg's biscuit. We objected to it and said it was not shredded wheat. It was in the package. He insisted it was shredded wheat. We went into lengthy detail about it. *He also stated Kellogg had bought out Shredded Wheat Company and that that was the shredded wheat.*

We did not succeed in getting anything else.

He was corroborated by THOS. R. KENNEY, who stated (R. 390):

> In August of this year I was in Doukas Cafe, Keene, New Hampshire, asked for shredded wheat, and was served Kellogg's biscuit. I told the waiter that was not shredded wheat, was not what I wanted. He insisted it was shredded wheat, the only shredded wheat he had. To convince me it was, *he told me the Kellogg Company had bought out the Shredded Wheat Company and was now putting the biscuit out in this package and in this form.*

Testimony of Mrs. FLORENCE L. COWLES, R. 491:

> I walked in the store and asked for several articles, among them Shredded Wheat. She placed a box of Kellogg's Whole Wheat on the counter and I said, "Is this Shredded Wheat?" and the lady said "Yes." I said, "I thought the Shredded Wheat had a picture of Niagara Falls on it." *And she said, "Well, this comes from Niagara Falls,"—meaning the Kellogg package which she placed on the counter.*

Testimony of CLAYTON K. BRACE, R. 987:

> I remember particularly Mr. Thoms having breakfast with me and three or four other men. In that case, *I particularly asked the girl if she had Shredded Wheat, the original Shredded Wheat, and she said she had.* I told her I would take it. *When she delivered it to me in the bowl, not in the package, it was the Kellogg product.* I recall that instance, because Mr. Thoms became quite excited and called over the manager of the restaurant.

Testimony of SAMUEL A. LEONARD, R. 639, 640:

> I recently went to the store of V. Pettrolala, Belleville, New Jersey, and said: "I would like to have a box of National Biscuit Shredded Wheat." He was standing behind the desk. In back of him there was a well-dressed fellow, Italian, and he began to look around. My son, who was with me, said he did not have any in the place. The fellow who stood on the opposite side of the desk said: "Right up there." He

said, "Oh, yes," and pulled down one of these Whole Wheat packages.

I said, "That is not the National Biscuit, is it?" He says, "Yes." "Well," I said, "it does not say so." Well, he says, "It is Shredded Wheat." "All right," I said, "I will take a box of it."

Testimony of MRS. DOROTHY MCFARLAND, R. 783:

On November the twenty-first, I bought shredded wheat at Walter's Market, 1050 East Anaheim, Long Beach. I asked for Shredded Wheat and I got Kellogg's Wheat Biscuit. Plaintiff's Exhibit 174 is the package I got at that time.

I asked the grocer for Shredded Wheat, and he gave me that package. I did not think that was the kind I wanted. It was not the kind I had been buying. *I asked him if it was Shredded Wheat; and he insisted it was; that it was the original Shredded Wheat; that the Kelloggs were the first people that made the Shredded Wheat* and they made the Shredded Wheat, and that was what it was. So I bought it. *The grocer told me that Kellogg's were the first people that made Shredded Wheat, that they made the original Shredded Wheat.*

Testimony of CLARA M. TUTT, R. 900:

Recently, I went into the store of Phipps, on the north side, a store at which I do not regularly trade, and asked for Shredded Wheat. They brought me this package. I was asked to do that by somebody connected with the National Biscuit Company. I said, "This is not the original Shredded Wheat." He said, "Oh, yes, it is." He called a manager and said, "Mr. Phipps, is that the original Shredded Wheat?" He said, "Yes." I said, "This is not what I have been buying." *He said, "This is the original Shredded Wheat."* I took it and paid for it. This happened yesterday. The box they gave me was Plaintiff's Exhibit 185. I did not even know there was a Kellogg's on the market until I saw this package.

Mrs. R. K. Stalcup testified (R. 904):

I went in the store and asked him if he had some Shredded Wheat. He said, "Yes, ma'am, I do have." We both glanced at the same time up to the shelf. He said, "I have the Kellogg's shredded wheat." *I said, "Is this the original shredded wheat?" He said, "Yes, ma'am."* I said, "I want to be sure. I am buying this for someone else." He said, "Yes they will never know the difference. *This is the original Shredded Wheat.*"

Testimony of Nora G. Evans, R. 651, 652:

I recently had an experience in ordering Shredded Wheat and obtaining something else. I went into a cafeteria and ordered Shredded Wheat. They brought this Whole Wheat and fixed it in the bowl, where it looked like a long biscuit. I said, "That does not look like Shredded Wheat to me. Bring me the box. I want to see." She did not bring the box. I suppose she told a story and she did not want to get caught. After I tasted a little bit, I said "Bring another one and bring the box with it." She brought the box. I said, "That is not Shredded Wheat. That must be a new biscuit that is put out. I never saw it before." She said, "It is just the same." I said, "You are mistaken. It is not." This was at The Meadow Cafeteria, 72 Henry Street, Brooklyn. * * * I placed the order with the waitress. I said, "I want an order of Shredded Wheat Biscuit." *She brought this Whole Wheat Biscuit. I did not know what it was at the time. She had it in a bowl.* It looked just like the original Shredded Wheat. She did not bring the original container I called for. I ordered another order of it, and then she brought another container, which I have produced here, Plaintiff's Exhibit 145. I ate part of one, and the other biscuit is in there. The biscuit I first had and this are the same biscuit.

(Stipulated that the biscuit produced by the witness is a Kellogg biscuit.)

2. Instances of Passing Off.

Testimony of Mrs. Florida P. McCabe, R. 366, 367:

I needed shredded wheat and I went into the store of Fontaine, at Castle Hill, Salem, Massachusetts, about a month ago. I asked the clerk for a package of cigarettes, and he gave them to me. Then I asked for a package of shredded wheat. He handed me this package, Plaintiff's Exhibit 15, which did not look like shredded wheat to me that I have been using. I asked him if it was shredded wheat, and he said yes. I said, "It does not look like shredded wheat I have been using." He said, "It is positively the same thing, except it is a smaller biscuit." I said, "I want to make sure that, when I call for anything, I find what I want." He said, "That will be the same." I took the package.

Testimony of W. A. Doyle, R. 552:

On the nineteenth day of December, about 8:30 A. M. I went into the Lull grocery store, 410 East Dutton Street, Kalamazoo, Michigan, and asked for a package of Shredded Wheat. The grocer handed me Plaintiff's Exhibit 74. I replied, "That is not Shredded Wheat." He said, "*That is shredded wheat. See the biscuits in the dish?*" I took it and went out.

Lester S. Guthrie testified (R. 936):

I remember especially September 7th, in Wichita, at P. O. Weltner's, 3060 East Douglas Street, a grocery store. I bought some other groceries and asked for some Shredded Wheat Biscuit. He gave me a box of Kellogg's Whole Wheat Biscuit. I told him it was not what I wanted. He said, "*That is just the same thing. One time they come marked one way; and one time they come marked another.*" He said it was all one and the same.

Testimony of Elizabeth C. Barrett, R. 361:

At the Hawthorne Hotel in Salem, Massachusetts, about three weeks ago, I asked for shredded wheat, and they brought me some biscuit that looked similar to a

shredded wheat biscuit, not as large, came in a package marked Kellogg's Wheat Biscuit or something like that. I called the waitress and asked if it was shredded wheat. She said yes. There was a package with two biscuit, and I said, "This is not shredded wheat." She said, "Yes, it is." I said, "Does it say so on the package?" She said, "No. Well, it is, just the same." She did not take the package back. I finally accepted it.

3. Instances of Confusion.

R. L. WAUGH testified (R. 852, 853, 854):

My customers or one of them picked up Kellogg's Whole Wheat Biscuit off the shelf and came to my checker to pay for it. I do my own checking-out, mostly. I would say to the customer, "What do you think you have got in this package here?" She would say, "Is that not Shredded Wheat," and I would say, "No, that is not Shredded Wheat." She said, "What is this, then?" I said, "This is Kellogg's. That is the new product that is put out by Kellogg's." I may have told her it was Kellogg's shredded wheat, *and she said, "Oh, well, that is not the package I wanted. I wanted this package here," when, probably, she thought that the Shredded Wheat Company had put in this window package.* • • • I do not want them to take that package home thinking they are taking the other package. When they bring me the package, it is not wrapped; it is in the basket.

I think they are more likely to find out when they get home that this package is not what they wanted, than they would in my store. *When they take it off the shelf, they may think it is one thing. When they get home and think about it, they finally realize that it is not what they intended taking.* • • •

I think the cellophane front in there has a lot to do with increasing sales of the Kellogg package. I would say that the cellophane front has the effect of suggesting the other, the old Shredded Wheat package. In other words, in my mind, the old Shredded Wheat package looms up as though it had a cellophane front

in it. * * * With the Kellogg package and the National Biscuit package, I do not think they stop to look at the name. They just simply see the Shredded Wheat through the package, and they grab it and go.

Testimony of PAUL W. SIEBERT (R. 893):

A lady came and said, "Will you sell me two packages of Shredded Wheat and give me one? They are selling them off the wagon that way." I said, "I am sure it is not Shredded Wheat." She said, "I am sure it is." So she went so far as to look on my shelf and go and look at her package and came back and apologized to me. *She was getting Kellogg's and thought she was getting Shredded Wheat.*

Testimony of GEORGE SCHAPANSKY, R. 721, 722, 723:

I was on my way; it dawned on me I was to get a package of Shredded Wheat; and I walked into the store and asked for it. Mrs. Reeder met me at the door and talked to me. We conversed a few minutes. I said, "I want a package of Shredded Wheat." She told me to help myself. I reached for it, took it down, paid for it, and walked out. * * *

When she pointed out this package of Kellogg's to me on the shelf, there was no window on the package. This was on the shelf there just like that, and I reached up and took it down.

All I saw was just the plate with the Shredded Wheat biscuit. I did not see the name Kellogg's. I did not even look at it, did not even pay any attention to it. After I got it down, I said, "Is that Shredded Wheat?" Then I did look at the package, and I turned it around a couple of times and walked out with it, after I had paid for it and said no more about it.

When I looked at it, it just seemed like it was just a different package all at once. To my own mind, I said, "I guess they have changed packages and changed the size of their package," never making any statement to anybody.

Testimony of JESSIE M. FATJO, R. 742, 743:

I asked for a package of Shredded Wheat at Miller's Station, Miller's store, which is on the road from

Cupertino to Saratoga. They gave me Kellogg's package. It did not look quite familiar to me, so I asked the woman, "Is that Shredded Wheat?" and she said, "Yes."

* * * * * *

This took place on November 25th, in the afternoon. I did not particularly inspect the package at the time I bought it in the store. *I just glanced at it and saw a biscuit on it. I have been accustomed to seeing a biscuit on Shredded Wheat, the picture of a biscuit.* I said, "Is that Shredded Wheat?" I thought maybe they had changed their package. She said, "Yes," so I took it. When I got out in the machine, I put it in the back, and the youngsters said, "Mama, this is not the kind of Shredded Wheat we have been accustomed to getting." So I looked at it, and then I recognized it was not. That was my first knowledge that it was not Shredded Wheat. I had no idea anyone else had more or less the same package. When I looked at the package in the store, I did not read the name Kellogg on it. I just saw the biscuit, the wheat biscuit, and then I thought that is what it is.

Mrs. Caroline Cavalier testified (R. 612):

I recently had an experience in purchasing Shredded Wheat in a store in South Norwalk on East Avenue, A. Greene's. I asked for Shredded Wheat, expecting they would give me Shredded Wheat, but they gave me Kellogg's Whole Wheat. I did not stop to think or look at it until I got home. I saw the package when it was handed to me. I was buying three or four items at the time. *When I got home, I noticed it was Whole Wheat.* Plaintiff's Exhibit 80 is the package. That is my only experience of that kind. I had never seen Kellogg's Whole Wheat Biscuit before. I did not open this package.

Mrs. Grace Darling testified (R. 393):

In October of this year, I went to the Quincy Market, as I do Saturdays. As I went up the aisle, a clerk held a package out. I did not see the name but what I supposed was shedded wheat. I was out of

shedded wheat, and I wanted some, because I am never, never without it. I gave him my traveler and said, "Send it up," and thought no more about it.

Q. 13. Let me ask you this: When you say you saw what you thought was shredded wheat, do you mean that the words *shredded wheat* were on it?

A. No. *I saw this picture there, and I supposed it was shedded wheat. I did not see the name.*

Testimony of R. L. WAUGH, a grocer, R. 850:

Yes, occasionally we have a party who will bring up a package of Shredded Wheat, and I have asked them if they thought that was the Shredded Wheat. They said, "Is that not Shredded Wheat," and I said, "That is Kellogg's Whole Wheat Biscuit." *"Oh, I thought that was Shredded Wheat," and they would point to the window package* and then walk back and get the other package, and they said, "This is what I want," meaning Plaintiff's Exhibit 1.

THE WITNESS: That has occurred several times, in connection with the package with the window in it, Plaintiff's Exhibit 168, the package of Kellogg Whole Wheat Biscuit that shows the biscuit through a cellophane window. *The customers have picked that up in my store, under the impression that it was Shredded Wheat.*

Testimony of W. D. VAN ARSDALE, a grocer, R. 762:

There is one instance I can state exactly. There was a lady sent her twelve-year-old boy for a pack of Shredded Wheat. He picked out a package of Kellogg's, with the open face. I do not know that he stopped to read it. He took it home. She called me on the 'phone, told me she was sending him back, that he got the wrong package. We changed it for Shredded Wheat. * * *

I think that the cellophane opening feature on Plaintiff's Exhibit 153 is the one that would offer the most confusion, because it resembles the regular Shredded Wheat, the genuine Shredded Wheat. I think the picture of two biscuit also has a tendency to confuse to a certain extent, but not so much as the other one.

4. Instances of Substitution in Restaurant Sales.

LAWRENCE SKEWES testified (R. 520):

At Davie's Lunch, on Forty-seventh Street, Chicago, I asked for Shredded Wheat as it was listed on the menu. Two small biscuit were served to me in a dish. *After I had eaten one of the biscuit I discovered it was not the original Shredded Wheat.* I purchased another package to take away with me, and I put my initials on it. (The box referred to was received in evidence and marked "Plaintiff's Exhibit No. 62.")

Testimony of HARRY C. ROHN, R. 472:

Yes, I have asked for shredded wheat and have received something else. This happened last week Saturday at Huf's restaurant. I asked for an order of shredded wheat and received Kellogg's. It was served to me in a bowl, but I happened to see the package that it came out of before it was served to me in the bowl and I said "This is not shredded wheat." And, the waitress replied, "Sure it is. Doesn't it look like it?" She also said, "That is what we serve for shredded wheat." There were two biscuits served—I ate one of them. I asked for the carton they were served in and have same with me.

STANLEY A. MICHALAK testified (R. 499):

I often order Shredded Wheat and cream for my lunch in restaurants. Recently, at Pixley & Ehlers, a restaurant located at 68 South State Street, Chicago, I asked for a bowl of Shredded Wheat and a cup of coffee. The counter clerk reached down under the counter (I had noticed that it had not been the National Biscuit Shredded Wheat that I had been receiving—it was a different type of package) and as he was doing that, he seemed to try to conceal something. He had his back facing me. Just as he slit open the package and was going to empty it into the bowl, I said, "Hold everything. That does not look like the thing I want."

The clerk tipped it out in the bowl, and he said, "Sure, that is the thing." And then he tried to explain to me what the difference was. He said that was Shredded Wheat and that was the thing.

Testimony of JOSEPH F. BECK, R. 701:

I, along with two other fellows who were having breakfast, ordered Shredded Wheat, in the little coffee shop right off the main lobby. I just asked for Shredded Wheat, and the package that was brought out was that particular Kellogg package, with just the top off, like Plaintiff's Exhibit 71.

I remarked to the waitress that I had ordered Shredded Wheat and that was all that came back to me. Her little comment was "This is Shredded Wheat." So I let it go at that. There was no time for arguing with her. We were in a hurry.

Testimony of EARL K. BURKNER, R. 732:

When I ask for Shredded Wheat in a restaurant, it is usually served in a dish, and without the package, as a rule.

I have had experience recently in ordering Shredded Wheat in a restaurant, at Smithie's Coffee Cup, in Stockton, approximately two months ago or three; some time in the fall. I ordered Shredded Wheat, and the waitress served me with Whole Wheat Biscuit; so I called her attention to it. I said, "Hold on; you are not giving me Shredded Wheat." She said, "Oh, yes; I am." I said, "You are not. You are giving me some Whole Wheat Biscuits." She said, "That is all we have. We sell that for Shredded Wheat right along."

Testimony of EVELYN LOUGHLIN, R. 502:

When I order Shredded Wheat in restaurants and in stores I always ask for the Shredded Wheat that I am accustomed to having, and I expect to get it. I generally always receive what I ask for, but yesterday there was an exception. I went to the Y. M. C. A. on Chicago Avenue, to the grill, and ordered Shredded Wheat. They brought me Shredded

Wheat in a dish, and I ate it; then I asked for another package to take out with me and they brought me this package of Kellogg's.

Testimony of HOWARD P. BURKE, R. 884, 885:

I have purchased Shredded Wheat at restaurants sometimes. I ask for Shredded Wheat. In one instance, when I did that, the young lady brought me a box of Kellogg's Whole Wheat Biscuit. I had asked for Shredded Wheat, so I asked her, "Is that Shredded Wheat?" She said, "Yes, sir." I looked at the box. I said, "It says 'Kellogg's Whole Wheat Biscuit.'" She said, "It is the same thing." I said, "Is it?" She said, "Yes, sir," and I ate it. This occurred yesterday at the Texas Hotel Coffee Shop, Fort Worth. That is the only experience of that kind I have had, to my knowledge, when I was looking for that product. I was always under the impression I was getting Shredded Wheat when I bought it. • • •

Yesterday was the first time I was ever conscious at the time of getting Kellogg's biscuit. *After getting it yesterday, I knew that I had gotten the Kellogg biscuit a number of times before but had not realized it.*

Testimony of ELMER J. KLEEMANN, R. 527, 528:

Last week I went into the Ennis restaurant, which is located on "F" Street, by Seventh, and ordered a portion of Shredded Wheat with bananas. After a consultation with the counter man, the waitress came to me—I was sitting at the counter—and said, "We do not have any." I said, "You do not have any what?" She said, "Bananas." "Well," I said, "I will take the Shredded Wheat with milk." She went to the rear of the restaurant, behind this same counter, and *came back with two biscuit in a bowl of milk;* but they neither looked like Shredded Wheat nor tasted like it to me. I asked her what she had served me. She said, "Shredded Wheat."

And I said to her, "This is not Shredded Wheat."

Well, she said, "That is what we always call shredded wheat."

I said, "I would like to see the package."

She said, "Oh, I have thrown the package in the waste-basket."

I said, "Well, I would like to see the package, anyway." So she went back to the kitchen and she came back with a small squarish package that bore the name of Kellogg's Whole Wheat Biscuit.

5. Opinions as to the Likelihood of Confusion.

WILLIAM J. BOHNET, a grocer of long experience, testified (R. 646):

I think, in a lot of places, they can pass off Kellogg's Whole Wheat Biscuit for Shredded Wheat Biscuit, if they have it on hand and shove it over, saying it is the same thing. Some women are shrewd buyers. They can see right away or when they get it home that it is not the same thing. I think there is a possibility of a grocer passing it off one for the other.

MICHAEL WEINSTOCK, wholesale grocer of New York City, testified (R. 664):

I would say it would be possible for a grocer to sell an unwary customer Whole Wheat for Shredded Wheat.

ELMER R. JONES, a retail grocer of Washington, D. C., said (R. 543):

If a customer in a self-service store or a chain store, having in mind that she needed Shredded Wheat, saw that package there with the picture of the dish on it and two biscuit in the dish (Defendant's Exhibit No. 6) I would think it possible that the customer, or any average customer, would be led to pick up that package thinking it was Shredded Wheat—a lot of them would. I would say that others would ask "Is this the same as Shredded Wheat."

HENRY B. RICKARD, a Los Angeles retail grocer, testified (R. 822):

I would say that the presence of the window shows that it is a shredded wheat biscuit. It is very similar

to the other. *I think Kellogg's Whole Wheat Biscuit could be sold as Shredded Wheat biscuit.* I have noticed our customers pick up the Kellogg package and then "I do not believe this is what I want," and they will go back and change it, or vice-versa.

HENRY L. DINGEE, a retail grocer of Fort Worth, Texas, testified (R. 862):

Plaintiff's Exhibit 161, with the windew in it, is the first package of that kind I recall seeing. When I see that product back of the window, it looks to me like a package of Shredded Wheat. The package looks to me like an imitation of Shredded Wheat. *I believe that, with this package on the shelf, there might be confusion in the public mind.*

I think the Kellogg package, like Plaintiff's Exhibit 161, might and would be sold as Shredded Wheat. Looking at the printing on one end, it says, "Shredded Wheat in its most delicious form," and, on the other end, "A shredded wheat product." It looks to me as if they are trying to sell it as Shredded Wheat. I think Kellogg's Whole Wheat Biscuit could be sold more readily as a shredded wheat biscuit than as a new product.

Petitioner's witness, GEORGE W. CRENSHTON, buyer for a grocery firm at Dallas, Texas, testified (R. 1306):

Personally, I think the window package is a factor in the sale of that biscuit. The sight of it through that window has some sales appeal, I think. It looks like shredded wheat, which makes it an easier seller. It looks like shredded wheat. I think it is a shredded wheat. As I said, I can describe it no better than by calling it shredded wheat. It could be sold to a customer who asked for shredded wheat, and he would think he was getting shredded wheat.

EDWARD E. SWEET, R. 333:

"Assuming that Kellogg's Whole Wheat Biscuit is served out of the package in a restaurant without accompanying identification of the package, I think it would pass very acceptably as shredded wheat."

Mrs. Irma Colliflower, R. 428:

"As to the shredded wheat package one could easily be misled, if in a hurry, into thinking that Kellogg's package was the Niagara Falls Shredded Wheat. Of course, if one is expecting that they may get a substitution you would be most careful to see what you were getting, whereas if you were in a hurry you might receive another package without noticing the difference until you arrived home."

Harry Adrian, R. 385:

"If I had a Kellogg's biscuit on the table outside the package, I would think it was a Shredded Wheat Biscuit. It would be hard to differentiate them without the box"

Appendix C

List of all hotels, restaurants, lunch rooms, etc., specifically referred in testimony, showing whether Petitioner's or Respondent's product was or is served in the individual package, or outside the package, from a bowl.

Appendix D

Evidence of Secondary Significance Unconsciously given by Petitioner's Counsel and Witnesses.

The following statements by sixty-eight *witnesses for the petitioner* are cited to demonstrate that the public habitually uses the words "Shredded Wheat" to designate respondent's product. In each instance the witness was testifying in either 1932 or 1933, when both Shredded Wheat and Kellogg's Whole Wheat Biscuit were on the market. Even Mr. Clarke, counsel for petitioner, unconsciously contributed to the proof of secondary significance as the following extract from the record (p. 1631) will show.

> MR. CLARKE: This morning, in the cafeteria of the William Penn Hotel, on the long counter, was a display, including a number of cereals, each in an individual carton, and each carton being in a plate of its own.
>
> *The last two cereals on the counter were a package of shredded wheat and a package of Kellogg's Whole Wheat Biscuit.*
>
> * * * I make this statement through the courtesy of Mr. Vilas, and *I offer in evidence the Kellogg package as a defendant's exhibit.* * * *
>
> MR. CLARKE: *And I also offer the shredded wheat package in evidence.* * * *
>
> MR. VILAS: Mr. Clarke's statement is accepted as a statement of fact.

We now list the statements of petitioner's witnesses.

"I thought it (the Kellogg biscuit) was quite similar to Shredded Wheat".

Mrs. Harold L. Mac Millan, R. 1208.

"It (the Kellogg biscuit) * * * is a crisper biscuit than Shredded Wheat".

Thos. W. Laughlin, R. 1226.

"As far as I know, the dealer makes a little more on the Kellogg Biscuit than he does on Shredded Wheat".

Lee W. Thompson, R. 1283.

"We get eleven cents on shredded wheat and ten cents on Whole Wheat".

Chas. F. Florine, R. 1310, 1311.

"I sell some Shredded Wheat and some Whole Wheat Biscuit to restaurants in the large package".

David H. Bergey, R. 1366.

"We bring the package of Shredded Wheat out and we bring one of the Whole Wheat Biscuit out".

Roy B. Laverin, R. 1382.

"Kellogg's Whole Wheat Biscuit in our store sells at least three to one against shredded wheat".

Alexander Wilson, R. 1387.

"We do not, as a rule, attempt to offer Kellogg's Whole Wheat Biscuit, or Shredded Wheat, one in preference to the other".

Leo Keil, R. 1391.

"Shredded Wheat has more of a flat flavor: but Whole Wheat has a different flavor, sort of sweet".

Mrs. O. W. Dunner, R. 1430.

"Kellogg's Whole Wheat Biscuit did not take any customers from shredded wheat that I know of".

Maurice Fishkin, R. 1436.

"We handle both Kellogg's Whole Wheat Biscuit and shredded wheat".

Mrs. Grace Hatfield, R. 1444.

"We handle Kellogg's Whole Wheat Biscuit in the individual cartons, * * * I have ceased buying shredded wheat".

Mrs. Margaret Tyler, R. 1446.

"Both the Kellogg's biscuit and shredded wheat were on display".

Clayton Kolvoord, R. 1448.

"Shredded wheat is outselling Whole Wheat immensely".

Morris Gourwitz, R. 1455.

"Prior to that, shredded wheat out sold Kellogg's or may have been even with it".
Douglas Rumball, R. 1459.

"Since then we have not bought shredded wheat, but we have bought Kellogg's".
Mrs. Harriet Young, R. 1466.

"Prior to the time I used Kellogg's biscuit, I had been eating shredded wheat".
Chester W. Carr, R. 1468.

"Then I saw the Kellogg product on a shelf, tried it, and liked it better. Since then, I have not bought any shredded wheat".
Mrs. Marguerite Brown, A. 1471.

"I would expect to have some former users of shredded wheat among the users of our Kellogg's Whole Wheat Biscuit".
Frank W. Mahan, R. 1475.

"I have ceased buying shredded wheat and turned over to Kellogg's biscuit".
Mrs. Helen Waugh, R. 1482.

"So, from then on, I became a user of the Kellogg product. I am no longer a user of shredded wheat".
Mrs. Mabel Pocock, R. 1483.

"At that time we tried to substitute Kellogg's Whole Wheat Biscuit for shredded wheat".
Jos. L. Molitor, R. 1487.

"I will sell three of shredded wheat to one of Kellogg's biscuit".
C. C. Braunhardt, R. 1494, 1495.

"We have, for some time, sold Kellogg's a cent cheaper than shredded wheat".
Chas. E. Denison, R. 1500.

"Nevertheless, in this instance, we have both Shredded Wheat and Kellogg's biscuit".
Burton A. Miller, R. 1506.

"I think there is no doubt about the Kellogg product having gotton some of the trade that shredded wheat formerly had".

Arthur J. Twentyman, R. 1511.

"Some of my customers are now buying Kellogg's instead of shredded wheat".

John A. De Mallie, R. 1524.

"We use more shredded wheat than Whole Wheat Biscuit".

William J. Gray, R. 1530.

"Whole Wheat Biscuit and shredded wheat encounter competition of other cereal products".

Jos. T. Lewis, R. 1534.

"I think our sale of Kellogg's is more than of shredded wheat".

Robert H. Moses, R. 1548.

"It is natural to assume that we have converted some over from shredded wheat to Kellogg's Whole Wheat Biscuit".

Clarence P. Peterson, R. 1558.

"We sell about three-quarters as much Whole Wheat as we do shredded wheat".

Norbert Thiemann, R. 1571.

"We sell five to six cases a month of Whole Wheat Biscuit to one of shredded wheat in my store".

Nicholas Diehl, R. 1576.

"At present I am using Kellogg's Whole Wheat Biscuit instead of shredded wheat".

Mrs. Vera Walters, R. 1604.

"After I started buying Kellogg's biscuit I did not go back to shredded wheat".

Mrs. Lillian Saur, R. 1606.

"Before I picked up Kellogg's biscuit, I bought shredded wheat for my husband".

Mrs. Maude Dedrich, R. 1607.

"I used Shredded Wheat before I used Kellogg's biscuit".

Mrs. Luella Kuhr, R. 1610.

"Three or four months ago, the pamphlet he sent me said it was new Whole Wheat Biscuit and smaller in size than shredded wheat".

Mrs. Sarah Owens, R. 1613.

"We sell Kellogg's biscuit for ten cents and get eleven cents for shredded wheat".

Nat. C. Reis, R. 1616.

"To a large extent Whole Wheat Biscuit has forged ahead of shredded wheat in our store".

Wm. M. Stephens, R. 1621.

"Before I carried Whole Wheat Biscuit I had shredded wheat in large packages".

Sam J. Friedman, R. 1623.

"Kellogg's Whole Wheat Biscuit is the far superior seller * * * my customers ask for it by name, as Kellogg's Whole Wheat Biscuit. If he wants shredded wheat, we give him shredded wheat".

Jennings Atkins, R. 1629.

"We sell shredded wheat at twelve cents and Kellogg's Biscuit at ten".

C. B. Trumick, R. 1655.

"We get nine cents for shredded wheat and ten cents for Kellogg's Whole Wheat Biscuit".

Albert T. Tomsko, R. 1674.

"Kellogg's Whole Wheat Biscuit has been outselling shredded wheat for probably the last six months".

Jos. F. Maga, R. 1685.

"I sell shredded wheat for twelve cents and Whole Wheat for ten".

Harry Farber, R. 1691.

"I got a sample of Kellogg's Whole Wheat Biscuit a few months ago and thought I liked it better than shredded wheat".

Mrs. Ada White, R. 1697.

"Kellogg's biscuit has taken the place of shredded wheat in our household".

Mrs. W. Clotworthy, R. 1700.

"I prefer to use Kellogg's Whole Wheat Biscuit, and so do my grandchildren. I used to give them shredded wheat".

Mrs. Elizabeth Amann, R. 1703.

"After we got this sample, I bought Kellogg's and now I buy that instead of shredded wheat".

Mrs. Betsy James, R. 1734.

"We have used Kellogg's Whole Wheat Biscuit to supplant shredded wheat in our stores".

Harry Maxman, R. 1747.

"I have not had a package of shredded wheat in the house since I first tried Kellogg's Biscuit".

A. B. Craft, R. 1772.

"Ever since that time I have used Kellogg's biscuit instead of shredded wheat".

Mrs. Wm. T. Wescott, R. 1781.

"Kellogg's has taken the place of shredded wheat in my household".

Mrs. Wm. C. Stokes, R. 1783.

"I switched from shredded wheat to Kellogg's biscuit".

Mrs. Walter Grimm, R. 1787.

"Since then I have used Kellogg's biscuit and have never used any more shredded wheat".

Mrs. Edgar F. Chew, R. 1807.

"I used to get shredded wheat for the summer. He likes the Kellogg's Whole Wheat better. He does not want the shredded wheat now."

Mrs. F. M. Shollengerger, R. 1809, 1810.

"We have eaten Shredded Wheat when the grocer was out of Kellogg's.

Wm. W. Shaw, R. 1812.

"I could not say whether they sell more of Kellogg's biscuit than Shredded Wheat".

Frederick Hall, R. 1822.

"I would say shredded wheat sells more than Kellogg's Whole Wheat".

Wm. E. Skellenger, R. 1827.

"Many of them used shredded wheat and are now using Kellogg's Whole Wheat Biscuit through my effort".

Clarence A. Morrison, R. 1838.

"70 percent. of the people that formerly used shredded wheat are now using Kellogg's Whole Wheat Biscuit".

Geo. W. Moyer, R. 1852.

"I made a purchase of shredded wheat when they did not have the Whole Wheat".

Mrs. Wm. Boyer, R. 1853.

"I would say my house sells considerably more shredded wheat than it does Kellogg's Whole Wheat Biscuit".

Clifford F. Guyer, R. 1897.

"The customers usually call them shredded wheat and Kellogg's Whole Wheat Biscuit".

Jos. E. Kroemer, R. 1917.

"Since then I have not ordered any more shredded wheat, but have used Kellogg's Whole Wheat Biscuit".

Mrs. Edith M. Williams, R. 1923.

"We swung to Kellogg's and bought no more shredded wheat since".

Chas. L. Thompson, R. 1945.

"There have been times when I have been out of shredded wheat and also times when I have been out of Kellogg's biscuit".

B. F. Hosman, R. 1949.

Appendix E

Section 5 of the Trade Mark Act of 1905. (15 U. S. C. A. 85)

United States Code, Title 15, Section 85 (Section 5 of the Trade Mark Act of 1905):

"Sec. 85. *Trade marks which may be registered.* No mark by which the goods of the owner of the mark may be distinguished from other goods of the same class shall be refused registration as a trade mark on account of the nature of such mark unless such mark—

"(a) Consists of or comprises immoral or scandalous matter.

"(b) Consists of or comprises the flag or coat of arms or other insignia of the United States or any simulation thereof, or of any State or municipality or of any foreign nation, or of any design or picture that has been or may hereafter be adopted by any fraternal society as its emblem, or of any name, distinguishing mark, character, emblem, colors, flag, or banner adopted by any institution, organization, club, or society which was incorporated in any State in the United States prior to the date of the adoption and use by the applicant: *Provided*, That said name, distinguishing mark, character, emblem, colors, flag, or banner was adopted and publicly used by said institution, organization, club, or society prior to the date of adoption and use by the applicant; *Provided*, That trade marks which are identical with a registered or known trade mark owned and in use by another and appropriated to merchandise of the same descriptive properties, or which so nearly resemble a registered or known trade mark owned and in use by another and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers shall not be registered: *Provided*, That no mark which consists merely in the name of an individual, firm, corporation, or association not written, printed, impressed, or woven in some particular or distinctive manner, or in association with a portrait of the individual, or merely in words or devices which are descriptive of the goods with which they are used, or of the character or quality of such goods, or

merely a geographical name or term, shall be registered under the terms of this subdivision of this chapter: *Provided further*, That no portrait of a living individual may be registered as a trade mark except by the consent of such individual, evidenced by an instrument in writing, nor may the portrait of any deceased President of the United States be registered during the life of his widow, if any, except by the consent of the widow evidenced in such manner: *And provided further, That nothing herein shall prevent the registration of any mark used by the applicant or his predecessors, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States or with Indian tribes, which was in actual and exclusive use as a trade mark of the applicant, or his predecessors from whom he derived title, for ten years next preceding February 20, 1905: Provided further*, That nothing herein shall prevent the registration of a trade mark otherwise registrable because of its being the name of the applicant or a portion thereof. And if any person or corporation shall have so registered a mark upon the ground of said use for ten years preceding February 20, 1905, as to certain articles or classes of articles to which said mark shall have been applied for said period, and shall have thereafter and subsequently extended his business so as to include other articles not manufactured by said applicant for ten years next preceding February 20, 1905, nothing herein shall prevent the registration of said trade mark in the additional classes to which said new additional articles manufactured by said person or corporation shall apply, after said trade mark has been used on said article in interstate or foreign commerce or with the Indian tribes for at least one year, provided another person or corporation has not adopted and used previously to its adoption and use by the proposed registrant, and for more than one year such trade mark or one so similar as to be likely to deceive in such additional class or classes."

Appendix F

The Judgment of Mr. Justice Bennett.

IN THE HIGH COURT OF JUSTICE

CHANCERY DIVISION

Royal Courts of Justice
Tuesday, 21st December, 1937.

Before

MR. JUSTICE BENNETT.

IN THE MATTER OF THE TRADE MARKS ACTS, 1905 to 1919

and

IN THE MATTER OF TRADE MARK No. 500,671 registered in the name of the SHREDDED WHEAT COMPANY, LTD. in Class 42.

JUDGMENT

MR. JUSTICE BENNETT: The application before me is an originating motion issued on the 20th February, 1936, asking for an Order to rectify the Register of Trade Marks by expunging therefrom Trade Mark No. 500,671, registered in the name of the Respondents, the Shredded Wheat Co. Ltd. in class 42.

The mark consists of the words "Shredded Wheat," and it was entered in class 42 in respect of biscuits or crackers made from wheat. The mark was registered on the 5th March, 1929.

The Applicants are an English limited company, the Kellogg Company of Great Britain Ltd.

The relevant facts are as follows: in the year 1895 a Mr. Perky, a citizen of the United States of America, in-

vented a process for the making of bread or food from whole wheat, and machinery for the production of bread or food made in accordance with his process. For this invention he applied for and obtained a grant of letters patent, the letters patent being dated 15th October, 1895, and numbered 19,368 of 1895. Perky describes his process at line 15 of page 1 of his Complete Specification in the following terms: "The object of the invention is the economic production of a cereal food or bread which will be wholesome, inviting in appearance, and palatable; such production being accomplished without the addition of injurious properties or compounds and without taking from the grain any of the beneficial qualities provided by nature, and presenting the same in convenient form for service as a superior article of food, without the aid of experts or skilled labour now required to produce bread. The usual methods practised in the manufacture of flour, and the resultant bread therefrom, are such as to detract from the natural and healthful properties possessed by the grain in its original state, while the addition of leavening or raising material, to render the bread light is also detrimental and the entire method consumes a large amount of time and labour. According to the improved method which I am now about to describe, of preparing grain food, the wheat or other cereal is taken in berry form, and after being cleaned and thoroughly washed, is boiled for about one hour, the grain still remaining in berry form at the close of this operation. The boiling in addition to cooking the grain thoroughly removes therefrom the extreme outer silicious coating and adherent extraneous matter, and also destroys all insect life and removes the traces thereof. Before removal from the boiler, the grain is seasoned with salt. The wheat, still in grain or berry form, is, nevertheless, just after the boiling, quite soft and its interior or starchy portion especially, is watery. It can be easily mashed between the finger and thumb, and is not in condition for proper compression until its inner and outer portions are brought more upon an equality in point of consistency. To which end, the grain being removed from the boiler, is allowed to dry for some hours, from 12 to 20 hours being usually sufficient, until the interior of the berry has, from the loss of some of its water, become more consistent. The

grain should be pretty constantly stirred or agitated during this part of the process, to hasten the drying out action, and to prevent incipient fermentation. I prefer, therefore, to dry out the grain in rotating wire-cloth barrels or cage tumblers, as hereinafter described. The berries should now have sufficient interior consistency to enable their outer and interior portions to be effectively incorporated with each other, such incorporation being accomplished by passing the grain between compression rollers, one or both of which is provided with a series of fine circumferential grooves, whereby the berries are mashed and their outer bran coats, gluten layers, and starchy interior portions thoroughly incorporated together and forced into the grooves of the roller or rollers, whence the resultant food is discharged by means of a comb or scrapper in light, porous and tender threads or filaments into a pan or other receptacle, or upon a moving receiver whereby they may be disposed in layers. The food as discharged from the rolls is ready for use without further cooking, or it can be shaped for baking in various ways. The food presented is a purely cereal product, and all the parts of the berry are given to the consumer in attractive form. No chemical change is set up therein by the use of ferments or other foreign ingredients, and the percentage of water in the food is much less than in ordinary bread. The article as produced is a food or bread composed of superposed or massed layers or deposits of comparatively dry, externally rough, porous sinuous threads or filaments of cooked whole wheat, containing intermixed the gran, starch and gluten of the entire berry, and which is absolutely free from leavening or raising material or their products".

The Specification then proceeds to describe the machinery to produce the bread or food, and by his claims in the Specification Perky claims as follows: "A food or bread composed of superposed or massed layers or deposits of comparatively dry, externally rough, porous, sinuous threads or filaments of cooked whole wheat containing intermixed the bran, starch and gluten of the entire berry and which is free from leavening or raising material or other products. (2) The process of reducing cereals for food, consisting, first, in cooking the grain with seasoning material, after it has been thoroughly

cleaned, without destroying the whole berry form, second, partially drying the grain with agitation until its interior and exterior portions are of substantially the same consistency and finally, compressing the grain to intimately commingle or incorporate together the outer or bran coats, gluten layers and starchy, interior portions in the form of porous, rough filaments or threads, substantially as specified. (3) Apparatus for the preparation of cereals for food, consisting of a boiler, its rotating mechanism, holding cages or tumblers to be rotated in said boiler, drying frames adapted to receive said cages and rotate the same, and means for transferring the cages from the boiler to the drying frames, together with a reducing machine for reducing the cooked and dried grain to filamentous or thread-like form, substantially as specified".

It is to be noticed that Perky in his Specification gives no name to the food produced by his process. In or about 1895 a company was incorporated under the laws of the State of Colorado in the United States of America under the name of the Cereal Machine Co., and this company started to manufacture in the United States of America biscuits from the threads or filaments of whole wheat made in accordance with the process described in Perky's Specification and by the machinery Perky had invented. The biscuits were made by collecting together a suitable number of the threads of wheat made in accordance with Perky's process and cutting the mass of threads so put together into lengths of 3 or 4 ins. This mass of threads when cut took the shape of a small pillow. This small pillow was then baked and became a kind of brown biscuit. Biscuit so made in the United States of America were imported into this country and sold here by a partnership firm of Ingersoll & Melhuish from about the year 1896 until December, 1908. The biscuits were sold as "Shredded Wheat" not as "Shredded Wheat biscuits". In December, 1908, the Respondent Company was formed, and they took over the business of Ingersoll & Melhuish, and from December, 1908, until the end of 1925 the Respondent Company imported to and sold in this country the biscuits made in the United States of America in the way I have described. They also sold the biscuits under the name "Shredded Wheat". At the end of 1925 a change took place. The Respondent Company erected at

Welwyn Garden City a large factory, and from some date early in 1926 the Respondent Company had made the biscuits in this factory and sold them as "Shredded Wheat". I do not think it is relevant, but it is nevertheless the fact that since the formation of the Respondent Company their share capital has been held by a company formed under the laws of the State of New York, and called the Shredded Wheat Co. Since 1929 the whole of the share capital of the Shredded Wheat Co. has been held by another New York Company named the National Biscuit Co.

The evidence is to the effect that since 1896 biscuits in all respects similar to those now made by the Respondent Company have been sold under the name of "Shredded Wheat". These biscuits have always been made in the same way. In the making of them the process protected by Perky's Letters Patent of 1895, and by the machinery protected by the same Letters Patent, have been used. The evidence is that at all times the biscuits have been sold in cartons, each carton containing 12 biscuits, and that on the cartons the words "Shredded Wheat" have been prominently displayed on at least two sides. The Exhibit "J.G.5" is a specimen of the carton now in use. The evidence was to the effect that since 1926 the cartons have been in this form and have had printed on them substantially the same wording and the same picture. The trade in the biscuits in this country has been steadily growing year by year since 1925. In the year 1925 the Respondents sold 236,205 cases of biscuits at a value of £212,584.10s.0d. In the year 1935 they sold 702,422 cases of a value of £632,179.16s.0d. As each case contains 36 cartons, and each carton contains 12 biscuits, it is plain that the sales have been large, and the evidence shows that they have been widespread throughout England and the South of Scotland. The actual number of cartons sold in 1935 was over 25,000,000, containing over 303,000,000 biscuits. In 1929, the year in which the trade mark sought to be expunged was registered, the number of cartons of biscuits sold by the Respondents was over 15,500,000. Between 1925 and 1935 the Respondents had spent large sums of money in advertising their biscuits. In 1925 the sum spent was, in round figures, £48,000; in 1929 it was £72,000; and in 1935 it was £115,000. All these

figures appear in detail in an affidavit sworn by Mr. Gray, the managing director of the Respondents, on the 1st July, 1936. In paragraph 11 of this affidavit Mr. Gray, referring to the Respondents' advertisements, says as follows: "In all our advertising material, the trade mark 'Shredded Wheat' is prominently displayed and throughout the whole period such advertising has been devoted to making the name 'Shredded Wheat' as prominent as possible and identifying it with the product of the Respondents". As I have already stated, the Respondents' mark was registered on the 5th March, 1929, and the motion to expunge it was launched on the 25th February, 1936.

The Applicants are the Kellogg Company of Great Britain Ltd. The Kellogg Company of Great Britain Ltd. are an English limited company. The whole of their share capital is held by a company incorporated in the United States of America with the name of the Kellogg Company. The Kellogg Company are keen business competitors in the United States of America and Canada of the National Biscuit Co. of New York.

The Applicants assigned a number of grounds for asking for the Order of the Court to expunge the Respondents' trade mark from the Register. These are annexed to the notice of motion and read as follows: "(1) The entry of the said trade mark on the Register was made without sufficient cause and the said trade mark wrongly remains on the Register. (2) The said trade mark was at the date of registration and still is wholly descriptive of the goods in respect of which it is registered and registration was effected contrary to the provisions of Section 9 of the Trade Marks Act 1905. (3) The said trade mark was not at the date of registration and never has been a distinctive trade mark or a mark adapted in fact or in law to distinguish the goods of the registered proprietors from those of other persons. (4) The said trade mark was not at the date of registration and never has been a 'trade mark' within the meaning of the definition in Section 3 of the Trade Marks Act 1905. (5) The said trade mark was at the date of registration and still is the name of the article in respect of which it has been used by the registered proprietors and the said trade mark has been consistently used by the registered proprietors, both prior to and since the date of registration, as the name of the

cereal product manufactured by them and the said trade mark was at the date of registration and still is incapable of registration under the provisions of the Trade Marks Acts 1905-1919. (6) The said trade mark is the name or only practicable name of an article or substance manufactured under letters patent which have expired or determined. (7) The words 'Shredded Wheat' were first applied to describe a new article of food and have ever since been used as descriptive of such food. (8) The said trade mark, if used on a wheat product which has not been shredded, would at the date of registration and still be calculated to deceive. The said trade mark accordingly offended and still offends against the provisions of Section 11 of the Trade Marks Act 1905".

The first question argued was that the words registered as a trade mark were not and never had been a trade mark within the meaning of Section 3 of the Trade Marks Act 1905. The relevant words of the section are: "A 'trade mark' shall mean a mark used or proposed to be used upon or in connection with goods for the purpose of indicating that they are the goods of the proprietor of such trade mark by virtue of manufacture, selection, certification, dealing with, or offering for sale". The argument that the words registered were not and never had been a trade mark within the meaning of the section was linked up and associated with the objection that the words were at the date of registration and still are the name of the article in respect of which it had been used by the Respondents, and with the objection that the words "Shredded Wheat" were first used to describe a new article of food, and have ever since been used to describe such food. The argument was put in this way: first it was said that the biscuits in connection with which the mark was registered were made in accordince with the invention comprised in Perky's specification, and were new patented articles; secondly, that to these new patented articles the Respondents' predecessors in trade gave the name "Shredded Wheat"; thirdly, that when Perky's Patent expired in October of 1909 and the biscuits continued to be sold under the name of Shredded Wheat, the name was being used merely to describe the article being sold and not in any way to indicate that the goods to which the words were applied were manufactured by the Respond-

ents, or by those who had preceded them as the manufacturers thereof; and lastly, that from October, 1909, down to the date when the trade mark was registered, the words were always used merely to describe the article sold, and never to indicate that the article had been made by the Respondents or their predecessors in its manufacture. The argument was to some extent based on the authority of the decision of Mr. Justice Fry in the *Linoleum* case. *Linoleum Manufacturing* Co. v. *Nairn* (7 Chancery Division, p. 834).

In my view of the facts proved in this case the fallacy lies in the assertion as a matter of fact that the biscuit now made and sold by the Respondents and made and sold by their predecessors is the new article of food for which Perky obtained his Letters Patent. That Patent was limited in its claims to a bread or food made in accordance with the process as described in the specification I have just read, and to a process for mashing cooked whole grains of wheat into a mass, and then converting the mass into threads or filaments. The biscuits which the Respondents and their predecessors have been selling since 1896 have no doubt in them the food made in accordance with Perky's specification, but that food has been subjected to further processes, namely, shaping, cutting and baking, never covered by Perky's specification. No doubt the biscuits could not have been made without infringing Perky's Letters Patent whilst they were in force, but they are not the food described by Perky in his specification.

I apprehend that the real question of fact to be determined for the purpose of deciding the first question argued is whether in 1929 when the mark was registered the words "Shredded Wheat" merely meant an article made in accordance with Perky's specification, or whether they meant an article made by the Respondents. There is not a shred of evidence to support the argument that the words meant or were understood by any one to mean that the article to which they were applied was an article made in accordance with Perky's specification. To my mind the evidence afforded by a consideration of the advertisements put out by the Respondents, in which the words "Shredded Wheat" have always been the most prominent feature, and of the cartons and the wording

upon them, and in particular of the use thereon of the words "Shredded Wheat" is conclusive that the words "Shredded Wheat" have, since the beginning of 1926, been used by the Respondents for the purpose of indicating that the biscuits in connection with which the words have been used were manufactured by the Respondents at their Welwyn Garden City Factory.

This conclusion leads up to the second, and I think the main question argued, namely, that the words had reference to the character of the goods, had never been distinctive of the Respondents' biscuit, and therefore were not registrable as a trade mark. The words have direct reference to the character of the goods in connection with which they are used as a mark, and therefore the requirements of sub-section (5) of Section 9 of the Trade Marks Act of 1905, as amended by the Act of 1919, must be satisfied if the words are to be allowed to remain on the Register. Section 9 of the Act, as amended, reads as follows: "A registrable trade mark must contain or consist of at least one of the following essential particulars: (1) The name of a company, individual, or firm represented in a special or particular manner; (2) The signature of the Applicant for registration or some predecessor in his business; (3) An invented word or invented words; (4) A word or words having no direct reference to the character or quality of the goods, and not being according to its ordinary signification a geographical name or a surname; (5) Any other distinctive mark, but a name, signature, or word or words, other than such as fall within the descriptions in the above paragraphs (1), (2), (3), and (4), shall not be registrable under the provisions of this Section except on evidence of its distinctiveness. . . . For the purposes of this section 'distinctive' shall mean adapted to distinguish the goods of the proprietor of the trade mark from those of other persons. In determining whether a trade mark is so adapted, the Tribunal may, in the case of a trade mark in actual use, take into consideration the extent to which such user has rendered such trade mark in fact distinctive for the goods with respect to which it is registered or proposed to be registered". Since the registered trade mark "Shredded Wheat" has, in my judgment, direct reference to the character of the goods, it could only have been put upon the Register upon evidence of

its distinctiveness, and the only question to be determined, I think, is whether the Court is satisfied upon the evidence that the mark was truly distinctive in the sense in which that word is used in the section.

The principles by which a Court has to be guided have been laid down by Lord Justice Fletcher Moulton in the *Perfection Soap* case (26 Reports of Patent Cases at page 856). The principles he laid down have never been questioned, and I propose to be guided entirely by the principles as he states them. The passage in which the Lord Justice states the principles by which I propose to guide myself begins at line 20 on page 857 of the report, and reads as follows: "Much of the argument before us on the part of the Opponents and the Board of Trade was based on an assumption that there is a natural and innate antagonism between distinctive and descriptive as applied to words, and that if you can show that a word is descriptive you have proved that it cannot be distinctive. To my mind this is a fallacy. Descriptive names may be distinctive, and *vice versa*. No class of words are more directly and intentionally distinctive than proper names, and yet originally they were usually, if not invariably, descriptive in all languages. They still are so among savage peoples, and although among civilised nations the original significations of proper names are not remembered, or regarded, we see that the natural tendency to use descriptive words as names still exists since nick-names—the only names that are now invented—are usually descriptive. There is therefore no natural or necessary incompatibility between distinctiveness and descriptiveness in the case of words used as trade marks. The notion that there is such an incompatibility is confined to lawyers, and is, in my opinion, due to the influence of the earlier Trade Marks Acts. By those Acts, which are now repealed, the fact that words were descriptive of the goods was fatal to their registration as Trade Marks, and thus becoming in the eye of the law distinctive of the goods of a particular maker. But the question whether a word is or is not capable of becoming distinctive of the goods of a particular maker is a question of fact, and is not determined by its being or not being descriptive. The law has never refused to recognize that this is the case, or to give protection to descriptive trade marks when once duly estab-

lished in fact, although—except in the case of old marks—they refused registration, and left the owners to obtain protection in another form of action. This is now changed, and under the provisions of the present Act the Court clearly has power to allow descriptive words to be registered, if a case on the merits is proved before it sufficiently strong to induce it to do so. The language of Section 9, paragraph 5, puts this beyond doubt, but if any doubt upon the point could remain it would be set at rest by the language of Section 44 which provided that: 'No registration under this Act shall interfere with . . . the use by any person of any *bona fide* description of the character or quality of his goods'; clearly indicating that a registered trade mark may have as its essential part words capable of being used descriptively. Having thus established the jurisdiction of the Court to permit the registration of words having a direct reference to the character and quality of the goods as well as geographical terms it remains to consider the principles on which this jurisdiction should be exercised. Nothing that I have said must be taken to imply that I consider the effect of paragraph 5 to be to leave the matter at large so that it is indifferent for the purposes of registration whether a word is within the classes specified in 3 and 4 or not. On the contrary, I am of opinion that the fact, that the legislature has required in these cases a preliminary permission to proceed, evidences that it intends the excepted cases to be carefully considered on their merits before they are pronounced to be eligible to obtain the privileges of registration. The tribunal before whom is brought an application to register a word under paragraph 5 is entitled to regard the word as *prima facie* unsuitable by reason of its being outside the specified classes, and it is for the applicant to show that it is proper to be registered. This he may do by arguments based on the word itself and the nature of the goods with respect to which it is sought to be registered, as I have already indicated in the case of geographical terms. The exact issue is formulated in the paragraph, and if the tribunal is of opinion that the nature of the word is such that it is adapted to distinguish those particular goods of the trader from those of other persons it will be its duty—in the absence of special circumstances—to allow the registration to proceed. But the applicant is not

confined to arguments drawn from the words itself. He may support his application, in the case of a mark already in use, by showing that by user the mark has, in fact, become more or less completely identified with the goods by having been continuously used in connection therewith, and the statute expressly provides that the Court may take this into consideration for the purposes of its decision. To my mind this provision can bear but one interpretation. It recognises that distinctiveness—that is, being adapted, to distinguish the goods from those of other traders—is not necessarily an innate quality of the word. It may be acquired. There may be cases in which the Court might say: 'The word is descriptive of the goods, and cannot be distinctive solely of your make of those goods'. The Applicant may (if he can) reply thereto: 'I will show that it can become distinctive of any make of those goods by showing that it has actually become so either generally or in a particular market'. To use a phrase suggested by Lord Justice Farwell during the argument, the reply is of the type of *Solvitur ambulando*. (It can denote my goods because it actually does now). The extent to which the Court will require the proof of this acquired distinctiveness to go will depend on the nature of the case".

He lays down the law first that words which have a direct reference to the character of the goods are registrable; secondly that such words are *prima facie* unsuitable; thirdly that it is for those who seek to have them registered to show that it is proper that they should be registered; and lastly that if the Court is of opinion that the nature of the words is such that they are adapted to distinguish those particular goods of the trader from those of other persons it will be its duty to allow registration.

The evidence in the present case is really all one way. The biscuits in respect of which the mark was registered in March, 1925, have been sold in this country since 1896, and have throughout that period been linked with the Respondents or their predecessors in business by the words "Shredded Wheat". In 1929 the sales were large and widespread throughout England and the South of Scotland. As I have already said over 15,500,000 cartons were sold in that year and they contained over 156,000,000 biscuits: £72,000 was spent in advertising the Respondents' product in that year, and the principal feature of the advertise-

ments was the trade mark "Shredded Wheat", not merely as the Applicants have contended to describe what was sold, but as a trade mark. A very large number of persons trading or living in different parts of England and the South of Scotland made affidavits, some in support of the Applicants' case and some in support of the Respondents' case. The Deponents included persons engaged in the wholesale trade, persons engaged in the retail trade, consumers and housekeepers. Some of the deponents were cross-examined. The effect of the evidence is clear and establishes beyond all question the following facts: (1) That a wholesaler asked to supply Shredded Wheat supplies as a matter of course the biscuits made by the Respondents, and orders them as a matter of course from the Respondents. To the wholesaler "Shredded Wheat" means the pillow shaped biscuit made by the Respondents and nothing else. (2) That the retailer, when he needs supplies of the Respondents' biscuits, places with his wholesaler an order for Shredded Wheat. He expects to get on giving such an order the Respondents' biscuits. When he is asked, either in his shop or over the telephone, for Shredded Wheat, he always supplies the Respondents' biscuits, knowing that it is the Respondents' biscuits that he is being asked to supply. (3) All the consumers when they ask for Shredded Wheat, and that is all they do ask for, desire when they ask for Shredded Wheat to get the Respondents' biscuits and nothing else. All the housekeepers when they speak of Shredded Wheat mean the biscuit made by the Respondents. In fact the evidence in my judgment establishes that Shredded Wheat is as much a household word as Bovril or Oxo or Hovis. Every trader knows it to mean the Respondents' biscuits, and in every household in which they are eaten the biscuits are known as Shredded Wheat, and known by that name as being of the Respondents' manufacture.

In the course of the years that have elapsed since Ingersoll & Melhuish started the sale of this Shredded Wheat Biscuit in this country an attempt has been made to put upon the English market a whole wheat biscuit made from threads of whole mashed wheat. This biscuit had the name of "Muffets", but there does not seem to have been a great demand for it. At any rate, it was, as one of the witnesses said, not a good seller. The evidence of the Respondents satisfied me that the words "Shredded

Wheat" although they had reference to the character of their goods, had in fact become distinctive of them. I was also satisfied that if there were today to be put on the market similar goods made by another manufacturer which might be called Shredded Wheat passing-off would not be merely possible but probable, particularly in hotels and boarding houses, where the customer never sees the carton or package from which the biscuit offered to him has been taken.

For these reasons I hold that the mark was properly put upon the register and that the motion to expunge it fails.

In the course of the argument it was suggested that the provisions of Section 11 of the Trade Marks Act of 1905 made the registration unlawful because the mark might be used in connection with biscuits or crackers not made of wheat. This, of course, is true if the Respondents were fraudulently minded. But the argument would apply to any trade mark which had reference to the character of the goods in connection with which it was used, and no such mark could ever be registered because the proprietor of it might misuse it. But sub-section (5) of Section 9 recognises that such a mark is registrable. In the absence of any evidence of the mark ever having been used so as to deceive or of any threat so to use it, I do not think that I ought to order the mark to be removed, merely because of the suggestion of a possible misuse of it. I dismiss the motion with costs.

TWELVE BISCUIT

"IT'S ALL IN THE SHREDS"

How to Serve Shredded Wheat

Shredded Wheat is made of the whole wheat and is made digestible by steam-cooking, shredding and baking.

Contains all the elements necessary for building, nourishing and sustaining the human body.

Shredded Wheat is easily digested but not predigested.

Especially beneficial for those who suffer from indigestion, constipation and kindred complaints.

The crispness of its shreds promotes thorough mastication, which is the first process in the digestion of all food.

For breakfast heat the Biscuit in the oven to restore crispness, then pour hot or cold milk over it adding a little cream. Salt or sweeten to suit the taste.

Or dip the Biscuit in milk, drain and fry in butter, after which it may be served with cream. If you don't like milk or cream dip the Biscuit quickly in hot salt water and place a chunk of butter on it, allowing the butter to melt into the shreds.

The Biscuit is also delicious when split and heated in oven and eaten with butter or melted cheese the same as any toast.

Shredded Wheat Biscuit is also delicious and nourishing for any meal when served in combination with berries, peaches, bananas, baked apples and other fresh or preserved fruits. Heat the Biscuit in oven, then cover with the fruit prepared as for ordinary serving and serve with cream and sugar to suit the taste.

STATEMENT 1

I. IN VIEW OF THE INTERNATIONAL SITUATION THE WRIT SHOULD BE GRANTED OR THE ORDER DENYING THE SAME STAYED 3

II. THE CASE IS ONE OF GREAT NATIONAL AND INTERNATIONAL IMPORTANCE. THE PUBLIC IS ENTITLED TO COMPETITION IN THE PRODUCTION AND SALE OF A STANDARD ARTICLE OF FOOD. THE SECOND DECISION BELOW, IF NOT REVIEWED AND REVERSED, WILL ESTABLISH A UNIQUE AMERICAN SYSTEM OF PERPETUAL MONOPOLIES OF FORMERLY PATENTED PRODUCTS AND NAMES DISGUISED AS TRADEMARKS AND WILL THUS TAKE THE UNITED STATES OUT OF A WELL ESTABLISHED INTERNATIONAL BODY OF PATENT-EXPIRATION AND TRADEMARK LAW. THIS COURT WILL ALSO SANCTION A REVERSAL OR DISREGARD OF ITS OWN LONG ESTABLISHED RULINGS BY REFUSING EITHER A WRIT OR A STAY 5

IF THE JUDGMENT BELOW STANDS, THE PUBLIC WILL BE SADDLED FOREVER WITH A SHREDDED WHEAT MONOPOLY. NO MATTER HOW NARROWLY IT IS VIEWED, THIS IS A MATTER OF LARGE PUBLIC CONSEQUENCE 8

III. THE CASE IS NOT UNIQUE OR PECULIAR IN ITS FACTS. MANY PATENTEES HAVE ENDEAVORED AND WILL ENDEAVOR TO CONVERT THEIR PATENT MONOPOLIES, AFTER EXPIRATION, INTO PERPETUAL DESIGN, FORM AND NAME MONOPOLIES MASQUERADING AS TRADEMARKS. THE CASE IS UNIQUE ONLY IN THE NEW LAW WHICH THE SECOND DECISION BELOW ATTEMPTS TO SET UP 8

No. 396.

KELLOGG COMPANY,
Petitioner-Appellee-Defendant,

against

NATIONAL BISCUIT COMPANY,
Respondent-Appellant-Plaintiff.

PETITION FOR REHEARING AND APPLICATION TO WITHHOLD ORDER DENYING WRIT OF CERTIORARI.

Statement.

Respondent brought this suit in the District Court in Delaware in 1932 for infringement of certain alleged trademarks consisting of (a) the formerly patented design, shape or appearance of the ordinary and well known shredded wheat biscuit which had been protected up until 1912 by forty-one patents on the design of the biscuit, the fabricated product or biscuit itself and the method of and machinery for automatically making and shaping it (b) the words "shredded wheat" which had been used throughout said patents to describe the biscuit and (c) the representation or pictorial description of the biscuit. These three "rights" were claimed as perpetual trademark monopolies by virtue of use since the expiration of the patents and in spite of specific statutory disclaimers by respondent of the representation of the biscuit and of the words shredded wheat as trademarks.

There should be no misapprehension as to the character or scope of the perpetual monopoly claimed and granted by the second decision below. The rectangular, formerly

patented biscuit represents the only known means of marketing shredded wheat. Ribbon wheat can be marketed in other shapes but no other practicable means of making, packing and shipping the fragile product, shredded wheat, is known to Petitioner and none was proved by Respondent.

After trial, Judge Nields in the District Court dismissed the bill on the ground that after the expiration of the patents the defendant had a right to make and illustrate the formerly patented design and product and to describe it as Kellogg's Shredded Wheat, (*Singer* v. *June*, 163 U. S. 169), and that there had been no unfair competition or deception of the public by defendant.

On appeal, the Circuit Court of Appeals for the Third Circuit, composed of Circuit Judges Buffington, Davis and Thompson, unanimously affirmed the District Court, adopting the finding of the Trial Court that:—

> "The testimony of a hundred witnesses from all parts of the country establishes there was no passing off of defendant's biscuit for plaintiff's . . ."

Rehearing was granted and the same judges then unanimously reversed themselves on the law, holding that because no member of the public except respondent had been manufacturing the biscuit in issue in the years from 1919 to 1921 and from 1923 to 1927, the rights of plaintiff had become perpetual and exclusive in the patent expired product and in the pictorial and verbal description thereof.

An accounting was ordered and the mandate and injunction withheld pending a petition for certiorari.

Application for certiorari was made to this honorable Court by petitioner and denied October 25th, 1935.

The order denying certiorari was stayed by Mr. Justice Brandeis until the disposition of this petition for rehearing.

Petitioner hereby respectfully prays for a rehearing of its said application for a writ of certiorari or for a further stay of the order denying the writ.

The grounds of this application are:—

I.

In view of the international situation the writ should be granted or the order denying the same stayed.

A controversy precisely similar to this has arisen in Canada between subsidiaries of these same parties. The Canadian Court of first instance held that the name "shredded wheat" and the form of the biscuit had gone into the public domain as the result of the expiration of the patents and that the Defendant's goods were adequately distinguished as to origin. The Defendant in Canada is using the same package as Petitioner's, the same name and the same form of biscuit. On appeal to the Court of Appeals of Ontario the decision of the Court of first instance dismissing the bill was unanimously affirmed. An appeal has been taken to the Privy Council in London, which is set for argument November 25, 1937.

There is also pending in the High Court of Justice in England a proceeding brought by Petitioner's English subsidiary to rectify the Trade Mark Register by expunging the name "Shredded Wheat" therefrom. This case is set for hearing November 15, 1937. According to English custom and practice the probabilities are that the decisions in the pending cases in England will be announced at the conclusion of the argument or prior to December 1, 1937, so that prompt decision of each of these cases is to be expected.

These judgments by the English courts will govern the manufacture of the patent-expired biscuit and the use of the patent-expired term "shredded wheat" in Great Britain and generally throughout the British Empire, where large amounts of the product are sold and consumed.

The law of dedication of the patented design or product and name by patent expiration, is the same in Canada and England as it was in the United States until the second decision below.

The first decision of the Circuit Court of Appeals of the Third Circuit is in conformity with that of the Court of Appeals of Ontario. The second decision is diametrically opposite.

The law of dedication of product, design and name by patent expiration apparently has long been definitely settled in Canada and is not likely to be changed by the Privy Council.

If the Privy Council should affirm the Court of Appeals of Ontario in *Canadian Shredded Wheat Co.* v. *Kellogg Co. of Canada*, 1936 Ont. Rep. 613, and *Same* v. *Same*, 1936 Ont. Rep. 281, and the High Court of Justice decides in conformity therewith in the proceeding to rectify the register, the position in which petitioner will find itself in the marketing of its product throughout the world will be anomalous in the extreme unless this petition is granted or the order denying the writ stayed. Petitioner could lawfully then, as it can now, sell in foreign countries a formerly patented product which it is perpetually enjoined from selling in any way whatever in its own country. Respondent as a matter of right is appealing to the highest tribunal in Great Britain in a controversy in which Petitioner has been denied by the highest tribunal of its own country a review of the last one of two diametrically opposite decisions of the same judges establishing a wholly new and heretofore unheard of rule of law.

Either petitioner should be free to make and sell at home as well as abroad the formerly patented product in its formerly patented shape or fabricated form, by the formerly patented machinery which shapes it, or petitioner should not be permitted to sell the product anywhere—at least where Anglo-Saxon law prevails—and certainly the domestic part of the business should not be condemned to death while the foreign part is permitted to live.

II.

The case is one of great national and international importance. The public is entitled to competition in the production and sale of a standard article of food. The second decision below, if not reviewed and reversed, will establish a unique American system of perpetual monopolies of formerly patented products and names disguised as trademarks and will thus take the United States out of a well established international body of patent-expiration and trademark law. This Court will also sanction a reversal or disregard of its own long established rulings by refusing either a writ or a stay.

If the second decision of the Circuit Court of Appeals for the Third Circuit is allowed to stand, the Respondent herein will have received a perpetual monopoly in the manufacture and sale of a standard article of food. Respondent, although it and its predecessors enjoyed for the full period allowed by law exclusive patent rights in this product, is now by this decision granted, long after the expiration of its patents, a perpetual monopoly not only in the manufacture and sale of the familiar shredded wheat biscuit, but a perpetual exclusive right to stop everyone else from calling the product by such name or representing the same pictorially upon its cartons and in its advertising.

Such a holding is of great national and international importance and is, we submit, at variance with well established law.

The confirmation of such perpetual monopolistic right is in direct contravention of the Constitution which authorizes patent monopolies to inventors, *for a limited time only.*

This decision is contrary to the long recognized doctrine set forth in Mr. Justice White's opinion in *Singer* v. *June*, *supra*, and Mr. Justice Sutherland's in *Eli Lilly* v. *Warner*, 265 U. S. 526.

These cases have for years defined, limited and denied the right to monopolistic control of patent-expired articles

of commerce and the use of appropriate language to describe them in trade. If this decision of the Circuit Court of Appeals remains unreversed, an entirely new theory and practice of trade monopolies will become law. A multitude of patented articles, though the patent protection may long since have expired, will come under the protection of this ruling. Any number of producers of such articles, in reliance upon it, will claim perpetual monopolistic rights in the functional shape or appearance and in the descriptive names of their products in direct contravention of the Constitution and of previous decisions of this Court.

The second decision below is also directly at variance with the decision of the Second Circuit in *DuPont Cellophane* v. *Waxed Products Co.*, 85 Fed. (2) 75.

The case is also contrary to long established law in that the injunction ordered prohibits even fair competition. Respondent's case failed at first in trial and appellate court alike on both the law and the facts. Both courts held, as law, that unless the defendant was selling its goods as plaintiff's, there could be no relief and as fact, that defendant was not guilty of deception or unfair competition. Then the Court of Appeals below reversed itself, not on the facts but, on the law. It held, as law, that even in the absence of fraud, deceit or misrepresentation by petitioner, a perpetual monopoly of product, design and name had arisen through respondent's exclusive occupation of the market from 1919 to 1921 and from 1923 to 1927. There is no way in which petitioner can avoid the proposed injunction. If it attached a large red Kellogg placard to every biscuit, it would still be enjoined. This ruling that relief can be based on monopoly rights of respondent rather than on wrongs or frauds of petitioner is directly contrary to the rulings of this court in

Delaware and Hudson Canal Co. v. *Clark*, 13 Wall. 311; and

Standard Paint Co. v. *Trinidad Asphalt Mfg. Co.*, 220 U. S. 446.

Briefly stated, the second decision below accomplishes the following unusual and, we submit, erroneous results:

Disregards the ruling of the Second Circuit Court of Appeals that the right of a competitor of plaintiff's to make the patent-expired shredded wheat here in issue is indubitable (*Shredded Wheat Co.* v. *Humphrey Cornell*, 250 Fed. 960); disregards the ruling of the same Court that plaintiff's effort to monopolize the manufacture and sale of shredded wheat is unlawful under the Sherman Anti Trust Act (*Kellogg Company* v. *National Biscuit Company*, 71 Fed. (2d) 662); disregards the ruling of the Court of Appeals of the District of Columbia, that shredded wheat is incapable of exclusive appropriation as a tradename (*Natural Food Company* v. *Williams*, 30 App. D. C. 348); disregards the ruling of the Supreme Court of Ontario that by virtue of patent expirations defendant is free to make shredded wheat and call it Kellogg's Shredded Wheat in Canada; disregards the ruling of this Court holding that after a patent expires anyone is free to make the patented product and call it by its patent name (*Singer* v. *June*, 163 U. S. 169); disregards the ruling of this Court holding that perpetual monopolies may not be set up under the guise of trademarks (*Delaware & Hudson Canal Co.* v. *Clark*, 13 Wall. 311); disregards the ruling of this Court (Mr. Justice Sutherland) holding that relief in fair trade cases cannot exceed the wrongs of the defendant and that even if the defendant there practiced deception, it could not thereby be deprived of its right to combine chocolate and quinine (*Warner* v. *Ely Lilly & Company*, 265 U. S. 526); disregards the ruling of this Court that so-called trademarks, once disclaimed in statutory registrations, cannot thereafter be reclaimed (*Beckwith* v. *Commissioner of Patents*, 252 U. S. 538, *Rahtjens* v. *Holzapfel*, 183 U. S. 1; *Saxlehner* v. *Wagner*, 216 U. S. 375).

Surely such wholesale disregard of long standing and well established precedents and of important principles of law in the fields of patents, trademarks, fair trade and monopoly should receive the scrutiny of this Court.

The results cannot be confined to this case. If the decision stands it is certain to usher in the most sweeping changes in these important fields of public law.

Viewing the case in its narrowest possible light it is still one of large public consequence. The public is a third party with its right to the benefits of competition in the production and sale of an important and standard article of food. The case is not a mere money case.

Shredded wheat cannot be marketed except as a fabricated, baked rectangular biscuit. The product is so fragile that the biscuit must be held on its four edges and cushioned by partitions in the cartons. Ribbon wheat can be fabricated in other shapes but not shredded wheat.

If the judgment below stands, the public will be saddled forever with a shredded wheat monopoly. No matter how narrowly it is viewed, that is a matter of far-reaching public consequence.

III.

The case is not unique or peculiar in its facts. Many patentees have endeavored and will endeavor to convert their patent monopolies, after expiration, into perpetual design, form and name monopolies masquerading as trademarks. The case is unique only in the new law which the second decision below attempts to set up.

The second decision below is the first instance we have been able to find in American or foreign law in which a court of last resort has enjoined the manufacture of a formerly patented product marketed under its patent or descriptive name.

The same court below once perpetually enjoined a defendant from making an ordinary, unpatented product composed of chocolate and quinine but this court granted certiorari and reversed that decree. *William Warner and Co.* v. *Eli Lilly & Co., supra.*

But no court, until now, so far as we know, has ever sought to renew an expired mechanical or design patent and make it perpetual. The decree below gives plaintiff as good protection as its forty-one patents afforded, if not better, and the monopoly is perpetual unless this court intervenes while Petitioner's business is still in being.

All a patentee has to do is to lower the price of his product for a few years after the expiration of his patent. That will discourage competition and give rise to a perpetual monopoly of design, form and name, under the theory of the second decision below.

IV.

No harm can come to Respondent from granting the writ or at least staying the order denying it until the international situation can be treated as a whole.

Petitioner's business is valued in excess of one million dollars. An injunction would ruin it. For this loss no adequate compensation is possible. This controversy commenced in January 1922. Petitioner has never been enjoined in its manufacture and sale of this product.

No harm can result to Respondent by withholding the injunction at this time. Petitioner is an old established concern having been engaged in business through itself and its predecessors for over thirty years, is amply responsible financially and maintains plants, agencies and distributing centers throughout the nation and in Europe, and is fully able to answer for any damages that might result to Respondent if the issuance of the injunction were stayed until final decree or at least until the international situation can be treated as a whole.

In view of the international situation respecting the parties' rights, we urge that if on this rehearing a writ of certiorari be not granted, the order denying the same be

stayed at least until the Privy Council in London decides Respondent's appeal now set for November 25, 1937.

Petitioner therefore respectfully prays this Court for a rehearing of its petition for a writ of certiorari herein and for the granting of the writ at this time or for a withholding of the order denying the writ so that petitioner's United States business may be preserved intact at least until the Privy Council acts on Respondent's Canadian appeal. For a fuller statement of the merits, we refer to the Petition for Certiorari and the brief in support thereof heretofore filed.

Respectfully submitted,

W. H. Crichton Clarke,
Edward S. Rogers,
Robert T. McCracken,
Counsel for Petitioner.

Certificate.

I, W. H. Crichton Clarke, of counsel for Petitioner herein, hereby certify that in my opinion the foregoing petition for a rehearing of the Petition for Certiorari herein and for a further stay of the order denying the same, is sound in law and that the same is presented in good faith and not for the purpose of delay.

W. H. Crichton Clarke.

PETITIONER'S MOTION FOR LEAVE TO FILE OUT OF TIME ITS SECOND PETITION FOR RECONSIDERATION OF ITS PETITION FOR A WRIT OF CERTIORARI TO THE CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT.

Now comes the petitioner herein and asks leave to file out of time the annexed second petition for reconsideration of its petition for a writ of certiorari to the Circuit Court of Appeals for the Third Circuit.

The case is of great public importance because under the decree of the Circuit Court of Appeals, as "clarified" by a decision of that Court entered since the petition for a writ of certiorari was denied by this Court, the

respondent is in effect entitled to a perpetual monopoly of manufacture and sale of shredded wheat biscuits in accordance with the disclosure of patents which have long since expired and to the exclusive use of the name shredded wheat biscuit by which this previously patented product is known. This motion is made at the earliest opportunity after the Circuit Court of Appeals on May 5, 1938 changed its directions to the District Court.

Respectfully submitted,

KELLOGG COMPANY, Petitioner,

Respondent.

SECOND PETITION FOR RECONSIDERATION OF PETITION FOR CERTIORARI TO THE CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT.

TO THE HONORABLE THE CHIEF JUSTICE AND THE ASSOCIATE JUSTICES OF THE SUPREME COURT OF THE UNITED STATES:

Respondent brought suit in the District Court of the United States for the District of Delaware against the petitioner to enjoin trademark infringement and unfair competition in the sale of petitioner's product generally known as shredded wheat biscuits. The District Court dismissed the complaint upon the merits, holding that there was no violation of trademark or unfair competition

(R. 1, pp. 193-228). The Circuit Court of Appeals for the Third Circuit (Buffington, Davis and Thompson) affirmed the judgment of the District Court (R. 3-A, pp. 2069, 2073), but upon reargument vacated its order of affirmance and directed that an injunction issue (R. 3-A, pp. 2083-2094). To review this judgment the petitioner filed a petition for certiorari in this Court which was denied October 25, 1937, and thereafter applied for reconsideration of its petition which was denied November 8, 1937.

Events have occurred since the denial of the writ which clearly indicate that in the interest of justice the petition for the writ should now be reconsidered because of the action taken by the court below in revising its decree since the denial of the writ.*

The decree as originally drawn (R. 3-A, p. 2094) directed the District Court

> "to enter a decree enjoining the defendant from the use of the name 'Shredded Wheat' as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade-mark",

which the Court described in its opinion (R. 3-A, p. 2085) as

> "consisting of a dish containing two biscuits submerged in milk".

Upon the going down of the mandate an interlocutory judgment was entered and an injunction was issued in

---

* As stated at page 4, *infra*, the revision of its decree by the court below subsequent to the denial of the petition for certiorari by this Court, brings its decision into conflict with the decisions of the Circuit Courts of Appeals in three other circuits and with applicable decisions of this Court. In *Sanitary Refrigerator Co.* v. *Winters*, 280 U. S. 30, 34, this Court held that a conflict of decision between two Circuit Courts of Appeals, arising after a denial of a petition of certiorari, is ground for granting a writ upon a petition for rehearing.

the words of the mandate. Thereafter question arose in the District Court as to the meaning of the words of injunction taken from the mandate. The petitioner contended that they should be construed conjunctively, and that thus construed they permitted the petitioner to continue the manufacure of shredded wheat biscuits in their characteristic form and fairly to sell the product provided they were not sold under the name "Shredded Wheat" in conjunction with the use of plaintiff's trademark consisting of a dish containing two biscuits submerged in milk (R. 3-A, p. 2249). The respondent contended that the language should be construed disjunctively, and that the petitioner must be enjoined from all use of the words "Shredded Wheat" in advertising or selling its product, from all sales of shredded wheat biscuits in their characteristic form, and from picturing a dish containing two biscuits submerged in milk (R. 3-A, p. 2250).

The respondent thereafter, on March 4, 1938, moved the Court of Appeals (R. 3-A, p. 2248) to recall its mandate for clarification, and on May 5, 1938 the court below filed an opinion (R. 3-A, p. 2282) stating in part (R. 3-A, pp. 2283-4):

> "The language at the end of the opinion and in the order [of April 12, 1937] and mandate is poorly phrased. We intended to enjoin the use of the words 'Shredded Wheat' as a trade name, the advertising and sale of biscuit in the pillow-shape form, and the use of the two-biscuit-in-a-dish trade mark, separately or together. * * *"

The order recalling and clarifying the mandate directed (R. 3-A, p. 2285):

> "(2) That the said Mandate be clarified so as to direct the United States District Court for the District of Delaware to enter a decree, in the usual form, enjoining the defendant, Kellogg Company (1) from the use of the name 'SHREDDED WHEAT' as its trade name, (2) from advertising or offering for sale its product in the form and shape of plaintiff's biscuit, and (3) from doing either; * * *"

Thus, the court below has now "clarified" its mandate so as to direct an injunction prohibiting petitioner from making any sales whatever of shredded wheat biscuits in their characteristic form, even though there is no violation of respondent's trade mark, and even though such sales are made in cartons or other packages of such distinctive size, style and design, and so marked, that there can be no misrepresentation or confusion as to the source of the product. The effect of the decree is to prohibit all sales of petitioner's product, and to give the respondent a monopoly in manufacturing and selling an article, heretofore protected by patents which have long since expired.

This change in the decree of the court below brings its decision into irreconcilable conflict with the decision of the Circuit Court of Appeals for the Second Circuit in *Shredded Wheat Co.* v. *Humphrey Cornell Co.*, 250 Fed. 960, where the respondent's rights were determined in a suit brought by its predecessor in title after expiration of the patents to enjoin acts of unfair competition in selling shredded wheat biscuits identical in substance, size and appearance with the respondents. In that case the Court concluded (p. 966):

> "The decree will therefore be modified as follows: First, by relieving the defendants of any injunction in the sale of such biscuits as shall reach the last purchaser in cartons; second, all biscuits reaching the last purchaser outside of their cartons must either bear a letter, cross, or other plain symbol, impressed in their substance, or have fastened upon them a wrapping, tag, or band, stating that they are made by the Ross Food Company; third, the defendant at the end of six months may apply to the District Court to be relieved of the second requirement, upon showing that after a bona fide trial of all possible expedients it cannot comply with that provision, except at an expense which would make impossible any continued competition in the business of selling biscuits outside the cartons with any assurance of reasonable profit."

The Circuit Court of Appeals for the Second Circuit upheld the indubitable right of the defendant to manufacture and sell shredded wheat biscuits of precisely the same form, size and appearance as those sold by the Shredded Wheat Company, respondent's predecessor in title, emphasized the necessity of completely preserving the right of the defendant to compete with respondent's predecessor in the sale of such biscuits, and in this connection held (p. 964):

> "Under the guise of protecting against unfair competition, we must be jealous not to create perpetual monopolies."

This is the unavoidable and direct result of the injunction directed by the court below in its latest decree.

Contrasted with the situation which existed in the *Humphrey Cornell* or so-called "Ross" case, *supra*, the practice of the petitioner as disclosed by the record has been to manufacture and sell biscuits of smaller size than those sold by the respondent when the petitioner entered the field of competition (R. 1, p. 221), and furthermore, to sell in separate distinctive cartons two biscuits for service to the ultimate purchaser in hotel and restaurant trade (R. 1, p. 204). No biscuits are sold by petitioner except in cartons which are distinctively marked (R. 1, pp. 203-204, and see cartons R. 1, pp. 205-219). The District Court concluded that the defendant's practices fully complied with all of the requirements of the *Humphrey Cornell* case, *supra*.

The correctness of the decision in that case was in effect conceded by respondent in the court below. (See original Petition for Certiorari, p. 2, footnote.)

With respect to the use of the name "shredded wheat", the decision of the court below is in conflict with the decision of the Circuit Court of Appeals for the Eighth Circuit in *Centaur Co.* v. *Heinsfurter*, 84 Fed. 955. With respect to the determination that the plaintiff was entitled to any relief, the decision of the court below is in conflict with

the decision of the Circuit Court of Appeals for the Sixth Circuit in *Kellogg Toasted Corn Flake Co.* v. *Quaker Oats Co.*, 235 Fed. 657, 667, and with applicable decisions of this Court in *Warner & Co.* v. *Lilly & Co.*, 265 U. S. 526; *Canal Co.* v. *Clark*, 13 Wall. 311; *Standard Paint Co.* v. *Trinidad Asphalt Mfg. Co.*, 220 U. S. 446. In holding respondent entitled to the exclusive use of the name "shredded wheat" the decision of the court below is in conflict with the decision of the Court of Appeals of the District of Columbia in *Natural Food Co.* v. *Williams*, 30 App. D. C. 348, and with the applicable decisions of this Court in *Holzapfel's Co.* v. *Rahtjen's Co.*, 183 U. S. 1, 12, and *Beckwith* v. *Commissioner of Patents*, 252 U. S. 538.

A further reason for review in this Court is found in the decision of the Privy Council in England, in *Canadian Shredded Wheat Co. Ltd.* v. *Kellogg Company of Canada Ltd., and another*, 55 R. P. C. 125, All England Law Reports Annotated 1938, Vol. 1, Part 8, pp. 618-634, where in a suit between the respective Canadian subsidiaries of the two parties to this suit, the members of the Judicial Committee of the Privy Council expressed their preference for the first decision of the court below dismissing the complaint to its later decision reversing the District Court. The facts stated in the judgment of the Privy Council delivered by Lord Russell of Killowen appear to be the same in all material respects as the facts in the case at bar. The questions presented were the same as those at bar. The decision is in direct conflict with that of the court below. For the convenience of the Court we are filing herewith printed copies of the opinion of the Privy Council.

These extraordinary circumstances disclosed by the proceedings in the court below since the denial of the petition for a writ of certiorari to review the decree of April 12, 1937, we submit, appropriately require further consideration of the question whether or not all of the

proceedings in the court below should not be reviewed in this Court.

Accordingly, the petitioner is filing coincidentally with the filing of this motion a new petition for a writ of certiorari to review the last decree of the Circuit Court of Appeals, entered on May 5, 1938. This motion for reconsideration of the prior petition for a writ of certiorari to review the decree of the court below, entered April 12, 1937, is now made so that the questions then considered may be open for consideration in determining whether this Court should review all of the proceedings in the court below.

WHEREFORE we pray that this Court reconsider the petition for a writ of certiorari heretofore filed herein, and upon such reconsideration and upon consideration of the petition for a writ of certiorari filed coincidentally with this motion that the Circuit Court of Appeals for the Third Circuit be directed to certify the record of its proceedings in this case to this Court for review.

Respectfully submitted,

THOMAS D. THACHER,
W. H. CRICHTON CLARKE,
Counsel for Petitioner.

Dated, May 23, 1938.

WE HEREBY CERTIFY that the foregoing petition is presented in good faith and not for delay.

THOMAS D. THACHER
W. H. CRICHTON CLARKE

Nos. 396 and 1053.

KELLOGG COMPANY,
Petitioner,

AGAINST

NATIONAL BISCUIT COMPANY,
Respondent.

RESPONDENT'S MEMORANDUM IN OPPOSITION TO THE MOTION FOR LEAVE TO FILE A SECOND PETITION FOR RECONSIDERATION OF PETITIONER'S FIRST PETITION FOR WRIT OF CERTIORARI AND IN OPPOSITION TO PETITIONER'S SECOND PETITION FOR CERTIORARI.

Statement of the Case.

In order to avoid repetition we are answering in one memorandum the petitioner's two applications which are now before the Court.* Both of these applications must have been filed on the theory that if respondent

* The first application is a motion for leave to file seven months out of time a second petition for reconsideration of petition for writ of certiorari, and the second application is a second petition for writ of certiorari.

knocks often enough the door will be opened, because, as will be presently shown, nothing new is now presented to the Court except the affirmance of a Canadian decision by the British Privy Council. It is fortunate for the Court that such a theory is not prevalent among counsel who seek writs of certiorari.

These applications combined constitute the *fourth* application to this Court since the Circuit Court of Appeals handed down its decision on April 12th, 1937 in petitioner's effort to escape the effect of that decision. Counting in addition the applications that have been made to the Circuit Court of Appeals since that time for the same purpose, they are the *eighth*. The only reason advanced why either application should be entertained by this Court, which has not already been advanced at least three times to this Court, is that on May 5th, 1938 the Circuit Court of Appeals made an order* recalling and clarifying the mandate† previously issued by that Court. It is claimed that this order is substantially different from the original order of April 12th, 1937‡ which this Court has refused to review, but we shall demonstrate that there is no substantial difference whatever.

We have not thought that we should burden the Court with a further recital of the facts in this case. In our brief in opposition to the first application for writ of certiorari the facts were stated fully. Nor do we think that we should again point out why there is no conflict between the decision of the Circuit Court of Appeals in the case at bar and the cases which were then and are now asserted by the petitioner as being in conflict. This was done in our brief in opposition to the first application for writ of certiorari.

The affirmance by the British Privy Council of the decision of the Ontario Supreme Court in *Canadian*

---

* R. III A, p. 2285.

† *ibid*, 2254.

‡ *ibid*, 2094.

Shredded Wheat Company, Ltd. vs. *Kellogg Company, Ltd.*, has added nothing new. The decision of the Ontario Court was relied upon in the application for the original writ of certiorari and in the two subsequent applications which have been made to this Court. Indeed, in both the first petition for reconsideration and in the petition to this Court to stay the injunctive features of the order of the Circuit Court of Appeals, the decision of the Privy Council was foreshadowed and the Court was asked to even withhold its consideration of the petition for writ of certiorari or at least to prevent any injunctive process going into effect until after the decision in that case should be rendered. As pointed out in previous answers which we have filed in this Court, the facts in the Canadian case, involving the right of the defendant in Canada to use the plaintiff's registered trade mark "Shredded Wheat", presented an entirely different record from that before this Court. The plaintiff in Canada had a registered trade mark, and the decision of the Privy Council goes no farther in effect than to hold that plaintiff's proof had failed to establish that *in Canada in 1928*, when the term "Shredded Wheat" was registered, it had become distinctive of plaintiff's goods. The defendant having made but one sale in Canada before suit was brought, there was no actual evidence of "passing off". The record in the case at bar is replete with such evidence and evidence also that both the trade name "Shredded Wheat" and the shape of plaintiff's biscuit had acquired a distinctive meaning inseparably connected with respondent and its predecessors. Furthermore, the Judges of the Privy Council concurred in the rule of law contended for by respondent that in the case of a patent long expired, it is possible to establish that the name has acquired a distinctive meaning which a court of equity will protect. Thus there is no disagreement between the Circuit Court of Appeals for the Third Circuit and the Privy Council as to the law. The latter held that the Canadian plaintiff had not met the

burden of proof resting upon it, whereas the Circuit Court of Appeals held that the respondent here had discharged that burden.

We call attention to the fact that the British High Court of Justice on December 21st, 1937 (not yet reported), held that the words "Shredded Wheat" were registrable under the British Trade Marks Act. In that case the Shredded Wheat Company, Ltd., a British corporation, registered the words "Shredded Wheat" as a trade mark. The Kellogg Company of Great Britain, Ltd., which is the operating company in Great Britain for the petitioner here, sought to have the registration cancelled upon the ground that the words were not registrable both because descriptive and because of the expiration of patents. After a long trial and a very full hearing in which there was a very complete record, the Court held that the proof established that the words had acquired a distinctive meaning and were registrable over both objections.

As pointed out in our brief in opposition to the first application for the writ of certiorari, the case at bar is peculiarly one that must stand *upon its own facts*. Stripped of the technical considerations with which petitioner has always tried to cloak it, the present record presents a clear case of an attempt on the part of a competitor to appropriate to itself, and trade upon, the good will which respondent has built up over the years for its product by the expenditure of vast sums of money in advertising and by the excellence of its product. Thus the case falls, as already pointed out in that brief, within the bounds of unfair competition as announced by this Court in *Schechter Poultry Corporation* vs. *United States*, 295 U. S. 495, *i. e.* the "misappropriation of what equitably belongs to a competitor".

As in petitioner's previous briefs and applications to this Court, the cry of monopoly is again raised. A sufficient answer to this is that at least two of respondent's largest and most powerful competitors have always sold

and are still selling whole wheat biscuits manufactured under the expired Perky patents without appropriating respondent's trade name or the form and shape which have characterized its biscuit for over forty years.* It has been amply demonstrated that petitioner could easily manufacture its product in different forms and under a different name. It has been equally well demonstrated that petitioner does not wish to do what other competitors of respondent have done. It desires not to stand on its own feet but to trade upon respondent's good will.

ARGUMENT.

1. The order of May 5th, 1938 did not change in substance the order of April 12th, 1937, but merely clarified it.

At the outset it should be noted that petitioner does not claim that the Circuit Court of Appeals was without power to make the order of May 5th, 1938. The very fact that the jurisdiction of the Court to make the order is not now questioned carries with it the concession that it does not change in substance the order of April 12th, 1937. As pointed out in the cases cited in the opinion of the Circuit Court of Appeals† upon which the order of May 5th, 1938 was based, the Court was without power when this order was made to change in substance the order of April 12th, 1937 because the term at which it was made had long since expired.

---

* See Respondent's brief in opposition, page 3.

† R. p. 2284, *Bronson* v. *Schulten*, 104 U. S. 410; *Marion County Court, W. Va.* v. *Ridge, et al.*, 13 Fed. (2d) 969; *Arcdil Mfg. Co.* v. *American Eq. Assur. Co.*, 87 Fed. (2d) 206; *Foster* v. *N. L. R. B.*, 90 Fed. (2d) 946. These authorities could, of course, be multiplied.

It is entirely clear that the order of May 5th, 1938 made no change *in substance* in the order of April 12th, 1937. All that it did was to eliminate the words at the end of the first order "in violation of its trade mark".* This will be manifest by comparing the two orders as they are quoted on pages 2 and 3 of the motion for leave to file the second petition. The clarification thus made was necessitated by the position which *petitioner* took before the District Court on the application to settle the form of decree to be entered on the mandate. Then, *for the first time,* petitioner took the position that the order of April 12th, 1937 enjoined it from using the name "Shredded Wheat" as a trade name and selling and advertising its biscuit in the form and shape of plaintiff's, *only* when *both* were done in connection with a trade mark known as the "two-biscuit-in-a-dish". In other words, that it should be enjoined from doing the things conjunctively only, and that it might do any two of the three provided it did not do all three. The District Court made a decree in the exact language of the mandate, which in turn used the same language as the order of April 12th, 1937. When petitioner persisted in *acting* upon its interpretation of the order of April 12th, 1937, respondent was compelled to ask that the mandate be recalled for clarification.† It made a motion to that effect during the term in which the mandate issued. The order of May 5th, 1938 clarifies the order of April 12, 1937 so that it is now made clear that the latter means exactly what the *petitioner represented* to the Circuit Court of Appeals on

---

* For the reasons stated in the last opinion of the Circuit Court of Appeals (R. p. 2285), that Court declined to *rephrase* those words so that a violation of the two-biscuit-in-a-dish trade mark would be enjoined, although it stated that it was the intention in the original order on April 12th, 1937 to enjoin that violation as well as the others.

† It could have made a motion to punish for contempt but that would have entailed considerable delay and more extended litigation; the ultimate result would have been the same.

its first petition for rehearing and in its various previous applications to this Court that it meant, namely, that it prevented petitioner from using the words "Shredded Wheat" as its trade name and from selling its biscuit in the shape and form of respondent's, or either of them. We have attached hereto as an appendix extracts from petitioner's briefs and applications to this Court which demonstrate that the statement which we have made is entirely correct. This is not questioned. In the Circuit Court of Appeals on the application to recall the mandate for clarification, counsel for petitioner admitted that it had placed such a construction upon the order of April 12th, 1937 in its applications to that Court and to this Court. This appears from the last opinion of the Circuit Court of Appeals* where the Court said:

> "We thought that, when our opinion was read as a whole, we had made it perfectly clear that what we intended to enjoin was the use of the name 'Shredded Wheat' as a trade name and the advertising and selling of biscuits in the pillow-shape form, irrespective of whether the two-biscuit-in-a-dish trade mark were employed in connection with either the use of the name or the sale or advertising of the biscuit in the pillow-shape form. This was the construction which the appellee placed on the opinion and order of April 12, 1937, in its petition for rehearing to this court and appellant says that it placed the same construction upon them in its various petitions to the Supreme Court. *It so admitted before this court at the hearing to recall the mandate.* Appellee in those petitions doubtless placed upon the mandate what it believed to be its proper construction and its changed view adopted after the mandate of this court had issued was apparently due to the exigencies of its position rather than to any real belief that the opinion of this court left any doubt as to what was meant" (italics ours).

---

* Record, p. 2282.

The parts of the extracts quoted on page 10 of the appendix which we have italicized go even further than we have above stated and show that petitioner considered at the time of filing its motion for rehearing in this Court that the meaning of the order of April 12th, 1937 was precisely what the Court said on May 5th, 1938 that it had intended, namely, "to enjoin the use of the words 'Shredded Wheat' as a trade name, the advertising and sale of biscuits in the pillow-shape form, and *the use of the two-biscuit-in-a-dish trade mark*, separately or together".*

In view of these considerations, it is difficult to see how petitioner can now be heard to make a diametrically different representation to this Court as to the meaning of the order of April 12th, 1937, in order to make it appear that this order was changed in substance so as to create a basis for another petition for reconsideration of the denial of the first petition for writ of certiorari, and a second petition for writ of certiorari.

II. The second petition for a writ of certiorari is a mere subterfuge to circumvent Section 350, Title 28, U. S. C.

If, as we have above endeavored to demonstrate, the order of May 5th, 1938 does not change in substance the order of April 12th, 1937, then it must follow that the Court is without jurisdiction to entertain the second petition for writ of certiorari. The time to file an application for a writ of certiorari to review the order of April 12, 1937, under Section 350, Title 28, U. S. C. expired ninety days after July 13th, 1937, which was the date on which the Circuit Court of Appeals denied petitioner's application for a rehearing.

---

* Record, p. 2284.

As previously stated, the jurisdiction of the Court to make the order of May 5th, 1938 is not questioned. The petitioner presents nothing new in its second application for certiorari. It repeats its old contentions and old arguments. We submit that it is a mere subterfuge to circumvent the bar of the statute.

Conclusion.

It is respectfully submitted that the motion and petition should be denied.

THOMAS G. HAIGHT,
DAVID A. REED,
DRURY W. COOPER,
CHARLES A. VILAS,
Counsel for Respondent.

APPENDIX.

Quotations showing Petitioner's understanding of the meaning of the decision of April 12th, 1937:

"* * * the last decision in the Third Circuit which enjoins defendant from selling the biscuit in issue and thus, in effect, from making it * * *" (Petition for certiorari, page 12).

"The last decision of the Circuit Court of Appeals of the Third Circuit held that plaintiff may lawfully appropriate exclusively the form of (and thus the right to manufacture) the biscuit in issue * * * (*Ibid*, page 13).

"1. In holding that since the expiration of plaintiff's patents on Shredded Wheat, defendant was not entitled to advertise or sell shredded wheat biscuits in a form and shape similar to plaintiff's, * * *" (Petitioner's specification of errors *Ibid*, page 21).

"3. In holding that, since the expiration of plaintiff's patents on shredded wheat, defendant is not entitled to display in its advertisements pictures of shredded wheat biscuits in form and shape similar to plaintiff's * * *" (*Ibid*, page 22).

"Defendant can make the patent expired product but it is enjoined from advertising or offering it for sale * * *" (*Ibid*, page 24).

"* * * the court below has now enjoined defendant perpetually from advertising or selling any sized biscuit large or small, whether banded, tagged, packaged or not" (*Ibid*, page 24).

"* * * plaintiff is given a perpetual monopoly of the *form or shape and verbal and pictorial description* of a patent-expired product" (*Ibid*, page 26).

"The decree below holds in substance and effect, that plaintiff has perpetual and exclusive trademark property rights in the words "shredded wheat" and in the shape, appearance or design of the patent-expired biscuit * * *" (Petitioner's reply brief on petition for certiorari, page 1).

"The first 'injunction' which ever completely prohibited the sale of either marked, unmarked or cartoned biscuit was the second decree ordered below" (*Ibid*, page 4).

"There should be no misapprehension as to the character or scope of the perpetual monopoly claimed and granted by the second decision below" (Petition for rehearing, page 1).

"Petitioner could lawfully then, as it can now, sell in foreign countries a formerly patented product which it is perpetually enjoined from selling in any way whatever in its own country" (*Ibid*, page 4).

"Respondent * * * is now by this decision granted, long after expiration of its patents, a perpetual monopoly *not only in the manufacture and sale of the familiar shredded wheat biscuit*, but *a perpetual exclusive right to stop everyone else from calling the product by such name or representing the same pictorially* upon its cartons and in its advertising" (*Ibid*, page 5).

"By its second decision sought to be reviewed by the petitioner herein, the plaintiff-respondent is granted a perpetual monopoly in the manufacture and sale of the patent-expired *shredded wheat biscuit and in the use of such name and the pictorial representation of this product*" (Petition to withhold order denying a writ of certiorari, page 2).

"It held, as law, that even in the absence of fraud, deceit or misrepresentation by petitioner, a perpetual monopoly of product, design and name has arisen * * *" (Petition to stay injunction, page 9).

KELLOGG COMPANY,

Petitioner,

against

NATIONAL BISCUIT COMPANY,

Respondent.

RESPONDENT'S MOTION FOR REHEARING AND MOTION FOR STAY OF MANDATE

The respondent National Biscuit Company respectfully moves this Court for a rehearing of the above entitled cause in which an opinion was rendered November 14th, 1938, reversing the judgment of the Circuit Court of Appeals for the Third Circuit and directing the dismissal of the bill of complaint; and for a stay of the mandate of this Court pending the disposition of this motion for rehearing.

I.

It is respectfully submitted that the decision in this case extends and broadens the doctrine enunciated by this Court in *Singer* v. *June*, 163 U. S. 169, to an extent which conflicts with other decisions of this Court. The opinion of the Court states:

> "But the name and form are integral parts of the good will of the article. To share fully in the good will, it must use the name and the pillow-

shape. And in the good will Kellogg Company is as free to share as the plaintiff. Compare William R. Warner & Co. v. Eli Lilly & Co., 265 U. S. 526, 528, 530."

* * * * *

"Kellogg Company is undoubtedly sharing in the good will of the article known as 'Shredded Wheat'; and thus is sharing in a market which was created by the skill and judgment of plaintiff's predecessor and has been widely extended by vast expenditures in advertising persistently made. But that is not unfair. Sharing in the good will of an article unprotected by patent or trade-mark is the exercise of a right possessed by all—and in the free exercise of which the consuming public is deeply interested."

This doctrine must necessarily result in profound economic consequences. The effect of it is to make the owner of an expired patent an outcast in the eyes of the law. For no matter how long and uninterrupted his use of the name applied to the product while it was patented, no matter how great the expenditure of money in acquiring good will nor how successful, that good will lies ready for appropriation by any comer at any time. Even though as much as a century of uninterrupted use of the name has created unprecedented good will, the owner of it is without the protection of the law because for a small fraction of time he enjoyed a monopoly in the production of the article.

While in *Singer* v. *June* (163 U. S. 169) this Court held that a patent owner, upon the expiration of the patent, *impliedly* dedicated to the public the right to use the name by which the patented article had been called during the life of the patent, "if essentially necessary" to describe the product, yet it clearly recognized that the good will which the patent owner had built up belonged to him. Thus,

in the opinion (written by Mr. Justice WHITE) at 163 U. S., page 187, the Court said:

> "To say that a person who has manufactured machines under a patented monopoly can acquire no good will, by the excellence of his work, or the development of his business, during the patent, would be to seriously ignore rights of private property, and would be against public policy, since it would deprive the one enjoying the patent of all incentive to make a machine of good quality, because at its termination all the reputation or good will resulting from meritorious work would be subject to appropriation by every one."

The decisions of this Court since that time have uniformly recognized the right of each trader to be protected in his good will, even though he had at some prior time sold under the protection of a patent. See *Elgin National Watch Co.* v. *Illinois Watch Case Company*, 179 U. S. 674; 675; *Herring-Hall-Marvin Safe Co.* v. *Hall's Safe Co.*, 208 U. S. 554, 558, 556; *Merriam Co.* v. *Syndicate Publishing Co.*, 237 U. S. 618, 623.

The uniform decisions of this Court have been that the owner of a patent, who through his skill in manufacture, expenditure in advertising and faithful service to the public, has built up a good will, does not upon the expiration of a patent yield all of this to the public as well as the invention of the patent. Moreover, in the instant case, during the seventeen years following the expiration of the basic Perky patents in 1912, the sales of the respondent's predecessor were increased almost three-fold. This tremendous good will, the indisputable resultant of the skill, judgment, advertising and faithful public service of respondent's predecessor *after the patent's expiration*, should not in good conscience be dedicated to the public merely

because there was a preceding seventeen years period during which sales were made under patent protection.

We appreciate that the Court refers to the good will of the *article* and not the good will of respondent. But the evidence indubitably shows that the two are inseparably connected. The article would have had no good will except for its healthful and excellent quality resulting from the care exercised by respondent and its predecessor in producing the article. Moreover, a great part of the good will of the article is the result of extensive advertising on the part of respondent and its predecessor, while petitioner and all others who might wish to compete sat by and allowed the good will to be created. It is believed that in this day, when the courts are continually called upon to prevent unfair competition, both bold and subtle, and when the law as recently stated by this Court has been expanded to cover not only misrepresentation but the "misappropriation of what equitably belongs to a competitor" (*Schechter Poultry Corp.* v. *United States*, 295 U. S. 495, at p. 532), the beforestated doctrine announced by this Court in the case at bar should be reconsidered, especially in the light of the previous cited decisions of this Court.

In its opinion (p. 5) the Court said:

> "Kellogg Company's right was not one dependent upon diligent exercise. Like every other member of the public, it was, and remained, free to make shredded wheat when it chose to do so; *and to call the product by its generic name.*"

In previous cases this Court has recognized that acquiescence through lapse of time in the use of a trade mark or trade name may estop even a prior user from adopting or extending the use of a mark. See, for example, *Hanover Star Milling Co.* v. *Metcalf*, 240 U. S. 403; *United Drug Co.* v. *Rectanus Co.*, 248 U. S. 90, and *Jacobs* v. *Iodent Chemical Co.*, 41 Fed. (2d) 637 (C. C. A. 3rd).

We submit that there is no difference in principle between depriving the owner of a trade mark, because of non-user, of his otherwise *exclusive* right to use it, and in preventing another, who at one time had a *non-exclusive* right to use a trade mark, from subsequently using it, merely because for a long period of time he and everyone else has neglected to use it. Especially is this true when the use will result in confusion and enable him to appropriate some of the good will of a competitor who has continually used the mark. It must be remembered that the dedication which this Court held in *Singer* v. *June* was made, at the expiration of the patent, of the name by which the patented article had been known, was not based upon any provision of the patent statutes, but upon the Court's idea of what was necessary to enable the public to enjoy fully the invention of the patent. An equity was thus raised in favor of the public, but this equity certainly can be destroyed by a paramount counter-equity. A court of equity always balances equities. A trade mark is lost by non-user in favor of one who has used it, because of the latter's superior equity. In respect to this it makes no difference whether respondent's claim be considered as based upon petitioner's delay or respondent's prior user since 1912.

The Court in its opinion refers to *William R. Warner & Co.* v. *Eli Lilly & Co.*, 265 U. S. 526, as a precedent for the proposition that the petitioner is free to share in the respondent's good will, but the *Warner* case, as we pointed out in our brief, was a clear case of unfair competition in which injunction was granted. Therein this Court said, at page 532:

> "But respondent being entitled to relief, is entitled to effective relief; *and any doubt in respect of the extent thereof must be resolved in its favor as the innocent producer* and against the petitioner, which has shown by its conduct that it is not to be trusted."

In the case at bar any doubt as to effective relief has been resolved *against* the innocent producer. This Court's opinion has given petitioner a right that enables him (claiming to be for years the *largest producer* of cereal foods) to sit idly by while the good will for an article has been built up and its connection, through name and form, has become inseparably connected with respondent as a producer, and then to step in and reap where it has not sown.

The Court states that the name "Shredded Wheat" "is the generic name of the article" and "since the term is generic, the original maker of the product acquired no exclusive right to use it." (Opinion, p. 3.) If the Court used the word "generic" in the sense of descriptive, we point out that in our brief (p. 40) we endeavor to demonstrate that the words "Shredded Wheat" are not descriptive in the sense that they may not constitute a valid trade mark. To ascertain whether they are descriptive we submit that one must go back to 1893 when they were first used by Perky. Is it possible to believe that at *that time* the name would have meant to anyone, filaments of whole wheat berries which had been boiled and passed through rollers so as to assume the form of long filaments or strings? If, on the other hand, the Court meant that the words were truly generic, it is only because they have been made so by respondent's and its predecessor's use of them for over 45 years, nearly two-thirds of which has occurred since the expiration of the patent. The Court holds in effect that the more extensive the use of a trade name the less chance there is that the proprietor of the name may be able to protect it against appropriation by others.

Perky was quite able without using the word "shredded" in his first patents to describe the machines of his invention and the product of the patent in total compliance with the patent statute requiring a description so full, clear and concise that the public on the patent's expiration might

enjoy the invention's use. Respondent's competitors, and for a time the Kellogg Company itself, found no necessity to appropriate the phrase. Kellogg's subsequent conduct was not in the slightest conceivable measure necessitous. Part of the time it falsely held its product out as the original. Part of the time it used respondent's two biscuit trade mark. Part of the time it copied the respondent's form. Part of the time it used respondent's now forty-five year old phrase, and sometimes used various combinations of all these. All of the time, and now for twenty-six years after the Perky patents expired, the respondent has used the phrase "Shredded Wheat" upon its product, and all of the time in the public's mind it has signified the respondent's Niagara Falls product. How and by what justice and under what equitable necessity did the Perky patents become free licenses to the Kellogg Company to do more than take what the patents gave? The patent owner does not, like Faust, sell his soul. He gets a limited seventeen year reward for the invention he gives. He is asked to give no more under the Patent Act. A court of equity should not award away more than this, save when compelling necessity requires it, in order that the public may enjoy the invention.

Paraphrasing the language of this Court in *Singer* v. *June*, 163 U. S. 169, 187, quoted above, we submit:

> "To say that respondent and its predecessors who manufactured food products under a patent monopoly for 17 years can acquire no good will, by the excellence of their work, or the development of their business, during the patent, is to seriously ignore rights of private property, and is against public policy."

II.

The doctrine of *Singer* v. *June* relied upon by the Court's opinion in this case rests upon *necessity*. The Court in *Singer* v. *June* said at page 185:

> "It equally follows from the cessation of the monopoly and the falling of the patented device into the domain of things public, that along with the public ownership of the device there must also *necessarily* pass to the public the generic designation of the thing which has arisen during the monopoly * * *" (Italics ours.)

But it was demonstrated beyond dispute in this case that this *necessity* does not exist here. To apply the paragraph just quoted to the present case is to carry the decision of *Singer* v. *June* beyond its basis. The Court points out in that case that the reason for permitting the defendant to use the word "Singer" was that the name was *"essentially necessary to vest the public with a full enjoyment of the monopoly."*

We have pointed out in our brief (p. 9) that other competitors, including petitioner for much of the time, have found it possible to enjoy the disclosures of the Perky patents without appropriating respondent's name and form. These facts are not disputed by the petitioner but apparently were overlooked by the Court. The Court has apparently wholly ignored the practices of other competitors and the lessons to be drawn therefrom. Similarly the Court has overlooked the evidence of widespread confusion among consumers (see Appendix C of respondent's brief).

This Court in subsequent cases has recognized that the doctrine of *Singer* v. *June* is one of necessity, only to be applied where inescapable need demands it to permit the public to enjoy the expired patents. Thus in *Holzapfel's*

Co. v. *Rahtjen's Co.*, 183 U. S. 1, 9-10, the Court pointed out that the only possible way to describe the patent expired product was "Rahtjen's Composition."

The question to be determined in a case of this character where the plaintiff is asserting a right to be protected in the good will which it has built up at great cost and over many years of faithful public service, and where the defendant is asserting a right to sell freely an unpatented product and describe it, is one which may involve some balancing of equity. Except for the statement of this Court in the instant case referred to above, it has been the endeavor of American courts to save to every man that good will which his skill and judgment produce. It has likewise been the endeavor of our courts to permit a trader to describe his goods. If these two endeavors come in conflict, the principal question to be determined is whether it is "essentially necessary" to deprive the plaintiff of any good will in order to permit the defendant to describe his product. This approach was taken by Mr. Justice HOLMES, then presiding in the Supreme Court of Massachusetts, in *American Waltham Watch Co.* v. *U. S. Watch Co.*, 173 Mass. 85, in which the Court said (p. 86):

> "In cases of this sort, as in so many others, what ultimately is to be worked out is a point or line between conflicting claims, each of which has meritorious grounds and would be extended further were it not for the other. *Boston Ferrule Co.* v. *Hills*, 159 Mass. 147, 149, 150. It is desirable that the plaintiff should not lose custom by reason of the public mistaking another manufacturer for it. It is desirable that the defendant should be free to manufacture watches at Waltham, and to tell the world that it does so. The two desiderata cannot both be had to their full extent, and we have to fix the boundaries as best we can. On the one hand, the

defendant must be allowed to accomplish its desideratum in some way, whatever the loss to the plaintiff. On the other, we think, the cases show that the defendant fairly may be required to avoid deceiving the public to the plaintiff's harm, so far as is practicable in a commercial sense. It is true that a man cannot appropriate a geographical name, but neither can he a color, or any part of the English language, or even a proper name to the exclusion of others whose names are like his. Yet a color in connection with a sufficiently complex combination of other things may be recognized as saying so circumstantially that the defendant's goods are the plaintiff's as to pass the injunction line. *New England Awl & Needle Co.* v. *Marlborough Awl & Needle Co.*, 168 Mass. 154, 156. So, although the plaintiff has no copyright on the dictionary or any part of it, he can exclude a defendant from a part of the free field of the English language, even from the mere use of generic words unqualified and unexplained, when they would mislead the plaintiff's customers to another shop. *Reddaway* v. *Banham* (1896) A. C. 199. So the name of a person may become so associated with his goods that one of the same name coming into the business later will not be allowed to use even his own name without distinguishing his wares. *Brinsmead* v. *Brinsmead*, 13 Times L. R. 3; *Reddaway* v. *Banham* (1896) A. C. 199, 210. See *Singer Manuf. Co.* v. *June Manuf. Co.*, 163 U. S. 169, 204; *Allegretti Chocolate Cream Co.* v. *Keller*, 85 Fed. Rep. 643. And so, we doubt not, may a geographical name acquire a similar association with a similar effect. *Montgomery* v. *Thompson* (1891) A. C. 217."

If the desire to protect the good will of the respondent be weighed against the desire to permit the petitioner to avail itself of the expired patents in this case, there can

be only one answer; the undisputed history of the Quaker Oats Company and the Loose Wiles Biscuit Company shows that they were and are able to avail themselves of the expired patents without taking unjustly the good will of the respondent by using either the words "Shredded Wheat" or the form of biscuit which has been associated with respondent and its predecessors. To the weight of this must be added the fact that petitioner has, for much of the period, used other words to designate its product.

III.

In its opinion herein this Court said:

> "There is no basis here for applying the doctrine of secondary meaning. The evidence shows only that due to the long period in which the plaintiff or its predecessor was the only manufacturer of the product, many people have come to associate the product, and as a consequence the name by which the product is generally known, with the plaintiff's factory at Niagara Falls."

It is submitted that the showing of the evidence that "many people have come to associate * * * the name by which the product is generally known, with plaintiff's factory at Niagara Falls" is precisely what has heretofore been known as "secondary meaning." It shows that in the public mind "Shredded Wheat" meant "a single thing coming from a single source and well known to the community." (*Coca-Cola Co.* v. *Koke Co.*, 254 U. S. 143, 146, opinion written by Mr. Justice Holmes.) The evidence here shows what it did in *Shredded Wheat Co.* v. *Humphrey Cornell Co.*, 250 F. 960, which was summarized by Judge Learned Hand as follows (p. 963):

> "The plaintiff has at least shown that the public has become accustomed to regard its familiar wheat

> biscuit as emanating; if not from it by name, at least from a single, though anonymous, maker, and the second is as good for these purposes as the first."

The evidence in the *Humphrey-Cornell* case was taken in the year 1915. Prior to that time 9,962,529 cases of "Shredded Wheat" were sold. In the following 12 years 21,479,720 cases of "Shredded Wheat" were sold.* The secondary meaning which was clear in 1915, is even clearer today (see Appendix A, Respondent's Brief).

However, in its opinion herein, the Court required respondent not only to show as previously required by this Court in *Coca Cola* v. *Koke Co.*, 254 U. S. 143, 146, that the public knew the product as "a single thing coming from a single source, and well known to the community" but held:

> "but to establish a trade name in the term 'shredded wheat' the plaintiff must show more than a subordinate meaning which applies to it. It must show that the *primary* significance of the term in the minds of the consuming public is not the product but the producer."

This is in sharp contrast to the decision of this Court in *Coca-Cola Co.* v. *Koke Co.*, 254 U. S. 143, 146, in which the Court (by Mr. Justice Holmes) said:

> "It hardly would be too much to say that the drink characterizes the name as much as the name the drink. In other words Coca-Cola probably means to most persons the plaintiff's familiar product to be had everywhere rather than a compound of particular substances. Although the fact did not appear in *United States* v. *Coca-Cola Co.*, 241 U. S. 265, 289, we see no reason to doubt that, as

*R., Vol. IV, p. 51.

> we have said, it has acquired a secondary meaning in which perhaps the product is more emphasized than the producer but to which the producer is entitled."

Our attention has just been called to the decision of this Court rendered December 5th, 1938, in the case of *Nu-Enamel Corporation* v. *Armstrong Paint and Varnish Co.*, in which this Court held that the word "Nu-Enamel" was descriptive of the product of the plaintiff but had acquired a secondary meaning. In that case, as in this case, the mark in question had been registered under the 1920 Trade Mark Act. Secondary significance, we believe, has been established in this case as conclusively as in the *Nu-Enamel* case. It seems impossible to us to reconcile the decision in the *Nu-Enamel* case and that in the case at bar on this point unless the Court in the latter has had regard to form rather than substance.

The decision of this Court in the instant case that secondary meaning is not shown where the plaintiff proves that the public identifies his product under its trade name, as a single thing coming from a single source is a marked departure from previous decisions of this Court and other federal courts and will necessarily affect adversely the heretofore established good will of many traders. The burden of proving that the producer and not the product is the primary significance of the term in the minds of the consuming public is a heavy one. Hungry folk think of wholesome food, not of manufacturing concerns.*

---

*"Thirsty folk want beer, not explanations." Stone Ale Case, (Montgomery v. Thompson, 1891, A. C. 217, 8 RPC 361).

IV.

The opinion of the Court in this case overlooks the extension of the scope of the doctrine of unfair competition in recent years by this and other Courts. This is an action in equity based on equitable principles. As previously stated, this Court has recently recognized that the doctrine of unfair competition applies not merely to misrepresentation but to "misappropriation of what equitably belongs to a competitor" (*Schechter Poultry Corp.* v. *United States*, 295 U. S. 495 at p. 532). The opinion of the Court in this case recognizes that the petitioner has appropriated and shared in the good will of the respondent but says that it has a perfect right to do so. We submit that this is contrary to the expressions of this Court in the *Schechter* case just referred to and in other cases cited in our brief. The idea has been well expressed by the Supreme Court of New York as recently as 1937 in *Philadelphia Storage Battery Co.* v. *Mindlin*, 163 Misc. 52, at page 56 as follows:

> "The fear is sometimes expressed that the extension of protection may foster monopoly, not merely of language but of trade. The fear is groundless. He who coins a trade symbol adds rather than detracts from the language. Even when a term in a dictionary is used in an arbitrary manner, the language is not impoverished. The term may still be used in its accepted sense; what equity prevents is the appropriation of the new layers of meaning that have been added by the plaintiff. The rights of the first user can be sustained to the extent that they do not unduly handicap others in the honest conduct of their business. New competition and enterprise must not be throttled, but the late comer should be compelled to rely upon his own ingenuity, rather than misrepresentation and misappropriation for the creation of his market. This much at least

> is demanded by the most elementary notions of honesty.' (Handler, Unfair Competition, 21 Iowa L. Rev. 175, 186.) Blatant imitation should not be recognized by the judicial condonation of practices which violate the fundamental precepts of fair business dealing."

A trade mark is not a monopoly in the sense in which that word has been used by the petitioner in this case. It is not a property right except in a somewhat limited sense. In its essence a trade mark is a responsibility. It vouches for the integrity of the goods to which it is attached. If the producer of the goods fails in maintaining the quality and integrity of trade marked goods, the mark itself loses its value. The Shredded Wheat Company and the respondent as its successor have for more than forty-five years maintained the integrity of the product to which the trade name "Shredded Wheat" has always been attached. Ever since the year 1912 the process of the Perky patents and the use of the machinery to make the product have been open to the public. No competitor except the petitioner has sought to share in the plaintiff's good will as the Court now says may be done. We believe that the Court overlooked that this is an equity case, appealing to the conscience of the chancellor. No possible equity can justify the petitioner in the conduct disclosed by the record, and the most elementary equitable considerations warrant some measure of protection for the respondent. To hold otherwise, as this Court does in this decision, is to discourage the very purpose for which the patent laws exist, namely, the encouragement of invention and enterprise by granting to an inventor the sole right to make and vend for a limited period the product of his brain upon condition that at the end of that limited period he dedicate it, and it alone to the public.

If a patentee is now to be deprived of the benefit of the good will which he has succeeded in attaching to his product, either during the life of the patent, or after its expiration, then he would be far better off never to take any patents (which must, as the *only statutory consideration,* inform the public how best to practice the invention, R. S., Sec. 4888), but to keep his invention secret, and rely upon his common law rights for protection from unfair competition by unscrupulous dealers who stand by until great good will has been acquired and then come and sit without day as unbidden guests. The Court's decision now adds the penalty of loss of good will to the statutory consideration for the grant of a patent.

V.

We believe the Court has misapprehended the action by the Circuit Court of Appeals with respect to the dish trade mark. This Court in its opinion (p. 8) says:

> "Fourth: By its 'clarifying' decree, the Circuit Court of Appeals enjoined Kellogg Company from using the picture of the two shredded wheat biscuits in the bowl only in connection with an injunction against manufacturing the pillow-shaped biscuits and the use of the term shredded wheat, on the grounds of unfair competition."

Reference to the opinion of the Circuit Court of Appeals discloses that that Court, while it had intended to enjoin the use of the dish trade mark, felt that there was some doubt as to its expression of that intention in its first opinion. The term having expired, it felt that it was without jurisdiction to change or add to its original mandate and, therefore, expressly declined to issue any injunction against the use of the dish trade mark. We believe, therefore, that the sentence from this Court's opinion quoted above is incorrect.

For these reasons we respectfully urge that this motion for rehearing be granted and that the opinion and judgment of the Court be modified as indicated herein and that the issuance of the mandate of the Court be stayed pending the disposition of this motion and of the rehearing.

Washington, D. C.
December 8th, 1938.

DAVID A. REED,
Solicitor for Respondent.

CHARLES A. VILAS,
THOMAS G. HAIGHT,
DRURY W. COOPER,
Of Counsel.

Certificate.

I, CHARLES A. VILAS, of counsel for the respondent herein, hereby certify that in my opinion the foregoing petition for rehearing herein and for a stay of the mandate pending determination thereof is sound in law and that the same is presented in good faith and not for the purpose of delay.

CHARLES A. VILAS.

pp. 1, 4, 6

SUPREME COURT OF THE UNITED STATES.

Nos. 2 and 56.—October Term, 1938.

Kellogg Company, Petitioner,
vs.
National Biscuit Company.

On Writs of Certiorari to the United States Circuit Court of Appeals for the Third Circuit.

[November 14, 1938.]

Mr. Justice Brandeis delivered the opinion of the Court.

This suit was brought in the federal court for Delaware[1] by National Biscuit Company against Kellogg Company to enjoin alleged unfair competition by the manufacture and sale of the breakfast food commonly known as shredded wheat. The competition was alleged to be unfair mainly because Kellogg Company uses, like the plaintiff, the name shredded wheat and, like the plaintiff, produces its biscuit in pillow-shaped form.

Shredded wheat is a product composed of whole wheat which has been boiled, partially dried, then drawn or pressed out into thin shreds and baked. The shredded wheat biscuit generally known is pillow-shaped in form. It was introduced in 1893 by Henry D. Perky, of Colorado; and he was connected until his death in 1908 with companies formed to make and market the article. Commercial success was not attained until the Natural Food Company built, in 1901, a large factory at Niagara Falls, New York. In 1908, its corporate name was changed to "The Shredded Wheat Company"; and in 1930 its business and goodwill were acquired by National Biscuit Company.

Kellogg Company has been in the business of manufacturing breakfast food cereals since its organization in 1905. For a period commencing in 1912 and ending in 1919 it made a product whose form was somewhat like the product in question, but whose manu-

Delaware

[1] The federal jurisdiction rests on diversity of citizenship—National Biscuit Company being a New Jersey corporation and Kellogg Company a Michigan corporation. Most of the issues in the case involve questions of common law and hence are within the scope of Erie R. R. *v.* Tompkins, 304 U. S. 64 (1938). But no claim has been made that the local law is any different from the general law on the subject, and both parties have relied almost entirely on federal precedents.

facture was different, the wheat being reduced to a dough before being pressed into shreds. For a short period in 1922 it manufactured the article in question. In 1927, it resumed manufacturing the product. In 1928, the plaintiff sued for alleged unfair competition two dealers in Kellogg shredded wheat biscuits. That suit was discontinued by stipulation in 1930. On June 11, 1932, the present suit was brought. Much evidence was introduced; but the determinative facts are relatively few; and as to most of these there is no conflict.

In 1935, the District Court dismissed the bill. It found that the name "Shredded Wheat" is a term describing alike the product of the plaintiff and of the defendant; and that no passing off or deception had been shown. It held that upon the expiration of the Perky patent No. 548,086 issued October 15, 1895, the name of the patented article passed into the public domain. In 1936, the Circuit Court of Appeals affirmed that decree. Upon rehearing, it vacated, in 1937, its own decree and reversed that of the District Court, with direction "to enter a decree enjoining the defendant from the use of the name 'Shredded Wheat' as its trade name and from advertising or offering for sale its product in the form and shape of plaintiff's biscuit in violation of its trade-mark; and with further directions to order an accounting for damages and profits." In its opinion the court described the trade-mark as "consisting of a dish, containing two biscuits submerged in milk". 91 F. (2d) 150, 152. We denied Kellogg Company's petition for a writ of certiorari, 302 U. S. 733; and denied rehearing, 302 U. S. 777.

On January 5, 1938, the District Court entered its mandate in the exact language of the order of the Circuit Court of Appeals, and issued a permanent injunction. Shortly thereafter National Biscuit Company petitioned the Circuit Court of Appeals to recall its mandate "for purposes of clarification." It alleged that Kellogg Company was insisting, contrary to the court's intention, that the effect of the mandate and writ of injunction was to forbid it from selling its product only when the trade name "Shredded Wheat" is applied to a biscuit in the form and shape of the plaintiff's biscuit and is accompanied by a representation of a dish with biscuits in it; and that it was not enjoined from making its biscuit in the form and shape of the plaintiff's biscuit, nor from calling it "Shredded Wheat," unless at the same time it uses upon its cartons plaintiff's trade-mark consisting of a dish

with two biscuits in it. On May 5, 1938, the Circuit Court of Appeals granted the petition for clarification and directed the District Court to enter a decree enjoining Kellogg Company (96 F. (2d) 873):

"(1) from the use of the name 'SHREDDED WHEAT' as its trade name, (2) from advertising or offering for sale its product in the form and shape of plaintiff's biscuit, and (3) from doing either."

Kellogg Company then filed a petition for a writ of certiorari to review the decree as so clarified, and also sought reconsideration of our denial of its petition for certiorari to review the decree as entered in its original form. In support of these petitions it called to our attention the decision of the British Privy Council in *Canadian Shredded Wheat Co., Ltd.* v. *Kellogg Company of Canada, Ltd.*, 55 R. P. C. 125, rendered after our denial of the petition for certiorari earlier in the term. We granted both petitions for certiorari.[2] (304 U. S. —.)

The plaintiff concedes that it does not possess the exclusive right to make shredded wheat. But it claims the exclusive right to the trade name "Shredded Wheat" and the exclusive right to make shredded wheat biscuits pillow-shaped. It charges that the defendant, by using the name and shape, and otherwise, is passing off, or enabling others to pass off, Kellogg goods for those of the plaintiff. Kellogg Company denies that the plaintiff is entitled to the exclusive use of the name or of the pillow-shape; denies any passing off; asserts that it has used every reasonable effort to distinguish its product from that of the plaintiff; and contends that in honestly competing for a part of the market for shredded wheat it is exercising the common right freely to manufacture and sell an article of commerce unprotected by patent.

First. The plaintiff has no exclusive right to the use of the term "Shredded Wheat" as a trade name. For that is the generic term of the article, which describes it with a fair degree of accuracy; and is the term by which the biscuit in pillow-shaped form is generally known by the public. Since the term is generic, the orig-

[2] Rights here claimed by plaintiff have been involved in much other litigation. See Natural Food Co. v. Williams, 30 App. D. C. 348; Shredded Wheat Co. v. Humphrey Cornell Co., 250 Fed. 960 (C. C. A. 2d); Kellogg Co. v. National Biscuit Co., 71 F. (2d) 662 (C. C. A. 2d); Canadian Shredded Wheat Co., Ltd. v. Kellogg Co. of Canada, Ltd., 55 R. P. C. 125; In the Matter of Trade Mark No. 500,761, Registered in the Name of the Shredded Wheat Co., Ltd., in Class 42 (1938) Supreme Court of Judicature, Court of Appeal; also Natural Food Co. v. Buckley, No. 28,530, U. S. Dist. Ct., N. Dist. Ill., East. Div. (1908).

inal maker of the product acquired no exclusive right to use it. As Kellogg Company had the right to make the article, it had, also, the right to use the term by which the public knows it. Compare *Saxlehner* v. *Wagner*, 216 U. S. 385; *Holzapfel's Composition Co.* v. *American Composition Co.*, 183 U. S. 1. Ever since 1894 the article has been known to the public as shredded wheat. For many years, there was no attempt to use the term "Shredded Wheat" as a trade-mark. When in 1905 plaintiff's predecessor, National Food Company, applied for registration of the words "Shredded Whole Wheat" as a trade-mark under the so-called "ten year clause" of the Act of February 20, 1905, c. 592, sec. 5, 33 Stat. 724, William E. Williams gave notice of opposition. Upon the hearing it appeared that Williams had, as early as 1894, built a machine for making shredded wheat, and that he made and sold its product as "Shredded Whole Wheat". The Commissioner of Patents refused registration. The Court of Appeals of the District of Columbia affirmed his decision, holding that "these words accurately and aptly describe an article of food which . . . has been produced for more than ten years. . . ." *Natural Food Co.* v. *Williams*, 30 App. D. C. 348.[3]

Moreover, the name "'Shredded Wheat", as well as the product, the process and the machinery employed in making it, has been dedicated to the public. The basic patent for the product and for the process of making it, and many other patents for special machinery to be used in making the article, issued to Perky. In those patents the term "shredded" is repeatedly used as descriptive of the product. The basic patent expired October 15, 1912; the others soon after. Since during the life of the patents "Shredded Wheat" was the general designation of the patented product, there passed to the public upon the expiration of the patent, not only the right to make the article as it was made during the patent period, but also the right to apply thereto the name by which it had become known. As was said in *Singer Mfg. Co.* v. *June Mfg. Co.*, 163 U. S. 169, 185:

"It equally follows from the cessation of the monopoly and the falling of the device into the domain of things public, that along

[3] The trade-marks are registered under the Act of 1920. 41 Stat. 533, 15 U. S. C. §§ 121-28 (1934). But it is well settled that registration under it has no effect on the domestic common-law rights of the person whose trade-mark is registered. Charles Broadway Rouss, Inc. v. Winchester Co., 300 Fed. 706, 713, 714 (C. C. A. 2d); Kellogg Co. v. National Biscuit Co., 71 F. (2d) 662, 666 (C. C. A. 2d).

with the public ownership of the device there must also necessarily pass to the public the generic designation of the thing which has arisen during the monopoly. . . .

"To say otherwise would be to hold that, although the public had acquired the device covered by the patent, yet the owner of the patent or the manufacturer of the patented thing had retained the designated name which was essentially necessary to vest the public with the full enjoyment of that which had become theirs by the disappearance of the monopoly."

It is contended that the plaintiff has the exclusive right to the name "Shredded Wheat", because those words acquired the "secondary meaning" of shredded wheat made at Niagara Falls by the plaintiff's predecessor. There is no basis here for applying the doctrine of secondary meaning. The evidence shows only that due to the long period in which the plaintiff or its predecessor was the only manufacturer of the product, many people have come to associate the product, and as a consequence the name by which the product is generally known, with the plaintiff's factory at Niagara Falls. But to establish a trade name in the term "shredded wheat" the plaintiff must show more than a subordinate meaning which applies to it. It must show that the primary significance of the term in the minds of the consuming public is not the product but the producer. This it has not done. The showing which it has made does not entitle it to the exclusive use of the term shredded wheat but merely entitles it to require that the defendant use reasonable care to inform the public of the source of its product.

The plaintiff seems to contend that even if Kellogg Company acquired upon the expiration of the patents the right to use the name shredded wheat, the right was lost by delay. The argument is that Kellogg Company, although the largest producer of breakfast cereals in the country, did not seriously attempt to make shredded wheat, or to challenge plaintiff's right to that name until 1927, and that meanwhile plaintiff's predecessor had expended more than $17,000,000 in making the name a household word and identifying the product with its manufacture. Those facts are without legal significance. Kellogg Company's right was not one dependent upon diligent exercise. Like every other member of the public, it was, and remained, free to make shredded wheat when it chose to do so; and to call the product by its generic name. The only obligation resting upon Kellogg Company was to identify its own product lest it be mistaken for that of the plaintiff.

Second. The plaintiff has not the exclusive right to sell shredded wheat in the form of a pillow-shaped biscuit—the form in which the article became known to the public. That is the form in which shredded wheat was made under the basic patent. The patented machines used were designed to produce only the pillow-shaped biscuits. And a design patent was taken out to cover the pillow-shaped form.[4] Hence, upon expiration of the patents the form, as well as the name, was dedicated to the public. As was said in *Singer Mfg. Co.* v. *June Mfg. Co.*, *supra*, p. 185:

"It is self evident that on the expiration of a patent the monopoly granted by it ceases to exist, and the right to make the thing formerly covered by the patent becomes public property. It is upon this condition that the patent is granted. It follows as a matter of course that on the termination of the patent there passes to the public the right to make the machine in the form in which it was constructed during the patent. We may, therefore, dismiss without further comment the complaint, as to the form in which the defendant made his machines."

Where an article may be manufactured by all, a particular manufacturer can no more assert exclusive rights in a form in which the public has become accustomed to see the article and which, in the minds of the public, is primarily associated with the article rather than a particular producer, than it can in the case of a name with similar connections in the public mind. Kellogg Company was free to use the pillow-shaped form, subject only to the obligation to identify its product lest it be mistaken for that of the plaintiff.

Third. The question remains whether Kellogg Company in exercising its right to use the name "Shredded Wheat" and the pillow-shaped biscuit, is doing so fairly. Fairness requires that it be done in a manner which reasonably distinguishes its product from that of plaintiff.

Each company sells its biscuits only in cartons. The standard Kellogg carton contains fifteen biscuits; the plaintiff's twelve. The Kellogg cartons are distinctive. They do not resemble those used by the plaintiff either in size, form, or color. And the difference in the labels is striking. The Kellogg cartons bear in bold script the names "Kellogg's Whole Wheat Biscuit" or "Kellogg's Shredded

[4] The design patent would have expired by limitations in 1909. In 1908 it was declared invalid by a district judge on the ground that the design had been in public use for more than two years prior to the application for the patent and theretofore had already been dedicated to the public. Natural Foods Co. v. Bulkley, No. 28,530, U. S. Dist Ct., N. Dist. Ill., East. Div. (1908).

Whole Wheat Biscuit" so sized and spaced as to strike the eye as being a Kellogg product. It is true that on some of its cartons it had a picture of two shredded wheat biscuits in a bowl of milk which was quite similar to one of the plaintiff's registered trade-marks. But the name Kellogg was so prominent on all of the defendant's cartons as to minimize the possibility of confusion.

Some hotels, restaurants, and lunchrooms serve biscuits not in cartons, and guests so served may conceivably suppose that a Kellogg biscuit served is one of the plaintiff's make. But no person familiar with plaintiff's product would be misled. The Kellogg biscuit is about two-thirds the size of plaintiff's; and differs from it in appearance. Moreover, the field in which deception could be practiced is negligibly small. Only 2½ per cent of the Kellogg biscuits are sold to hotels restaurants and lunchrooms. Of those so sold 98 per cent are sold in individual cartons containing two biscuits. These cartons are distinctive and bear prominently the Kellogg name. To put upon the individual biscuit some mark which would identify it as the Kellogg product is not commercially possible. Relatively few biscuits will be removed from the individual cartons before they reach the consumer. The obligation resting upon Kellogg Company is not to insure that every purchaser will know it to be the maker but to use every reasonable means to prevent confusion.

It is urged that all possibility of deception or confusion would be removed if Kellogg Company should refrain from using the name "Shredded Wheat" and adopt some form other than the pillow-shape. But the name and form are integral parts of the goodwill of the article. To share fully in the goodwill, it must use the name and the pillow-shape. And in the goodwill Kellogg Company is as free to share as the plaintiff. Compare *William R. Warner & Co.* v. *Eli Lilly & Co.*, 265 U. S. 526, 528, 530. Moreover, the pillow-shape must be used for another reason. The evidence is persuasive that this form is functional—that the cost of the biscuit would be increased and its high quality lessened if some other form were substituted for the pillow-shape.

Kellogg Company is undoubtedly sharing in the goodwill of the article known as "Shredded Wheat"; and thus is sharing in a market which was created by the skill and judgment of plaintiff's predecessor and has been widely extended by vast expenditures in advertising persistently made. But that is not unfair. Sharing in the goodwill of an article unprotected by patent or trade-mark

is the exercise of a right possessed by all—and in the free exercise of which the consuming public is deeply interested. There is no evidence of passing off or deception on the part of the Kellogg Company;[5] and it has taken every reasonable precaution to prevent confusion or the practice of deception in the sale of its product.

Fourth. By its "clarifying" decree, the Circuit Court of Appeals enjoined Kellogg Company from using the picture of the two shredded wheat biscuits in the bowl only in connection with an injunction against manufacturing the pillow-shaped biscuits and the use of the term shredded wheat, on the grounds of unfair competition.[6] The use of this picture was not enjoined on the independent ground of trade-mark infringement. Since the National Biscuit Company did not petition for certiorari, the question whether use of the picture is a violation of that trade-mark although Kellogg Company is free to use the name and the pillow-shaped biscuit is not here for review.

Decrees reversed with direction to dismiss the bill.

Mr. Justice McREYNOLDS and Mr. Justice BUTLER are of opinion that the decree of the Circuit Court of Appeals is correct and should be affirmed. To them it seems sufficiently clear that the Kellogg Company is fraudulently seeking to appropriate to itself the benefits of a goodwill built up at great cost by the respondent and its predecessors.

---

[5] Attention is called to the fact that the label on these Kellogg cartons bears, in small letters, the words: "The original has this [W. K. Kellogg's] signature." Objection to their use was not charged in the bill; no such issue was raised at the trial; and the use was not enjoined. Counsel for the Company admitted in the argument before us that its use, common as applied to other Kellogg products, should not have been made on cartons of shredded wheat; and stated that the use had been discontinued long before entry of the "clarifying" decree.

[6] In its opinion clarifying the mandate, the Circuit Court of Appeals, after considering the provisions concerning the name and the form of the biscuit, said (96 F. (2d) 875):

"The only remaining question is whether, in view of the fact that the order of April 12, 1937, did not specifically provide for an injunction against the violation of the two-biscuit-in-a-dish trade-mark (although it was intended to do so) we have any jurisdiction to amend the mandate so as to include specifically such a provision. As there may be some doubt on this question, we will not amend the mandate so as to provide a specific injunction against the use of the two-biscuit-in-a-dish trade-mark. Its use on a carton or in advertising matter, when the defendant is not permitted to use the word 'Shredded Wheat' as a trade-name or to advertise or sell biscuits in the pillow-shaped form, would manifestly be so improper and so likely to mislead that we will assume that the appellee will not use it."
